That visit had its results. Warrisden met Pamela Mardale again and realized that Lady Millingham's indignation had been justified. At the end of that season he proposed and was gently refused. But if he was slow to move, he was also firm to persevere. He hunted with the Quorn that winter, and during the following season he was persistently but unobtrusively at her elbow; so that Pamela came, at all events, to count upon him as a most reliable friend. Having duly achieved that place in her thoughts, he disappeared for ten months, and returned to town one afternoon in the last week of June. There were letters waiting for him in his rooms, and amongst them a card from Lady Millingham inviting him to a dance upon that night. At eleven o'clock his coupé turned out of Piccadilly and entered Berkeley Square. At the bottom of the square the lighted windows of the house blazed out upon the night, the balconies were banked with flowers, and behind the flowers, silhouetted against the light, were visible the thronged faces of men and women. Warrisden leaned forward, scrutinizing the shapes of the heads, the contours of the faces. His sight, sharpened by long practice over wide horizons, was of the keenest; he could see, even at that distance, the flash of jewels on neck and shoulder. But the face he looked for was not there. Lady Millingham, however, set his mind at ease.

"You are back, then?" she cried.

"This afternoon."

"You will find friends here."

Warrisden passed on into the reception-rooms. It seemed to him, indeed, that all the friends he had ever made were gathered to this one house on this particular evening. He was a tall man, and his height made him noticeable upon most occasions. He was the more noticeable now by reason of his sunburn and a certain look of exhilaration upon his face. The season was drawing to its end, and brown faces were not so usual but that the eyes turned to them. He spoke, however, the fewest possible words to the men who greeted him, and he did not meet the eyes of any woman. Yet he saw the women, and was in definite quest of one of them. That might have been noticed by a careful observer, for whenever he saw a man older than the rest talking to a girl he quickened his pace that he might the sooner see that girl's face. He barely looked into the ballroom at all, but kept to the corridors, and at last, in a doorway, came face to face with Pamela Mardale. He saw her face light up and the hand held out to him was even eagerly extended.

"Have you a dance to spare?"

Pamela looked quickly round upon her neighbors.

"Yes, this one," she answered. She bowed to her companion, a man, as Warrisden expected, much older than herself, and led the way at once towards the balcony. Warrisden saw a youth emerge from the throng and come towards them. Pamela was tall and she used her height at this moment. She looked him in the face with so serene an indifference that the youth drew back disconcerted. Pamela was deliberately cutting her partners.

Another man might have *built* upon the act, but Warrisden was shrewd, and shrewdness had taught *him* long since to go warily in thought where Pamela Mardale was concerned. She might merely be angry. He walked by her side and said nothing. Even when they were seated on the balcony, he left it for her to speak first. She was sitting upon the outside against the railing, so that the light from the windows streamed full upon *her* face. He watched it, looking for the change which he desired. But it had still the one fault he found with it. It was still too sedate, too womanly for her years.

"I heard of you," she said. "You were shooting woodcock in Dalmatia."

"That was at Christmas."

"Yes. You were hurt there."

"Not seriously," he replied. "A sheep-dog attacked me. They are savage brutes, and indeed they have to be, there are so many wolves. The worst of it is, if you are attacked, you mustn't kill the dog, or there's trouble."

"I heard of you again. You were at Quetta getting together a caravan."

"That was in February. I crossed by the new trade route from Quetta to Siestan."

She had spoken in an indefinite tone, which left him with no clue to her thoughts. Now, however, she turned her eyes upon him, and said in a lower voice, which was very gentle, "Don't you think you might have told me that you were going away for a year?"

Warrisden had gone away deliberately, and as deliberately he had abstained from telling her of his intention. He had no answer to make to her question and he did not attempt to invent one. He sat still and looked at her. She followed the question with another.

"Don't you think it would have been kinder if you had written to me once or twice, instead of letting me hear about you from any chance acquaintance?"

Again he made no answer. For he had deliberately abstained from writing. The gentleness with which she spoke was the most hopeful sign for him which she had made that evening. He had expected a harsher accusation. For Pamela made her claims upon her friends. They must put her first or there was likely to be a deal of trouble.

"Well," she said, with a shrug of her shoulders, "I hope you enjoyed it."

"Yes. I wish I could have thought you would have enjoyed it too. But you wouldn't have."

"No," she answered, listlessly.

Warrisden was silent. He had expected the answer, but he was none the less disappointed to receive it. To him there was no century in the history of the world comparable to that in which he lived. It had its faults, of course. It was ugly and a trifle feverish, but to men of his stamp, the men with means and energy, a new world with countless opportunities had been opened up. Asia and Africa were theirs, and the farthest islands of the sea. Pamela, however, turned her back on it. The new trade route to Siestan had no message for her. She looked with envy upon an earlier century.

"Of course," he resumed, "it's pleasant to come back, if only as a preparation for going away again."

And then Pamela turned on him with her eyes wide open and a look of actual trouble upon her face.

"No," she said with emphasis. She leaned forward and lowered her voice. "You have no right to work upon people and make them your friends, if you mean, when you have made them your friends, to go away without a word for ever so long. I have missed you very much."

"I wanted you to miss me," he replied.

"Yes, I thought so. But it wasn't fair," she said, gently. "You see, I have been quite fair with you. If you had gone away at once, if you had left me alone, when I said 'no' to you two years ago, then I should have no right to complain. I should have no right to call you back. But it's different now and you willed that it should be different. You stayed by me. Whenever I turned, there were you at my side. You taught me to count on you, as I count on no one else. Yes, that's true. Well, then, you have lost the right to turn your back now, just when it pleases you."

"It wasn't because it pleased me."

"No. I admit that," she agreed. "It was to make an experiment on me, but the experiment was made at my expense. For, after all, you enjoyed yourself," she added, with a laugh.

Warrisden joined in the laugh.

"It's quite true," he said. "I did." Then his voice dropped to the same serious tone in which she had spoken. "Why not say the experiment succeeded? Couldn't you say that?"

Pamela shook her head.

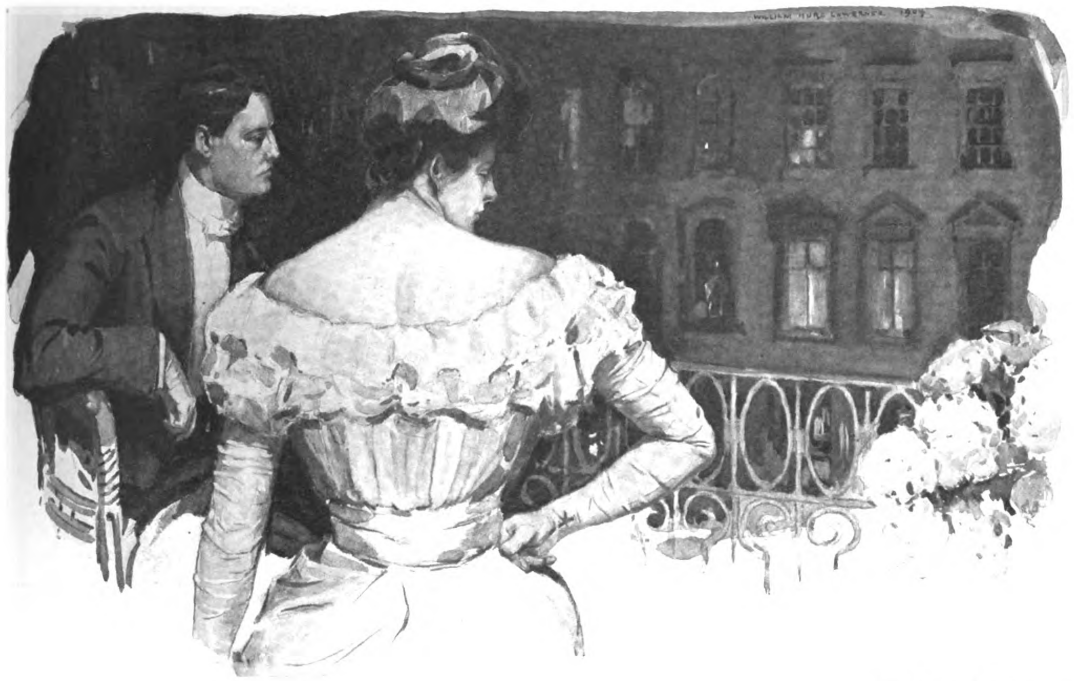
"No. I can give you no more now than I gave you a year ago, two years ago, and that is not enough. Oh, I know," she continued hurriedly as she saw that he was about to interrupt. "Lots of women are content to begin with friendship. How they can puzzles me. But I know they do begin with nothing more than that and very often it works out very well. The friendship becomes more than friendship. But I can't begin that way. I would if I could. But I can't."

She leaned back in her chair and sat for a while with her hands upon her knees in an attitude extraordinarily still. The jingle of harness in the Square rose to Warrisden's ears, the clamor of the town came muffled from the noisy streets. He looked upwards to the tender blue of a summer sky where the stars shone like silver; and he leaned back disheartened. He had returned to London and

"Do you see that light?" he asked, "in the window on the second floor?"



"Yes."

He took out his watch and noticed the time. It was just a quarter to twelve. He laughed softly to himself and said:

"Wait a moment!"

He watched the house for a few minutes without saying a word. Pamela with a smile at his eagerness watched too. In a little while they saw the door open and a man and a woman both in evening dress appear upon the steps. Warrisden laughed again.

"Wait," he said, as if he expected Pamela to interrupt. "You'll see they won't whistle up a cab. They'll walk beyond the house and take one quietly. Very likely they'll look up at the lighted room-window on the second floor as though they were schoolboys

Drawn by William Hurd Lawrence

"That house has always puzzled me," he said

nothing was changed. There was the same busy life vociferous in its streets, and this girl still sat in the midst of it with the same lassitude and quiescence. She seemed to be waiting, not at all for something new to happen, but for the things which were happening to cease, waiting with the indifference of the very old. And she was quite young.

"So nothing has changed for you during these months," he said, deeply disappointed.

She turned her face quietly to him and smiled. "No," she answered, "there has been no new road for me from Quetta to Siestan. I still look on."

"And you still prefer old men to young ones?" he cried in a real exasperation.

"They talk more of things, and less of persons," she explained.

That was not right either. She ought to be interested in persons. Warrisden rose abruptly from his chair. He was completely baffled. Pamela was like the sleeping Princess in the fairy tale, she lay girt about with an impassable thicket of thorns. She was in a worse case indeed, for the Princess in the story might have slept on till the end of time, a thing of beauty. But was that possible for Pamela, he asked himself? Let her go on in her indifference, and she might dwindle and grow narrow, her soul would be starved and all the good of her be lost. Somehow a way must be forced through the thicket, somehow she must be wakened. But he seemed no nearer to finding that way than he had been two years ago and she was no nearer to her wakening.

"No, there has been no change," he said, and as he spoke his eye was caught by a bright light which suddenly flamed up in the window of a dark house upon his right. The house had perplexed him more than once. It took so little part in the life of the Square, it so consistently effaced itself from the gayeties of the people who lived about. Its balconies were never banked with flowers, no visitors mounted its steps; and even in the daytime it had a look of mystery. It may have been that some dim analogy between that house and the question which so baffled him, arrested Warrisden's attention. It may have been merely that he was by nature curious and observant. But he leaned forward upon the balcony-rail.

who had escaped from their dormitories and were afraid of being caught by the master. There, do you see?"

For as he spoke the man and the woman stopped and looked up. Had they heard Warrisden's voice and obeyed his directions they could not have more completely fulfilled his prediction. They had the very air of truants. Apparently they were reassured. They walked along the pavement until they were well past the house. Then they signalled to a passing hansom. The cab-driver did not see them, yet they did not call out, nor did the man whistle. They waited until another approached and they beckoned to that. Warrisden watched the whole scene with the keenest interest. As the two people got into the cab he laughed again and turned back to Pamela.

"Well?" she said, with a little laugh of amusement, and the quiet monosyllable falling as it were with a cold splash upon his enjoyment of the little scene suddenly brought him back to the question which was always latent in his mind. How was Pamela to be awakened?

"That house has always puzzled me," he said. "I used to have rooms overlooking this Square, high up, over there," and he pointed to the eastern side of the Square towards Berkeley Street, "and what we have seen to-night used to take place every night, and at the same hour. The light went up in the room on the second floor, and the truants crept out. Guess where they go to! The Savoy. They go and sit there among the lights and the music for half an hour, then they come back to the dark house. They live in the most curious isolation with the most curious regularity. There are three of them altogether, an old man—it is his light I suppose which went up on the second floor—and those two. I know who they are. The old man is Sir John Stretton."

"Oh!" said Pamela, with interest.

"And the two people we saw are his son and his son's wife. I have never met them. In fact no one meets them. I don't know any one who ever knows them."

"Yes you do," said Pamela, "I know them." And in her knowledge, although Warrisden did not know it, lay the answer to the problem which so perplexed him.

To be Continued.

Miss Virginia Earl as "Sergeant Kitty"

Miss Virginia Earl is shown in the rôle of "Sergeant Kitty," in the comic opera of that name by Messrs. Sloane and Burnside. The story of the play concerns the efforts of a young soldier to escape the consequences of a wager in disposing of his rich uncle, by palming his wife off as the bride of a brother officer with whom "Kitty" is in love. The ensuing tangle furnishes the comedy of the piece

Mr. Forbes Robertson as "Hamlet"

Mr. Robertson will appear in his most successful part, "Hamlet," in the production of Shakespeare's play to be given at the Knickerbocker Theatre, New York, on March 7. Mr. Robertson has recently been appearing on tour in this country in George Fleming's dramatization of Kipling's novel, "The Light that Failed," which ran at the Knickerbocker Theatre during the early winter

"The Yankee Consul"

"The Yankee Consul," the new comic opera by Henry M. Blossom, Jr., and Alfred C. Robyn, was produced this week at the Broadway Theatre. The scene is laid in San Domingo. "Dona Teresa Ribera," a wealthy widow, has a daughter and a niece, "Bonita" and "Papinta." The governor is in love with "Bonita"; "Leopoldo," captain of the troops and a friend of the insurgents, is in love with "Papinta." The governor has arranged to give an elaborate ball, but as he has no funds in the treasury, is at a loss to know what to do. "Leopoldo" is planning to surrender the town to the insurgents. The governor begs "Bonita" to marry him, for he knows that, with her money, he can pay off the troops and prevent the revolution. "Leopoldo" attempts to have the governor arrested, but "Bonita" appeals to "Lieutenant-Commander Morrell," in charge of the United States Marines, and begs the naval officer to prevent the governor's arrest, as, if the arrest is made, there will be no ball. The climax of Act I. brings the American marines in a clash with the insurgents. In the second act the governor patches up a truce with "Leopoldo," and orders the lieutenant-commander arrested. The lieutenant is led away to a dungeon. "Papinta" agrees to elope with "Leopoldo," but is caught in the act by "Abijah Booze," "the Yankee Consul," who has learned of the arrest of "Morrell." He makes "Papinta" promise to have "Leopoldo" release the American officer. Meanwhile the Vice-President succeeds in overthrowing the republic. In the end, the complications are pleasantly solved

MME. AÏNO ACKTÉ AS "ELISABETH"

Madame Ackté, the new soprano engaged by Mr. Conried for the Metropolitan Opera Company, made her New York début last week as "Marguerite" in "Faust." She was born at Helsingfors, in Finland, and received her early training at the Paris Conservatoire, where she won several prizes. Later she sang at the Opéra, making her début as "Marguerite." Madame Ackté has sung also "Juliette" in "Roméo et Juliette," "Elsa" in "Lohengrin," "Elisabeth" in "Tannhäuser," "Eva" in "Die Meistersinger," and "Nedda" in "I Pagliacci." She has been decorated by King Oscar of Sweden, and while in Paris received the honorary nominations of Officier de l'Académie and Officier de l'Instruction Publique

Correspondence

WHY NOT A UNION OF THE CHRISTIAN CHURCHES?

FORT SCOTT, KANSAS, *January 19, 1904.*

To the Editor of Harper's Weekly:

SIR,—When I read such articles as that in the WEEKLY of recent date on "Moral Indifferentism" and such sermons as that delivered a few weeks ago on "Religion and the Common Schools," by the Rev. Dr. McLeod, of the Clinton Avenue Congregational Church, Brooklyn, New York, I wonder, as I have often done before, and as many others have, why some effort is not made to unite all the many Christian denominations and do away with this thing of disputes between what are now known as different branches of the same church. Of course, some will say that such a thing is impossible. Maybe it is, but, in my opinion, there is no plausible reason for it being so. Simply because one denomination interprets a certain passage of Scripture to mean one thing and another interprets it as meaning something slightly different is no reason why the two should be as strangers to each other. If both believe in the truths of the Old Bible and adhere to the religion of Jesus Christ, there is no reason why they should not unite in one grand body. Among all the members of all the Christian denominations now in existence, I will venture to assert, no two persons will be found who will exactly agree on all the interpretations of scriptural passages the one or the other may make. They will differ, at least slightly, on many things. Therefore, should each man start a church organization of his own? Should he deny church fellowship to the other, and be so egotistic and untair as to have no respect for the other man's opinions? Certainly not! Yet, have not the many church denominations of to-day been organized because of such practice of opinion? Undoubtedly they have! But let us put an end to such feelings and come together. Let something in the nature of a convention of all the churches be called, representatives from each body be sent, and a compromise and a union be effected among all Christ-believing people. Each man, though a member of a church in which there are a million members, can have his own private opinions on the minor matters as well as if he were one of a body of ten.

The effect and the benefit of such a union as I have herein suggested cannot be overestimated. It would be a *far more* economical way of spreading the gospel. In many small cities where there are now ten churches, each with a seating capacity of a thousand and with a regular average attendance of about one hundred each, one church a little larger could be made to suffice. In larger cities the attendance in proportion to the seating capacity of the churches is about the same, and a similar grouping could be made. This would save very much in the way of running expenses and for building purposes, which would enable the hiring of better ministers in many places and the erection of churches elsewhere, and for missionary work. In addition to the benefit in the way of economy, greater enthusiasm in the church would prevail, and a better example of Christianity would be put forth to unbelievers and the heathens in foreign lands. And to thinking people, and men especially, to see all who worship Christ kneeling at the same altar would appeal much more forcibly than ten sermons from as many different pulpits on why they *should* attend church services. It would not seem to them, then, that there are so many different roads to heaven. To see ten small armies of men, each flying the same banner, on the same field of battle, all after the same enemy and without any association with one another, or no concerted plan of action, would certainly be disgusting. It would look like the rankest of foolishness. Yet, in the action of the different churches, the observing man sees a portrayal of the same *thing*. If it be a war 'twixt Christ and Satan, why not make it such pure and simple, and not a sort of a many cornered skirmish? Then ministers would not have to occupy so much of their time in talking on "moral indifferentism" and could talk with better effect on "religion and the common schools."

I am, sir, CHARLES ALMA BYERS.

THE PAUPER LABOR OF EUROPE

February 1, 1904.

To the Editor of Harper's Weekly:

SIR,—It is quite possible to believe that our oratorical politicians keep certain exploded fallacies before the public to secure the opportunity to display both eloquence and patriotism. The facts that refute the fallacies may be easy to obtain, may even be used on other occasions by the same men in bland unconsciousness of their meaning, but still every now and then a thoughtful reader is made mad by the repeated assertion of that which he knows to be untrue.

I am not a party politician, simply a student of political economy in its application to the proper performance of a voter's duty, and as such have taken some trouble to find out the facts that relate to the cost of production in this country and in Europe, and no annoyance can be greater than to be urged to support one set of politicians because forsooth they stand between the American workman and the competition of worse-paid men across the sea.

The cost of labor in this country is but seventeen per cent. of the total cost of production, so I am informed by the Hon. C. Wright, and this percentage I believe to be lower than that of any country on earth. The wages here are higher, but the machinery, methods, are so much better that the European rival is beaten out of the field in nearly all the articles that are produced in quantities sufficient to provoke competition. Then, if to the cost of labor abroad we add the cost of freight, commissions, insurance, it is as certain as any fact can be in this uncertain world, that the policy of high protection should be defended upon some other ground than the wholly disinterested regard for the workman's interest. Most certainly a duty that is from three to six times as much as the whole wage the workman receives cannot be framed entirely in his interest.

It would be a great blessing to this whole continent if we could raise a native Carlyle who would kill the cant that seems natural to our political and financial leaders, and show us how to bury worn-out pretentions of philanthropy in a very deep grave.

I am, sir, MAGEE PRATT.

WHAT IS THE DEMOCRACY TO DO?

WACO, TEXAS, *February 5, 1904.*

To the Editor of Harper's Weekly:

SIR,—I have just read, and with considerable interest, your remarks under the head, "What Is the Democracy To Do?" It should go without saying that the Democracy will address itself to the important consideration of restoring the government to its constitutional functions. The first thing on the programme would be a tariff for revenue only. The next thing would be equal laws for every foot of territory over which the flag floats. The trust evil is generally recognized, but it is very doubtful if it can be cured by restrictive legislation. A lowering of the tariff wall would probably rid us of the trusts.

Mr. Roosevelt affords the Democracy the opportunity which it should be quick to take advantage of. He seems to have small regard for constitutional restraints. "My will is law," says Emperor William, and President Theodore seems to be of the same pattern. In an article in the *Youth's Companion*, written while he was Vice President, Mr. Roosevelt spoke of the President of the United States as a ruler. That assumption characterizes his every performance. How very different was the conception of Horatio Seymour, as outlined in an article in the *North American Review*. The radicalism of Roosevelt is in striking contrast to the conservatism of Cleveland, and this can be pressed home on the American people with telling effect by a sane Democracy.

I am, sir, GEORGE C. ROBINSON.

SOAP

ST. LOUIS, *February 6, 1904.*

To the Editor of Harper's Weekly:

SIR,—Of course you can say, with Byron,

> What is writ, is writ.
> Wish it would be worthier."

Or. . . . To the contrary, you might be willing to listen to reason and to repair the wrong you did. I refer to the item in yours of February 6 on *Soap*.

It is bad enough when one hears the argument, "I read it in the papers." Your paper, taking a somewhat exalted position [mind your coat of arms], gives a peculiar stamp of reliability and veracity to the contents of your columns. That is why most of us like HARPER'S WEEKLY.

Truth and fiction, and most of the last-named variety, is mixed in your "Soap" information. *Sapindus* is not at all so especially noteworthy. Neither are the plants new to science, as the average reader might feel inclined to think. There are about 600 species of the family where the plant quoted belong to, and all of them contain more or less of this substance what you erroneously call soap.

You bring about further delusions when you state, A natural soap can be obtained from the fruit.

And to impress your readers that you know what soap is, you continue,—alkali is absent.

Allow me to call your attention to the fact that good soap—and you advocated: the soap from *Sapindus utilis* is in many respects superior to the "ordinary" commercial product—always contains free alkali.

It would not wash the greasy spots out of your clothing, neither would it give you that agreeable sensation of being clean, after using it, if it did not. A natural soap does not exist. Soap is an artificial product, does not grow on trees. The consummation of soap is a guide for civilization. As Liebig and the German Emperor after him once said, "Seife ist die Hauptsache." Romans nor Greeks did know soap. Neither do savages use it at the present day. You are making soap when you shake linseed-oil with lime-water (an excellent remedy, by the way, for burns and scalds), or when you boil the drippings, the leakings, the washings of wood-ashes with fat. It is better to leave the making of hard soap to a soap manufacturer.

The Sapindus plants do not contain "soap," but saponin, an active principle appearing in white crystalline needles, when isolated, known to chemists under the collective name of "a glucoside."

It is found in the soapwort (*Saponaria officinalis*); in the soapwood (*Quillaia Saponaria*); is not as harmless a substance as one might think from its soapy name; does not clean clothes any more than water will do; *foams when shaken with water;* das ist der Pudels Kern. Beer, soda-water, and other beverages, to which the appearance of "body," of "richness," is given, which are wanted with foam owe this sometimes to saponin.

So you see, Mr. Editor, "Sapindus" contains quite a different thing from "Soap."

I am, sir,

J. B. NAGELVOORT.

To Safeguard Life

While radium, phototherapy, and other agencies are being used experimentally for the cure of cancer, its origin and development are being studied with the hope of increasing knowledge of the disease and of finding an effective cure. In Great Britain much work is being done under the direction of the Cancer Research Fund of the Royal College of Physicians of London, and the Royal College of Surgeons of England. During the last year the investigators maintained by this fund have been endeavoring to ascertain facts in connection with the distribution of the disease among various animals, and for that purpose have examined and experimented with malignant tumors in many vertebrates. They have found that a large number of animals are affected by cancer, and that in them the disease is substantially the same as in man, involving the same processes and changes. These malignant growths occur in animals under varying conditions of habitat, food, general life, etc., and the experiments do not yet show that there is difference in susceptibility in the case of different animals or of different parts of the body. The object of the experimenters was to find some exceedingly favorable conditions under which the disease developed, so that they could turn their attention towards checking it and thus get a clue to the best preventive methods. The knowledge of the various circumstances attending malignant growths has been increased, but the workers are no nearer a method of cure.

Advice to Mothers.—Mrs. Winslow's Soothing Syrup should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

THE INFANT
takes first to human milk; that failing, the mother turns at once to cow's milk as the best substitute. Borden's Eagle Brand Condensed Milk is a cow's milk scientifically adapted to the human infant. Stood first for forty-five years.—[*Adv.*]

Telephone Service lightens the cares of house-keeping, saves time, and prevents worry. Low rates. New York Telephone Company, 15 Dey Street, 111 West 38th Street.—[*Adv.*]

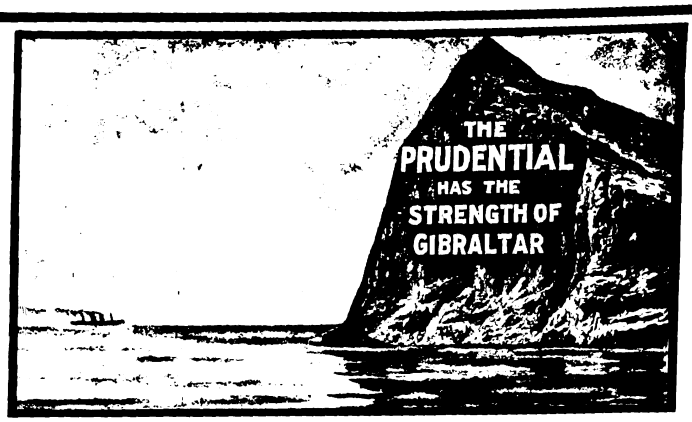
As a dinner wine, Cook's Imperial Extra Dry Champagne is unexcelled. It is pure, delicious and wholesome.—[*Adv.*]

Good health is real wealth—Abbott's Angostura Bitters is a veritable fortune to the weak.—[*Adv.*]

Take Piso's Cure for Consumption. It will cure your cough. 25c. By all druggists.—[*Adv.*]

ADVERTISEMENTS.

TIMELY CALLING
How the Pastor Saved a Life.



A man near Fort Gay, W. Va., made an entire failure in getting strength from the kind of food he ate, and not knowing that the trouble was with the food, kept on losing health until the doctors gave him up to die.

It was supposed to be consumption, because he was wasting away steadily, and slowly dying. His minister called from time to time, and one day brought along a package of Grape-Nuts, thinking from what he knew of the famous food that perhaps it might help him. The sick man took to it at once, and from that day began to get well. In writing, he says:

"I walked to town to-day, 3 miles. Have gained over 40 pounds in about 2 months, and my neighbors don't know what to say. I frequently am told it was as if I am raised from the dead. Everybody here knows of my case; you can tell people to write to the Postmaster or Rev. L. D. Bryan. I will make a sworn statement that Grape-Nuts saved my life." Name given by Postum Co., Battle Creek, Mich.

This is another illustration that where all other food fails one can be brought back to health and strength on Grape-Nuts. "There's a reason."

Look in each package for the famous little book, "The Road to Wellville."

Are You Single or Married?

In either case why not take out an Endowment Policy, payable when you are advanced in life? Time soon passes, and at forty or fifty you may need the money. Endowment Policies issued by this Company are especially profitable to policy-holders.

Dr. Lavendar's People

By MARGARET DELAND
Author of "Old Chester Tales," etc.

Mrs. Margaret Deland's recent book of stories concerning Dr. Lavendar and the other dwellers of Old Chester seems to have awakened the interest in these characters created by the publication of "Old Chester Tales." "It will be a lump of pure delight to those who have aforetime known and loved Old Chester," says the New York *Daily News*. The Chicago *Tribune* thinks that "the author has done on a small scale what Balzac, Zola, and others have done on a larger scale." The illustrations by Lucius Hitchcock are in close sympathy with the spirit of the text.

A Revolution in Electric Railroading

By Louis Bell, Ph.D.

WITHIN the past few months steps have been taken in the improvement of electric railway methods that promise great things for the future of the art. So long as the use of the electric motor in traction was confined to tramway work over distances of but a few miles no especial difficulties were encountered in delivering sufficient power to the cars. With the coming of long suburban and interurban lines, circumstances were altered, and while the long systems have been successfully operated it has been at the cost of large investments and great loss of power. The motor almost universally used on electric railways has been a direct-current machine—*i. e.*, one operated by electric current flowing steadily in one direction—and worked at very moderate electrical pressure—about 500 volts, in electrical parlance. The reason for this moderate pressure has been mainly the difficulty of building first-class motors of the necessary size for greater pressures, much on the same principle that it is hard to build a steam-engine which will work well with steam at a thousand pounds per square inch. Now the low-pressure motor is an admirable machine in itself, but to keep it supplied with power at a long distance from the source is a troublesome problem. In the first place, the conductors have to be big, just as the steam-pipe for a very low-pressure engine must be big, and in the second place, if the electrical pressure is low a larger current is required to produce the same power, and the large current is difficult to draw from the trolley-wire without damaging both the wire and the trolley.

Consequently, of late years, to meet the rapidly increasing cost of the conducting system and the loss of power which inevitably followed an attempt to economize on conductors and to secure the delivery of adequate power at the motors, engineers have made flank movements upon the difficulties. The first was by generating and transmitting the power as alternating current—*i. e.*, current periodically reversed in direction, say fifty times a second—at high pressure. Then at certain points along the line this current was delivered to a transformer, which, acting somewhat after the purpose of a reducing valve, and with great efficiency, delivered the power as alternating current of moderate pressure and large volume. But in order to use this in the ordinary motors it had again to be changed to direct current, this time in a rotating machine almost exactly like an ordinary dynamo and quite as costly. After all this was done the current was delivered to the ordinary 500-volt trolley-wire, or to a third rail, the ample surface of which gave a good chance for taking off current. These various transmutations of the current and the apparatus to accomplish them, involve large expense and very considerable loss, and while the third rail answers well on elevated roads, the leakage from it is likely to be severe in cross-country work, so that the whole system needed improvement very badly.

If the alternating current could be used directly in the motors, and delivered to the trolley-wire at fairly high pressure the case would be much bettered, but heretofore alternating motors have involved some very undesirable features. Very recently, however, the problem has been solved at least in part. The common railway motor is "series-wound"—that is, the current traverses the windings of the big magnet that forms the bulk of the machine and then goes on through the rotating armature that is geared to the wheels.

Such a motor does not reverse its direction of rotation when the direction of the current through it as a whole is reversed, but only when the relative direction through the magnet and armature is changed. So several inventors have recently planned this series-wound motor so that it will run *smoothly* on when the direction of the current through the whole is reversed *even* fifty times a second. The principle of the motor rests unchanged, and the extensive improvements have been in detail, merely to enable the alternating current to be used efficiently. Such a motor needs no complicated system for receiving its power, which can be generated as high pressure alternating current, and sent, if need be, directly into the trolley-wire, or along the line, and reduced in pressure for the trolley-wire by transformers mounted on the poles along the track. In the former case, as in long railway lines, the transformer would be carried on the *locomotive*, and the current being taken off by the trolley at very high pressure, an ordinary overhead wire would supply very large power without trouble. On entering the outskirts of a city the motor could take its current directly *from* the trolley-wire at low pressure, or, as it still retains the properties of an ordinary series-wound railway motor, can be made to pass upon an ordinary trolley system and operate with the customary direct current. The possession of such a motor confers upon electric traction a facility and flexibility of rare value, especially in solving the problems of ordinary railroading over long distances. These alternating railway motors, *differing in some particulars, but having similarly valuable properties*, have now been developed by at least four makers, and are awaiting trial upon a large scale. They are probably yet far from perfect, and may require much working over to obviate sparking and other minor difficulties, but they give rare promise of usefulness, certainly in some fields where improvements have been badly needed, perhaps even in the large general work of replacing the steam-locomotive on long railway lines.

International Aspects of the War

By Albert Bushnell Hart, LL.D.

FROM Eastern Asia comes again the

> Terrible grumble and rumble and roar,
> Telling the battle is on once more:

and from end to end of the three continents of Asia, Europe, and America spread interest, sympathy with one or the other belligerent, and a note of expectancy unusual even in war. For the whole world knows that though the struggle for the moment is between Russia and Japan, the underlying stake is the future of China, and that is a question which is neither Asiatic nor European, but must be settled through world diplomacy and by world powers.

Upon this contest the people of the United States look with an absolutely new feeling of personal interest. When on May 1, 1898, Admiral Dewey destroyed the Spanish fleet in Manila Bay, and thereby practically annihilated the Spanish power in the East Indies, the United States became a partner in the future concerns of Asia. Only 350 miles separate the northernmost of the Philippine Islands from the mainland of China. The rise of a new factor in Eastern affairs was made clear when in 1900 a detachment of American troops marched to Peking side by side with the contingents of England, France, Germany, Russia, Italy, and Japan; and still more after the Boxer rebellion was over, when the consummate diplomacy of John Hay pointed out that the "open-door" policy was the only solution of the Chinese question.

The participants in that inward march are significant; leaving out of account the Belgians (?) and the Italians, whose interest in the matter was very small, and neglecting France for the moment, the troops of six nations participated in this campaign, and they are the six nations in whose hands lie the future destinies of mankind. The United States, Great Britain, Germany, and Russia are the four western powers of the world; China and Japan are the two eastern powers. France and Austria, in the long run, will have no more influence in the political development of Asia than Persia and Siam in the destinies of Europe; and unless new German or Anglo-Saxon powers spring up in Africa or Australia, the number of dominant nations is already made up. Of these six, two are engaged in hostilities at this moment, three of the others look on with uneasiness, and one of them, China, with dread apprehension.

For, though for the moment the object of the two powers at war is to destroy each others' fleets and to take or defend Port Arthur or Tai-lien-wan, though they contend for influence in Korea and influence in Manchuria, the ultimate object of this war is to influence the future of China. Let no man be deceived about the Flowery Kingdom. Every thoughtful traveller or resident in China recognizes immense elements of strength and of race coherence. It is true that news circulates slowly, that the southern provinces lose no sleep when the northern provinces are invaded, that the government is clumsy, involved, weak, and preposterously wrong-headed, but no people on earth have such a homogeneous population, such universal customs, such an unquestioned religious system, such pride of race and ancestry, such determination not to be pulled apart. The Chinaman is inert, a poor soldier, has the worst-officered army in the world, but the campaign of 1900 showed that under good leadership, the Chinaman is a good marcher, an obedient soldier, and a reckless fighter.

The underlying belief that the Chinese, if not China, may be made a militant power probably lies at the bottom of the idea of dividing China. What seems easier than to lop off Manchuria for the Russians, the Yalu for the Japanese, Shantung for the Germans, the upper valley of the Yangtse-Kiang for the French, and the rich coast provinces for the British? But dividing China is like dividing a pond by putting down nets; you may keep the fish from swimming freely about, but, after all, it is one water, and the moment a hole is made in the net it is again one shoal of fish. One hundred and thirty-two years have passed since first the division of Poland, and the Poles are still a people; and if they were four hundred millions, instead of four millions, would still be a government in spite of all their neighbors.

This conviction of the physical impossibility of tearing China into fragments immensely strengthens the insistence of the United States that China shall not be nominally divided into spheres of commercial influence, that in all parts of the empire there shall be equal privileges of trade and of intercourse; and here comes in the great solicitude of the administration over the present war.

A glance at the map will show that it is impossible for Japan and Russia to collide on land without endangering China. The Russians are at present the most expansive people in the world; their vast country, though situated on two seas, is remote from the great thoroughfares. For centuries they strove to push their way westward along the Baltic; for centuries they have sought to take Constantinople, and thus reach the Mediterranean. Beaten

ilroadi

ck from both points by western Europe, ey have at last turned eastward, and in century and a half of steady progress ve forced their way to the Pacific, by izing the northern part of the Amur Val- y and the coast to Vladivostok, where they ped to find a Pacific port. That port is t only subject to ice; it is not upon the en sea; the road to the Pacific is through raits flanked by the Japanese on the one le and Korea on the other. Hence the sperate efforts of Russia to gain access to e Yellow Sea through the Chinese province Manchuria, which reaches from the Amur the Gulf of Pechili; the railroad route to adivostok leads through that province, and a comparatively short spur Port Arthur reached. To the Russian mind, the future Siberia, central Asia, and Russia itself pends upon the holding of that port as addition to the less favorably situated adivostok. It is very much such a case the annexation by the United States of lifornia, after we had obtained a hold on Pacific coast through the acquisition of State of Oregon.

The difficulty of this process is that it ctically involves the military occupation Manchuria. The Siberian Railroad is a at natural highway, which, with its minus, cannot be left, according to Rus- n ideas, without protection by troops, and own experience in Panama has shown w difficult it is to hold a railroad with- holding the country through which it is.

But Port Arthur is situated very near cing, the capital of China; and the United tes has taken the bold and irrevocable p of closing a commercial treaty with ina, under which Manchuria is included, l of despatching consuls to Mukden and er places occupied or likely to be occu- d by Russian forces. The strain here is same as in the Balkan provinces, nom- lly a part of the Turkish Empire, and eiving consuls accredited to Turkey, al- ugh that power really has little author- over them.

War

he situation in Japan is one of the mira- of the world's history. Fifty years ago eudal monarchy in its customs, its wars, l its arts, and very like the Europe of enturies ago, Japan has become a mod- world power. The just ambition of the anese is to control Korea, which bounds ir great interior sea to the westward, and ch extends north almost to the port of divostok.

n overpeopled and intensely ambitious ntry, Japan must either enlarge or de- e. The published statements of the two l foreign offices show very clearly that Japanese demanded a free hand in Korea, ountry desperately misgoverned, which ld clearly profit by Japanese occupation; that the Russians, though inclined to ede a part of Korea, would not consent he fortification of the straits, which are r principal outlet from Vladivostok to open sea, and would give no guarantee inst the eventual annexation of Man- ria. By a turn, therefore, which was a part of the original contention between two parties, Japan has come to stand the integrity of China, including Man- ria.

apan in the late Chinese war took Port hur, but was compelled to give it up by western powers. A second time Japan esieging the same port, but if she takes he is pledged not to hold it for her although if Russia takes Korea or a of it, she is under no such obliga- A Japanese control of Korea does not tself militate against the interest of the tern powers, for at best it would be only apanese *tête-du-pont* on the mainland. object of the Russians is to enlarge ter- rial claims already thought too large, they are fighting as they fought against rles XII. of Sweden and against the s in the Crimean war, for an outlet to sea.

hile this struggle is going on almost ight of Peking, the Chinese Empire lies ressed but inert; and John Hay, whose m to be the greatest American diplomat d be disputed by none save John Quincy ms, directs his efforts towards preserving e in China, which is necessary if there o be peace in Europe and if there is to erenity in the United States.

AMONG the new automobiles of the year, our Columbia Electric Runabout, shown herewith, fills an important place. It is the lightest electric made with the same battery power, and no other approaches it for speed, endurance and reliability under all conditions of use. Another new Columbia that is selling rapidly is our 12 h. p. Light Gasolene Tonneau with two opposed cylinders in a forward bonnet and novel automatic features of control which make it easier to operate than any other gasolene car on the market.

Catalogue of these and other Columbia vehicles will be sent on request; also special catalogues of our Commercial Automobiles and Town Carriages for private service.

The Procession in the Grounds of the Smithsonian Institution

Professor Bell and Secretary Langley, of the Smithsonian Institution, awaiting the Arrival of the "Dolphin"

The Military Escort at the Arrival of the "Dolphin"

HONORING THE FOUNDER OF THE SMITHSONIAN INSTITUTION

The body of James Smithson, the founder of the Smithsonian Institution, which was brought to America from Genoa on the steamer "Prinzessin Irene," arrived in New York on January 20, and was sent to Washington for reinterment. Smithson, who was a son of the first Duke of Northumberland, lived all his life in Europe. When he died in 1829 he left a fund for the establishment of an institution "for the increase and diffusion of knowledge among men." When the cemetery at Genoa fell into neglect, Professor Alexander Graham Bell suggested that Smithson's remains should be brought to this country and suitably entombed as an honor to the founder of the institution which bears his name

Oysters and Disease

s a result of recent agitation over the
municability of disease by shell-fish ta-
from waters polluted by sewage, there
e been numerous investigations of the
ject by biologists in Europe and the
ted States. The last report of the Brit-
Royal Commission on Sewage Disposal
siders in detail the progress made in re-
investigations, and states that there is
doubt that many cases of typhoid fever,
well as other diseases, are caused by eat-
shell-fish obtained from waters contam-
ed by sewage. So serious was the evil,
he opinion of the commission, that the
satisfactory method of coping with it
to confer on some competent authority
lute jurisdiction over tidal waters from
h were taken shell-fish for human food,
rder that no supplies whatsoever should
erived from polluted waters. The com-
ion also realized that some definite
dard of purity must be established, as
were able to find the *Bacillus coli*, which
nsidered to indicate the presence of hu-
pollution, in nearly all of one thou-
oysters which were examined bacterio-
cally. As many of these specimens came
n waters known to be very pure, it pre-
ed a difficulty which will require further
arch to remove. It has, however, been
onstrated that shell-fish should not be
n, stored, or fattened in water to which
possible pollution may come. The same
stion was also studied at the Woods
l Laboratory of the United States Fish
mission last summer, but the results,
ch are believed to be most interesting,
e not as yet been published.

Experiences of a Huntsman

By Reginald Gourlay

No "lover of the wind and open sky" can resist the subtile, fascinating charm which is to be found in that manly and delightful pursuit called "marsh shooting."

The clear, pure air, the vast open spaces, the broad expanse of mingled land and water extending to the horizon, with, perchance, the steel-blue line of a vast lake to bound the prospect,

> The clear water spaces fringed with rushes gray,
> With lines of wild-fowl passing far away,

and, above all, the teeming animal life to be found by the sportsman in those "large solitudes"—make "marsh shooting" peculiarly fascinating to the real sportsman who likes to work for his game and to shoot it fairly.

And the shooting of the traverser of the marshes is as fair as shooting of any kind can be. All his birds are killed singly on the wing, and have a fair chance for their lives; his game is the agile Wilson snipe, which he cuts down honorably at thirty-five yards as he zigzags off like a piece of gray-colored forked lightning over the marsh-grass and tussocks. Or he follows the wild and wary golden plover over vast flats of mingled green and gray—sand and marsh-grass; or he lures the yellow-leg or telltale plover by crafty imitation of its note. If he gets ducks—and very frequently he gets many, and of many different sorts—he brings them down like an honest sportsman as they rise quacking loudly from some solitary pool, or as they whistle over the place where he lies hidden in some clump of tall spear-grass or bulrushes, instead of murdering them five or six at a time as they hover, bunched together, over his decoys, or, still worse, sitting down among them.

Great as is the fascination of the "mixed bag" which every sportsman is liable to acquire in the marshes, there is one game-bird who is pre-eminently *the* game-bird of these vast waste places. That bird is the Wilson snipe *(Gallinago wilsonii)*. This dashing and crafty game-bird of the marshlands enjoys, among other claims to distinction, the honor of being the most widely distributed game-bird in the whole world. His range is greater even than that of the wild-goose, and he is found in every quarter of the globe. Even in the great Island Continent of Australia, which is in itself a feat; for the snipe there is absolutely identical with the snipe of Europe or America, and is about the only bird or animal in Australia quite similar in every respect to those of other lands.

He is found in Africa's burning clime, and far up within the arctic circle in North America. The favorite pursuits of the British subaltern in India are "snipe and tiger shooting," while in the Western States of America, and especially in Canada, his vast numbers and the ease with which many of his resorts may be reached render him an object of more attention to the sportsman than is altogether safe or agreeable to himself. There is no more healthful or fascinating pursuit than marsh shooting. The great wide prospects, the wonderful blending of colors, from the greens, grays, reds, and brick browns of the autumn reeds and grasses to the alternate indigo, blue, or slate and amber-clouded sky, with the silver line of some great lake bounding the whole vast expanse of blended land and water, make the scenery that the sportsman is surrounded by while following the Wilson snipe to his chosen haunts most poetic, and quite unforgettable by any man who has some of the artist in his temperament—as all true sportsmen have. Then there is the abundant wild-animal life of these vast lonely spaces, the opportunity of making that thing dear to the sportsman's soul—"a mixed bag."

I have shot in one day, in a great marsh of this kind in Canada, black duck, squaw duck, green-winged teal, Wilson snipe, robin-snipe, the greater and lesser telltale (yellow-leg plover), ring-necked and golden plover—surely a bag "mixed" enough to content any one. But the Wilson snipe is *the* bird which one goes chiefly in search of when one

DEAFNESS CURED

A Device That is Scientific, Simple, Direct, and Instantly Restores Hearing in Even The Oldest Person—Comfortable, Invisible, and Perfect Fitting.

190 Page Book Containing a History of the Discovery and Many Hundred Signed Testimonials from All Parts of the World — SENT FREE.

The True Story of The Invention of Wilson's Common Sense Ear Drums Told by Geo. H. Wilson, the Inventor.

I was deaf from infancy. Eminent doctors, surgeons and ear specialists treated me at great expense and yet did me no good. I tried all the artificial appliances that claimed to restore hearing, but they failed to benefit me in the least. I even went to the best specialists in the world, but their efforts were unavailing.

My case was pronounced incurable!

I grew desperate; my deafness tormented me. Daily I was becoming more of a recluse, avoiding the companionship of people, because of the annoyance my deafness and sensitiveness caused me. Finally I began to experiment on myself, and after patient years of study, labor, and personal expense, I perfected something that I found took the place of the natural ear drums, and I called it Wilson's Common Sense Ear Drum, which I now wear day and night with perfect comfort, and do not even have to remove them when washing. No one can tell I am wearing them, as they do not show, and as they give no discomfort whatever, I scarcely know it myself.

With these drums I can now hear a whisper. I join in the general conversation and hear everything going on around me. I can hear a sermon or lecture from any part of a large church or hall. My general health is improved because of the great change my Ear Drums have made in my life. My spirits are bright and cheerful. I am a cured, changed man.

Since my fortunate discovery it is no longer necessary for any deaf person to carry a trumpet, a tube, or any other such old-fashioned makeshift. My Common Sense Ear Drum is built on the strictest scientific principles, contains no metal, wires, or strings of any kind, and is entirely new and up to date in all respects. It is so small that no one can see it when in position, yet it collects all the sound waves and focuses them against the drum head, causing you to hear naturally and perfectly. It will do this even when the natural ear drums are partially or entirely destroyed, perforated, scarred, relaxed, or thickened. It fits any ear from childhood to old age, male or female, and aside from the fact that it does not show, it never causes the least irritation, and can be used with comfort day and night without removal for any cause.

With my device I can cure deafness in any person, no matter how acquired, whether from catarrh, scarlet fever, typhoid or brain fever, measles, whooping cough, gatherings in the ear, shocks from artillery, or through accidents. My invention not only cures, but at once stops the progress of deafness and all roaring and buzzing noises. The greatest aural surgeons in the world recommend it, as well as physicians of all schools. It will do for you what no medicine or medical skill on earth can do.

I want to place my 190-page book on deafness in the hands of every deaf person in the world. I will gladly send it free to anyone whose name and address I can get. It describes and illustrates Wilson's Common Sense Ear Drums and contains bona fide letters from numerous users in the United States, Canada, Mexico, England, Scotland, Ireland, Wales, Australia, New Zealand, Tasmania, India, and the remotest islands. I have letters from people in every station of life—ministers, physicians, lawyers, merchants, society ladies, etc.—and tell the truth about the benefits to be derived from my wonderful little device. You will find the names of people in your own town and state, many whose names you know, and I am sure that all this will convince you that the cure of deafness has at last been solved by my invention.

Don't delay; write for the free book to-day and address my firm—The Wilson Ear Drum Co., 1559 Todd Building, Louisville, Ky., U. S. A.

dons long water-proof boots, and seeks the great marshes

Where o'er the long gray wolds at night the autumn airs blow cool
On the sword-grass, and the spear-grass, and the bulrush in the pool.

The Wilson snipe is a most interesting study to the philosophical sportsman, presenting in his intellectual characteristics the same queer mixtures of craftiness and imbecility as are found in those of his near relation, the woodcock. Like the woodcock, too, he is a "Jekyll and Hyde" sort of bird as regards his flight, having at least two—sometimes three or four—distinct methods of flying at different parts of the shooting season. Both birds are the most difficult of game-birds to kill, at some times in the year, and quite easy, comparatively speaking, at others. And, curious to say, these times are the direct antipodes of each other. The woodcock is a comparatively easy bird to shoot early in the season, when he has just finished moulting and is languid with the heat, and is a very different proposition three months later, when he whizzes off through the leafless boughs with the bullet-like flight of ruffed grouse, and an aptitude for dodging, besides, which belongs to himself exclusively. The snipe, on the other hand, is a very hard bird to hit early in the season, when he is thin and light. Then he is alert, rises wild, and practises the well-known three zigzag twists or twirls, which have so often caused the crack shot "to waste his lead upon the desert air." Late in the season, when he is fat and lazy, he generally leaves out these elusive twists altogether, and goes off as straight as a crow—and not much faster—becoming quite an easy bird to bag, perhaps the easiest of all marsh game-birds. I am inclined to think, however, from a somewhat intimate acquaintance with both birds, that the Wilson snipe is superior, to a certain extent, to the woodcock, intellectually speaking. A woodcock, when flushed, will nearly always leave the dense cover where his real safety is and go to the edges of thickets and outlying clumps, where he is shot with comparative ease. A snipe generally goes further into the depths of the marsh every time he is flushed.

The Wilson snipe, however, has one very idiotic trick, which has been fatal to many of his long-billed race, and which the stupidest woodcock would scorn. Many sportsmen besides myself must have flushed a snipe, missed him with both barrels (such things *do* happen), and then stood and watched him making the straightest possible line towards the distant horizon, till he became a mere speck against the gray sky. Then all at once, without apparent rhyme or reason, he will waver in his flight, alter his course completely, and after seeking various opposite points of the compass, draw rapidly nearer and nearer, till finally, with the swift perpendicular descent peculiar to this bird, he will drop like a rocket-stick, coming down within fifty yards of the place where he was first fired at. I never could understand why the Wilson snipe performs this singularly idiotic piece of self-sacrifice, but I have seen him do it scores of times. Various species of plover, especially the golden and yellow-leg plover, will return again and again to the place where any wounded comrades have been left fluttering. It is quite easy, though, to understand why the poor birds do this, and it seems unfair, not to say cruel, of the sportsman to take advantage of their affection for each other. The beautiful upland plover, however, is superior to any weakness of that sort, and is—all things considered—the hardest to approach of any game-bird that flies, with the exception, perhaps, of the wild-goose.

A word should be said as to the best kind of dog for snipe and general marsh-land shooting. In my opinion setters and pointers, beautiful and sagacious dogs as they are, appear at their very worst in a marsh—are out of place there, in short.

The ideal dog for marsh shooting is a well-broken and courageous retriever or Irish water-spaniel. It may be set down as an absolute axiom in this kind of shooting "that the dog can hardly hunt too near the gun," and should be educated to understand that his principal business is to *retriere* the game.

Music

Weingartner

AFTER the masterful Colonne, the mathematical Kogel, the rhapsodic Henry Wood, the Philharmonic Society put forward at its sixth concert, on the evening of February 13, the eminent Felix Weingartner, of Munich, one of Germany's most admired "bâton prima donnas," as the fourth of the imported conductors whom it has engaged for its present season. The precise epithet for Mr. Weingartner does not readily suggest itself. His artistic personality is curiously divided, curiously unsusceptible of characterization. He is reticent, yet consummately dramatic. He knows the remoter excellences of repose, of a determined emotional continence; yet he is superbly compelling. His beat has a military severity and preciseness, yet it has an electric compulsion: Weingartner is, in brief, a conductor of astonishing individuality, finesse, and authority.

The occasion of his first American appearance also revealed Mr. Weingartner as a composer—although it was not strictly a revelation, for the identical tone-poem which he played with the Philharmonic, "Das Gefilde der Seligen," after the painting by Böcklin, was performed six years ago under Mr. Damrosch's direction. It is a work of poetic temper, of which the essential mood is admirably sustained; and it is exquisitely scored. But is there no contemporary German musician, one grows weary of wondering, who can write without reuttering the inspirations of Wagner—always, of course, excepting the amazing Strauss?

A Concert of American Music

How shall we treat the American composer in the matter of performing his works? Shall we pat him encouragingly on the back, arrange special concerts as occasions for bringing forward his music, and generally treat him as a deserving object of public charity? Or shall we treat him simply as a creative artist whose productions are to be regarded precisely as we regard the productions of European composers, and exploited according as they are admirable or desirable in themselves?

Mr. Heinrich Conried, if he gives any of his valuable time to the consideration of such trifling questions as the promotion of our national art, must have wondered a little concerning these matters after his "American Composers" concert last week at the Opera House. It was an amiable idea to arrange an occasion especially for the purpose of bringing forward works by our native composers, but it may be doubted whether the principle involved is a commendable one; and to the method in which the scheme was realized one must take unqualified exception. American music is not benefited by segregating it, by assuming toward it the condescending pose of the patron. Our composers are in no need of such benevolences. But if the thing must have been done, at least Mr. Conried—or Mr. Mottl, if he was responsible—should obviously have made some effort to exploit the best that is being done in American music, in place of much that was set before us last week as being, presumably, representative. Was it worth while to make an event of performing such music as Mr. P. T. Miersch's "Norse Legend," or Mr. Henry K. Hadley's "Oriental Suite," or Mrs. Beach's "June," or Mr. C. B. Hawley's banal song, "Mollie's Eyes"? These things are well enough in their way, but they are neither representative nor important. One wished for more music of the sort that Miss Gertrude Normand-Smith has achieved in her song, "Solstice Night"—which is by no means in her best vein. There are others of her songs which might have been brought forward in evidence of her distinguished and charming talent. An exception should be made, also, of Mr. Sydney Homer's song, "Prospice," which is sincere and finely felt, and of the aria, "Afar on the Plains of the Figris," from Mr. Chadwick's "Judith"; for these seemed of genuine consequence. As for the rest, one could not but feel that its selection was undertaken in a spirit of contemptuous indifference to the possibilities of American music.

COMMENT

THE texts of the Japanese and Russian replies to Mr. Hay's note, which were officially published on February 23, will, of course, be closely scrutinized. Before noting these responses we ought to recall the precise terms in which Mr. Hay's proposal was couched. He said, it will be remembered, not a word about Korea, but suggested that, in the course of the military operations which had begun between Russia and Japan, the neutrality of China, and in all practicable ways her *administrative entity*, should be respected by both parties. In its answer, dated February 13, the Tokyo government also made no allusion to Korea, but declared itself prepared to respect the neutrality and administrative entity of China, outside the regions occupied by Russia, as long as Russia, making a similar engagement, should, in good faith, fulfil the terms and conditions of such engagement. On February 19 the St. Petersburg government, refraining, in its turn, from any reference to Korea, signified a readiness to adhere to an understanding with other powers for the purpose of safeguarding the neutrality of the Chinese Empire on certain conditions, namely, first, China herself must strictly observe all the duties of a neutral. Secondly, the Tokyo government must loyally observe not only the engagement now specifically entered into with the powers, but also the principles generally recognized by the law of nations. Thirdly, that neutralization should in no case be extended to Manchuria, the territory which, by the force of events, may serve as the field of military operations.

Our State Department chose to accept the Russian note as embodying assent to its proposal, and, as such, has made it known to the neutral powers. It is clear, however, that from the omissions and conditions certain deductions must be drawn. First, both Korea and Manchuria are regarded by the belligerents as destined to be the prizes of victory. Secondly, each belligerent will arrogate for itself the right to determine whether neutrality has been observed by the other belligerent and by China; and if, in its judgment, the duties of a neutral have not been complied with, it will reserve to itself entire liberty of action. We should further notice that the St. Petersburg government already protests that at Chemulpo and Port Arthur, on February 8 and 9, Japan violated the principles of international law. The inference seems to be that Russia, should she prove successful, would not consider herself bound by her assent to Mr. Hay's proposal, but would hold that the conditions specified by her had been violated by Japan. It is also probable that a pretext could easily be found by Russia in the depredations committed by Chinese marauders in Manchuria for maintaining that China had failed to observe the promised neutrality. We do not, therefore, put much faith in the efficacy of the precautions taken by Secretary Hay.

We direct attention in another column to ex-President Cleveland's stirring appeal to the Democracy. We would note here the reception which the call has met with on the part of representatives of divers sections of the party. With reference to Mr. Cleveland's modest statement that he speaks only as one of the "rank and file," Mr. Bryan has flippantly remarked that he would admit that the ex-President was "rank," but would not accept him as belonging to the "file." Evil communications corrupt good manners. Such a comment on a man who has been twice elected to the Chief Magistracy sounds strangely from one who has himself been twice the nominee of a great party for the same high office. It is no secret that Mr. Bryan, although he has as yet made no public avowal of the fact, looking forward apparently to descending on the Democratic national convention like a god out of a machine, has been prevailed upon to dwarf his own personality by becoming a Hearst boomer. Only in this way can we account for the ostensible success of the Hearst canvass, which at first seemed certain to be drowned in laughter, in Mississippi, Kentucky, Iowa, and several other States.

That the Hearst-Bryan combination can manage to control a third of the Democratic national convention seems to us still incredible, however. Should its followers fail to secure a third of the delegates, or should the convention decide to abolish the two-thirds rule as having lost its usefulness, we have but little doubt that the wish of New York, if pronounced with unanimity and emphasis, would determine the choice of a candidate. It is indisputable that Mr. Cleveland's eloquent utterance has confirmed the conviction of Mr. Charles F. Murphy, the leader of Tammany Hall, that the New York delegation should demand the nomination of the ex-President. A fervent hope that such a demand will be made is said to have been expressed in an interview with Mr. Murphy by a number of editors of influential Southern newspapers. It is a melancholy fact that at such a juncture Colonel Henry Watterson, the editor of the Louisville *Courier Journal*, should decline to take any definite position and should announce his retirement from active politics. On Saturday, February 20, he declared that he would not raise a hand against the Kentucky Governor's plan to send a Bryan-Hearst delegation to the Democratic national convention. If the Democrats are to lose a third national election through Mr. Bryan's agency, Colonel Watterson would let Mr. Bryan and his friends bear the whole responsibility. We concur in his final assertion that if the Democratic party has not within itself saving grace enough to avoid suicide, no individual or newspaper effort will avail to save it.

On Saturday, February 20—three days before the date fixed by the United States Senate for a vote on the ratification of the canal treaty—the constitutional government of the new Republic of Panama became operative with the inauguration of Dr. Amador as President. It will have been noted that the four cabinet seats are equally divided between the Liberals and the Conservatives. The division, of course, is the outcome of a compromise, proofs of which are said to pervade the text of the Constitution. Although Panama's organic law has not yet been published, we have learned that the Liberals, who formed a majority of the constitutional convention, refused to give the Catholic Church the preponderant position assigned to it by Colombia's reactionary Constitution of 1886. In Colombia, for the last eighteen years, Catholicism has been recognized as the established Church, and the bishops and clergy have been paid by the state. The utmost concession that the Liberal members of the Panama constitutional convention would consent to make was a perfunctory acknowledgment that Catholicism is the prevailing religion on the isthmus—which, for the moment, it undoubtedly is—but not on that account would they impose upon the state responsibility for the support of ecclesiastics. Priests, nevertheless, may be intrusted with educational or charitable functions, and in that event they will be paid. Passing to matters purely secular, we observe that Dr. Amador's cabinet does not include a Minister of War or a Minister of Marine. Such officials, of course, would have been superfluous, since our Federal government guarantees the Republic of Panama from foreign aggression and from domestic insurrection. The young com-

monwealth will need neither an army nor a navy; for the maintenance of order policemen will suffice. Under the circumstances, the natives of the isthmus will be at liberty to devote most of their national revenue to the creation of facilities for communication and transportation throughout their territory, and to the development of their mineral and agricultural resources. Few persons realize the extent to which the Isthmus of Panama remains as unexplored to-day as it was when Balboa crossed it to catch the first glimpse of the Pacific.

The reported death of the Empress Regent Tsi An, at the age of seventy, has directed attention to the extraordinary career of a woman who for more than forty years has been the ruling spirit of the Chinese Empire, although for more than four thousand years the native prejudice against the exercise of authority by the female sex had been but twice overcome. Had she been a descendant of Confucius, or of the Ming dynasty, which preceded the present reigning family, or a high-born Manchu, her rise to autocratic power would have been more intelligible. As a matter of fact, she began life under grave disabilities, being of humble origin, though her parents are said to have been Manchus. Adopted by a Manchu family of considerable means, she was trained in the accomplishments which the Chinese prize in women, but her intellect owed nothing to the influence of an invigorative education. She got her opportunity when she became one of the concubines of the Emperor Hien Fung, who reigned from 1850 to 1861. She had no son by him, but, strange to say, she commended herself so strongly to the Empress Dowager, the mother of Tung Che, the next sovereign, that during his long minority the two women ruled conjointly as Empresses of the East and of the West. On Tung Che's death, they raised to the throne his infant cousin, who still ostensibly reigns under the name of Kwang Su. Since the death of her feminine coregent in 1881, Tsi An has been the real mistress of China, except during a brief interval, when Kwang Su, having attained his majority, was permitted temporarily to rule, and showed an inclination to reorganize the Chinese system of education on Western principles. The innovation was quickly stopped by a palace revolution, and during the last few years Kwang Su has been merely a figurehead, the Empress Tsi An having been recognized not only by all Chinese officials, but also by all the treaty powers, as Regent.

Opinions differ as to the extent to which she was implicated in the Boxer uprising against foreigners and in the attack on the legations at Peking. It is doubtful whether the truth will be known before the overthrow of the present Manchu dynasty, for only then will native traditions permit the publication of the veracious history which it is one of the functions of the Chinese censors to compile. Meanwhile, if we keep in view the difficulties, foreign and domestic, with which she has had to grapple, and also the length of time during which she has maintained ascendency, we must recognize that her experience has not been parallelled by any of her sex. Relatively restricted geographically was the sphere of the more or less legendary Semiramis in Assyria, or that of Hatasu or Cleopatra in Egypt, or that of Zenobia at Palmyra, or that of Elizabeth of England. The only women who can be compared with Tsi An as regards the obstacles overcome or the range and duration of their authority are the Empress Theodora of Constantinople and Catharine II. of Russia. Tsi An differed from both of her analogues in that she twice saw her capital occupied by a foreign force and yet lived to reassume the attributes of sovereignty.

Scarcely had Senator Hanna died when the leadership of the Republican party in Ohio became the subject of discussion. Reports from the State were for a time conflicting with regard to the coming distribution of political power. We were first informed that Governor Herrick, Senator Foraker, and Mr. George P. Cox, the Cincinnati "boss," had formed a combination, the outcome of which would be to make Governor Herrick the successor of Mr. Hanna in the United States Senate for both the short and the long terms, on the understanding that he should not attempt to interfere with Senator Foraker's control of the Federal patronage. As the result of Mr. Herrick's election to the United States Senate would be the assumption of the Governorship by the present Lieutenant-Governor, who is one of Mr. Foraker's friends, it was obvious that the latter would be powerfully strengthened in the State, as well as in the nation. It seems to have been far from plain to Mr. George P. Cox what would be reserved for him in such a partition, and, accordingly, a day or two later, we learned that an entirely new coalition had been formed. Now it is understood that the Hanna organization will be maintained intact, and that Senator Foraker will be kept in the position which he has held for several years—the position, namely, of leader of a small minority of the Republican party in Ohio. Mr. Herrick will discharge the functions of Governor until the end of his term, and General Charles F. Dick, now a member of the House of Representatives from Ohio, will be made a United States Senator for both the short and the long terms left vacant by Mr. Hanna. Meanwhile, Mr. Cox is to be recognized as the leader of the Republican party and sole dispenser of State patronage in Ohio, and if Mr. Foraker shall fail to defer to his wishes as regards Federal patronage also, he may find it difficult to secure a reelection to the Senate when his term expires four years hence. So far, however, as Mr. Roosevelt is concerned, it matters not whether the Hanna or the Foraker element is dominant in the Republican organization of Ohio. One of the last letters penned by Senator Hanna was addressed to Governor Herrick, and conveyed an earnest request that a unanimous delegation should be sent from Ohio in favor of the nomination of Mr. Roosevelt for the Presidency.

It begins to look as if, during the life of the Fifty-eighth Congress, the desires of Arizona, New Mexico, Oklahoma, and Indian Territory for Statehood would, in one way or another, be gratified. There will then be no such thing as a Territory between Canada on the north and Mexico on the south. Of our outlying possessions, Alaska and Hawaii are Territories, properly so called, because legally constituted. Not yet has Porto Rico acquired the rights of a Territory in the statutory meaning of the word; although, by a vote of the House of Representatives, the validity of which has been questioned, the Representative of Porto Rico has been clothed with the privileges of a Territorial Delegate—that is to say, he is permitted to speak, but not to vote. The admission of the Philippines to similar privileges is not yet even mooted by spokesmen of the party in power. As to the solution of the Statehood problem, with which Congress has been for some time occupied, it is understood that Arizona and New Mexico, which, by the census of 1900, had collectively a population of a little more than 318,000, will have to renounce their individual aspirations and accept admission as a single State. Politically, it is believed that the State will be Republican, but it is not expected to take part in the next Presidential election. Oklahoma also, though in 1900 it had a larger population than Arizona and New Mexico put together, will have to give up the hope of entering the Union as a separate State. Apparently it will have to acquiesce in fusion with Indian Territory; the State thus formed will have about a million inhabitants. Although, however, a bill to this effect may be passed during the present session of Congress, it will not become operative until the process of transforming the tribal ownership of land into individual ownership shall have been completed in Indian Territory, and until also allotments of public land for school purposes shall have been made. It seems to be taken for granted that the State made up of Oklahoma and Indian Territory will, as regards political leaning, be Democratic.

There is ample ground for the disappointment felt by friends of international peace at the decision rendered by The Hague Court of Arbitration in the matter of the claims against Venezuela, as regards the specific question whether the blockading powers should have a preference over those creditors who forbore to apply force to a feeble debtor. It is obvious that had the tribunal declined to give the three blockading powers a preference, it would have signally discouraged recourse to coercion. As it is, the two Russian members and the Austrian member, constituting the court, have concurred in declaring that the adjusted claims of the blockading powers—Great Britain, Germany, and Italy—must first be paid from the money assigned by Venezuela for the purpose, namely, thirty per cent. of the customs revenue of La Guayra and Puerto Cabello, before any part of the fund

can be allotted to the adjusted claims of the nonblockading powers. We cannot help thinking that the decision, whilst it will, of course, be accepted by all parties without any official protest, will not increase the confidence reposed by the friends of peace in The Hague Court of Arbitration. We doubt whether another important case will be referred to the tribunal for many a year to come. It may be that, on technical grounds, the judgment is unassailable, but we are sorry to renounce the hope that the tribunal would be governed by the broad principles of equity and humanity which it was created to uphold. From a merely pecuniary point of view, the defeated litigants lose but little. It is calculated that the assessed claims of Great Britain, and Germany—the claim of Italy is relatively small—will have been paid in about two years from the signing of the protocols, which took place in February, 1903. Within some five years thereafter, the assessed claims of the nonblockading powers will also have been liquidated. It was not, in truth, a pecuniary question, however, that was litigated at The Hague. The question was whether, in the twentieth century, enlightened public opinion, represented in the permanent court of arbitration, would tolerate the substitution of brute force for negotiation in the collection of ordinary debts. It should be remembered that the greater part of the claims of the blockading powers were based, not on a demand of reparation for injuries to person or property, but on debts arising out of contract, to which the maxim *caveat emptor* ought to apply.

Mr. Frederick W. Seward, formerly Assistant Secretary of State, narrated at some length last week to a correspondent of the New York *Times*, the story of Russia's friendly attitude towards the Union at the time of the civil war. It is a well-known story and fit to be kept green in the public memory. Mr. Seward's rehearsal of it is timely. When the ruling class in England hoped to see the American republic divided, the ruling class in Russia hoped to see it hold together. Russia would join the powers in no movement that her statesmen felt to be hostile or embarrassing to Mr. Lincoln's administration. At a critical time she sent a fleet to our shores. It lingered for months in our ports. It was then believed, and is still believed, that the intention was to put it at the service of our government if certain apprehended interference came from Europe. When it came to the sale and purchase of Alaska, that was a transaction between friends, and so conducted. Russia has seen her interest in promoting the aspirations of this country. That her motives have been political rather than sentimental makes no difference. However mixed her motives may have been it ought not to be forgotten for a moment that she has been our friend when friends were scarce and friendship meant something.

We don't think any good turn Russia ever did this country by word, or thought or deed has been forgotten for an instant. The Russian newspapers seem to think that American sentiment is all for Japan, and that we are ready to rejoice at Russia's discomfiture. Japan is our good friend, and has been ever since she came out into Western society. There is much about her cause that is bound to appeal to us. We have important trade interests in the East, and our reasonable solicitude about them may conflict at times with some of Russia's purposes. We don't like Russian Jew-baiting, and our Jews resent it bitterly. The Russian bureaucracy does not strike us favorably. We are not the ally, nor the blind friend of any nation on earth. But as to being hostile to Russia, forgetful of past friendship, ready to rejoice at her discomfiture—we are not. And Russians who know, must be aware of it. The United States is the friend of both contestants in the Eastern war. Its attitude is of the watchful and prayerful kind bred of a desire to minimize the damage to both contestants, to limit destruction and death, and to bring its good offices to any juncture where they will be helpful. We cannot forget that we were the earliest friend of Japan among the Western nations. No more can we forget how constant a friend Russia has been to us.

The situation in the Balkans grows worse from day to day. Not only is there a threat of impending trouble between Turkey and Bulgaria, with the practical certainty of an uprising in Monastir and Kossovo; but there is already practically a state of war in northern Albania, in the regions west of Uskub. Shemsi Pasha, with the Turkish regulars, has succeeded in inflicting a severe check on the Albanian insurgents; but, from what we know of these fierce and implacable mountaineers, this will stimulate rather than lessen their martial ardor. It is to some degree reassuring that the representatives of both Servia and Bulgaria have made declarations in an extremely pacific sense; but there seems some reason to believe that Turkey has decided on war. In the eyes of the Sultan, Bulgaria is a vassal, a troublesome and recalcitrant vassal, who most unjustifiably robbed him of Eastern Rumelia in 1885; and he will let slip no opportunity to recover and subdue not only Rumelia, but also Bulgaria itself. The suggestion has been made, with some show of authority, that Russia will promise to let the Sultan have his own way in Bulgaria, in return for permission to the Black Sea fleet of seven battle-ships to pass through the Bosporus and the Dardanelles. One hesitates before a suggestion so pregnant with evil, and so flatly in contradiction with Russia's pro-Christian and pro-Slavonic policy in the Balkans for centuries. Yet Russia is in a position of dire necessity, as a result of Admiral Togo's first attack on Port Arthur, and she may be forced to counsels of desperation. It is just possible that she may have made such sacrifices to Germany, and Austria, as will, in her belief, safeguard the Balkan Slavs, even if her own restraining hand is withdrawn. But even so, it is impossible to contemplate without horror the probable fate of the women and children of Macedonia, if left to the tender mercy of the Sultan's Asiatic hordes.

Should Russia's Black Sea fleet succeed in passing the Dardanelles, it is probable that England would find herself forced to contest its further passage, opposing it to her Mediterranean fleet. In plain words, the liberation of the Black Sea fleet would mean war with England, and therefore a general European war. England stands in close treaty relations with Turkey, and is pledged to uphold Turkish authority against Russia, in certain defined matters, and, among others, in this very matter of the Dardanelles. This treaty engagement has recently been strengthened by positive declarations from Mr. Balfour and Lord Lansdowne, and it is as likely as anything can be, that England would fight at this stage of the proceedings, rather than await further developments. Russia evidently foresees this, and has gone so far as to mobilize the Turkestan and Transcaucasian armies: the armies destined for the invasion of India. In the state of Russian feeling towards England at this moment, such a move would be welcomed by the whole people, and there is no denying the fact that England's position in India would be grave in the extreme. We may be sure that the victory of Port Arthur has been eagerly discussed in the bazars of Calcutta and Bombay, of Allahabad and Peshawur, not as a defeat for Russia, but as a victory for Asiatics over Europeans; and the little flame of national aspiration thus kindled may be fanned into a conflagration, which will presently spread to three hundred millions. Timid in subjection, India's millions are brave with the fanaticism of religious frenzy, once they are inflamed; and those who know what the Mutiny meant, in 1857, will look with hardly less dread to the possibilities offered by India, than to the fate awaiting the women and children of Macedonia. There are women and children, of English blood, in India, who might envy the lot of the Macedonian victims. Afghanistan may also see in the present situation just such an opportunity as the Sultan does. The wild mountaineers beyond the Kaibar pass are well armed, and of desperate valor. Nor is their attachment to England to be counted on, if their interest makes the other way. If they made common cause with a Russian invader, they would claim the Punjab and Kashmir as the spoils of war, and England has no bribe of equal value to offer them.

Vegetarians who are interested in the spread of their convictions about the proper nourishment of the human body will doubtless approve the new method of feeding college undergraduates which is on trial this year by the Harvard Dining Association, which uses Memorial Hall in Cambridge. The association does not furnish the cheapest board the Harvard undergraduate can get: there are two eating clubs that are less expensive; but it tries to keep the price of food as low as it can. Until this year it supplied meals on the "American plan" for a price per week that was determined by its

Mr. Cleveland Speaks

We do not think that we exaggerate when we say that the utterance of no American citizen—we do not except Mr. Roosevelt—would be so eagerly heard, and so seriously considered, as will be the appeal addressed by ex-President Cleveland to his fellow Democrats through the *Saturday Evening Post*. The extraordinary effect of this appeal is due mainly to the man from whom it comes, but partly also to the fact that it was uttered at the psychological moment. The author of the appeal is the only man, with the exception of Thomas Jefferson and Andrew Jackson, who has thrice been nominated for the office of Chief Magistrate by the section of his fellow citizens that were first described as Democratic-Republicans, but are now known as Democrats. Like the predecessors that we have named, Mr. Cleveland was once beaten, and was twice triumphant. He alone since the civil war has evinced the ability to place the Democratic party in control of the nation. It is not surprising, therefore, that every thoughtful word of a man who has spoken but seldom since his retirement from public life should be welcomed and treasured by that large section of his countrymen who see in him the one commander who, for upwards of a generation, has borne their standard to victory. We add that the message, weighty and inspiring in itself, could hardly have been more timely. The hour is at hand when State conventions will assemble for the purpose of naming delegates to the Democratic national convention, which will meet at St. Louis on July 6. It is incredible that the choice of delegates will not be materially affected by Mr. Cleveland's stirring appeal.

Perhaps, instinctively foreseeing Mr. Bryan's criticism that the ex-President's demand for an assertion of time-honored principles came too late, Mr. Cleveland begins his article by reminding his readers that more than three years ago, or immediately after the catastrophic defeat of the Bryanized Democracy in 1900, he pleaded, through the *Saturday Evening Post*, for a better recognition by the organization of the rank and file of the party, who were, he insisted, still undismayed by defeat, still stanch in their devotion to the traditional conception of Democracy, and still eager to fight for the supremacy of the party under trusted leadership. Mr. Cleveland reminded the readers of that former article, which Mr. Bryan seems to have forgotten, that therein the ex-President claimed no higher position in party councils than a place among the rank and file; but, writing after a second Democratic rout, and invited by a fatuous persistence in a new and strange party programme, he attempted to describe the disposition of those who had to bear the brunt of Democratic battle in the following words: "Our fighting forces will respond but listlessly and falteringly if summoned to a third defeat in a strange cause; but if they hear the rallying call of true Democracy, they will gather for battle with old-time Democratic enthusiasm and courage."

Mr. Cleveland proceeds to point out that, since that former appeal to his fellow Democrats was penned, remarkable changes have occurred, changes full of encouragement to the Democratic party, and of inspiration to the conscientious discharge of Democratic duty. In other words, he is one of those convinced that there is an opportunity for Democratic success in the coming Presidential election. Although the belief is welcome, he does not think the wish father to the thought. The belief is built, he says, on an unshaken and abiding trust in the patriotism, the intelligence, and the ultimately clarified foresight of his fellow countrymen. This trust will not permit him, he continues, to overlook the meaning of the daily increasing signs of restlessness among our people, a restlessness due to the startling and flippant abandonment by the party in power of our national maxims and traditions, its disregard of our national moral restraints, its inconsiderate tendency to set aside national good faith, its willingness to break away from safe and accustomed moorings, and its contemptuous neglect of our national mission. In Mr. Cleveland's judgment, these conditions, together with the administration's broken pledges and forgotten promises of reform, not only explain the popular distrust and fear prevailing throughout the land, but suggest that, amid such ominous political weather, not a few of our fellow citizens who may have acted hitherto with the Republican party, but who thoughtfully and constantly love our free institutions, will be not unmindful of the safety and tranquillity that may be offered by a patriotic and conservative Democracy.

But what does an opportunity amount to? The Democracy had one in 1880, and threw it away. It had another in 1888, and let itself be robbed of it. It might have had a third in 1900 had not the worthless vote of the delegate from Hawaii turned the scale in committee for the reassertion of the Chicago platform. Opportunities are the pitfalls of fools. Mr. Cleveland does not fail to warn his fellow Democrats that opportunity is only distantly related to actual accomplishment; that, of itself, unaided and alone, it warrants no expectation of attaining successful results. For Democrats all over the Union, and especially in the Southern States, which have most at stake, the vital question to ponder is whether wise, unselfish, and patriotic effort shall reap fruit from the present opportunity. Mr. Cleveland seems to hope and believe that they will not let the occasion slip; that they will awake betimes to the perception that victory can only be gained by a sincere and honest offer of reasonable and practicable measures promotive of public security and prosperity, and by truthful pledges of intelligent and conscientious political service—all predicated on the unadulterated creed of genuine and safe Democracy.

Is the programme vague? Mr. Cleveland makes it definite. He reminds his readers that Democracy loves equality of benefits under our chosen institutions, and hates the bestowal of special privileges upon the few at the expense of the many. Consequently, he would have his party's message to the people demand tariff reform; and he points out that the demand is emphasized by a situation which reveals to all men the shelter and aid afforded by existing tariff laws to huge business combinations that menace the sturdiness with which our citizenship once was characterized, by closing against the individual the door of independent industrial enterprise. Mr. Cleveland next directs attention to a truth that lately we have lost sight of, the truth, namely, that money exacted by taxation from the people ostensibly for the support of their Federal government is held in trust for that specific purpose, and that its needless and reckless appropriation, even on the pretext of a legitimate furtherance of public ends, is spoliation, bald and flagrant.

Turning, next, to the Republican policy in the matter of the Philippines, Mr. Cleveland, outlining what he thinks ought to be the message of the Democracy to the American people, insists that, in sincere and consistent compliance with the spirit and profession of our interposition in behalf of Cuba, the beneficent designs carried out by us in the case of that island should be extended also to the lands which, as an incident of that interference, have come under our control; that the people of the Philippines should be aided in the establishment of a government of their own; and that, when this is accomplished, our interference in their domestic affairs should cease.

In his remarkable contribution to the *Saturday Evening Post* the ex-President does not profess to have recapitulated all the topics that should find a place in the message formulated by the St. Louis convention, but only to mention some of those that, in any event, ought not to be omitted. The topics touched by him are such as involve an appeal to the moral sense of all our fellow countrymen, and to their love of the elevating and ennobling qualities of American institutions. The appeal may be unheeded. If the rising wave of sordidness is to be allowed to drown our moral sense, and if the people's attachment to our free institutions is only such as has its origin in present or anticipated selfish advantage, Democracy may as well renounce the hope of dislodging the Republican party from the control of our Federal government. Not yet will Mr. Cleveland, however, renounce the hope. He believes that the importance of the present crisis will be recognized, and that the American people, conscious of danger, will respond to the rallying cry of true Democracy if they are made sure that peace and safety lie in that direction. How will they gain that assurance? A platform is made up of promises. Who shall vouch for their fulfilment? The nominee must be himself a platform. Mr. Cleveland well says that, at a time like this, the Democratic party cannot, with prudence or honor, undertake the battle of the people, except under a leader who not only represents its best traditions and purposes, but who fully realizes what is meant by the tremendous issues of the conflict.

The Nebraskans and Mr. Rockefeller

Chancellor E. Benjamin Andrews, of the University of Nebraska, is a Baptist. It is second nature for college presidents to want money for their institutions. When they are Baptists it is second nature for them to ask Mr. J. E. Rockefeller to give it to them. Dr. Andrews did so. Mr. Rockefeller said he would give two-thirds of $100,000 if the people of Nebraska would give the balance. Most of that balance has been subscribed, but there is a great outcry in Nebraska about accepting Mr. Rockefeller's money.

The Nebraskans had better take all of Mr. Rockefeller's money that they can get. It is excellent money. If they think he has too much, they should not neglect to relieve him of what they can.

If they think he has been rapacious, they should encourage him in liberality. If they think his gains are ill gotten, they may at least assist in making his disbursements beneficial.

It seems wise to regard Mr. Rockefeller, not as a fellow human creature, but as a mental force, the exercise of which in trade under conditions which have prevailed in this country during the last thirty years has been attended with highly interesting and instructive results. It seems no more expedient to reject his offerings than to throw back into the sea parcels of wreckage cast up after a great storm. Reject nothing, Nebraskans! Fetch ashore all you can. The sea, at once destructive and bountiful, is a part of nature. So is Mr. Rockefeller.

PROGRESS OF THE WAR

A brief summary of the events which led to the present Eastern crisis, and an account of the progress of the war, day by day, based upon official letters and despatches from the Far East

THE events leading to the war in the Far East are, briefly, as follows: On the 12th of August, 1903, the Japanese government proposed to Russia, through its representative at St. Petersburg, the following basis of an agreement for arriving at a friendly adjustment of the interests of both in Korea, Manchuria, and the Far East:

1.—A mutual agreement to respect the independence and territorial integrity of the Chinese and Korean empires.

2.—A mutual engagement to maintain the principle of an equal opportunity for the commercial industry of all nations with the natives of those countries.

3.—A reciprocal recognition of Japan's preponderating interests in Korea, and of Russia's special interests in railway enterprises in Manchuria, and a mutual recognition of the rights of Japan and Russia to take measures necessary for the protection of the above-mentioned interests in so far as such measures should not violate the principle enunciated in Article 1.

4.—The recognition by Russia of the exclusive rights of Japan to give advice and assistance to Korea in the interest of reform and good government.

5.—The engagement on the part of Russia not to impede the eventual extension of the Korean railway into southern Manchuria, so as to connect with eastern China and the Shanghai-Kwan-New-chwang lines.

On the 3d of October the Russian government sent a reply in which it declined to consider proposals respecting the sovereignty and territorial integrity of China, stipulated the maintenance of the principle of equal opportunities for the commerce and industry of all nations in China, and requested that Japan declare Manchuria and its littoral as being entirely outside of her sphere and interest. Russia recognized Japan's right to despatch troops to Korea when necessary for the protection of her interests there, but refused to allow Japan to use any portion of Korean territory for strategical purposes. She proposed the establishment of a neutral zone in Korean territory north of the thirty-ninth parallel.

The gist of the reply of the Japanese government to these proposals was that as she had important commercial interests in Manchuria, with hopes of *their future* development, she could not recognize Manchuria as being entirely outside her sphere of interest. With regard to the neutral zone, Japan proposed that if one were to be established it should be on both sides of the boundary-line between Manchuria and Korea, with an equal width of about 100 miles. After discussing these points repeatedly at Tokyo, the Japanese government presented its definite reply, embodying these points, on the 30th of October. On the 11th of December Russia submitted her answer, suppressing the clauses relating to Manchuria, so that the proposed convention would apply entirely to Korea, and maintaining her original demand in regard to the non-employment of Korean territory for strategical purposes and insisting again upon a neutral zone.

These points were discussed on both sides without result. The last note from Russia was received at Tokyo on the 6th of January. It stipulated "the recognition by Japan of Manchuria and its littoral as outside her sphere of interest," but agreed, "within the limits of that province, not to impede Japan or any other power in the employment of rights and privileges acquired by them under existing treaties with China exclusive of the establishment of a settlement." The clauses regarding a neutral zone in Korean territory and the non-employment of Korean territory for strategical purposes were still insisted upon by Russia. These conditions Japan felt unable to fulfil. Further negotiations were undertaken by Japan, but no reply was received from Russia. A reply, however, was written, and was in the hands of the Russian minister at Tokyo for delivery to the Japanese government on the same day that Japan, by recalling her staff from St. Petersburg, broke off diplomatic relations.

This recall, followed by the withdrawal of M. Kurino, the Japanese minister, from St. Petersburg, was virtually a declaration of war, although no act of hostility occurred for forty-eight hours.

February 6.—In reply, Count Lamsdorff, the Russian Foreign Minister, acting under instructions from his government, sent the following circular telegram to Russian representatives abroad:

"His Imperial Majesty has been pleased to order that the Russian minister at Tokyo, with the whole staff of the imperial mission, shall leave the capital of Japan without delay."

The attitude taken by the Russian government in these proceedings was that the entire responsibility of the declaration of hostilities lay with Japan, since the reply to Japan's note with regard to a diplomatic settlement of questions in dispute was already in the hands of Baron de Rosen, the Russian minister at Tokyo, for delivery to the Japanese Foreign Minister when diplomatic relations were severed by Japan.

February 7.—Japan, after waiting forty-eight hours following the withdrawal of her diplomatic representatives from Russia, sent her war-ships to sea with orders to attack the Russian flag wherever it was found.

February 8.—According to the official accounts received by Baron Hayashi, the Japanese minister in London, the first naval engagement of the war took place off Chemulpo, Korea. The Japanese squadron escorting transports met the Russian gunboat *Korietz* as the latter was coming out of port. The *Korietz* fired on the Japanese torpedo-boats; the latter despatched two torpedoes without effect, and the *Korietz* returned to her anchorage in the port.

February 9.—Early in the morning Admiral Uriu, commanding the Japanese squadron, formally called on the Russian war-ships *Variag* and *Korietz* to leave Chemulpo before noon. The two Russian vessels left port at about 11.30 A.M., and a battle ensued. After about an hour's engagement the Russian war-ships sought refuge among the islands. Towards night the Russian cruiser *Variag* sank, and the following day the *Korietz* was also reported to have been sunk, blown up by her crew. Forty-nine men were reported to have been killed on the *Variag*.

Shortly after midnight on the morning of February 9 the Japanese made a torpedo attack upon the Russian war-ships lying off Port Arthur. Later, about ten o'clock in the morning, an attack was made by the Japanese fleet off Port Arthur. In the attacking fleet were sixteen Japanese war-ships, and in the opposing Russian fleet were five battle-ships, five first and second class cruisers, and fifteen torpedo-boats. The coast batteries at Port Arthur took part in the battle also. As a result of this battle and the torpedo attack during the night the following Russian war-ships were injured: Battle-ships *Czarevitch* and *Retvisan*, and cruisers *Pallada*, *Diana*, *Askold*, and *Novik*.

In Admiral Togo's report to the government at Tokyo of the attack on Port Arthur, it is said that two Russian battle-ships and one cruiser were damaged by torpedoes, that no Japanese ships were seriously damaged, and that the Japanese loss in men was four killed and fifty-four wounded. The Russian loss in men, according to the official statement of Viceroy Alexieff, was: of the squadron, five officers wounded, fourteen men killed, and sixty-four wounded; of the forts, one man killed, one seriously wounded, and five slightly wounded.

February 10.—The Czar issued a Supreme Manifest, in which he said:

"Without advising us of the fact that the breach of such relations would *in itself* mean an opening of warlike operations, the Japanese government gave orders to its torpedo-boats to suddenly attack our squadron standing in the outer harbor of the fortress of Port Arthur. Upon receiving reports from the Viceroy in the Far East about this we immediately commanded him to answer the Japanese challenge with armed force."

February 11.—The Russian torpedo transport *Yenesei* was sunk by accidentally striking a mine in the harbor at Port Arthur. It is officially reported that as a result of this accident the captain, three other officers, and ninety-one men were killed.

According to a despatch to the London *Times* from Tokyo, it is reported that, since the beginning of the war, at least five Russian commercial steamers—the *Ekaterinatosla*ff, *Mukden*, *Russia*, *Argun*, and *Alexander*—have been captured by Japan in Korean and adjacent waters. In addition, a despatch to the *Daily Mail* from Tokyo says that the Russian whalers *Chorige*, *Nocolai*, *Alexander*, and *Michael*, captured by the Japanese, have arrived at Sasebo.

February 13.—In order to preserve the neutrality of China, Secretary Hay to-day issued the following statement through the State Department:

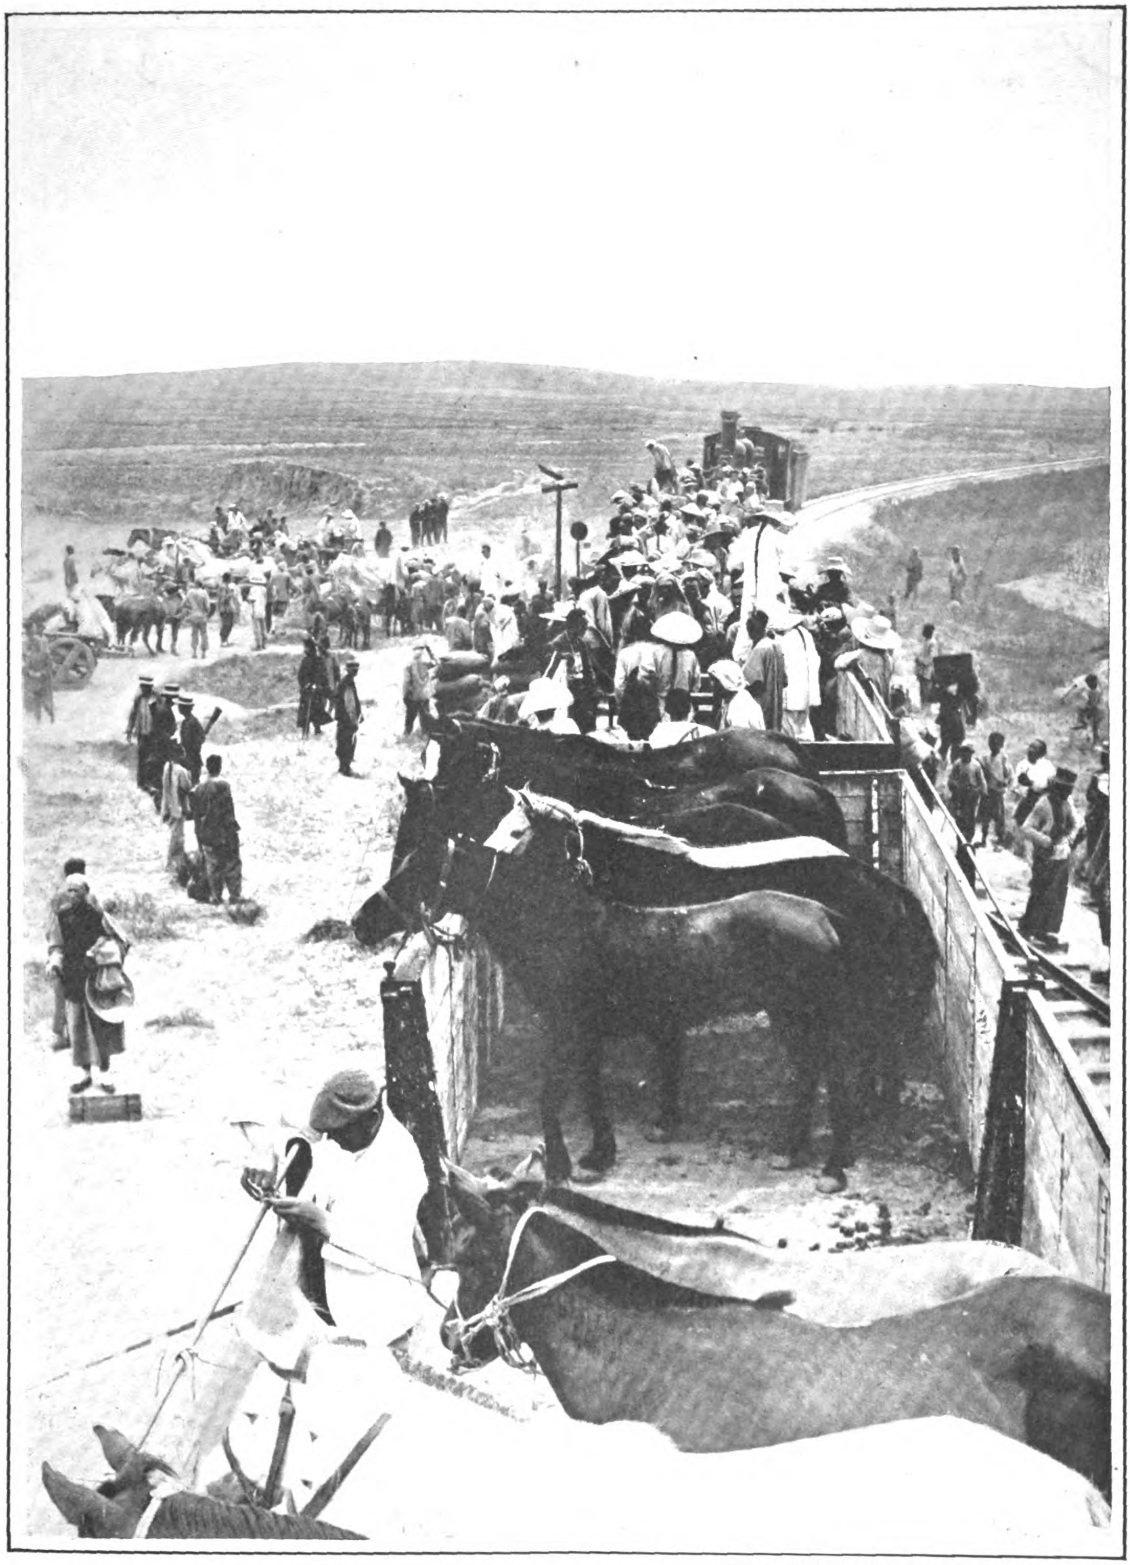
"After some preliminary exchange of views between this government and the governments of other powers interested in Chinese matters, the department on February 10 sent the following instruction to the American representatives in St. Petersburg, Tokyo, and Peking:

"You will express to the Minister for Foreign Affairs the earnest desire of the government of the United States that in the course of the military operations which have begun between Russia and Japan the neutrality of China, and in all practicable ways her administrative entity, shall be respected by both parties, and that the area of hostilities shall be localized and limited as much as possible, so that undue excitement and disturbance of the Chinese people may be prevented, and the least possible loss to the commerce and peaceful intercourse of the world may be occasioned.

JOHN HAY."

At the same time this government informed all the powers signatory of the protocol at Peking of its action, and requested similar action on their part.

By February 19 responses favorable to Secretary Hay's proposition had been received from all the powers, Japan accepting the plan to respect China's neutrality in case it is respected by Russia. Russia, in answering the note, stipulated that the neutrality of the Chinese Empire is to be respected, with the reservation that Manchuria shall not be regarded as excluded from the field of hostilities or as embraced within the administrative entity of China.



February 13.—The Russian cruiser *Boyarin* was blown up in the same manner as the *Yenesei*, by accidentally striking a mine.

February 17.—An official communication from Viceroy Alexieff says that a Japanese merchant steamer, the *Nagonoura Maru*, was destroyed off the northwestern coast of Japan by the Vladivostok squadron, and that forty-one of her crew were captured.

February 24.—It is reported from St. Petersburg that Count Lamsdorff, the Foreign Minister, has issued to her foreign representatives a circular protesting against Japan's violation of Korean neutrality in occupying, contrary to her promise, a country whose independence is recognized by all the powers.

February 25.—A report from Viceroy Alexieff states that an unsuccessful attempt was made by the Japanese to bottle up the Russian fleet at Port Arthur by sinking steamers in the channel. The report says that four Japanese steamers were disabled, and that one of the four escorting torpedo-boats was sunk.

RUSSIANS ATTENDING TO THEIR WOUNDED IN THE FIELD

It is estimated that there are at present at the scene of war in the Far East between two and three thousand nurses and physicians connected with the work of the Red Cross Society. Count Orloff Davkdoff, a philanthropist and intimate friend of the late Czar Alexander III., is said to have given $500,000 to the Red Cross Society for hospital and medical use at the front. Of this sum, $200,000 is to be devoted to the establishment of a school for children made orphans by the war

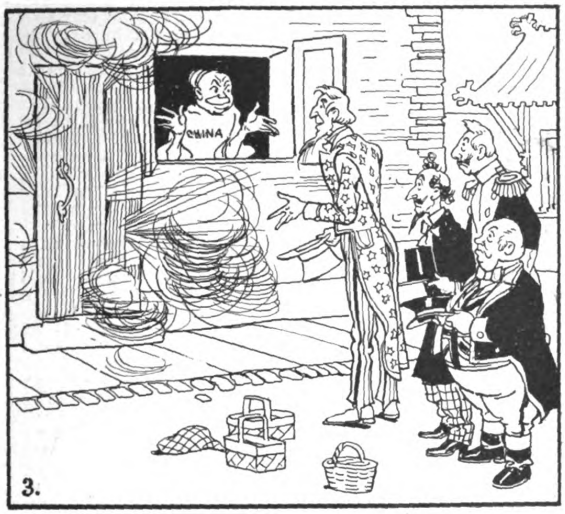
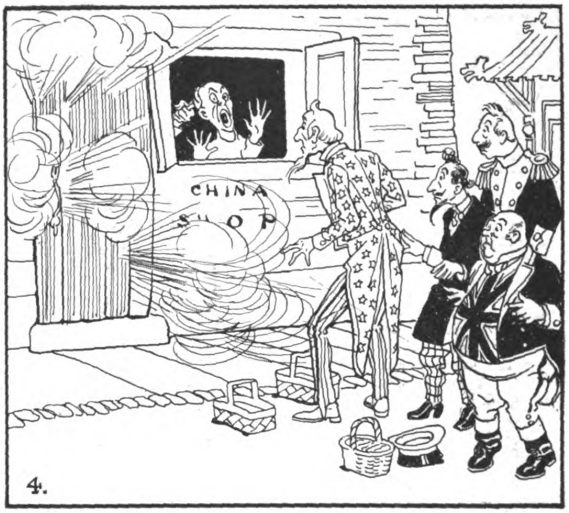
A STORY OF THE CHINA SHOP

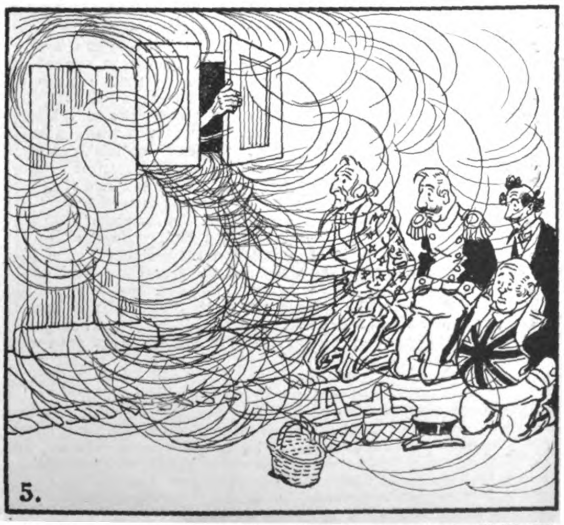
An Artist's View Of The Complications In The Far East



By ALBERT LEVERING



Uncle Sam. "Seems ter be a little trouble at the store to-day, boys."



Uncle Sam (to France, Germany, and England). "There he goes inside, boys; guess we'd better stay out fer a while."

Uncle Sam (to China). "Be careful you don't get mixed up in it."

China. "Hellup!"
Uncle Sam. "Jinkys! they've pulled him inside too. Don't git too near, boys."

Uncle Sam. "Never mind, boys. Don't go any nearer. We'll just wait a few days."

The Kaiser, et al. "Dot looks to usses like ve vait. Uncle Sammy was right, yes?"

Books and Bookmen

By James MacArthur

I HOPE that Mr. A. E. W. Mason, whose new novel, *The Truants*, began in the last number of the WEEKLY, is not going to allow himself to be side-tracked by politics. A recent skit on the idiosyncratic tendencies of well-known authors in *Punch* makes Mr. Mason say: "No novelist can really do his work properly unless he is an M.P. That should be the distinction for which novelists should strive. For my next book, which is to be called *Godiva of the Hustings*, I must have Parliamentary experience." I see that Mr. Mason has been recently adopted as a Liberal candidate for Coventry, and has been making speeches to the electors. At a recent meeting held under the auspices of the Coventry Liberal Association, he was supported by Mr. Augustine Birrell and Mr. J. M. Barrie, who are very good friends of the novelist. Mr. Mason is one of the most promising of the younger novelists in England, and came into prominence little more than a year ago with *The Four Feathers*, which, with the late Mr. Merriman's novel, *The Vultures*, was everywhere in England pronounced to be the strongest work of fiction of that year. Of the half-dozen novels he has written, *The Four Feathers* and *Miranda of the Balcony* are the best known. It will be remembered that Mrs. Fiske presented a dramatization of the latter during the season of 1901-02, but few are aware of the fact that the author himself made an adaptation of his second novel, *The Courtship of Morrice Buckler*, which had a brief performance in London, and was tried in this country, but without success. Mr. Mason had some experience as an actor in his early years, and has always had a hankering for the stage, which may one day result in his becoming a full-fledged dramatist. Outside of fiction his pursuits so far have been more serious-minded, having been secretary to the Archbishop of Canterbury, an active agent in the Church Defence Institution, and an earnest political worker. His present campaign is being directed against Mr. Chamberlain's policy, and in favor of the reform of the Education Act. "The true and proper remedy," he is reported as saying, "for many of the disadvantages under which England labors at the present time lies in a system of education which should be hampered by no sectarian tests, and in legislation of a social kind." This is now the burning question of the hour in England. Mr. Mason is a thoughtful and impressive speaker; he is still under forty; so that if he should gain a Parliamentary footing, the lure of Westminster may inevitably draw him, as it has drawn so many English men of letters, into the arena of politics, and the voice that promised to charm us in literature be hushed and silenced. We hope for a better fortune for Mr. Mason. Meanwhile, we have *The Truants* as a present delight.

Katherine Cecil Thurston
Author of "The Masquerader," now appearing in serial form

We have many writers of fiction with us nowadays, some novelists, but few story-tellers; and it is the story-teller who makes the best serialist. The inventive faculty which makes the story-writer must not be confounded with the higher imaginative gifts which make the novelist. It is by his wonderful ingenuity of mind to weave plots and spin the fabric of a tale that Conan Doyle fascinates his readers in the Sherlock Holmes stories, but it is by virtue of his imaginative power of creating character that he brought the great detective into being, and placed him among the memorable figures of fiction. That great story-teller, Charles Reade, was so convinced of this scientific fact that in his work on copyright he maintained that the inventor in fiction was entitled to a patent on his original ideas like any other ingenious craftsman who invented a new thing. I have been led into this train of thought after reading the opening instalments of *The Masquerader*, the serial of the year in HARPER'S BAZAR. Mrs. Katherine Cecil Thurston's first novel, *The Circle*, published a year ago, figured among the most remarkable novels by a new writer in the fiction of 1903. The characterization was fine and true, and the feeling for life and atmosphere vivid and intense, but, more than this, there was evident the gift of the story-teller. In *The Masquerader* this gift is even more apparent. I should not wonder if it turned out to be the best serial of the year. As a rule, I do not care to read a novel serially, and there are very few that once having started I care to finish in that form. Of recent exceptions, I can remember only two that compelled my interest to the end, namely, *To Have and to Hold* and *Lady Rose's Daughter*. But I venture to state that no one who reads the opening pages of *The Masquerader* will want to miss the succeeding chapters of that story. The situation involved may be a rare one in human experience, but it is not improbable, and it is fraught with dramatic possibilities of which so ingenious a story-teller as Mrs. Thurston may be trusted to make the most dexterous use. When the novel comes to be published in book form I anticipate a wide popularity for it, for there is nothing in print the reader is so grateful for as a thrilling story that engages his most ardent interest. It is the magic carpet of modern life.

Mrs. Thurston was born in Cork, and has lived a quiet and uneventful life in her home in the south of Ireland until recently, when she left the shores of Erin for the English metropolis. Always extremely fond of reading, she had never thought of writing herself until it was suggested by her husband. Since her marriage three years ago to Mr. Ernest C. Thurston, who is a dramatist, she has worked more or less continuously with the pen, and besides *The Circle* and *The Masquerader*, she has written a number of short stories within that time which have appeared in the English and American magazines. Although her home is now in London, she counts it one of her greatest pleasures to spend part of each year in her own country, and it was in the quaint and primitive village of Ardmore, on the south coast of Ireland, that the greater part of *The Masquerader* was written during the summer months of last year.

Speaking of the story-teller as an inventor, I notice that science and romance met in genial companionship at a recent dinner of the New Vagabond Club in London, when Sir William and Lady Ramsay were the guests of the evening. In proposing the toast of "The Visitors," Mr. Frankfort Moore made a felicitous speech, whose radiant and effervescent wit may perhaps be attributed to the "radioactivity" of the distinguished guest. Mr. Moore said that romancers and poets had at all times been the progenitors of the most valuable scientific discoveries. It was Shakespeare who suggested through the mouth of Ariel the electric telegraph, if not the telephone. It was Tennyson who invented the air-ship of Santos-Dumont. He did not know who invented Marconigrams, but he was aware of a poem called "The Message," which referred to the transmission of a despatch by wireless telegraphy with most successful results. Jules Verne invented the submarine boat and a dozen other things, and Mr. Wells discovered the man in the moon. As a matter of fact, it had taken science all its time to keep pace with the suggestions of romancers. Several years ago he made a character in one of his books invent a meat lozenge enabling one to dine in three minutes and in three mouthfuls. Before a year had passed an American chemist had put such a lozenge on the market, but he went further. It was not three minutes, three mouthfuls for him. It was one man, one mouthful, one meal, one minute. This went to prove that without the man of romance the man of science would never have existed. If now and then novelists felt a pang of jealousy in seeing how the man of science was working in their field and had reaped from it a far richer crop than ever they had done, they quickly regained their self-respect by the thought that he was their offspring, and they were proud of him. In Sir William Ramsay they welcomed the truest exponent of the methods of the man of science, observation, and imagination. The recent discoveries and investigations of Sir William Ramsay formed such a series of steps forward as had never been surpassed in the whole range of scientific research. After years of good work in many fields, argon was revealed to him; then came helium and uranium, and subsequently the very source and fount of light itself—radium. Sir William noted certain irregularities in the spectrum of some gases, and he became suspicious. One observation led to another, until argon could not hide himself any longer, and the moment he was arrested he turned King's evidence, and Sir William was able to secure the whole band. Sherlock Holmes was a fool compared to Sir William Ramsay. But, knowing what one did of scientific methods, he was not surprised to hear that the character of Holmes had been suggested to Conan Doyle by a professor of Edinburgh University.

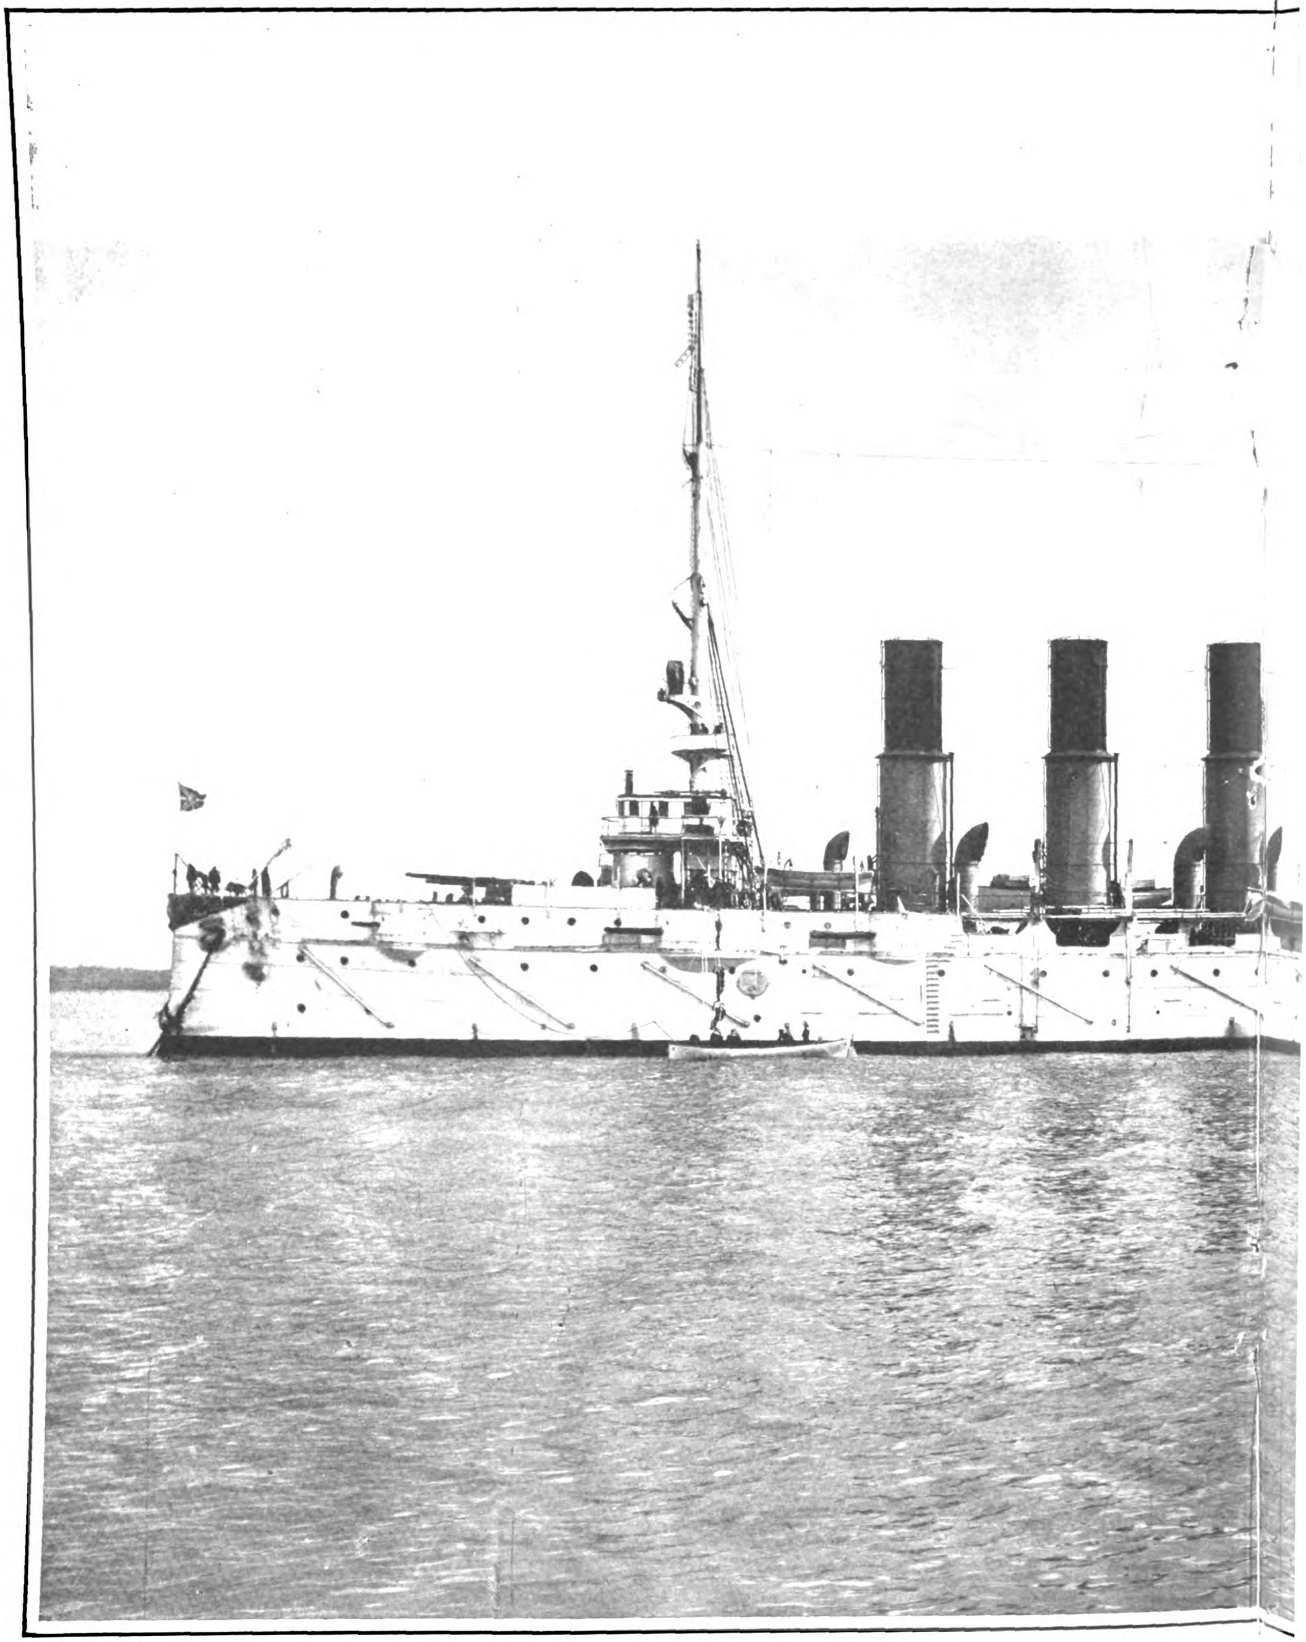
The House of Commons

By Sydney Brooks

LONDON, *February 17, 1904.*

THERE are times when even for a journalist omniscience becomes difficult. Such a time is the present in England. Nothing is certain in the political situation except its uncertainties. The session has begun, but nobody knows how it will end. I found the lobbies on the opening day a hive of conjectures, forecasts, surmises. The King's speech solved none of the questions that really touched men's minds. It did not even mention them. A bill for restricting the powers of the licensing magistrates to refuse new licenses and do away with old ones on the ground of public interests—in effect, another surrender of the government to the brewers; a bill for excluding criminal and destitute immigrants; various bills for amending existing acts—what was there in all this to interest an assembly agitated and engrossed with the fiscal question? Nothing whatever. It did not take the House ten minutes to get clear of these minor matters and come to close grips with the real and dominating topic. As the session began so in all probability it will continue. By the side of the great and engrossing issue everything else will seem tame, perfunctory, unactual. You must pardon the enthusiasm with which honorable members are girding themselves for the fray. It is a new arena to them. America has had thirty years' full and exciting experience of it, and may smile at the eager freshness with which England takes the plunge. With us it is a novelty. In time we may weary of it, but that time is not yet. At present we are all excited and stimulated and whirling specific and ad valorem duties and theories of foreign exchange like so many blackthorns at Donnybrook.



Moreover, to add to the sporting possibilities of the situation, there is the utter confusion of parties. Chamberlain may or may not revolutionize the English fiscal system; it is clear already that he has revolutionized English politics. But how far the breach extends is still a matter of speculation. We know that the Opposition is again a jubilant and united party. We do not know how many of the Ministerialists are prepared to secede. We do not know which side the Irish are going to take. We do not know whether the Balfourian policy of retaliation will be able to hold its own or must merge itself in the wholesale protection to which Mr. Chamberlain has committed himself. Such divisions, such perplexities would make even a session of Congress lively; but they make a session of Parliament ten times more so. For here the serried rows face one another in parallel lines; the retort is flung full in the face. We have too that spectacle which never fails to intoxicate the House—the spectacle of men rising to oppose the policy of the party to which they belong, heard with chilling silence by those who sit around them, received with redoubled applause from their quondam opponents. Nothing in Parliamentary life is so dramatic as such a sight as that, and for weeks and months, possibly for years, it is to be our almost daily treat. Again, Parliament is not merely the maker of laws; it is also the unmaker of governments; and herein lies the secret of its debating vitality. There is now the chance, a better one by far than any that has offered itself for nearly ten years, that by skilful leading, by persistent and resolute attack, the Opposition may so reduce the government majority as to compel it to resign. We have, therefore, all the elements of an enthralling session—a vast and pregnant issue offering unlimited openings, an Opposition full of fight and ardor, a government strong in numbers, but divided in counsels, and captained by one of the most brilliant debaters in Parliamentary annals, an unknown number of "bolters," an equally unknown number of supporters of the government who have made up their minds not to seek reelection, and whose loyalty, therefore, is not likely to be unquestioning—everything, in short, that can make the House of Commons the centre of national interest.

And what sort of an assembly is the House of Commons? How is it composed, what are its characteristics, how far does it really represent the country? There are in the House of Commons 670 members, in the American House of Representatives 357 members (in the Fifty-seventh Congress), and in the French Chamber of Deputies 584 members. It is interesting to see how the members of these legislatures are apportioned among the trades and professions. Agricultural interests are represented in the House of Commons by about 140 members; in the Chamber of Deputies by 70; in the House of Representatives (according to Mr. S. J. Barrows's article in the *North American Review* for November, 1903) "by ten farmers and seven others who combined farming with some other occupation." The law claims 236 Representatives in the American Lower House, 139 in the French, and 129 in the British. Mr. Barrows puts the number of Congressmen engaged in mercantile pursuits at 63; the number of Deputies who come under the heading of industry or commerce—that is, who are either manufacturers or merchants, is also 63; while the number of M.P.'s is 113. Journalism, under which term I include newspaper proprietors and authors, accounts for 59 members in the French Chamber, about 10 in the American Congress, and 44 in the House of Commons. The army and navy are practically unrepresented in the French Lower House, claiming only 6 members; Mr. Barrows states that 69 Congressmen have served in the army, but of these very few, if any, are professional soldiers; in the House of Commons 59 members have held commissions in the services. Physicians, surgeons, and pharmaceutical chemists play a far larger part in the public life of France than of England or America; 53 of them are to be found among the French Deputies, not more than 8 among the English M.P.'s, and only 1 in the American House of Representatives. Another class which by comparison predominates in the French Chamber is the official class, which number 95; in the House of Commons the civil service, including diplomacy, is represented by only 14 members, while in the American House of Representatives, so far as I can find out, it is not represented at all. In the House of Commons there are 28 members connected with the coal and iron trades, either as working miners or as masters and employers; there are 8 engineers; 4 contractors; 23 directors of companies; 17 brewers and distillers; 19 bankers; perhaps 15 secretaries or salaried representatives of various trade-unions; 9 professors or schoolteachers; 11 connected with the Stock Exchange; 3 hotel proprietors; 1 bookseller; 2 architects; 2 millers; 3 commission agents; 1 printer; 1 pilot; and 7 who are returned as "independent."

These figures, of course, do not supply an absolute criterion; no figures do. They are subject to a hundred deductions and qualifications, and may be made to square no doubt with a hundred theories. But I think that whatever one reads into them, there is one fact which cannot but be inferred, and that is that the House of Commons is far more representative of England than is the Chamber of Deputies of France or the House of Representatives of the United States. Agriculture, industry, and commerce, which together form the basis of national prosperity, find themselves far better represented in the English Lower House than in either the American or the French. Nearly five-sevenths of the American House of Representatives is made up of lawyers; solicitors, attorneys, and barristers *plus* the "liberal professions" account for nearly half the number of French Deputies; while in the English House of Commons the law, journalism, and teachers and medical men constitute only a little over a quarter of the total membership. I do not know that this fact of the superior representative quality of the English House of Commons counts for as much as it should; I do not know that legislation in England is any wiser than in France or America, or that the interests of the country are any better looked after, or that Parliament reaches a higher standard of practicality than the Chamber of Deputies or the House of Representatives. Still, it is an undeniable fact that under the English system the various interests, trades, professions, and occupations of the country are more adequately represented in the *personnel* of the national legislature than in any other land.

There are three other characteristics that differentiate the House of Commons from the French and American legislatures. First, it is a body with a far higher social standing; secondly, it is better educated; thirdly, it is much wealthier. Nothing amazes Englishmen who visit Washington so much as to find that in the polished, agreeable, and distinctive society that graces and is graced by the national capital, Congressmen have no part—even less part than a French Deputy in the Parisian world. In England an M.P., unless he be an Irishman, is at once a man of social position not only in the provinces, but also in London. He has, at any rate, the *entrée*, and it depends entirely on himself whether or no he converts it into a permanent foothold. Then, again, a very large percentage of members are 'varsity men. They have received, or most of them have received, the best education that England can offer, and they carry its stamp through life. And finally an immense majority of them are rich men. It has been said that there is nowhere where a poor man feels so out of place as in the House of Commons. That does not prevent poor men from being elected to Parliament or from being received and welcomed there on a footing of the most perfect equality. The Labor members are all poor men; most of them, in fact, are supported by the societies they represent; and I have never heard even the most hardened Tory object to them on that account. All the same, it remains a fact that for a man whose means are not well above the average the pleasures of Parliamentary life scarcely exist, and its drudgery and vexations are infinitely multiplied; he is in the House but not of it, and all that makes it so clubable and enjoyable and lends to the accessories of existence within its precincts so delightful a flavor, passes him by. These attributes of wealth, education, and social standing show themselves particularly in the bearing and appearance of the members. Taking it all round, the House of Commons is the best-dressed assembly in the world. It has an air of good breeding, of men accustomed to drawing-rooms and good society. The general deportment comes up to a fairly high average. You see honorable members wearing their hats in the House and the sight offends; but that is not a point of manners, but a custom with a picturesque history at the back of it. You sometimes, too, see honorable members asleep, and you often hear unmannerly interruptions from the Irish and Tory benches. On the other hand, you never see an English M.P., as I have often seen an American Congressman, enjoying the luxury of a "dry smoke" and relieving himself by profuse spitting. The House, too, is much more punctilious than Congress on the small points of order. Whenever a member violates them he is instantly hauled up, not merely by the Speaker, but by his fellow members, to many of whom it is part of the spice of life to pounce upon offenders. As for the oratorical standard of the House it is difficult to speak with precision. The late Empress of Austria used to say that she saw more good and more bad riding in the English Shires than anywhere else in the world. Much the same sort of criticism might be passed on Parliamentary eloquence. Some of it is exceedingly good, better, I think, than anything one is likely to hear in Congress; but much of it is atrocious. On the whole, in this, as in so many other spheres of Anglo-American comparatives, I should be inclined to say that while the House of Commons best is better than the Congressional best, the House of Commons average is below the Congressional average.

THE TRUANTS

BY A·E·W·MASON

CHAPTER III

THE TRUANTS

WARRISDEN turned quickly to Pamela.

"You never mentioned them."

"No," she replied, with a smile. "But there's no mystery about my silence. I simply haven't mentioned them because for two years I have lost sight of them altogether. I used to meet them about, and I have been to their house."

"There?" said Warrisden, with a nod towards the lightest window.

"No; but to the house Millie and Mr. Stretton had in Deanery Street. They gave that up two years ago when old Lady Stretton died. I thought they had gone to live in the country."

"And all the while they have been living here," exclaimed Warrisden. He had spoken truthfully of himself. The events, and the people with whom he came, however slightly, into contact always had interested and amused him. It was his pleasure to fit his observations together until he had constructed a little biography in his mind of each person with whom he was acquainted. And there was never an incident of any interest within his notice but he sought the reason for it and kept an eye open for its consequence.

"Don't you see how strange the story is?" he went on. "They give up their house upon Lady Stretton's death, and they come to live here with Sir John. That's natural enough. Sir John's an old man. But they live in such seclusion that even their friends think they have retired into the country."

"Yes, it is strange," Pamela admitted. And she added, "I was Millie Stretton's bridesmaid."

Upon Warrisden's request she told him what she knew of the couple who lived in the dark house and played truant. Millie Stretton was the daughter of a judge in Ceylon, who, when Millie had reached the age of seventeen, had married a second time. The stepmother had lacked discretion; from the very first she had claimed to exercise a complete and undisputed authority; she had been at no pains to secure the affections of her stepdaughter. And very little trouble would have been needed. For Millie was naturally affectionate. A girl without any great depth of feeling, she responded easily to a show of kindness. She found it neither difficult to make intimate friends nor hard to lose them. She was of the imitative type, besides. She took her thoughts and even her language from those who at the moment were by her side. Thus her stepmother had the easiest of tasks, but she did not possess the necessary tact. She demanded obedience, and in return offered tolerance. The household at Colombo, therefore, became for Millie a roofstead rather than a home, and a year after this marriage she betook herself and the few thousands of pounds which her mother had bequeathed her to London. The ostensible reason for her departure was the invitation of Mrs. Charles Rawson, a friend of her mother's. But Millie had made up her mind that a return to Ceylon was not to be endured. Somehow she would manage to make a home for herself in England.

She found her path at once made easy. She was pretty, with the prettiness of a child; she gave no trouble, she was fresh, she dressed a drawing-room gracefully, she fitted neatly into her surroundings, she picked up immediately the ways of thought and the jargon of her new companions. In a word, with the remarkable receptivity which was hers, she was very quickly at home in Mrs. Rawson's house. She became a favorite no less for her modest friendliness than on account of her looks. Mrs. Rawson, who was nearing middle age, but whose love of amusements was not assuaged, rejoiced to have so attractive a companion to take about with her. Millie, for her part, was very glad to be so taken about. She had fallen from the obscure clouds into a bright and wonderful world.

It was at this time that Pamela Mardale first met Millicent Strettor, or rather, one should say, Millicent Rundell, since Rundell was at that time her name. They became friends, although, so far as character was concerned, they had little in common. It may have been that the difference between them was the actual cause of their friendship. Certainly, Millie came rather to lean upon her friend, admired her strength, made her the repository of her confidences, and if she received no confidences in return, she was content to believe that there were none to make. It was at this time, too, that Millie fell in with Lady Stretton.

Lady Stretton, a tall old woman with the head of a grenadier, had the characteristic of Sir Anthony Absolute. There was no one so good-tempered so long as she had her own way; and she generally had it.

"Lady Stretton saw that Millie was easily led," Pamela continued. "She thought, for that reason, she would be a suitable wife for Tony, her son, who was then a subaltern in the Coldstreams. So she did all she could to throw them together. She invited Millie up to her house in Scotland, the house Lady Millingham now has, and Mr. Stretton fell in love. He was evidently very fond of Millie, and Millie, on her side, liked him quite as much as any one else. They were married. Lady Stretton hired them the house I told you of, and took a great deal of trouble to see that they were comfortable. You see, they were toys for her. There, that's all I know. Are you satisfied?"

She leaned back in her chair, smiling at Warrisden's serious face.

"And what about the old man, Sir John Stretton?" he asked.

"I never met him," replied Pamela. "He never went out to parties, and I never went to that house."

As she concluded the sentence, a man came on to the balcony and approached them. Pamela rose at once from her chair, and, with a sudden movement of jealousy, Warrisden swung round and faced the newcomer. The newcomer was a man well past the middle age, stout of build, and with a heavy care-worn face with no pleasure in it at all. He was the man who had been with Pamela when Warrisden had arrived. Warrisden turned back to the girl with a smile of relief.

"You are engaged?"

"Yes, for this dance, to Mr. Mudge," and she indicated the man who was waiting. "But we shall meet again—at Newmarket, at all events. Perhaps in Scotland, too."

She held out her hand to Warrisden, and as he took it her voice dropped to a plea.

"Please don't go away again without telling me first, without talking it over, so that I may know where you are from month to month. Please promise!"

Warrisden promised, and went away from the house with her prayer echoing in his ears. The very sound of her voice was audible to him, and he never doubted the sincerity of its appeal. But if she set such store on what she had, why was she content with just that and nothing more, he asked himself! Why did she not claim a little more and give a little more in return? Why did she come to a halt at friendship, a mere turnpike on the great road, instead of passing through the gate and going on down the appointed way? He did not know that she passed the turnpike once, and that if she refused to venture on that path again, it was because, knowing herself, she dared not.

In the narrows of Berkeley Street, Warrisden was shaken out of these reflections. A hansom jingled past him, and by the light of the lamp which hung at the back within it, he caught a glimpse of the truants. They were driving home to the dark house in the Square, and they sat side by side silent and with troubled faces. Warrisden's thoughts went back to what Pamela had told him that night. She had told him the half, but not the perplexing, interesting half of their history. That, indeed, Pamela could not tell, for she did not know Sir John Stretton, and the old man's warped and churlish character alone explained it.

It was by his doing that the truants gave up their cheery little house in Deanery Street and came to live in Berkeley Square. The old man was a miser, who, during his wife's existence, had not been allowed to gratify his instincts. He made all the more ample amends after she had died. The fine allowance on which the young couple had managed to keep a pair of horses and a little brougham was stripped from them.

"Why should I live alone?" said the old man. "I am old, Tony, and I need some attention. The house is big, much too big for me, and the servants are eating their heads off for the want of something to do." There were, indeed, more servants than were needed. Servants were the single luxury Sir John allowed himself. Their liveries were faded, they themselves were insolent and untidy, but they were there, in the great bare dining-room at dinner-time, in the hall when Sir John came home of an afternoon. For the old man went out each day as the clock struck three; he came back each evening at half past six. He went out alone, he returned alone, and he never went to his club. He took an omnibus from the corner of Berkeley Street and journeyed eastwards as far as Ludgate Hill. There he took a drink in the refreshment bar, and coming out, struck northwards into Holborn, where he turned westwards, and, walking as far as the inn at the corner of the Tottenham Court Road, stepped for an hour into the private bar. Thence he took another omnibus, and finally reached home, where his footmen received him solemnly in the hall. To this home he brought Tony and his wife.

"There, choose your own rooms, Tony," he said, magnanimously. "What's that? Money? But what for? You'll have it soon enough."

Tony Stretton suggested that it was hardly possible for any man, however careful, to retain a commission in the Coldstreams without an allowance. Sir John, a tall, thin man, with a high bald forehead and a prim Puritanical face, looked at his son with a righteous severity.

"A very expensive regiment. Leave it, Tony! And live quietly at home. Look after your father, my boy, and you won't need money," and he stalked up-stairs, leaving Tony aghast in the hall. Tony had to sit down and think it over before he could quite realize the fate which had overtaken him. Here he was twenty-six years old, brought up to spend what he wanted and to ask for more when that was ended, and he was to live quietly on nothing at all. He had no longer any profession; he was not clever enough to enter upon a new one without some sort of start, and, in addition, he had a wife. His wife, it was true, had a few thousands; they had remained untouched ever since their marriage, and Tony shrank from touching them now. He sat on one of the hall chairs, twisting his mustache and staring with his blank blue eyes at the opposite wall. What in the world was he to do? Old Sir John was quite aware of those few thousands. They might just as well be used now, he thought, and save him expense. Tony could pay them back after his father was dead. Such was Sir John's plan, and Tony had to fall in with it. The horses and the brougham, and all the furniture, the prints, the pictures, and the mirrors which had decked out so gayly the little house in Deanery Street went to the hammer. Tony paid off his debts, and found himself with a hundred pounds in hand at the end; and when that was gone he was forced to come to his wife.

"Of course," said she, "we'll share what I have, Tony."

"Yes, but we must go carefully," he replied. "Heaven knows how long we will have to drag on like this."

So the money question was settled, but that was in reality the least of their troubles. Sir John, for the first time in his life, was master in fact as well as in name. He had been no match for his wife, but he was more than a match for his son. He was the fifth baronet of his name, and yet there was no landed property. He was rich and all the money was safely tucked away in the public funds, and he could bequeath it as he willed. He was in a position to put the screw on Tony and his wife, and he did not let the opportunity slip. The love of authority grew upon him. He became exacting and portentously severe. In his black, long shabby coat, with his long thin figure and his narrow face, he had the look of a cold, self-righteous fanatic. You would have believed that he was mortifying his son for the sake of his son's soul, unless perchance you had peeped into that private bar in the Tottenham Court Road and had seen him drinking gloomily alone. He laid down rules to which the unfortunate couple must needs conform. They had to dine with him every night, and to sit with him every evening until he went to bed. It followed that they lost sight of their friends, and every month isolated them more completely. The mere humiliation of the position in which they stood caused them to shrink more and more into their privacy. When they walked out in the afternoon they kept away from the Park; when they played truant in the evening, at the Savoy, they chose a little table in an obscure corner. This was the real history of the truants with whose fortunes those of Warrisden and Pamela were to be so closely intermingled. For that life in the dark house was not to last. Even as Warrisden passed them in Berkeley Street, Tony Stretton was saying over and over again in his inactive mind:

"It can't go on! It can't go on!"

CHAPTER IV

TONY STRETTON MAKES A PROPOSAL

REGULAR as Warrisden had declared the lives of the truants to be, on the night following the dance at Lady Millingham's there came a break in the monotony of their habits. For once, in a way, they did not leave the house in their search for light and color as soon as they were free. They stayed on in their own sitting-room. But it seemed that they had nothing to speak about. Millie Stretton sat at the table, staring at the wall in front of her, moody and despairing. Tony Stretton leaned against the embrasure of the window, now and then glancing remorsefully at his wife, now and then looking angrily up to the ceiling, where the heavy footsteps of a man treading up and down the room above sounded measured and unceasing.

Tony lifted a corner of the blind and looked out.

"There's a party next door," he said; "there was another at Lady Millingham's last night. You should have been at both, Millie, and you were at neither. Upon my word, it's rough."

He dropped the blind and came over to her side. He knew quite well what parties and entertainments meant to her. She loved them, and it seemed to him natural and right that she should. Light, admiration, laughter and gayety, and fine frocks—these things she was born to enjoy, and he himself had in the old days taken a great pride in watching her enjoyment. But it was not merely the feeling that she had been stripped of what was her due through him which troubled him to-night. Other and deeper thoughts were vaguely stirring in his mind.

"We have quarrelled again to-night, Millie," he continued, remorsefully. "Here we are cooped up together with just ourselves to rely upon to pull through these bad years, and we have quarrelled again."

Millie shrugged her shoulders.

"How did it begin?" he asked. "Upon my word, I don't remember. Oh yes, I—" and Millie interrupted him.

"What does it matter, Tony, how the quarrel began. It did begin and another will begin to-morrow. We can't help ourselves, and you have given the reason. Here we are cooped up by ourselves with nothing else to do."

Tony pulled thoughtfully at his mustache.

"And we swore off quarrelling, too. When was that?"

"Yesterday."

"Yesterday!" exclaimed Tony, with a start of surprise. "By George! so it was. Only yesterday."

Millie looked up at him, and the trouble upon his face brought a smile to hers. She laid a hand upon his arm.

"It's no use swearing off, Tony," she said. "We are both of us living all the time in a state of exasperation. I just—tingle with it, there's no other word. And the least smallest thing which goes wrong sets us quarrelling. I don't think either of us is to blame. The house alone gets on our nerves, doesn't it? These great empty, silent, dingy rooms with their tarnished furniture. Oh! they are horrible! I wander through them sometimes, and it always seems to me that a long time ago people lived here who suddenly felt one morning that they couldn't stand it for a single moment longer, and ran out and locked the street door behind them, and I have almost done it myself. The very sunlight comes through the windows timidly, as if it knew it had no right here at all."

She leaned back in her chair, looking at Tony with eyes that were hopeless and almost haggard. As Tony listened to her outburst the remorse deepened on his face.

"If I could have foreseen all this, I would have spared you it, Millie," he said. "I would, upon my word." He drew up a chair to the table, and sitting down, said in a more cheerful voice, "Let's talk it over, and see if we can't find a remedy."

Millie shook her head.

"We talked it over yesterday."

"Yes, so we did."

"And quarrelled an hour after we had talked it over."

"We did that, too," Tony agreed, despondently. His little spark of hopefulness was put out, and he sat in silence. His wife, too, did not speak, and in a little while it occurred to him that the silence was more complete than it had been a few minutes ago. It seemed that a noise had ceased, and a noise which, unnoticed before, had become noticeable by its cessation. He looked up to the ceiling. The heavy footsteps no longer dragged upon the floor overhead. Tony sprang up.

"Then he is in bed," he exclaimed. "Shall we go out?"

"Not to-night," replied Millie.

He could make no proposal that night which was welcomed, and as he walked over to the mantelshelf and filled his pipe, there was something in his attitude and bearing which showed to Millie that the quick rebuff had hurt.

"I can't pretend to-night, Tony, and that's the truth," she added, in a kinder voice. "For, after all, I do only pretend nowadays that I find the Savoy amusing."

Tony turned slowly round with the lighted match in his hand and stared at his wife. He was a man slow in thought, and, when his thoughts compelled expression, laborious in words. The deeper thoughts, which had begun of late to take shape in his mind, stirred again at her words.

"You have owned it," he said.

"It had been pretence with you too, then?" she asked, looking up in surprise.

Tony puffed at his pipe.

"Of late, yes," he replied. "Perhaps chiefly since I saw that you were pretending."

He came back to her side and looked for a long time steadily at her while he thought. It was a surprise to Millie that he had noticed her pretence, as much of a surprise as that he had been pretending too. For she knew him to be at once slow to notice any change in others and quick to betray it in himself. But she was not aware how wide a place she filled in all his thoughts, partly because her own nature, with its facile emotions, made her unable to conceive a devotion which was engrossing, and partly because Tony himself had no aptitude for expressing it, and, indeed, would have shrunk from its expression had the aptitude been his. But she did fill that wide place. Very slowly he had begun to

watch her, very slowly and dimly certain convictions were taking shape, very gradually he was drawing nearer and nearer to a knowledge that a great risk must be taken and a great sacrifice made partly by him, partly, too, by her. Some part of his trouble he now spoke to her.

"It wasn't pretence a year ago, Millie," he said, wistfully. "That's what bothers me. We enjoyed slipping away quietly when the house was quiet, and snatching some of the light, some of the laughter the others have any time they want it. It made up for the days; it was fun then, Millie, wasn't it? Upon my word, I believe we enjoyed our life, yes, even this life, a year ago. Do you remember how we used to drive home laughing over what we had seen, talking about the few people we had spoken to? It wasn't until we had turned the latch-key in the door and crept into the hall—"

"And passed the library door," Millie interrupted, with a little shiver.

Tony Stretton stopped for a moment. Then he resumed in a lower voice: "Yes, it wasn't until we had passed the library door that the gloom settled down again. But now the fun's all over, at the latest when the lights go down in the supper-room, and often before we have got them at all. We were happy last year," and he shook her affectionately by the arm. "That's what bothers me."

His wife responded to the gentleness of his voice and action.

"*Never mind*, Tony," she said. "Some day we shall look back on all of it, this house and the empty rooms and the quarrels"—she hesitated for a second—"yes, and the library door — we shall look back on it all and laugh."

"Shall we?" said Tony, suddenly. His face was most serious, his voice most doubtful.

"Why, what do you mean?" asked Millie. Then she added, reassuringly: "It must end sometime. Oh yes, it can't last forever."

"No," replied Tony, "but it can last just long enough."

"Long enough for what?"

"*Long* enough to spoil both our lives altogether."

He was speaking with a manner which was quite strange to her. There was a certainty in his voice, there was a gravity too. He had ceased to leave the remedy of their plight to time and chance, since through two years time and chance had failed them. He had been seriously thinking, and as the result of thought he had come to definite conclusions. Millie understood that there was much more behind the words he had spoken and that he meant to say that much more to her that night. She was suddenly aware that she was face to face with issues momentous to both of them. She began to be a little afraid. She looked at Tony almost as if he were a stranger.

"Tony," she said, faintly, in deprecation.

"We must face it, Millie," he went on, steadily. "This life of ours here in this house will come to an end, of course, but how will it leave us, you and me? Soured, embittered, quarrelsome, or no longer quarrelsome, but just indifferent to each other, bored by each other?" He was speaking very slowly, choosing each word with difficulty.

"Oh no," Millie protested.

"It may be even worse than that. Suppose we passed beyond indifference to dislike—yes, active dislike. We are both of us young, we can both reasonably look forward to long lives, long lives of active dislike. There might, too, be contempt on your side."

Millie stared at her husband. "Contempt?" she said, echoing his words in surprise.

"Yes. Here you are most unhappy and I take it sitting down. Contempt might come from that."

"But what else can you do?" she said.

"Ah," said Tony, as though he had been waiting for that question couched in just those words. "Ask yourself that question often enough and contempt will come."

This idea of contempt was a new one to Millie, and very likely her husband was indiscreet in suggesting its possibility. But he was not thinking at all of the unwisdom of his words. His thoughts were set on saving the cherished intimacy of their life from the ruin which he saw was likely to overtake it. He spoke out frankly, not counting the risk. Millie, for her part, was not in the mood to estimate the truth of what he said, although it remained in her memory. She was rather confused by the new aspect which her husband wore. She foresaw that he was working towards the disclosure of a plan; and the plan would involve changes, great changes, very likely a step altogether into the dark. And she hesitated.

"We sha'n't alter, Tony," she said. "You can be sure of me, can't you?"

"But we are altering," he replied. "Already the alteration has begun. Did we quarrel a year ago as we do now? We enjoyed those evenings when we played truant a year ago"; and then he indulged in a yet greater indiscretion than any which he had yet allowed himself to utter. But he was by nature simple and completely honest. What occurred to him, that he spoke without reserve, and the larger it loomed in his thoughts the more strenuous was its utterance upon his lips. He took a seat at the table by her side.

"I know we are changing. I take myself, and I expect it is the same with you. I am—it is difficult to express it—I am deadening. I am getting insensible to the things which not very long ago moved me very much. I once had a friend who fell ill of a slow paralysis which crept up his limbs little by little, and he hardly noticed its advance. I think that's happening with me. I am losing the associations—that's the word I want—the associations which made one's recollections valuable and gave a color to one's life. For instance, you sang a *song* last night, Millie, one of those coon songs of yours, do you remember? You sang it once in Scot-

land on a summer's night. I was outside on the lawn, and past the islands across the water, which was dark and still. I saw the lights in Oban Bay. I thought I would never hear that song again without seeing those lights in my mind, far away across the water, clustered together like the lights of a distant town. Well, last night all those associations were somehow dead. I remembered all right, but without any sort of feeling, that that song was a landmark in one's life. It was merely you singing a song, or rather, it was merely some one singing a song."

It was a labored speech, and Tony was very glad to have got it over.

"I am very sorry," replied Millie, in a low voice. She did not show him her face, and he had no notion whatever that his words could hardly have failed to hurt. He was too intent upon convincing her, and too anxious to put his belief before her with unmistakable clearness, to reflect in what spirit she might receive the words. That her first thought would be, "He no longer cares," never occurred to him at all, and cheerfully misunderstanding her acquiescence, he went on:

"You see, that's bad. It mustn't go on, Millie. Let's keep what we've got. At all costs, let us keep that!"

"You mean we must go away?" said Millie, and Tony Stretton did not answer. He rose from his chair and walked back to the fireplace and knocked the ashes from his pipe. Millie was accustomed to long intervals between her questions and his replies, but she was on the alert now. Something in his movements and his attitude showed her that he was not thinking of what answer he should make. He was already sure upon that point. Only the particular answer he found difficult to speak. She guessed it on the instant and stood up erect, in alarm.

"You mean that you must go away and that I must remain?"

Tony turned round to her and nodded his head.

"Alone! Here?" she exclaimed, looking round her with a shiver.

"For a little while. Until I have made a home for you to come to. Only till then, Millie. It needn't be so very long."

"It will seem ages," she cried, "however short it is. Tony, it's impossible."

The tedious days stretched before her in an endless and monotonous succession. The great rooms would be yet more silent and more empty than they were; there would be a chill throughout all the house; the old man's exactions would become yet more oppressive, since there would be only one to bear them. She thought of the long dull evenings in the faded drawing-room. They were bad enough now, those long evenings during which she read the evening paper aloud and Sir John slept, yet not so soundly but that he woke the instant her voice stopped and bade her continue. What would they be if Tony were gone, if there were no hour or so at the end when they were free to play truant if they willed? What she had said was true. She had been pretending to enjoy their hour of truancy, but she would miss it, none the less. And in the midst of these thoughts she heard Tony's voice:

"It sounds selfish, I know, but it isn't, really. You see, I sha'n't enjoy myself. I have not been brought up to know anything well or to do anything well—anything, I mean, really useful. I'll have a pretty hard time, too." And then he described to her what he thought of doing. He proposed to go out to one of the colonies, spend some months on a farm as a hand, and when he had learned enough of the methods, and had saved a little money, to get hold of a small farm to which he could ask her to come. It was a pretty and a simple scheme and it ignored the great difficulties in the way, such as his ignorance and his lack of capital. But he believed in it sincerely, and every word in his short and broken sentences proved his belief. He had his way that night with Millicent. She was capable of a quick fervor, though the fervor might as quickly flicker out. She saw that the sacrifice was really upon his side, for upon him would be the unaccustomed burden of labor, and the labor would be strange and difficult. She rose to his height since he was with her and speaking to her with all the conviction of his soul.

"Well then, go," she cried. "I'll wait here, Tony, till you send for me."

And when she passed the library door that night she did not even shrink.

To be Continued.

An Interview with the Russian Ambassador

By A. McK. Griggs

THE loss of the great cruiser *Variag*, a modern first-class ship of the Russian navy, in the naval action off Chemulpo, is of more than ordinary interest in this country, for the ship was last seen in American waters.

She was at anchor in Hampton Roads for several days after leaving the yards of her builders, the William Cramp Ship and Engine Building Company, at Philadelphia, on her maiden voyage.

She came to Hampton Roads for the dual purpose of filling her bunkers with coal preparatory to her long voyage across the Atlantic to join the fleets of the Czar, and also to be inspected by the Russian ambassador at Washington, who, with the entire embassy staff, came to Old Point Comfort for the purpose of formally accepting the ship from her builders.

The *Variag* attracted the greatest attention as she lay at anchor midway between Old Point Comfort and Sewall's Point, and although the weather was extremely cold, hundreds of Norfolk and Portsmouth people made pilgrimages down the river to see the big Russian.

The *Variag's* lines were pleasing and her armor protection looked strong enough. One feature of the arrangement of her batteries excited considerable adverse comment among those competent to judge, however. The gun-shields were inadequate to protect the gunners from an enfilading small-arms fire, and guns and gunners were exposed terribly to artillery fire.

Those who saw the ship when she was here, without discounting the Japanese victory over her, are inclined to believe that this unfortunate arrangement of her battery probably resulted in the dismounting of all her heavy guns and the slaughter of their crews, leaving the ship unable to reply to the gun-fire of her adversaries. In this condition she was probably bound to surrender.

It was the writer's duty to interview Count Cassini, the ambassador of the Czar to this country, on the occasion of his inspection of the *Variag*. Accompanied by his daughter, the Countess Marguerite Cassini, the secretaries of embassy, and the military and naval attachés, all resplendent in their uniforms, the military attaché wearing perhaps the first Cossack regimentals ever seen in America, outside of Washington, the ambassador came aboard the *Variag* in a launch flying the imperial ensign.

The count was not reserved. He was frankly open and above board. He dwelt long on the Trans-Siberian Railway, and expressed the earnest desire that the Americans should build a line up to Bering Strait to connect with a spur of the Russian road. "Think of it," he exclaimed, enthusiastically, "through cars between Washington and Paris and St. Petersburg, five months in the year. Ice-breaking steamers could cross the strait, I believe, even for a longer time than this each year. Oh, I do hope it will come soon, for I am such a poor sailor." In view of his recent discharge of the functions of a high admiralty officer, this was rather laughable. But the count cracked many jokes at his own expense. He said he had served as minister to the court of China so long that he really was not sure half the time, when he was trying to speak English, whether he was getting Chinese mixed up with his Russian or not. "You see, I really cannot quite avoid my native tongue," he said, and truly he could not.

All this occurred in March of the year 1902, almost two years ago, and yet the nations even then were wondering how soon Japan and Russia must clash. Count Cassini knew this, and shrewd diplomat that he is, versed in all the ins and outs of his profession, trained for it and keenly alive to the message of every straw which shows which way the wind blows, so far as the sentiment of other nations toward his own is concerned, he realized even then that the sentiment of the American people was not for Russia.

He dwelt impressively upon the aid and comfort that the great empire whose representative he is, has ever been ready and willing to extend to the great republic of the west. He said that Russian friendship for America was not of the self-seeking kind, that commercial interests would dissipate, but that it was grounded on the high esteem and admiration his nation had for the achievements and the indomitable courage of the American people. By every subtle art known to the accomplished diplomat, the ambassador sought to win the hearts of the people of this country in that little interview. He almost plead the cause of his country, and repelled with scorn and indignation the idea that the Russian people were not loyal to their government. "Lies, lies, all lies," he thundered, when shown despatches stating that the Czar was living in deadly daily peril and that his office had been encased in steel.

Asked where the *Variag* would go after she crossed the Atlantic, he did not hesitate to tell that she would immediately proceed to join the Asiatic squadron. He would not discuss the relative strength of the Russian and Japanese fleets in the Orient, but said that Russia feared nothing ashore or afloat.

"My nation is a peace-loving nation. She has set herself to the tremendous work of developing her internal resources. We want no wars of conquest, nor do we want wars of any kind," the ambassador said in his broken English. "Still, we are ever vigilant and prepared. Nations, like men, have secret enemies, and these may and often do cause unnecessary strife and bloodshed. Russia seeks no conflict with any nation, but she can and will repel any invasion of her rights." There was an outline of Russian policy made two years ago!

"Diplomacy and commercialism are, in this age, so intimately connected as to be well-nigh inseparable," said Count Cassini. "The ambassador is an international commercial agent in many ways. With us, this is of very great importance, for we have mines to develop, railways to build, vast agricultural districts to open up, factories to start, and a thousand and one things to do to enable us to achieve that destiny which God Almighty mapped out for us, and which will make the mighty Russian Empire the happiest and most prosperous land upon which the sun shines."

In words he did not actually predict war with Japan. He merely sounded a note of defiance. And the earnestness with which he bespoke the friendship of America showed how much his people desire it. "We know not whither strife and combat may lead us in these days," he said. "The Czar is a most earnest advocate of peace and he is wise. God grant that the day will come when all the nations will go forward in amity and love, and enrich their people and make them happy. But so long as wars must be fought, so long as men are ready to die for principle and it is necessary for them to do so, then nations must be prepared. Russia is always prepared to defend her honor."

Miss Olive Fremstad as "Sieglinde"

Miss Fremstad, one of the singers new to the Metropolitan this season, is shown in the photograph as "Sieglinde" in Wagner's "Walküre." She has also been heard here, for the first time, in the rôles of "Brangäne" in "Tristan und Isolde," "Venus" in "Tannhäuser," and "Santuzza" in "Cavalleria Rusticana"

Mr. Otis Skinner as "Petruchio"

Mr. Skinner is associated with Miss Rehan in the classic revivals which they are giving this season. They closed last week at the Harlem Opera House, and are now going on tour among the larger Eastern cities. Mr. Skinner is playing "Petruchio" in "The Taming of the Shrew," "Shylock," and "Sir Charles Surface"

"Glittering Gloria"

"Glittering Gloria," a comedy with music by Hugh Morton and Bernard Rolt, was produced at Daly's Theatre on February 15. The plot of the piece centres about the purchase of a diamond necklace for "Gloria," of the Utopia Theatre, London. The intending purchaser of the necklace is "Mr. Jack James," a young married man, whose wife discovers his purpose from reading a letter which he had blotted too plainly on his writing-pad. "Mrs. Jack" proceeds to the jeweller's shop to confront her husband, and with her goes her friend, "Miss Dorothy Kenworthy." At the jeweller's shop they discover not only the guilty "Mr. James," but his friend "Archie Toddleby," the fiancé of "Dorothy," who has tried to anticipate "Jack" in the purchase of the gift for the popular "Gloria." In their confusion the husband and fiancé are forced to invent an imaginary "Mr. Milliken" as a scapegoat. They explain that he had intended to buy the necklace, and that their scheme had been to forestall him in securing it, and then to sell it to him at an advanced price. When they are required to produce a counterfeit for the hypothetical "Milliken" in order to satisfy the suspicions of the women, their troubles begin, and various farcical scenes arise out of their dilemma. In the end, matters are satisfactorily patched up

MME. EMMA CALVÉ

Madame Calvé reappeared at the Metropolitan Opera House on February 1 after an absence of one season. Her last New York appearances were in the winter of 1901–2, the season during which she created in America the part of "Messaline," in Isidore de Lara's music-drama of that name. Madame Calvé has been heard this season as "Carmen," as "Santuzza" in "Cavalleria Rusticana," and as "Marguerite" in a scene from Boïto's "Mefistofele." The plan of the management to present her in Maillart's "Les Dragons de Villars" and as the "Countess" in "The Marriage of Figaro," has been abandoned

Correspondence

MUSIC FOR THE BLIND

NEW YORK, *February 14, 1904.*

To the Editor of Harper's Weekly:

SIR,—Will you give room in your columns for a plan which might bring joy to many people whose lives are singularly devoid of pleasure?

In the struggle for existence the blind are at such a disadvantage, in spite of the financial help which they sometimes receive from the city, that many of the most intellectual cannot afford any of the artistic delights which mean so much more to them than to other people.

The practicability and benefit of furnishing the best musical and dramatic entertainment free to them has been proved by its success for many years in Europe, on the Continent, and in England. Shall this country remain any longer in this particular behind the Old World, or will our city set the example for other towns in caring for the happiness of its sightless citizens?

As we are credibly informed that managers can often know well in advance that their houses will not be "sold out," we ask the philanthropic directors of opera, concerts, and the managers of standard theatres to give, whenever possible, some unsold tickets to the blind. Will subscribers, when they cannot use their tickets, devote them to the same purpose?

The office of the Musical Art Society, 362 Fifth Avenue, has been kindly offered as a central bureau for the distribution of these tickets. They will be given out, under the direction of this committee, to a carefully compiled official list of the industrious and deserving blind living in their own homes, and to other qualified persons. Further information may be had from "The Committee for Tickets for the Blind," 362 Fifth Avenue.

This committee appeals to the public and to public-spirited managers and directors to cooperate in the carrying out of an idea, the usefulness and feasibility of which are heartily recognized by those whose work here has been for years among the blind, and the success of which would add to the enjoyment of this appreciative part of the community.

Committee:

MRS. SETH LOW,
MRS. HENRY DRAPER,
MRS. RICHARD IRVIN,
MRS. SCHUYLER VAN RENSSELAER,
MRS. W. P. HAMILTON,
MISS SCHURZ,
MISS BLODGET,
MISS LAURA J. POST,
MISS CALLENDER,
MISS WINIFRED HOLT.

"CONVENTIONALITY"

ONTARIO, CANADA, *February 10, 1904.*

To the Editor of Harper's Weekly:

SIR,—Conventionality will soon, so far as this earth is concerned, join justice and the dodo. Many years ago conventionality was not infrequently synonymous with duty and a host of other so-called good qualities. It implied a certain courteous respect for the feelings of others, with an increased self-respect on our own part. It particularly manifested itself in social amenities, more especially referring to the female inhabiters of this terraqueous globe. The earthly incarnation of this idea was Mrs. Grundy—sometimes couched under the illusive title of "they," sometimes designated by the felicitous "people say"—in French (a more cultured if less intelligible expression) "on dit."

If any young lady showed too great a desire for the cigarette (the attraction of the moth to the lamp), conventionality banned that member, and she became socially excommunicated. In fact, practically all the present qualities for which we admire women so enthusiastically, were, under the absurd régime of conventionality, stigmatized as the reverse.

That boldness of manner which fascinates so much was called (unjustly) brazen-faced effrontery. That vivacious and sparkling conversation on all subjects or persons, principally the latter, which arouses our respectful envy, was censured by Mrs. Grundy as parrot-like loquacity and the vaporings of malice.

With inherent logic and skilful deduction modern woman has dissected, divided, and finally annihilated that mythical and indefinite code by which Mrs. Grundy wrongfully sought to check the exuberance of her genius. It was instantly discovered that the followers of conventionality were profoundly uninteresting and wofully tedious. The records of their lives were seldom illumined by the chaste halo of flirtation, and the travellers in this barren desert never reached the oasis of divorce. Moreover, they boasted old-fashioned notions about propriety and modesty, qualities regarded nowadays as virtually criminal.

To be conventional is to allow the divine gift of reason to lie dormant. All authority must be primarily questioned and subsequently dismissed unless sanctioned by our own private views.

Conventionality is, however, in our opinion, a necessary check to the blundering impetuosity of Jones, or to the uncultured barbarisms of Brown. But for the enlightened—that is, ourselves, such artificial restrictions are superfluous. We have, as Ibsen's heroine in the *Pillar of Society*, an innate perception of the eternal verities, and are a convention unto ourselves. In pronouncing such judgment, we separate ourselves from the vulgar herd who cannot boast such lofty pretensions. Such views coming from them would be preposterous.

The quality of being natural is diametrically opposed to conventionality. This quality eradicates all thoughts of principle, suggesting the picture of a man floating deliciously down life's stream untrammelled by legal or other hindrances. The burglar is therefore natural. But burgling is unutterably conventional.

I am, sir, R. L. LESLIE.

THE COMING RACE

LOWELL, MASS., *February 12, 1904.*

To the Editor of Harper's Weekly:

SIR,—The number of marriages for the week ending February 6, as reported, was, American and Protestant couples, three; those of the Catholic faith, mostly Irish, seventeen.

The number of births for the month of January, as reported, were of American and Protestant parents, eleven; of parents who are Catholics and principally Irish and French, ninety-five.

These reports are for the city of Lowell, Massachusetts, and are about the usual ratio.

Question. In twenty-five years from now who will be the people?

I am, sir, A. J. ELLISON.

AN INVITATION FROM GEORGIA

SAVANNAH, GEORGIA, *February 3, 1904.*

To the Editor of Harper's Weekly:

SIR,—For twenty-five years I have read the WEEKLY in different parts of the world. It is but natural, then, that I should be interested in everything that appears in its columns.

Your "communications" on the "Negro Problem" interest me very much, and I have long wished to contribute my mite, but time forbids. In reading the article "Uncle Sam not a Bully," in your issue of January 30, I could not resist the temptation of writing you. There is an adage, "Evil be to him who evil thinks." One much cruder says, "It takes a thief to catch a thief." So one who is a "bully" imagines every man to be as he.

A great deal of the friction between the whites and blacks in this section is due to the bullying of the former towards the latter. Knowing full well that there is no law affecting the negro which a white man is bound to respect, the dominant race as a rule inflicts upon him brutal indignities. I do not refer to negroes accused of crime, but to the better class, to the law-abiding and orderly.

The whites of the South would not dare to treat innocent and well-behaved negroes as barbarously as they do if the latter were their equal in *strength*. Any white person (child or adult) can as a rule "bully" the most inoffensive negroes, fully aware of the fact that they will either be lightly punished or escape punishment altogether, which latter is the *rule*. Do you doubt it? Leave your office in New York and come to Chatham County; kill any negro you wish, the most worthless or the most industrious and well behaved, you will never be hurt, despite the fact that the negro did you naught, and that the murder was most cold-blooded and atrocious. Do you doubt it? Come, and see.

I am, sir, MELVILLE CANCRYNE.

[Our spring engagements are such as to make it impracticable to embrace our correspondent's hospitable proposal.—EDITOR.]

ABNORMAL BEHAVIOR OF BIRDS

KNOXVILLE, TENN., *February 8, 1904.*

To the Editor of Harper's Weekly:

SIR,—Having read with interest, in the last WEEKLY, Mr. Chambers's experiences with "The Abnormal" in the behavior of birds, I should like to call his attention to the singular behavior of the Greek pheasant, as observed by the learned gentleman who wrote the scholia on *The Birds* of Aristophanes.

In endeavoring to ascertain the nature of the action—ekperdikisai, *play the partridge* (*Aves*, 768)—the scholiast asserts: The partridge, when any one pursues it, throws itself on its back and covers itself with bits of dry stuff which it takes up in its feet.

Personally, I was much astonished to learn that any game bird acts like that, and I have searched all the bird books I can find, besides inquiring of all the sportsmen I know, to learn if the scholiast was orthodox in his ornithology, but to no avail. Mr. Chambers seems to be a very cosmopolitan sportsman; perhaps he has shot partridges in Greece. If so, he ought to be able to say whether the scholiast was lying, or whether, which is quite possible, that is the sort of behavior one should look for from a bird in a country where the natives talk Greek. The latter conjecture gains plausibility from the fact that two English editors of the comedy in question quote the scholiast's remark without comment.

I am, sir, HERMAN SPENCER.

About the World's Fair

SOME random facts about the St. Louis Fair, which may prove interesting to intending visitors this summer, have recently been compiled:

The approximate cost of the exposition is stated as $50,000,000. France, Germany, Mexico, England, China, Japan, and Brazil are planning to spend over $500,000 each on exhibits. The dimensions and cost of important buildings follow: The United States government building, 250 by 800 feet, $450,000; the Palace of Mines and Metallurgy, 525 by 750 feet, $498,000; the Palace of Agriculture, 546 by 1660 feet, 23 acres, $529,940; the Palace of Varied Industries, 525 by 1200 feet, $604,000; the Palace of Manufactures, 525 by 1200 feet, $719,399; the Palace of Transportation, 525 by 1300 feet, $696,000; the Palace of Horticulture, 400 by 800 feet, $228,000; the Palace of Machinery, 525 by 1000 feet, $496,597; the Palace of Education, 525 by 750 feet, $319,999; the Palace of Liberal Arts, 525 by 750 feet, $475,000; the Palace of Electricity, 525 by 750 feet, $399,940; the Anthropology Building, 263 by 113 feet, $115,000. Over fifty foreign governments are planning to make elaborate displays. There will be a Philippine exhibit, costing $1,000,000, and covering forty acres. The Fair grounds will comprise 1240 acres, and there will be thirty-five miles of asphalt and gravel roadways.

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

NO SUBSTITUTE,
not even the best raw cream, equals BORDEN'S PEERLESS BRAND EVAPORATED CREAM for tea, coffee, chocolate, cereals, and general household cooking. It is the result of forty-five years' experience in the growing, buying, handling, and preserving of milk by Borden's Condensed Milk Co.—[*Adv.*]

TELEPHONE Service at your home will save many small annoyances. Low rates. Efficient service. New York Telephone Company, 15 Dey Street, 111 West 38th Street.—[*Adv.*]

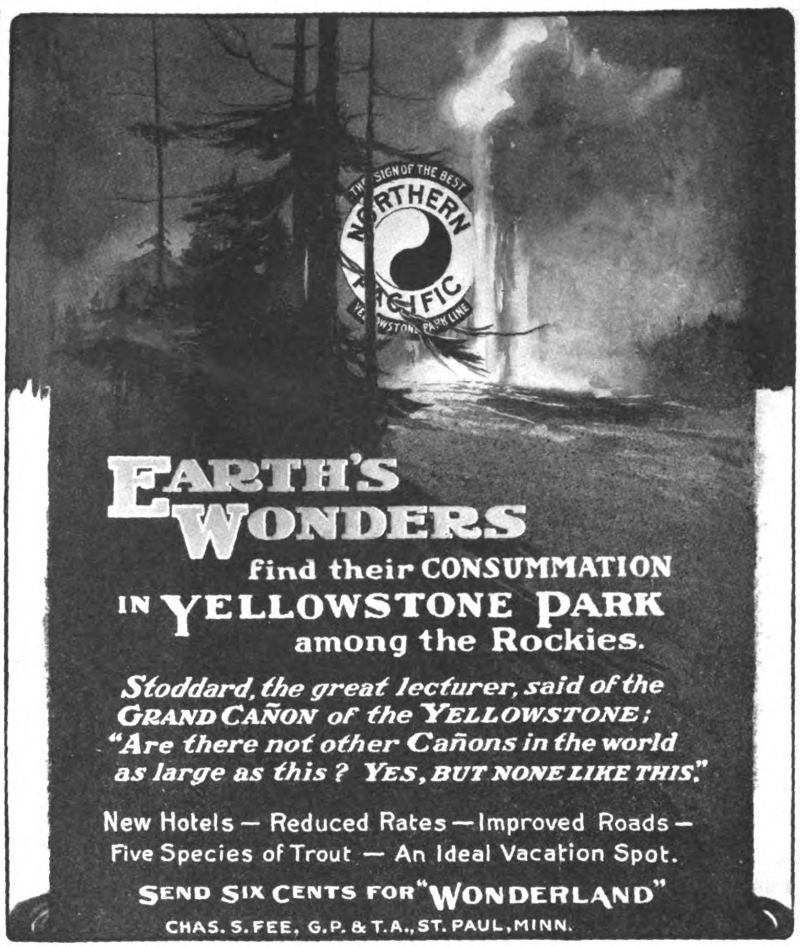
INACTIVE liver, depressed spirits—make both right with Abbott's Augostura Bitters. The genuine Abbott's will revolutionize the system.—[*Adv.*]

THE fruity product of the American Wine Co., St. Louis: COOK'S IMPERIAL EXTRA DRY CHAMPAGNE. Suits every taste.—[*Adv.*]

USE BROWN'S Camphorated Saponaceous DENTIFRICE for the TEETH. 25 cents a jar.—[*Adv.*]

PISO'S CURE—40 years on the market, and still the best for Coughs and Colds. 25c. per bottle.—[*Adv.*]

ADVERTISEMENTS.



Pears'

The skin *ought* to be clear; there is nothing strange in a beautiful face.

If we wash with proper soap, the skin will be open and clear, unless the health is bad. A good skin is better than a doctor.

The soap to use is Pears'; no free alkali in it. Pears', the soap that clears but not excoriates.

POACHERS

By Robert W. Chambers

Drawn by Sydney Adamson

THE very word poacher has an exotic if not a mediæval sound; yet our own law-breakers, two-footed and four-footed, come under the head; for if they do not always poach on private domain—that is, on preserves, of which there are comparatively few in this country—they none the less rob the public by crafty practices on public property. Except in private, State, or national preserves, the wild game and fish of this country may be lawfully taken at certain periods in a manner prescribed and regulated by laws enacted by the several States' legislatures.

Those law-breakers who take game in the close season, or in the open season using methods forbidden by law, are public plunderers, and are enemies of all law-abiding citizens. Every fish, every bird, every animal, taken by them illegally is a theft from public property. In our country poachers are divided into two great classes—conscious and unconscious law-breakers. The first includes men, the second animals, birds, and fishes who destroy game. I have known a number of poachers in my life. Before I knew any I thought that a poacher was a poor man who, carried away by an unconquerable passion for the chase and a love for a life in the woods, trespassed on the property of the rich.

Poachers, in reality, are the meanest class of men alive—meaner than sneak thieves. In my experience, not one in fifty cares anything for the sport of fishing or shooting. They poach because they find it an easy way to sustain themselves in a shiftless life. They almost invariably market what game they procure, and they procure it in the easiest way possible, by snaring, and shooting only when they are obliged to, but never wasting a penny's worth of powder. Some men poach out of pure cussedness, the majority for the sake of making a few dirty dollars, and the minority because their passion for hunting and fishing is beyond their ability to subdue. These latter are generally found in Europe, and they are usually peasants living near some preserve; although I have known of a few cases in this country where, there being no sport except on preserved land, the "honest" poacher, as I call him, took the risk of trespassing to satisfy his passion for the chase.

One example of this I recall. A simple fellow, born and raised on the west branch of a famous trout stream, saw, year by year, wealthy people buy up the fishing rights until no spot was left for him to fish in, unless, like Simple Simon, he made use of his mother's pail. He loved fishing for its own sake, and the keepers who patrolled the river found it almost impossible to keep him off. So they tried to catch him, but for a long time they couldn't do that, either. Finally, one evening three patrolling guards caught him at it. And the poacher threw the three keepers into the river, and went home. I believe it was settled later by the owners of the stream giving the yokel a position as keeper, which permitted him to hang about the stream and take a certain number of fish every week. And I heard that he was an excellent keeper, and never abused the confidence placed in him.

This is one of the few examples that I know of where a man poached from love of the sport alone. In that same county lies a very beautiful little lake, which swarms with splendid trout, and whose owner is troubled by poachers. From constant fishing in that lake I came to know the trout and to distinguish these speckled lake fish from fish taken out of the neighboring streams and rivers. One morning while driving, a ragged fellow hailed me and asked if I wished to buy some fine trout. At the first glance I saw that his trout had been taken from the lake. That poacher used to creep through the woods at night and fish in the lake with a gang-hook loaded with worms. He sold his trout at half a dollar a pound, and the money kept him in rum and tobacco. One night, however, the keeper's shotgun went off, and there was a yell from somebody whose trousers seat had been suddenly ventilated with bird-shot.

A favorite method of trout thieves is to take a sack or bag, weight it with stones, and place it, mouth up-stream, in the narrowest part of the brook. Then one of the rascals comes down-stream, wading, poking under the banks with a stick, and scaring the trout, who rush down-stream into the sack. This sort of thing, varied now and then by exploding dynamite under water and gathering the dead or stunned fish which float, has cleaned out some of our public trout waters. In other words, these thieves have robbed the public, and have sold the proceeds of the robbery for their own benefit. The game laws are not nearly stringent enough. Fines never deter such rascals from attempting to reimburse themselves. Imprisonment at hard labor is the only antidote.

In Europe trout-poachers have the reputation of catching trout with their bare hands. The process, in Ireland, is called "tickling." I could scarcely believe that this thing was done—that the most timid and wary of fish could be caught by the naked hands. Reading of one fellow sent to jail for "tickling" trout, I was curious enough to try the process myself in the presence of an angler as witness. I found it the simplest thing in the world, as far as the "tickling" was concerned. The difficulty appeared to lie in approaching the trout. But I found that this could be done almost every time by quiet adroit manœuvring; and I shall never forget the astonished face of my friend when I lifted from a pool a plump trout, and held him in the palm of my hand, just on the surface of the water. Half a dozen times I lifted the same trout, tickling him gently on the belly and sides. He appeared to like it, lying over against my hand like a cat who courts rubbing. I found that I could do almost anything with the trout, carrying them in my hand for a few moments before returning them to the water.

A particularly mean method of poaching in vogue in this country is to set a line, hung with a dozen baited hooks, across a stream. This same method is used to catch wild ducks—particularly the beautiful wood-duck. Poachers who do this merit the whipping-post. Set lines, floating lines, and bob-buoys are other illegal machines used constantly by poachers in this State.

Every species of net is also employed; and the game-wardens destroy quantities every year, according to the reports from the Fish and Game Commission. The Fish and Game Commission works hard, and does its work well in this State, yet there are regions that are the natural home of fish and game where every day for weeks at a time—nay, months—the law is violated. Trout under the legal limit are taken, set lines and set poles can be seen at any time; grouse and woodcock are shot out of season; deer are hounded; ducks are killed while breeding, and the young ducks shot long before the season opens; and three or four poachers who shoot for the market conspire to ship their birds for the sake of the dirty money that the dirty business brings them. The chances are that the State will offer some of them hospitality before very long.

Poaching as a fine art is practised to a lamentable extent in our country. A heavy flat stone in a thicket, a trip-stick, a bait of winter grapes or beechnuts, or a leaf of lettuce has brought many a fine grouse, hare, and cotton-tail to market. These traps are placed in the most inaccessible thickets, and the path leading to them is a blind one, "lined" by the poacher, who breaks a twig here and there to show him the way in the future. I have followed thickets so "lined," and destroyed half a dozen traps in a day, taking from them partridges and hares, and even squirrels. Sometimes rabbits and grouse walk into the deadfalls that boys set for woodchucks and skunks. A few months since, while grouse-shooting on a hillside, I came on a deadfall in which lay a fine big gray and white house cat, dead as a door nail.

In Europe the partridge is a lazy little fellow, preferring to

Athletics for Spanish War Veterans

VETERANS of the Spanish war have formed an organization similar to the Grand Army of the Republic, and composed of those who were honorably discharged or mustered out after the war. The State of New York Spanish War Veterans, of which General Eugene Griffen is corps commander, comprises about thirty-five commands, and nearly 5000 enrolled members. The commands in the vicinity of New York city, numbering about twenty, have arranged to hold a military athletic tournament in the armory of the Twenty-second Regiment, N. G. S. N. Y., on the 5th of March, the proceeds of which are to go to the treasuries of the corps and commands who take part.

The project has aroused considerable interest. The free use of the armory has been secured, and the services of all who are concerned in the tournament, with the exception of the professional starters, handicappers, etc., will be given without charge.

President Roosevelt has furnished funds for the purchase of a prize, and cups have been donated by Admiral Dewey, Hon. Elihu Root, General Robert Shaw Oliver, General George L. Gillespie, General William Crozier, Colonel John Jacob Astor, Hon. George B. McClellan, Hon. William Randolph Hearst, and Senators Depew, Platt, Proctor, Alger, and Lodge. The events will include the usual running races, shot-putting contests, bicycle races, three-legged races, wall-scaling contests, and a tug of war. Admiral Dewey's prize, a handsome silver cup, will be awarded to the military organization scoring the greatest number of points in the specified events open only to Spanish war veterans and members of the Military Athletic League.

In order that the tournament may be held under the auspices and with the sanction of the Amateur Athletic Union, it has been necessary for the commands to organize the Spanish War Veteran's Athletic Association, and the tournament will be held in the name of that association.

Senatorial Repartee

REPRESENTATIVE J. ADAM BEDE, of Minnesota, whose initial bow as an orator in the House won him instant recognition as a prince of raconteurs, and John Wesley Gaines, of Tennessee, who poses as the Adonis of the Lower House, were boasting of their respective political parties. "Jadam" Bede, as he has been nicknamed, is a rock-ribbed Republican, while John Wesley is a young exponent of Democratic principles.

"What," asked Gaines of Bede, "did you do with the Mayor of one of your great cities in Minnesota? Is he in for twenty-five years or for life?"

Every Democrat within hearing laughed at this sally.

"He's not in yet," retorted Bede, "and I hope he is innocent. He was recently a Democrat, and had been a Republican only for six months when convicted."

"That shows what a good man does when he gets into bad company," persisted Gaines.

"Fact is," replied Bede, smilingly, "we hadn't had time to reform him."

N-Rays from Plants

BOTANISTS have recently been investigating the N-rays, and we are told that they are emitted from plants, as well as from nerves and muscles, and that the fluorescent screen will glow when brought near to the plant, especially the leaves and the roots, where the effect is more pronounced than in the case of the flower. N-rays are emitted from such plants as onions and mushrooms, so that they do not seem to depend upon the presence of chlorophyll or green coloring matter, their intensity being apparently due to the activity and condition of the vegetable protoplasm. This was shown by the fact that the N-rays were produced from germinated seedlings and not from those which had not germinated, while their emission was stopped entirely on using chloroform to suspend the vital activity of the plant.

(Continued from page 368.)

walk rather than fly. A flock of these birds, passing from field to field, will walk along a hedge until they find an opening, rather than take the trouble to fly over the hedge. This habit is taken advantage of by poachers, who stop up all gaps in a hedge, except those just large enough to admit a partridge. Over these a slip-noose of thin wire or waxed silk or horsehair is spread, attached to a bent twig. When a partridge attempts to squeeze through, the trip-stick does the work, the bent twig flies up, the noose tightens, and there hangs a little dead partridge for the poacher. I have destroyed many such nooses in an afternoon, and confiscated many a dead partridge.

To hark back for a moment to the finny victims of poachers: One of this gentry informed me that he had a new method for taking fish; that it was not his own invention, but that it was known to a few select law-breakers, who employed it with great success. The method was this: a big glass globe containing shiners and *gold-fish* was lowered into a pool or lake. Fish were attracted and excited by seeing these toothsome small fry swimming about, and after a while a line hung with baited gang-hooks was lowered. He said that a heavy catch was certain, particularly at night, when they rubbed the globe with phosphorus, or employed a small incandescent electric light.

This is modern poaching with a vengeance, and I, for one, have no doubt of the murderous effect of an illuminated bait. Once I tried an artificial fly tied with phosphorescent body, and have seen what it does at night. The law should forbid its use, and place it in the same category as fyke-nets, gang-hooks, and spears. As for the globe of fish and the phosphorus, I confess I should be willing to try it as an experiment, not to continue if it proves as deadly as I can easily imagine it might.

Once, in this State, while fishing a favorite pool, I noticed a flat piece of wood floating near the opposite bank. My attention was first attracted to it because it did not float off down-stream, .d yet I could not see where it was stranded, for the water was ten or twelve feet deep there. The piece of wood was about two feet long and perhaps six inches wide, with a depth of half an inch. Presently, as it bobbed up and down, I saw a cord hanging from it. Briefly, the stick of wood proved to be a float, anchored on bottom. From the float hung half a dozen lines fitted with baited gang-hooks. There was nothing on the hooks except the bait. But what interested me particularly was that, at intervals along the anchor-line, were tied bits of spongy rotten wood, greenish in color. And I racked my brains to try to discover what part these rotten bits of wood played in this poacher's infernal machine.

After a while it came to me in an inspiration; and that night I proved it; for every one of those bits of rotten wood glowed like phosphorus in the dark. That poacher, whoever he was, might have made a good living at an honest trade. I suppose it did not take him very long to fashion a duplicate of the machine which I confiscated. By the way, although trout take a so-called "luminous fly" at night, I never knew a trout to take a fire-fly, either by day or by night. They may take them freely enough; I do not know; but I personally never heard of their doing it.

Everybody has read of the man who took off his breeches, tied up the legs at the ankles, and used them as a scoop-net for fishing. As a matter of fact, I know of such a case occurring, for I saw it myself in time to put an end to that method of trout-fishing.

Drawn by Sydney Adamson

"Threw the three keepers into the river"

Decent folk need have no sympathy for poachers when caught,—I mean human poachers. For the two-footed feathered poachers, for the four-footed furry poachers, I have the greatest sympathy. Yet it is sometimes necessary to send them to a happier hunting-ground. I remember a fine brood of fourteen grouse that lived in a willow thicket near me. Without disturbing them unduly I visited them every few days. After a while I noticed that their number was steadily diminishing. Watch as I might, it was impossible for a long while to discover the cause of this until, one day, I came upon the brood, now numbering only six. An enormous yellow cat was stalking them; so intent was she on one fascinated bird that she did not hear me. The poor bird appeared to be hypnotized; the cat, belly flat on the ground, tail switching, crawled nearer and nearer. Then I broke the spell; the willows echoed with the whirring thunder of rising birds, and the robber cat was routed.

Mink play the mischief with trout; weasels and foxes do damage among the grouse. Fortunately, a hen grouse on her nest exhales no scent, otherwise the foxes would have long since exterminated the last ruffed grouse. Skunks have their share in the murderous work; Cooper's hawk and the great horned owl are demons at it. But from all I can find out I do not believe that the big barred owl does much damage to game. Duck-hawks are too rare with us to count; but it is safe to shoot Cooper's hawk every time, for he is a villain too deeply dyed to be entitled to mercy.

On the whole, however, I am inclined to share with bird and beast a right to poach, and not to shoot them.

The Passing of the Fire-Engine

THE recent completion of a powerful pumping-plant and a system of independent high-pressure fire-mains in the city of Philadelphia to take the place of horse or motor-driven steam fire-engines is noteworthy as indicating the tendency toward centralization in modern mechanical engineering practice. While it may be too much to say that it marks the beginning of the disappearance of the fire-engine in large cities, nevertheless, it seems quite clear that such a plant can furnish more effective protection to a given area, and that, aside from its initial cost, it is less expensive to maintain. The advantage to the citizens is shown by the fact that for the district in Philadelphia protected by the new plant insurance rates have been decreased fifteen cents per $100, and with the increased efficiency of the system a further decrease of ten cents is promised.

The New System

In outline the new pumping system may be described briefly as follows: It consists of a number of powerful pumps driven by gas-engines and located in a single building 72 by 140 feet, and using an independent and never-failing supply of water derived from the Delaware River. This is distributed under high pressure through a network of specially constructed mains, aggregating some nine miles in length, over the selected territory which includes about 425 acres. The hose is attached directly to hydrants of a special pattern, and it is possible to send four streams to the top of the highest skyscraper in Philadelphia. The plant is said to take the place of more than forty fire-engines, and the pressure furnished and consequent efficiency is far beyond that of ordinary fire-engines.

How the Scheme Works

As soon as an alarm is turned in, the necessary communication is established with the pumping stations, and the engines are started and are in operation practically at once. It was for this reason that gas-engines were selected to drive the pumps in preference to steam, as they can remain at rest without any particular attention, and can be at once started to full capacity, whereas with steam-engines a certain amount of steam would have to be maintained constantly, and there would be delay in getting to full working capacity. The gas for the Philadelphia station is derived from the city illuminating gas-mains, while the electricity producing the igniting spark is derived from the city lighting system, a storage battery, or a generator driven by a small gas-engine, provision thus being made against the failure of any one of these sources of current.

Protection for Sky-scrapers

When ultimately completed, the plant will contain ten 11½ by 12 inch vertical pumps, each of which will deliver 1200 gallons a minute against a pressure of 300 pounds to the square inch. Each pump is driven by a 280 horse-power triple-cylinder gas-engine, and there are two smaller pumps, 6¼ by 12 inches. The mains are arranged at the river-front, so that the pumps of the fire-boats may be connected, and increased pressure thus obtained. In fact, this plan has been used in several instances previous to the completion of the station. With the increasing congestion of buildings in large cities and the erection of structures of extreme height, it seems perfectly clear that a central pumping-plant can furnish more efficient service than portable engines, especially where there is lake, river, or harbor water to draw upon. While the outlay for the independent mains is large, nevertheless the increase in protection more than compensates, while with gas or electric driven pumps water under high pressure can be delivered almost instantaneously on receiving the alarm. Despite picturesqueness and skilful operation, it seems as if the horse fire-engine for large and crowded cities must eventually give way to the more efficient and economical central station, though the horse and other apparatus must still be retained and transported to the scene of fire with the present celerity.

Itching Humors

Itching, burning, bleeding, and scaling of the skin and scalp is the condition of thousands of skin-tortured men, women, and children who may be instantly relieved and speedily cured by warm baths with CUTICURA SOAP and gentle applications of CUTICURA OINTMENT, the great Skin Cure, when all else fails.

WORLD'S FAIR AT ST. LOUIS

FIRST GREAT EXCURSION.
Via Pennsylvania Railroad, May 10.

The Louisiana Purchase Exposition will open at St. Louis April 30, and will be in perfect condition on that date. The Pennsylvania Railroad Company will run the first low-rate coach excursion from the East to the World's Fair on May 10, affording residents of the Eastern section an opportunity to see the great Exposition in all the glory of its pristine freshness. Tickets will be sold from all principal stations on the Pennsylvania Railroad System. The fare from New York will be $20; from Philadelphia, $18.50, with proportionate rates, approximating one cent per mile, from other points. These tickets will be good going only on special coach trains to be run on May 10, and returning in coaches of regular trains leaving St. Louis not later than May 19.

The Jumping Frog

By MARK TWAIN

This story first brought Mark Twain into prominence as a humorist. It had instant recognition as a notable piece of humorous fiction and has remained a general favorite amid all the author's later work. The story of the "Jumping Frog" is now published as a book, with translation from the French and new addition by the author written in November of 1903.

A History of the German Struggle for Liberty

VOLUME III.

By POULTNEY BIGELOW

The third volume of Mr. Bigelow's absorbing recital of the German fight for nationality tells of the period between 1815 and 1848. Prussia's condition after Waterloo, a sketch of the first German Emperor, account of the Carlsbad Decrees—these are a few of the really numerous topics included. It is a spirited account, told with calm judgment, fervor, and enthusiasm.

Progress of Science

A New Tunnelling-Machine

THE rapid increase in the number of underground railway enterprises has brought into existence improved methods of tunnelling, and one of the most recent of these is a combined electrically driven and hydraulic machine now in use in England. It is designed for tunnelling in fairly soft ground, such as is encountered in London, and consists of a shield with a cutting edge which is forced forward into the earth or clay. This part of the machine does not involve any new principle, as shields of one form or other have been used for many years in soft-ground tunnelling, but the combination with it of a mechanical excavator operated by electricity is a novel feature which contributes to its efficiency. This consists of a cutterhead and buckets, which are revolved by a 50 horse-power electric motor, and just clear the cutting edge of the shield. In operation, the shield, which is cylindrical in form, is forced forward by hydraulic rams, its edge cutting into the ground. The cutterhead and buckets are then rotated, and the material which is loosened by the cutting tools on the head is collected by the buckets and delivered at the top centre of the shield, whence it is discharged into a shute leading to a conveyor belt at the tail end of the shield, and carried back into the completed portion of the excavation for final removal. In London clay it has proved a distinct success, and the occasional boulders encountered are broken by the cutting tools and passed along to the delivery belt. It can be employed where the ground to be penetrated is sufficiently soft to admit of using a shield. In these cases cast-iron circular rings form the walls of the tunnel and are put in position just as soon as the material is excavated. These tunnels are usually at considerable distance beneath the surface, and are quite different from the open cut or rock excavation encountered on the subway work in New York city.

Artificial Diamonds

The manufacture of artificial diamonds by the aid of the electric furnace has been one of the goals of electrochemists since Moissan began his important experiments involving the production of high temperatures. This distinguished scientist, it will be remembered, was able to crystallize carbon and to obtain true diamonds, but they were of microscopic size, and attempts to produce larger crystals were fruitless. Recent experiments with the same purpose have been carried on in Germany by Ludwig, and while they did not result in diamonds of commercial size, nevertheless they confirmed Moissan's theory that the carbon crystals known as diamonds are the result of extreme temperature, great pressure, and sudden cooling. Where Moissan employed carbon dissolved in iron which was fused by the electric arc and was at the same time under high pressure, Ludwig used carbon alone, employing a bomb into which carbon electrodes were sealed, and which contained hydrogen, to produce the necessary pressure. This was possible, as hydrogen at high temperatures does not combine with carbon, and so enabled pressures as great as 1200 to 3000 atmospheres to be obtained. It was found that when a certain pressure and temperature were reached the carbon electrodes ceased to conduct, and it was then supposed that the carbon was assuming a crystalline form. On cooling the apparatus and permitting the gas to escape, a few minute crystals were found in the mass, though the number was considerably increased by sudden cooling with water. These minute particles of carbon had a crystalline and semi-transparent appearance, but were not found in sufficient quantities to warrant the prosecution of the method for commercial purposes. As regards the manufacture of artificial diamonds, it seems demonstrated that at present the scientists are unable to reproduce the conditions of temperature, pressure, and sudden cooling which must have acted on carbon to form the diamonds in the earth crust, but the cause of the phenomena having been demonstrated, subsequent electrometallurgists may be able to produce these forces with sufficient intensity to achieve the desired result.

Music

Richard Strauss: An Estimate

RICHARD STRAUSS, the most eminent of living composers, and by many considered the paramount figure in post-Wagnerian music, has come to America to appear in person at numerous public performances of his own works. During the course of his festival concerts in New York, which began last week, we shall hear all but one of the seven tone-poems on which his great fame chiefly rests: The early "Don Juan," the "Tod und Verklärung" of what may be called his middle period, the later "Till

Richard Strauss
Who is visiting America on an important concert tour

Eulenspiegel," and the epoch-making and characteristic works of his artistic maturity —"Zarathustra," "Don Quixote," and "Ein Heldenleben." It is promised that we shall also hear the first performance anywhere of his most recent composition: a "Sinfonia Domestica," which is said, in apparent seriousness, to represent phases of Herr Strauss's domestic arrangements.

What, in brief, are the signal characteristics of this composer who, before his fortieth year, had disturbed the currents of modern music as they had not been disturbed since the stormy period of the Wagner crisis? Are we to recognize in Richard Strauss an irresponsible musical anarchist, a crack-brained iconoclast, an outrageous disturber of the musical peace? Or is he a prophet bearing messages of great moment, a liberator, a genius of a new and unparalleled order? Or is he, finally, as Mr. Vernon Blackburn, with manful temerity, has lately declared, "simply the expression of childlike thought in music"; one whom it is absurd to think of "as a complete musician"? For ourselves, we can only declare our matured conviction that Strauss is the most important, the most potential composer since Wagner, and the greatest humanist, saving none, in music. His "Don Quixote"—a more representative work than any he has yet achieved —has a depth and tenderness of comedy, a ripe and enlightened humanity, a vigor and truth of characterization, which are nothing less than Shakespearean. And in those works of larger implication—in "Tod und Verklärung" and "Zarathustra," he has sounded vast spaces, has uttered, with unexampled conviction and impressiveness, aspirations and imaginings of overpowering significance: and he has touched, more than once, the margin of the sublime. As for his consummate technical equipment, his necromantic musicianship, nothing need here be said: for this, at least, he has compelled unstinted recognition. For a proper acknowledgment of the essential elements of his genius he will probably, like many another before him, have to wait with what serenity he can command.

THE MAIDS OF PARADISE

Robert W. Chambers possesses, more than any other American novelist, the feeling and quality of romance. The present tale carries the reader into the heart of the Franco-Prussian war. The Boston *Herald* writes that "Mr. Chambers is a superb master of his art as a story-teller of romantic fiction." Another Boston paper calls this romance "a wide-awake book, with plenty of dash and crash in it and many tender passages." Indeed, this charming story is, to quote the Philadelphia *North American*, "the foremost of modern romances."

COMMENT

THE nomination of Mr. Roosevelt for the Presidency by the Republicans being now absolutely certain, public attention is concentrated on the selection of his Democratic competitor. It begins to look as if the lunatics in the Democratic party would muster a sufficient number of delegates to the St. Louis convention to thwart the will of the majority under the two-thirds rule. If the Democratic national convention would, immediately after its organization, abolish that rule, it is probable that the conservative element of the party would be able not only to frame the platform, but also to name the candidates. It is high time, therefore, that Democrats who desire the triumph of their principles should recognize the expediency of abandoning a custom which, under existing circumstances, would be more honored in the breach than in the observance. By those who are conversant with the history of the two-thirds rule since the formulation of it in 1832, it is well known that at no time did the regulation confer any benefit upon the Southern States by which it was prescribed, while on three occasions it wrought them a grievous injury. In 1832 it was superfluous, because there was no opposition inside of the Democratic party to the renomination of Andrew Jackson. In 1836 and 1840 Martin Van Buren had practically no competitor in the Democratic camp. In 1852 and 1856 the South gained nothing, and lost nothing, by the enforcement of the two-thirds rule.

In 1844, had the majority of the national convention been permitted to carry out their wishes and to nominate Martin Van Buren, it is almost certain that the Democratic nominee would have secured more electoral votes than did James K. Polk; and it is probable that the Mexican war, with all of the resultant political troubles, would never have taken place. In 1848, had it been known that the two-thirds rule would be abolished, the friends of Van Buren would have made a second and successful effort to bring about his nomination; the Barnburner revolt in the State of New York would have been averted, and the Whig candidate for the Presidency would have been defeated. In 1860, had Stephen A. Douglas, to whom a majority of the delegates were devoted, been nominated by the Democratic convention at Charleston, it is evident from the votes cast in the following November that he would have been elected. But, as Lincoln had predicted, the position which Douglas was forced to take in the Illinois canvass for a seat in the United States Senate cost him the support of the extreme pro-slavery wing of the Democratic party, the wing which, in its unwillingness to accept the "Little Giant" for leader, committed political suicide by seceding from the Charleston convention, and coercing its section into the adoption of a course that led straight to the destruction of the domestic institution which it wished to protect. A curse to the South when it was mighty, the two-thirds rule emasculates the influence which Southern Democrats, if united, might still wield in a national convention.

There is no doubt that the movement in favor of nominating ex-President Cleveland for the Presidency is gaining ground among the Democrats in the Borough of Manhattan. An outburst of pro-Cleveland sentiment on the part of a district organization has been followed by the announcement that a mass-meeting will soon be held at which speeches will be made by Mr. John G. Carlisle, Mr. Charles Fairchild, and other men conspicuously associated with the Cleveland administrations. That, if the ex-President will permit it, the New Jersey delegation will present his name to the Democratic national convention may be taken for granted. On February 29, however, a Wall Street news bureau asserted, on what is alleged to be first-hand authority, that Mr. Cleveland's determination not to be a candidate was unalterable. It added that Mr. Cleveland had but slight expectation of the Democratic party nominating what might be called a decent candidate for the Presidency. It is scarcely to be expected that the national convention will nominate one of Mr. Cleveland's lieutenants, if their chief, who is far more widely known, and who would run incomparably better, declines to serve. We observe that a poll of the Democratic State Committee of Georgia, which took place at Atlanta on February 29, resulted as follows: For "a sound, conservative candidate," 15; for Cleveland, 6; for Gorman, 5; for Parker, 4; for Hearst, 3; for anybody except Hearst, 3. We note, by the way, that, on February 29, Mr. Hearst's New York newspaper, the *American*, published an alleged interview with Mr. Herman Ridder, the editor of the *Staats Zeitung*, to the effect that Hearst would be acceptable to him, though not on a silver platform. The assertion was promptly repudiated by Mr. Ridder. What the last-named gentleman said was this: That he favored the nomination of Mr. Cleveland, and under no circumstances would support a silverite candidate for President. He declares that he refused to say a word concerning the Hearst boom. The same policy of silence on that subject is observed by Mr. Charles F. Murphy, who adheres to the conviction which he has repeatedly expressed that if the Democratic party desires to elect its candidate, and is not deliberately riding for a fall, it will select Mr. Cleveland.

It begins to look as if Mr. William R. Hearst's candidacy for the Democratic nomination for the Presidency may have to be taken seriously. The fact that he is not a frequent or eloquent speaker, and has seldom, if ever, been heard on the floor of the House of Representatives, or on the stump, is not the fatal obstruction to his eligibility which some persons imagine it to be. Thomas Jefferson was no orator: his influence was acquired exclusively by the pen. In the eyes of many hundreds of thousands of naïve and credulous readers, Mr. Hearst is the author of every editorial article that appears in every issue of his numerous newspapers. It follows that, from their point of view, he seems to be a good deal of a man, measuring quite up to the standard set by such Presidents as Polk, Johnson, and Arthur. As the presumable writer, and as, certainly, the responsible indorser, of every word printed over his signature, he is indisputably a more important figure on the public stage than was Mr. William J. Bryan a week before the latter secured a nomination for the Presidency at the hands of the Democratic national convention of 1896. Although Mr. Bryan has, thus far, declined to avow himself a supporter of Mr. Hearst's, it is significant that only in States and Territories where the Bryanites are strong has the Hearst boom been launched successfully.

There is no reason to believe that Mr. Hearst will get a single delegate from the city or State of New York, although he represents a metropolitan district in Congress. On the other hand, he seems likely to have the delegates from New Mexico, Arizona, Oklahoma, Indian Territory, Hawaii, and Porto Rico. It would not be surprising should he have some support from California, Oregon, Washington, Nevada, Utah, Idaho, Wyoming, Montana, and Colorado. Some delegations also seem assured to him from the Middle West, and the South: we refer to those of Mississippi, of Iowa, and of Kentucky. A vigorous effort is making to gain for him some delegates from Massachusetts, and other New England States. On the

Digitized by Google

whole, it is needful for prudent Democrats to confront the possibility that the Bryan-Hearst combination may control a little more than a third of the members of the Democratic national convention. The fact should be accepted as conclusive proof of the need of abolishing the two-thirds rule. No doubt the nomination of Mr. Hearst is as impossible this year as would be that of Mr. Bryan. If nominated, Mr. Hearst would poll even fewer votes than were cast for the Democratic nominee in 1900. Still he and his next friend, the editor of the *Commoner*, may exercise a pernicious influence on the framing of a platform and the selection of a candidate at St. Louis.

Since the recent meeting of the Republican State Committee of New York, the deposition of Senator Platt from the leadership of his party in that State is no longer open to question. Governor Odell is now the "boss," and will remain so during the rest of his term of office, which expires, however, with the current year. There seems to be no doubt that he can secure the chairmanship of the next Republican State Committee if he desires it; or can obtain a third nomination for the Governorship. Which of those honors he will choose depends on the determination of a preliminary question, whether, namely, he will be invited to succeed the late Senator Hanna in the chairmanship of the Republican National Committee. We scarcely think that sincere and well-informed friends of Mr. Roosevelt would permit the last-named position to be offered to the present Governor of New York. The efficiency of his campaign methods was not demonstrated by the fact that in 1902 he was reelected by a plurality of less than nine thousand, although the municipal administration of New York city was in the hands of an ally, Mayor Low. Under Mayor McClellan all the power of the municipal administration will be used against the Republican candidates for the Presidency and the Governorship.

The total eclipse of Mr. Platt bodes ill to the fortunes of his colleague in the Senate, Mr. Chauncey M. Depew. What Mr. Odell's intention is with regard to the Senatorship is not yet definitely known. It was at one time reported that he had promised the seat now occupied by Mr. Depew to ex-Governor Frank Black, who, undoubtedly, is one of the ablest and most eloquent men in the Republican party. According to another rumor, Mr. Odell is hesitating between Governor Black and a certain eminent financier. It now looks as if Mr. Odell would dominate the Republican members of the next New York Legislature, but it is possible that they will not constitute a majority. If the Democrats in a lucid moment should nominate a conservative and trusted man for the Presidency, it is possible that they might gain control of both branches of the New York Legislature. In that event the whole vast structure of hopes and plans which Mr. Odell has reared on his assumed ability to manipulate the huge canal fund would be levelled to the ground, and "like the baseless fabric of a vision, leave not a wrack behind."

The Secretary of Commerce and Labor has made public the report of the special commission appointed by the President last September, to examine the conditions existing at the Ellis Island Immigration Station, New York. Inasmuch as the chairman of the committee was Mr. Arthur von Briesen, there is no reason to suppose that the conclusions were warped by any bias against the New York *Staats Zeitung*, the newspaper by which the charges of mismanagement were originally made. The commission, which seems to have made a careful investigation, reports that most of the charges are unfounded. It dismisses, for example, as unsupported by any evidence, the accusation that there has been a deportation of large numbers of immigrants who should have been allowed to land. Repelled also, as unsustained by proof, is the charge that uncleanly conditions exist in and about the buildings at Ellis Island. As a matter of fact, the buildings and appointments were found to be exceptionally clean, though there was a doubt as to whether blankets were sufficiently disinfected.

The commission also dismissed as unwarranted the charge that women and children and others who are detained at Ellis Island, or in the hospitals thereof, are required to do menial work. On the whole, the commission reports that the testimony is conclusive that immigrants are treated not unkindly, but, on the contrary, with every possible consideration, so far as the inadequate facilities at Ellis Island permit. They are well fed, fairly well housed, and, when ill, are cared for in hospitals—all without expense to themselves. If permitted to land, the permission releases the immigrant instantly from the direct control of the Ellis Island authorities. If, however, friends or relatives, who will act in the capacity of special protectors, are expected to call for him, he is supplied gratuitously with food and clothing until their arrival. The obvious purpose of such temporary detention is to protect immigrants from falling into evil hands. Far from discovering any proof of a general animus against immigrants on the part of the Commissioner of Immigration, the commission declares Commissioner Williams entitled to the highest commendation for the zeal, intelligence, and humanity evinced by him in administering the affairs of the Ellis Island station.

On Monday, February 29, the *Age-Herald* of Birmingham, Alabama, published an interesting letter, in which Booker T. Washington directed attention to the fact that, within the preceding fortnight, three members of his race, one of whom was a woman, had been burned at the stake. Not one of the three victims was charged with a crime even remotely connected with the abuse of a white woman. They were simply accused of murder. He went on to appeal to white men at the South to take firm ground against barbarities that would be certain in the end to prove more degrading to the people who inflict them than to the sufferers. It is true also, as he says, that if the law is systematically disregarded when a negro is concerned, it is only a question of time when the law will be disregarded also when a white man is accused. That the appeal to the good feeling and good sense of Southern whites will not be made in vain was attested on the preceding day—Sunday, February 28—when Governor Vardaman, who has been looked upon as exceptionally hostile to the colored race, saved at Batesville, Mississippi, a negro from a mob that had threatened to burn him at the stake. The offence of which the colored man was accused had nothing to do with the "new negro crime." He had been arrested on February 27 for the murder of a white engine-driver, and the sheriff, knowing that he would be powerless to save the negro's life, had telegraphed to Governor Vardaman for assistance. Leaving Jackson, the State capital, at 10 P.M., the Governor, attended by some sixty soldiers, travelled all night, and reached Batesville about daybreak, just in time to deprive the mob of their prospective victim. It is significant that the Governor's train was well-nigh wrecked by an engine-driver who is known to have been in sympathy with the mob. We need not say that the course pursued by Governor Vardaman reflects the highest credit upon him personally, and on his State. There is not even the shadow of an excuse for burnings in Mississippi, if it be true that, since the new Constitution has been operative, there have been no examples of the new negro crime in that commonwealth.

A curious colloquy took place in the House of Representatives on February 29 between Representative Gilbert of Kentucky, a Democrat, and Representative Scott of Kansas, a Republican. The former was discussing the "freedom and equality" plank of the Republican national platform, and remarked that the American people got an exhibition of the Republican notion of freedom and equality when a certain colored man named Booker Washington lunched with President Roosevelt at the White House. Mr. Scott asked Mr. Gilbert what he would say if a Democratic President should invite a negro to his table. To Mr. Gilbert's declaration that such an incident would be impossible, Mr. Scott rejoined that during the first administration of Mr. Cleveland a negro from Kansas was introduced to the President, and was by him invited to sit at the same table at luncheon, an invitation which was accepted. The negro was C. H. J. Taylor, who afterwards held the office of Register of Deeds for the District of Columbia, as Frederick Douglass had held it before him. The only comment that Mr. Cochran of Missouri could manage to make on the fact cited by Mr. Scott was that the incident proved Grover Cleveland to have been a good Republican. We long since recalled in these columns the invitation given by Mr. Cleveland to the negro Taylor, and pointed out that an act of courtesy which was entirely devoid of political importance twenty years ago had become invested with grave significance

to the constitutional changes which, with the approval of many Northern men, had been made in several Southern States; changes justified in the eyes of their authors and endorsers by the belief that the assumption of social and political equality between the races which lay at the root of the Reconstruction legislation has, or should have, no foundation in fact. Scarcely anybody dreamed of complaining in 1885 because a Democratic negro, the prospective occupant of the office of Register of Deeds, had been treated with the same conventional politeness to which his Republican predecessor, Frederick Douglass, had been long accustomed. Other times, other usages. What was immaterial two decades ago might be a serious blunder to-day.

We have read with interest some comments on "Peonage in the South," which appeared on February 24 in the *Age-Herald* of Birmingham, Alabama. This trustworthy newspaper informs us that, while it has no desire to defend peonage, yet, as a matter of fact, it knows that ninety per cent. of the persons charged with the crime in the County of Tallapoosa were guiltless of deliberately violating the law. It seems to have been generally believed in Tallapoosa County not only by the whites, but by the blacks, that a well-to-do citizen who took a negro out of jail by paying his fine, and allowed him to work out the indebtedness, was doing the so-called peon an act of kindness. It is said that at every term of court negroes would call upon white acquaintances to help them out of trouble, for the reason that they preferred to work for white farmers rather than go to the chain-gang. As white farmers, on their part, saw a profit in the transaction, the practice gradually spread. Obviously the custom of permitting negroes to work out alone might lend itself to abuses, and some cases of cruelty having been disclosed, the courts put an end to the practice. According to the *Age-Herald*, the stopping of peonage has caused discontent among negroes, as well as among some whites, but the leading men of the communities concerned heartily approve of the reform. They cheerfully bear the temporary inconvenience due to a scarcity of labor, in order to relieve from odium the counties in which they live.

It is settled that the Panama Canal is to be completed by the government of the United States. Before a single spade is put in the soil of the isthmus, however, adequate measures should be taken for the enforcement of sanitary regulations. It would be a national disgrace if the mortality of the laborers should recall the appalling loss of life incurred by the builders of the Panama Railroad; and, again, by the employees of the Lesseps Canal Company. A failure on the part of our government to provide sufficient precautions against pestilence will be inexcusable, because it is forewarned. Surgeon J. C. Perry has just submitted a report on the existing sanitary conditions of the isthmus to Surgeon-General Wyman of the Public Health and Marine Hospital Service. Let us note first what he says about the canal strip, ten miles wide and forty-seven miles long, which already has a population of about 15,000 persons, and which, presently, will have two or three times as many inhabitants. After pointing out that the denizens of this belt are almost exclusively negroes and Chinese, Surgeon Perry says that all the villages are extremely filthy. There is not even a pretence of sanitary regulations or restrictions. There are no sewers, and there is no supply of water, except that furnished by rain or obtained from small springs or streams. Offal or waste matter is simply thrown into the streets or left on the ground, in close proximity to hovels, thence to be removed by buzzards, or hogs, or the torrential rains.

Under the circumstances, we are not surprised to hear that all types of malarial fever are encountered in the canal strip, or that tuberculosis, rheumatism, and beri-beri are common. So much for the canal belt itself. If now we turn to its terminals, Colon and Panama, we learn that the island on which the former town is situated is a coral formation, the surface of which is only a few feet above the sea-level. The houses, except those occupied by railway officials, are, for the most part, built in a swamp, which is covered with water during the rainy season. Not only then, but sometimes also during the dry season, water stands in stagnant pools beneath two-thirds of the buildings. Colon's supply of drinking-water is derived exclusively from rain collected in cisterns, or from reservoirs on Monkey Hill, close to which reservoirs are houses occupied by negro families that wash their soiled clothing in the water. For scavengers Colon relies on buzzards and dogs. It is true that yellow fever is not so frequent in the town as it is at Panama, yet three fatal cases of the malady occurred last year among the better class of the white population. Surgeon Perry, for his part, has no doubt that Colon can be made a healthy tropical city. For competent sanitary engineers the task would be by no means impracticable. The proof of this assertion is that the section of the town occupied by the Panama Railroad Company is kept clean and dry, and is equipped with a modern sewerage system. What is needed is to fill in the swampy part of the island, to destroy most of the huts now occupied by negroes, and to require new houses to be built on sanitary principles.

Canada is by no means a unit on Mr. Chamberlain's fiscal scheme. It is becoming evident that, while the preferential tariff with England is warmly endorsed by the more Conservative element in the Dominion, it has many opponents among the Liberals, who object in principle to imperialism, as likely to lead Canada into militarism, and who seek rather to make Canada a sovereign state in everything but name, and not an appanage of the mother country. A powerful address in this sense was delivered the other day by Professor Adam Shortt, of the University of Kingston, Ontario, before the Canadian Club. Professor Shortt described Mr. Chamberlain as a kind of William J. Bryan—honest, enthusiastic, but unable to see the whole circle, and taking no thought of either past or future. Mr. Chamberlain makes the wildest statements, and pledges his honor on all kinds of future events which no mortal can foresee. He raises so many disputable points that he can only be answered by a hailstorm of statistics. His plan, in Professor Shortt's view, is not really good for Canada. It is a positive detriment to Canada to proclaim that Manitoba and the Territories can never be prosperous until England grants a preferential tariff. Moreover, the differences in the price of wheat are so considerable in different parts of Canada that a preferential duty would tend to favor certain localities at the expense of others; no uniform benefit could be assured.

Professor Shortt went on to liken the preferential proposal to a business of the same family, an arrangement made on sentimental rather than economic grounds, that invariably leads to trouble, for the reason that each party desires to do more for the other than he really can. He also proceeded to say that if Canada was going to build up the empire by furnishing a preferential market for British manufactures, there would be disappointment, and likewise if Britain tried to build up the empire by giving a preference to Canadian wheat, there would be disappointment. He declared that Canadians should rather pay attention to the great natural resources at their own doors. It was, doubtless, a sense of this growing opposition to Mr. Chamberlain's scheme which recently led the Ottawa *Citizen* to say that Great Britain might decide to adopt protection, Mr. Chamberlain might successfully formulate a scheme of interimperial tariff preference, but before the great project reached finality its fate would have to be decided in a political battle fought in the constituencies of Canada. In that fight all so-called sentimental forces of loyalty and patriotism would be arrayed against the tremendous temptation of material advantage by which the wealth and cunning of the United States would endeavor to induce the Dominion to accept continental reciprocity in lieu of the British scheme. Canada, declared the *Citizen*, could not be awakened too soon to the fact that she would be called on to undergo a strain that would test her allegiance to the utmost.

It is a satisfaction that John Turner, the English anarchist, is to have a hearing in April before the United States Supreme Court. Meanwhile he is released from Ellis Island, where he has been locked up for four months, and can fill his lecture engagements in Canada. Turner is personally a mild and orderly man, but he is a theoretical anarchist like Krapotkin, and does not believe in organized government. He is a fluent preacher of the theories he affects. How violent his utterances may sometimes be we do not know, but he enjoys the right of free speech in England, where he goes and comes at his will

and spouts unmolested. He was arrested here by the Ellis Island authorities, while making an address on labor-unions at the Lenox Lyceum. The arrest was made under the law for the exclusion of anarchists which was passed after the assassination of President McKinley. The law aims to keep out dangerous persons who might commit, or incite, political murders. Commissioner Williams and his associates thought the law applied to Turner. A good many other persons thought it didn't, and held that if it did it was bad law, and contrary to the constitutional prohibition of the abridgment of free speech. The whole subject is highly important. Turner has got his case before the Supreme Court, at the cost of four months' imprisonment. He could have been deported at once if he had consented. As the result of this inconvenience which he has voluntarily sustained, we shall get an interpretation of the new law from our highest court.

On February 29 the Republicans of the Twenty-fifth Congressional District of New York renominated Lucius N. Littauer for Congress, and named him and State Senator Brackett as delegates to the Republican national convention. The convention, at the instance, doubtless, of Messrs. Brackett and Littauer, declined to instruct for Roosevelt, or even to endorse his administration. This action, or want of action, is interpreted to mean that Mr. Littauer and the President are no longer in the same political boat. Since that is the case, it is obviously Littauer who has disembarked, for the boat still swims and makes excellent progress, and the President is still in it. Mr. Littauer expressed "feelings of deepest gratitude" to his constituents for standing by him in recent troubles, resulting, as he expressed it, from a malicious attack of enemies who "sought to make a clean and honest business transaction a violation of law." He would have done better to avoid making it so evident that he does not include the President, Mr. Root, or Attorney-General Knox among those to whom he has reason to feel grateful. They did no more, and no less, in his case than their official obligations compelled; to have done otherwise would have been neglect of duty. It does not help Mr. Littauer's case to make this public admission that he and his old friend Roosevelt are out.

It is a very stirring story that Samuel Hopkins Adams tells in *McClure's Magazine* about Caleb Powers and Kentucky. Mr. Adams is a well-known newspaper man in New York. He knows how to tell a story. He is the son of a minister and the grandson of a minister, and was well grounded in veracity in early life. He is a conscientious as well as a graphic narrator, and his story is undoubtedly as accurate as he could make it. Caleb Powers was the Republican Secretary of State in Kentucky, a member of the administration of Governor Taylor, which was turned out of office by William Goebel's Legislature. He has been in jail in Louisville or Frankfort for four years, and is now under sentence of death for the murder of William Goebel. All newspaper readers will recall the shooting of Goebel, but in most minds the details of the case have probably grown faint. We have read that Governor Taylor ran away from Kentucky and had not dared to return, because if he did he would be tried for Goebel's murder. He has said that he could not get a fair trial in Kentucky if he went back there, and we have believed him. The Governor of Indiana has refused to extradite him from that State. How well warranted that refusal was is made clear by Mr. Adams's narrative of the case of Caleb Powers. Powers has been three times tried for the murder of Goebel, and has been convicted each time. Twice he has been sentenced to imprisonment for life. As the result of the third trial he was sentenced to be hanged. The first and second trials were upset by the Kentucky Court of Appeals. On the third that court has not yet passed. If it fails to interfere, Mr. Adams says that effort will be made to bring the case before the United States Supreme Court, and if that fails, Powers will be hanged, unless the Democratic Governor of Kentucky commutes his sentence.

The way Mr. Adams puts it is that if the higher courts fail Powers, "nothing but the intervention of a Democratic Governor stands between the State of Kentucky and the onus of a legal lynching." For Mr. Adams has no doubt at all that Powers is innocent, and no one who reads his story can doubt that at least Powers has been improperly convicted. The chief witness against him on his first trial was proved to be a perjurer, and indicted for perjury, but released on bail ($200), and promptly ran away. Juries in all three trials were practically packed. The judge in the first two trials was a bitter and outspoken partisan; the judge in the third trial was not much better. The chief evidence in the third trial was a confession obtained by physical torture and terror from a witness, Henry Youtsey, who is himself suspected of being the man who shot Goebel. Mr. Adams declares that the state of feeling between Republicans and Democrats in Kentucky over the Goebel murder is such that it is impossible that any one indicted for a share in that murder can have a fair trial. As to the Powers case, he says that the animosities engendered by it have brought about scores of fatal quarrels. Business partnerships have been dissolved by it, churches broken up, old friendships withered, families disunited. Ladies who sent food to Powers in Frankfort jail had their gardens ruined and their domestic pets poisoned; the barns of folks who "talked too much" caught fire; the Governor's wife was ostracized in Frankfort. One side is as bitter as the other, but the Democrats have the official power. It is an extraordinary story, and would be impossible if we did not remember how very close Kentucky came to civil war after Goebel was shot.

This story will be widely read, and the country will follow the Powers case with quickened interest after reading it. The state of things in Kentucky as Mr. Adams describes them helps the observer to understand how it has happened that Kentucky Democrats have declared for Hearst and Bryan, and that Colonel Henry Watterson no longer cares to take an active part in public affairs. Bryan was a strong and constant backer of Goebel, and Goebel aimed at nothing less than a dictatorship in Kentucky. Any State that has civilizing influences to spare should try to find a market for them in the Blue-Grass country.

The conditions of intermarriage between Catholics and Protestants have lately come under discussion in some of the newspapers, and the stipulations precedent which are wont to be made by the Roman Catholic Church have been set forth with some minuteness. The Church, through its representative, usually stipulates that the marriage shall be indissoluble except by death, that the Catholic contracting party shall at all times be allowed the free exercise of the Catholic religion, that all children of either sex born of the contemplated union shall be brought up Roman Catholics, and that no other ceremony than that performed by the Catholic priest shall take place. There is usually no objection to any of these stipulations except the one that concerns the children. Where one of the prospective parents is a Protestant, the demand that *all* the children shall be brought up Catholics seems somewhat grasping. Yet this demand is always made under threat that unless it is complied with the Church will not countenance the marriage, nor suffer a priest to perform the ceremony. What is not generally known is that when the persons about to marry are agreed not to concede this stipulation about the children, and abide stoutly by that conclusion, the Church through its priest will sometimes marry them without it. When threat, injunction, and entreaty have failed, and it is plainly a question whether a priest or some one else shall perform the ceremony, the priest sometimes does it. Half a loaf is better than no bread even to the Catholic Church, but the effort to get the whole loaf is always urgent, and persistent up to the very last. A very few Protestants succeed in keeping their half-loaf in such cases, but only when their prospective Catholic spouses are ready at a pinch to change their Church rather than abandon the marriage.

President Eliot of Harvard says in his annual report that of all sports that which has been conducted at Cambridge with the least intelligence and success is football—except from a pecuniary point of view. The trouble with football is that it has been Rockefellered. The end has been lost sight of in a too sedulous cultivation of means. The idea of sport has been lost out of it. Everything has been sacrificed to "success," with the result that success itself has been sacrificed. There is no joy in Harvard football; no light, no sweetness; no real success; nothing but bitter competition and a profit of about $60,000 a year.

The War and its International Aspects

At the hour when we write, the progress of the war in the Far East indicates that the Japanese are not only destined to remain preponderant at sea, but are also likely to prove successful in the earlier military operations. Events have shown that Russia was unprepared for the contest, and that her Foreign Office should have spared no effort to avert it for at least a year or two to come, instead of provoking it by the unsatisfactory reply to Japan's latest note embodying demands which had been frankly described as constituting an irreducible minimum. We can only explain the blunder committed by the Russian Minister for Foreign Affairs on the assumption that gross ignorance prevailed in court circles at St. Petersburg concerning two vital questions, namely: first, the state of public feeling among intelligent Japanese and the adequacy of Japan's preparations, military and naval, for war; and, secondly, the frightful extent to which every department of Russia's military and naval organizations in the Far East had been honeycombed and paralyzed by fraud. Keeping in mind the shameful peculations of the bureaucracy during the Crimean war and during Russia's last war with Turkey, we have no doubt that money enough had been drawn from the treasury to place in or near Manchuria from two to three times as many soldiers as are actually there. We have no doubt, either, that money had been furnished, and was supposed to have been expended, in sufficient quantities to provide the ordnance, arms, ammunition, and food-supplies that would be required by an army of three hundred thousand men for at least two years to come. We now have reason to believe that, outside of the railway guards, who cannot leave their stations for an hour, even in time of peace, there were not a hundred thousand Russian soldiers between Lake Baikal on the west and Vladivostok and Port Arthur on the east and south at the outbreak of the war, and that, even for so inadequate a force, the supplies already forwarded would be exhausted in three months. Once more has the Russian colossus proved to have feet of clay. Of what avail are the ostensible vast resources of the Russian Empire if, owing to the ingrained and all-pervasive corruption of the bureaucracy and the military system, they never can be turned to account in the right place and at the proper moment?

As might have been expected, the Russian navy has not escaped the sapping influence of the decomposition to which the Russian army has been long subjected. The present contest, it should be remembered, has offered the first opportunity of testing what Russian war-ships and their personnel are made of since the battle of Navarino; for, during the Crimean war, it would have been madness for the Russian squadrons to confront the fleets of their British and French opponents. That the result of the test has been deplorable must be admitted by those who are disposed to sympathize with Russia. When the Japanese made their night attack upon Port Arthur, on February 8-9, almost all of the Russian naval officers seem to have been amusing themselves on shore. During many subsequent naval engagements the Russian gunners seem to have exhibited no efficiency, if we may judge from the slightness of the damage known to have been inflicted on Japan's war-ships. How ill provided is Port Arthur in respect of food-supplies, may be guessed from the fact that all civilians were long since expelled from the fortress. That Russia has no local military force equal to the defence of the Liao-tung peninsula is evident from General Stoessel's address to the Port Arthur garrison, in which he warns them that he expects to be forthwith besieged by land as well as by sea. Had the huge number of troops for which the St. Petersburg exchequer paid been really forwarded to Manchuria, a hundred thousand soldiers might be at this hour protecting the Liao-tung peninsula.

What is true of Port Arthur is true also of Vladivostok and of the Yalu River, which forms the boundary between Korea and a part of Manchuria occupied by Russia. At each of these three points Russia could and should have had, and had paid for having, a military force so large that Japan, even though preponderant at sea, could not have hoped to compete with it until many months should have elapsed. As things are, it seems probable that even on land the Japanese will prove superior in numbers at the points of collision. The blunder committed in provoking hostilities without adequate preparations at or near the theatre of war is scarcely retrievable by an army operating five or six thousand miles from its base, and dependent exclusively for reenforcements and supplies on a single-track and ill-built railway.

The awful humiliation to which Russia will be subjected should she be decisively beaten by an Oriental power which she has affected to despise will, unquestionably, prompt her to seek revenge. Sooner than assent on her knees to any terms that the Japanese victor might see fit to impose, she would accept her share of a world-wide disaster and see all the great naval powers involved in the Far-Eastern conflict. Should she, therefore, be beaten on land, as she has been already beaten at sea, she is likely to spare no effort to gain the active aid of France and Germany. Both of the last-named powers cooperated, it will be remembered, with Russia in 1895 to extort from Japan a retrocession to China of the Liao-tung peninsula, a retrocession quickly followed by a long lease of the coveted tongue of land to Russia. At that time, however, France and Germany had obtained from the British Foreign Office assurances that Lord Rosebery, then Premier, would not uphold Japan in a refusal of their demand. The situation at the present time is, obviously, very different. A treaty exists between England and Japan, which binds the former party to assist the latter in the event of Russia's securing support from a first-rate European power. Now, although France, Germany, and Russia might have ventured to confront Great Britain on the ocean in 1895, when Russia ranked as the third naval power on earth, while Japan's strength at sea was looked upon as a negligible quantity, it is obvious that the case to-day is materially altered. France and Germany have already built, or are building, sixty-one battle-ships, against a British total of sixty-three battle-ships. In respect of armored cruisers, Great Britain is very much superior to both France and Germany united. Moreover, Great Britain at this juncture would not be fighting alone, for she would have the cooperation of the active and victorious navy of Japan. On the other hand, France and Germany could derive no assistance for the moment from Russia's depleted and discredited fleet. In a word, no naval expert would dispute the preponderance on the ocean, under existing circumstances, of a British-Japanese coalition to a belated combination of Russia, France, and Germany. We hardly need add that if the navy of the United States were cast into the scale on the side of the British and Japanese allies the war-vessels of France and Germany would be sunk, captured, or driven from the sea.

We assume, therefore, that only with extreme reluctance would France or Germany now enter upon a struggle which, on Russia's part, has been so grievously mismanaged, and from which neither of the first-named powers could hope for anything but maritime disaster. Neither M. Combes, the French Premier, nor M. Delcasse, the Minister for Foreign Affairs, makes any secret of his personal unwillingness to be swept into the Far-Eastern vortex. So intimate, however, are the financial, political, and sentimental relations of France to Russia that a popular upheaval might at any moment subvert the existing cabinet and substitute a ministry committed to the immediate succor of the Czar. The money lent by France to Russia during the last decade is variously computed at from one billion, four hundred million dollars, to two billion dollars. The bankers through whom that stupendous sum was lent would do almost anything to avert a suspension of interest. We know how grave an effect was produced on French national sympathies during our war with Spain by the relatively insignificant loans that had been made in Paris to the Madrid government. It is, moreover, only fair to say that the apprehensions of an uneasy creditor do not constitute the sole basis of French sympathy for the Czar. But for the friendship of the Russian sovereign, France would have stood for many years, and would now be standing, in helpless and hopeless isolation, at the mercy of the Triple Alliance. Every decent Frenchman is keenly alive to the knowledge that to the Czar is due the rehabilitation of his country in its own eyes and in the eyes of the world. For France to evince ingratitude to Russia would be at once base and shortsighted; and for that reason we find it difficult to believe that she would turn her back upon the Czar if a demand for her assistance should be imperatively made. It is true that on February 29 the Combes government was upheld by a majority of 77 in the Chamber of Deputies in its refusal to discuss the whole question of the Russian-Japanese war, but there were some ominous incidents in the course of the debate. M. Firman Faure, a Nationalist member, assailing bitterly M. Pelletan, the Minister of Marine, and M. Doumer, formerly Governor-General of Indo-China and now president of the Budget Commission, threatening to undertake an independent investigation of the present condition of the navy. M. Doumer, who is one of the most outspoken and influential sympathizers with Russia in the French Chamber, is known to be the author of the article published recently in the *Figaro*, which revealed for the first time Russia's offer to join with France in a war against England at the time of the Fashoda affair.

It is, in a word, on Paris that the eyes of onlookers who desire to see the war localized should be fixed; for there may be witnessed at any moment an outburst of pro-Russian sentiment that will drive not only France, but England, and, eventually, half of Europe, into the Far-Eastern contest.

The Isle of Pines

The United States Senate has failed to confirm within the prescribed time the treaty concluded last July, by which the Isle of Pines was ceded to the Republic of Cuba. The agreement, therefore, is no longer binding, and we still retain the claim, which may be based on the wording of the Treaty of Paris. Our government has no intention, however, of enforcing such a claim, and it follows that a new treaty, not open to any objections that might be

fairly urged to the former document, should be negotiated without delay.

There is no doubt that, geographically, the Isle of Pines is as much a part of Cuba as Long Island is a part of the United States. Moreover, under the Spanish *régime*, the Isle of Pines was always treated as a part of Cuba's administrative entity. During our military occupation of Cuba, the Isle of Pines continued to be so treated, and when, in 1902, the Pearl of the Antilles was formally transferred to the independent constitutional government created by her people, the Isle of Pines was left under her jurisdiction. Having thus practically renounced any right of ownership or right of occupation, all that remained for us to do was to remove any possible cloud that the Treaty of Paris might seem to have cast upon Cuba's title, by embodying in a treaty the equivalent of a quit-claim deed. That is what our State Department undertook to do by the document signed last July.

It seems, however, that during the period intervening between January 1, 1899, and May, 1902, a considerable number of American citizens acquired land in the Isle of Pines, and invested money there in various ways, relying on unofficial assurances alleged to have been given by certain influential persons at Washington that the island would remain permanently a part of the United States. It might be contended that to such American investors the legal maxim *caveat emptor* applies. The alleged assurances were worthless on their face, for, as we have said, the Isle of Pines has never for a moment, from January 1, 1899, up to the present hour, been treated by us as a separate political or administrative entity. We presume, however, that nobody would desire to see American citizens subjected to pecuniary losses on merely technical grounds. We have no doubt that both the Cuban government and our State Department will afford them all the protection to which they are equitably entitled. It is obvious, however, that American investors cannot reasonably demand that the United States shall, by annexing the island, give to their investments the immense increment of value to which they may have looked forward. If it be true that lands in the Isle of Pines command lower prices to-day than they did three or four years ago, that is a risk which the buyers saw fit to run when they made purchases of real estate on the strength of unofficial assurances, given by nobody knows whom. It would be absurd for them to expect to receive from our government or from the Cuban government a pecuniary indemnity for the losses that may have been incurred in their speculations. What both governments can do, however, and doubtless will do, is to take adequate precautions in the new treaty to safeguard American residents from unfair discrimination in the matter of taxation or civil rights on the part of Cuba's legislative or administrative authorities. It may be also that some equitable concessions will be secured in the matter of public schools, and of the language in which instruction shall be given to the children of American settlers.

We have no doubt that all legitimate interests of American residents in the Isle of Pines will be conserved in the new instrument to be framed by Secretary Hay with the Cuban Minister for Foreign Affairs. If, however, there lurks anywhere a hope that our government will tarnish the hitherto stainless record of our treatment of Cuba, by an attempt to rob her of the Isle of Pines, such a discreditable hope should be renounced forthwith and forever.

It might be well for our State Department, before repeating the attempt to settle by treaty the future ownership of the Isle of Pines, to refer to arbitration the question whether the island, as a matter of fact, belongs to Cuba or to the United States under the terms of the treaty of peace concluded between our government and Spain at Paris in 1898. If the decision of the arbitrators should be that the Isle of Pines is a part of our national territory, it is obvious that we could not cede it by treaty. The alienation of it would have to be authorized by Congress. If, on the other hand, arbitrators should say that the island belongs to Cuba, the Havana government needs no confirmation of its title by a covenant on our part equivalent to a quit-claim deed. We ourselves have never believed it to have been the intention of any members of the peace commission of 1898 to assign to the Isle of Pines a political status differing in any particular from that given to Cuba.

The Paradox of Santo Domingo

INHABITANTS of that very beautiful, very fertile island which, among the Greater Antilles, is second in size only to Cuba, have always been exceedingly turbulent because their territory has always been exceedingly mountainous. They are politically disunited—not occasionally, but as their chronic misfortune—because those natural features which are the very type of permanence, the impassable mountain barriers, scatter the people among small communities in isolated areas. They are abnormally prone to revolutions, like the Colombians, not owing to any personal characteristics that differentiate them from the inhabitants of the somewhat more peaceful southern republics, but because Santo Domingo, more than all the other Latin-American countries excepting Colombia, has from the beginning been afflicted by that kind of topography which forbids the widely scattered political groups ever to draw near to each other socially and commercially, thus developing identical interests.

Now, although the cause of the trouble is found in the extreme rugosity of the island—the island itself being, in fact, nothing but the culmination of the Antillean continental uplift that formed eastern Central America as well—no careful student of West-Indian history will conclude that the deplorable effect must be accepted hopelessly, as though it were an immutable condition. On the contrary, it is just as certainly possible to do away with the effect as it is certainly impossible to remove the cause: a paradoxical statement which must stand at the beginning of any sound policy that may be framed in the United States, in Santo Domingo and Haiti, or in Europe, for the redemption of the island; otherwise, all efforts will be made in vain. Our war-ships may be sent there, to "strike sure and hard," as a recent despatch from Washington says, "with the purpose of putting an end once and for all to the present condition of affairs"; but the recorded experience of more than a century proves that the lesson will not be learned, and that the result of the proposed expedition will be limited to increasing the present wretchedness of a few coast towns. Our gunners and our marines might be better employed. Is it not worth while to remember that upon no other portion of the New World have highly civilized powers in the past tried more earnestly to impress by force of arms the lesson of respect for the rights of other nations; and that the forces of those polite foreign powers gave over the attempt as futile only after prolonged exertions and bitter suffering inflicted and sustained? Long ago France, Spain, and England, "once for all," learned by experience what we, surely, may learn by a little exact and dispassionate study. San Domingoans and Haitians do not especially need the lessons that our navy or army could teach. Neither do they especially require missionaries or schoolmasters: since the religious and secular instruction already provided for them is not without merit. But as an indispensable preliminary to all genuine progress, a complete system of highways and railways must be built.

We do not suggest in this any visionary or impracticable scheme. England constructed such a system of inland communications in mountainous Jamaica, and the negroes and half-breeds of Jamaica have been well-behaved during a long, severely trying period of financial distress that the smaller island has passed through since the price of sugar began to decline. The experiment has, therefore, been made elsewhere, under similar conditions, and the results are satisfactory: that is, good order has been maintained with ease in Jamaica, despite its mountains and its mixed, chiefly black, population. As we are dealing at present with the elements of the subject, the question of a protectorate, a colonial government, or any kind of foreign control in Santo Domingo should be excluded. The people of the little eastern and western republics there may or may not be able to gain facilities for communication without losing their independence: if there were good roads through the central desert that now holds them apart, the two nations would coalesce, and foreigners who should furnish capital for building roads of all kinds would hold a perilous claim. The certainties are these: Civil and electrical engineers can do more than the best army and navy in this field, by accepting the rough prohibition of the mountains as a challenge to their skill. The pacific course in this grave matter is confessedly difficult, and no whit spectacular; but we may save time and trouble if we realize now that the way of the engineers is the *only* way; that the infliction of an unmitigated punishment, with which no reasonable hope of correction and amendment can be associated would be an un-American proceeding.

The Political Outlook in England

MR. BALFOUR is counting the days which yet remain to the most hapless ministry in recent British history. His former ally and supporter, Mr. Redmond, has declared, in the most positive terms, that his party will vote against the Conservative government at every division, as a matter of principle, until home rule is granted to Ireland. This robs Mr. Balfour of his last hope, and he has the mortification of seeing empty places all along the Conservative benches, formerly tenanted by enthusiastic supporters of his government, who are now so depressed by his vacillating policy that they will not even come down to the House to vote, and have, in many cases, openly declared that they will not again stand for Parliament in the Tory interest.

Mr. Balfour's nominal majority of over a hundred votes dwindled, at the critical moment of Mr. Morley's fiscal vote, to fifty, and this after unheard-of efforts had been made by the Tory whips, who literally seized the recalcitrants and compelled them to come in. At later divisions, when the occasion was less spectacular,

the Conservative majority dwindled to a score. Collapse is now only a matter of days, and it is quite possible that Mr. Balfour will give up in despair, rather than wait for the sands to dwindle utterly away in the hour-glass of failure.

Lord Spencer will be asked to form the next ministry, in the event, which is practically certain, of a Liberal victory. The Liberals, and especially those who, like Earl Spencer, were close personal friends of Mr. Gladstone, are far from sharing the Russophobia which possessed Lord Salisbury and Mr. Chamberlain, and, to a less degree, Mr. Balfour. It is a main article in their creed that Russia has for generations stood for humanity and civilization in the Balkans against the brutalities of the Turks. Even now the echo of Gladstone's splendid campaign against the Bulgarian atrocities rings in their ears, and every Liberal who will hold office under Lord Spencer, or who will vote for him in either House, is convinced that to the Russophobia policy of Beaconsfield and Lord Salisbury is due the misery of Macedonia to-day, while to the intervention of Russia is due whatever mitigates that misery, and renders the lot of the Slavs of Kossovo, Monasty, and Salonica a little less atrocious. It only requires a week's war in the Balkans, with the amenities which the Turks will assuredly introduce into it, to arouse once more in England that enthusiasm which answered Mr. Gladstone's appeals.

It is plain that this will react on England's attitude towards Japan. Moreover, all England is at last awaking to the peril which menaces India. The mobilization of the army of Turkestan has avowedly no other purpose than an invasion of India, and Russian military men are talking openly of a descent upon the plains of the Indus and Ganges. The declaration of Arnold Foster, the other day, in the House of Commons, that India would have the preference when the new rifles and artillery are distributed to the British army, is significant in this connection. The fact that Lord Kitchener was not recalled from India, to take command at the renovated War Office, is another equally important indication.

When Lord Spencer comes to power, therefore, and brings the Gladstonian tradition once more into the ascendant, he will find England in a much more conciliatory mood than at the beginning of the Russo-Japanese war, and his efforts to keep England out of the contest will be supported by the majority of Englishmen.

The future domestic policy of the next Liberal government is expected to include a measure of home rule. It is an open secret that the recent defection of Mr. Redmond and the Irish Nationalists from their temporary allegiance to Mr. Balfour is due to the failure of the Tories to provide for the long-desired Irish Catholic university at Dublin; it is a secret hardly less open that this Tory decision is due to the firm stand of Mr. Arnold Forster, the new Secretary for War, who declared to his constituents, when seeking reelection, on taking office, that he would resign immediately if the Catholic university scheme was put forward. Hence the defection of the Irish members and the vastly increased chance of early defeat for Mr. Balfour. Lord Spencer, therefore, will probably come to an understanding with Mr. Redmond, as to the inclusion of the Catholic university scheme in the Liberal programme. Lord Spencer is a convinced home-ruler, convinced in spite of all his prejudices, and in face of his terrible experience when his friend Lord Frederick Cavendish was assassinated almost within hail of the viceregal lodge, by the Invincibles. Immediately after that murder, Lord Spencer and Mr. Gladstone applied to Ireland the severest measures of repression and coercion; and it was the daily observation of their working that finally and irresistibly brought Lord Spencer round to home rule.

The prevailing opinion, of course, is that the Liberals could never carry home rule through the Lords, and would therefore be defeated, and thus open the way for Mr. Balfour's return to power. But this is by no means certain. It must be remembered that Mr. Gladstone was able to pass through the House of Lords his quite revolutionary disestablishment of the Protestant Church in Ireland, a Church which was the symbol of English dominance and the supremacy of the English crown; Mr. Gladstone also passed his various land acts through the Upper House, although that body is almost exclusively composed of landlords, saturated with the feeling of caste. Now that Mr. Wyndham has practically settled the land question in a sense very favorable to the Irish landlords, the most prominent members of whose order sit in the House of Lords, that august body may very well waive its antipathy to home rule, even when proposed by a Liberal government, when the proposer of the measure is an aristocrat of such pronounced quality, and so true to his caste, as Lord Spencer.

Mr. Morley will have a decisive voice in shaping the new Liberal platform, and it seems certain that he will advocate a large programme of national technical education, affirming that this is the real way to meet German competition; this will be a blow, first, to the tariff schemes and artificial expedients of Mr. Chamberlain, and will, secondly, be a most popular rival to the unhappy scheme for reviving and extending denominational education in England; a scheme which has done as much as anything to bring about the dwindling of Mr. Balfour's majority, and the general and widespread dissatisfaction with the khaki government. Here we have a reminder that much remains to be done in South Africa, in the sense of conciliation of the Boer leaders, and here Mr. Gladstone's followers will have a congenial field. The spirit which moved the great Liberal Premier to make peace with the Boers, immediately after the disaster of Majuba Hill, will find much to do in healing the wounds of the Transvaal and the Free-Staters, and undoing the mischief worked by the dictatorial temper of Lord Milner. Here, again, the real way to strengthen the empire lies in a direction opposite to that pointed out by the former Secretary for the Colonies.

Lent

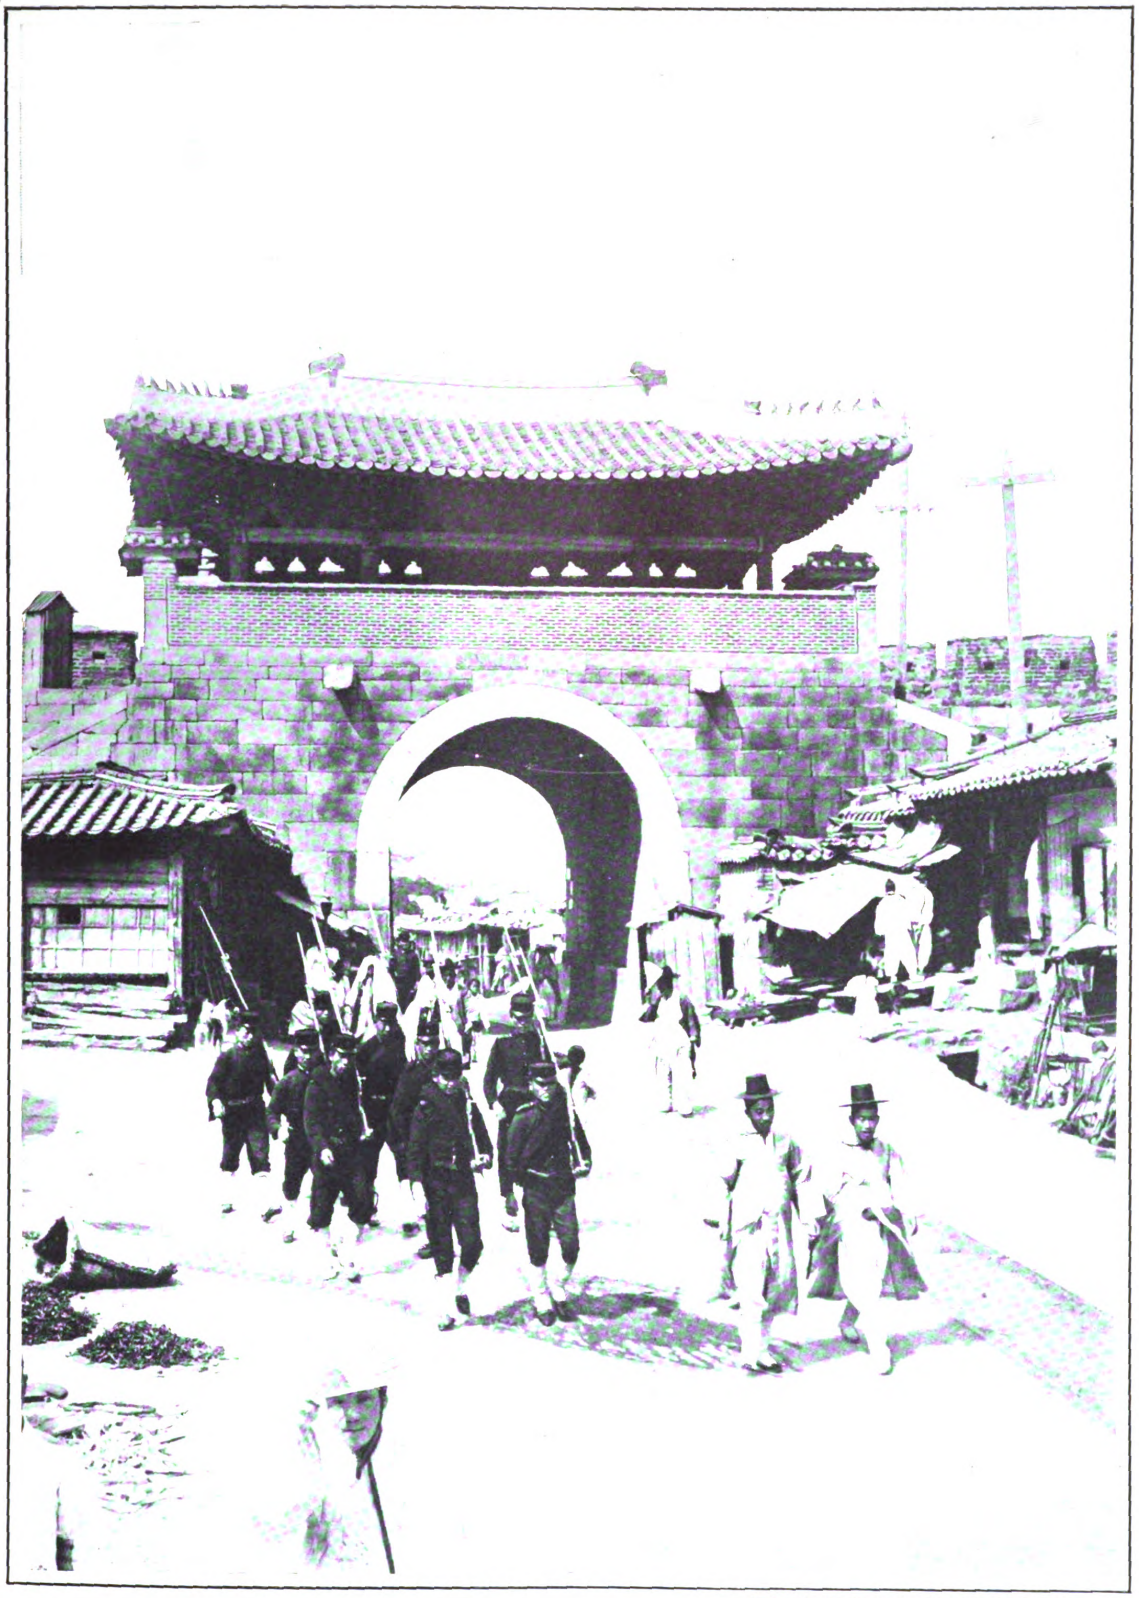
It would be difficult to find a religious system of thought which makes no provision for a season of self-denial as a means to moral culture.

It is an old axiom of the Amazulus that "the stuffed body cannot see spiritual things." It is platonic philosophy as well as modern common sense that a man who devotes himself to his appetites and his ambitions will have mortal thoughts; will be fenced in by such ideas as can be contained in a limited time and space. A man who nourishes a disinterested love of wisdom and pursuit of truth cannot fail to have immortal and divine ideas.

The Parsees had five set fasts in the year. Confucianism provided for one great fast and several minor ones. The Brahmans confined the severe fasts to their own caste, requiring only minor observances of the laity. The Jews were commanded to "afflict their souls" on the tenth day of the seventh month, while the priest made an atonement for the sins of the Children of Israel. The command, as is usual with the Jews, was definite and obligatory, and was followed by a threat, "Whatsoever soul shall not be afflicted in that same day, he shall be cut off from among his people." In the New Testament the question of obligatory fasting is again raised. When the Pharisees asked Jesus why His disciples did not fast, He answered, "Can ye make the children of the bride-chamber fast while the bridegroom is still with them?" and, again, he pointed out that they were equally dissatisfied with John, who came fasting, and the Son of Man, who came eating and drinking. On the whole, the New Testament seems to have recognized the use of fasting without approving of it as enforced and obligatory, lest thereby it become dead and lose its primal significance and object, which is, of course, to exalt a higher faculty by subduing and controlling a lower.

The definite observance of Lent as a season for fasting and penance in the early Church was not fixed until after Tertullian, and its tendency from that time on to the time of the Reformation was to grow constantly more rigid and strict. The English Church clung to almost all the Catholic observances, moderating only in the direction of individual liberty and choice. Some of the Protestant sects did away entirely with any observance of the season, on the high moral ground that all life ought to be a Lent and every Sunday an Easter; the only flaw in this conception being that it takes too little account of the frailty of human nature. Presbyterianism proclaims fasts from time to time, when special blessings are being prayed for, thereby admitting the fundamental principle of asceticism that we renounce one thing to attain another.

Every man *is* more or less an ascetic. He sacrifices one thing to get another, even if it is only on the plane of expending labor to buy food and clothing; he sacrifices inertia and ease for civilization and prolonged living. He carries the same principle further when he works not only for himself, but for the welfare of his family and fellow citizen. Every man who has any ideal of any sort begins by cutting off something that is incompatible with its attainment. Asceticism is, in this sense, merely a disciplined effort to gain an end. In the case of the Lenten observance, the fasting is a physical self-denial that prepares the mind for the spiritual joy of Easter. It is a truism that joy is great in proportion as it has absorbed pain. It is, in its essence, a contrast, a reaction. So by renunciation we attain a twofold end; we strengthen a habit of self-control by giving up something in itself harmless, and we prepare ourselves for joy by a self-imposed season of solemnity.



That there is something essentially beneficial in this season of fast one is led to believe by the continuous spread of the observance as well as by the fact that it is, apparently, an innate instinct. More and more society finds refuge from itself in a season of enforced quiet. It is a season variously used by various temperaments to various ends, as all religious symbolism will be to the last of time. There are those to whom it is a rest after excitement; those to whom it is a season of physical recuperation after indulgence. Those to whom the religious life and its symbolism, pointing beyond a narrow concreteness, is the only gleam in an existence of gloomy sordidness.

More and more, in the present day, do those who can seek quiet and shelter in religious retreats and break the usual routine by a season of self-denial and self-forgetfulness in religious recollection.

PROGRESS OF THE WAR

An account of the progress of the war, day by day, based upon official letters and despatches from the Far East

February 25.—Official reports received by the London *Times* regarding the recent attacks by the Japanese at Port Arthur, show that the following different operations took place:

On the morning of February 24, at 2 o'clock, four torpedo-boat destroyers approached Port Arthur and made an attack on one of the Russian ships, with what effects is not known.

An hour and a half later five steamers, loaded with stone and explosives, invited the fire of the Russians and were sunk.

The report of the third operation tells of the rescue of the crews of these steamers, under the protection of Japanese guns.

On the night of February 24, Japanese destroyers searched Talien-wan, Pigeon Bay, and Port Arthur, discharging torpedoes, with unknown results.

On the morning of February 25, the main Japanese squadron bombarded Port Arthur at long range.

The report also states that one of two Russian destroyers that were sighted was forced aground at Pigeon Bay and destroyed.

On the morning of February 25 the entire squadron, proceeding to Port Arthur, observed the *Bayan*, *Novik*, and *Askold* outside, which retreated into the harbor under the long-range attack of the Japanese, thus proving that the channel was unobstructed. The Japanese then shelled the vessels in the harbor, with successful results. Flames were seen, and one of the Russian destroyers was sunk. The Japanese ships escaped without injury.

Word was received on this day, through Minister Allen at Seoul, of an important treaty which had been consummated between Japan and Korea, by which the independence and integrity of the latter are guaranteed—an indication that the two countries have come to a complete understanding, and that Korea is not concerned over the "acts of violence" which Russia alleges to have been "committed by the Japanese government with respect to Korea." The text of the protocol, which was signed at Seoul on February 23 by M. Hayashi, the Japanese minister, and Major-General Yet Chi Yang, the Korean Minister of Foreign Affairs, is as follows:

"First, for the purpose of maintaining a permanent and solid friendship between Japan and Korea and firmly establishing peace in the Far East, the government of Korea shall place full confidence in the government of Japan, and adopt the advice of the latter regarding the improvement of the administration.

"Second, the government of Japan shall in a spirit of firm friendship insure the safety and repose of the imperial house of Korea.

"Third, the government of Japan definitely guarantees the independence and territorial integrity of the Korean Empire.

"Fourth, in case of the welfare of the imperial house of Korea or the territorial integrity of Korea being endangered by the aggression of a third power or internal disturbance, the government of Japan shall immediately take all necessary measures, such as the circumstances require, and in this action the government of Korea shall give full facilities to promote the action of the Japanese government. The latter may for the attainment of the above object occupy, when the circumstances require it, such places as it is necessary from a strategic point of view.

"Fifth, the governments of both countries shall not in the future, without mutual consent, conclude with a third power such an arrangement as may be contrary to the principles of the present protocol.

"Sixth, the details in connection with the present protocol shall be arranged as the circumstances require between the representative of Japan and the Minister of Foreign Affairs of Korea."

Word was received to-day of a proclamation issued by Admiral Alexieff, the Russian Viceroy, to the Manchurians, in which he virtually insists that they give their aid to the Russians. The proclamation states, first, that "war having commenced between Russia and Japan, I, imperially appointed by the great Russian government the high official in charge of the Far East, have determined upon six regulations, which all must tremblingly obey."

The proclamation says:

"*First.*—While peaceful negotiations were proceeding between Russia and Japan, the Japanese, harboring unexpected thoughts, made a treacherous, covert attack on our fleet.

"Forced by circumstances of so great difficulty, it is incumbent on us to offer desperate resistance to protect Chinese territory from invasion and to prevent the Japanese from passing over it to devastate the Russian boundary.

"*Second.*—On this occasion the interests of Russia and China are indissolubly allied, and on the principle of the mutual connection between the cart prop and the cart, the duty of China should be to join in attacking the destroyers and invaders.

"But China has announced to me her resolve to be neutral and to look on with her hands in her sleeves. Accordingly, I command every official in Manchuria not only not to hinder our troops, whether on the march on in garrison, from purchasing whatever provisions are necessary, but also to render every possible assistance to them.

"*Third.*—All the inhabitants of Manchuria, gentry, agriculturists, workmen, and merchants, must continue their vocations as usual. When the Russian troops enter your neighborhood you must treat them with confidence, and they will not ill-treat you, but will accord you extra protection.

"*Fourth.*—I hold all the virtuous citizens residing in the neighborhood of the Manchurian railroads and telegraph and telephone wires responsible for their protection. The official headsmen and village elders must unanimously devise means to prevent damage. For this we shall be grateful.

"Should attempts at destruction be made, not only the offenders will be severely punished, but you, the officials and people who witnessed the attempts, will be held responsible.

"*Fifth.*—The Chunchuses, the red-bearded brigands—the curse of Manchuria—the Russian army desires to exterminate them. Be not afraid of their vengeance, but learn in which thicket desperadoes are assembling, and give information, that they may be utterly destroyed.

"Anybody privily harboring desperadoes or concealing their hiding-places will be punished as if he were a desperado himself.

"*Sixth.*—I earnestly trust that the people will extend their unanimous confidence to the Russian army. If the officials or people treat with enmity the Russian army, the Russian government will assuredly exterminate those persons, showing no mercy.

"When the time comes the Russian government will devise a suitable policy to protect its interests."

A despatch from Seoul, made public to-day, reports that a Japanese force, consisting of 10,000 men, have landed at Chemulpo; that they have fortified Ping-Yang, and are sending scouting parties toward the Yalu River. News of this date regarding the activity of the Russians reports part of their forces as concentrating at Possiet Bay, to the south of Vladivostok, and from there sending scouting parties into Hang-yen-do, Song-ching, and Wensan. A reconnaissance in the direction of An-ju, made by Russians from the north of the Yalu, figures in the despatches for this day.

Later despatches report an important move on the part of the Japanese—the landing of a force at Possiet Bay, indicating the intention of an attack on Vladivostok, which is a little over seventy miles distant from Possiet Bay. The Japanese are also reported to have begun operations against Hunchin (forty miles to the west of Possiet Bay, on the left bank of the Tumen River), and against Kirin (a large town about 220 miles inland, to the west of Possiet Bay).

In another despatch, under date of February 26, Viceroy Alexieff said: "Maps of Port Arthur and Port Adams and a chart of the Yellow Sea were discovered aboard the enemy's vessels which were sunk in the night attack of February 24. Conducting-wires and electric batteries were found on the vessel which caught fire. The wires were cut by port miners. The fire has been extinguished."

General Pflug was reported to-day as saying that the officer commanding at Vladivostok announced that eleven Japanese ships were seen to the southward of that port on the morning of February 24.

A report from Seoul, received to-day, says that Russians, proceeding on the ground that Korea had become an ally of Japan, made an attack on the Koreans in the neighborhood of Wiju, killed some and others put to flight.

Later advices report that Russian and Japanese troops have had a skirmish near Ping-Yang, Korea, both sides claiming the victory.

Another action at Port Arthur took place at 1 o'clock on the morning of February 26. Several Japanese torpedo-boats were sighted with their sails set for the purpose of disguising their character. The battleship *Retvisan* and the shore batteries opened fire on them, and continued firing until daybreak without any visible result. After daybreak a Japanese squadron, apparently convoying transports, was sighted. At 11.15 this squadron came nearer, and an engagement which lasted forty minutes ensued. There was no damage, and few shells fell in Port Arthur.

February 27.—A telegram from General Alexieff, embodying a history of the attack of February 25 on the forts at Port Arthur, and addressed to the Czar, was also given out on this date. It is believed to have been sent from Mukden, under date of February 25, and contained the following details: "A squadron of the enemy's vessels, numbering sixteen, approached the fortress at about 11 o'clock this morning and opened a bombardment on the cruisers *Askold*, *Bayan*, and *Novik*, which were in the outer harbor, and also on the fortress. The firing continued for half an hour. Then our cruisers went into the harbor. The enemy fired for several minutes on one of our batteries, and then began to leave. They stopped within sight of the fort, but out of range of fire. At this time four of the enemy's cruisers detached themselves from the squadron and proceeded to Pigeon Bay, where they quickly opened fire on our torpedo-boats that were cruising there. They directed also a strong cannonade against the shore. The commandant consequently sent troops to Pigeon Bay. The firing there lasted for thirty minutes, but no landing was made. The Japanese cruisers then departed. Suitable measures have been taken to oppose a possible effort on the part of the enemy to creep up by sea. Our losses this day were one man wounded at the battery."

February 29.—A despatch from St. Petersburg states that Russia has announced her official rules of war. According to one of the provisions, the following are some of the articles that will be regarded as contraband of war: (*a*) Every kind of small arms and guns, complete or in separate parts, and armor; (*b*) shells and bullets; (*c*) powder, explosives, or materials for purposes of explosion; (*d*) everything appertaining to artillery, engineering, and troop trains; (*e*) material for equipment and clothing of troops; (*f*) ships bound for the enemy's ports, even if sailing under a neutral commercial flag, if their construction and internal arrangements or any other indication makes it apparent that they have been built for warlike purposes.

March 1.—For two hours yesterday morning the Japanese squadron bombarded Port Arthur, injuring the *Askold* and *Novik*, and again damaging the *Retvisan*. The Japanese fleet is reported to have escaped injury.

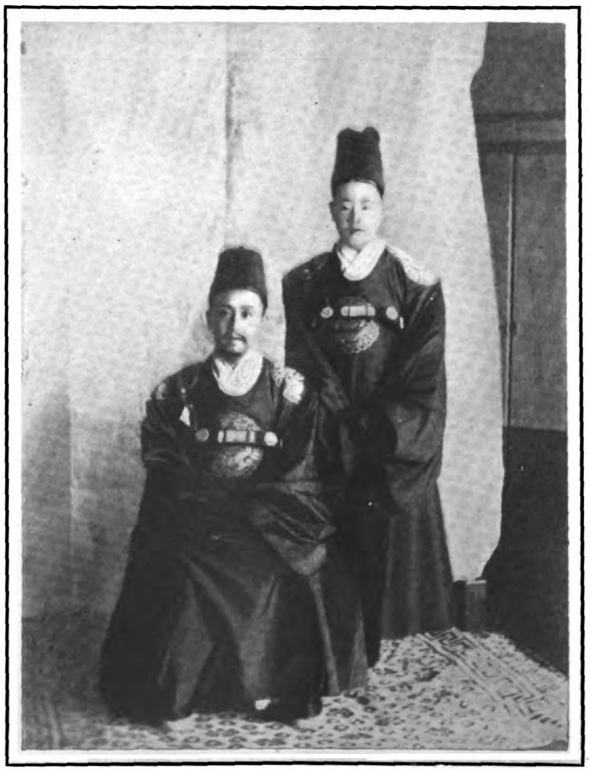
Russia and Japan in Korea

By William Elliot Griffis, D.D., L.H.D.

Author of "The Mikado's Empire," "Corea: The Hermit Nation," etc

ON the 27th of November, 1883, I saw my first Korean at the Victoria Hotel, New York. I had read, studied, and dreamed of the hermits who always seemed to me to dress in night clothes and keep their heads in horse-hair. It was a new sensation to salute the men from the Great Land of Morning Calm. Their names were Min Yong Ik, So Kwang Pom, and Pien Su. As the two latter gentlemen, with Lieutenant Foulk, U.S.N., could talk Japanese, we conversed with comfort. We talked of the British evacuation of New York, the centennial celebration of which had been celebrated two days before. We joked about the time to come when there would be "Evacuation Day" in Korea, when neither Chinese nor Japanese should own or mortgage the peninsula, and when great Cho-sen should be as free from either as is the United States from Great Britain. They asked much about George Washington. After an evening spent over the map of their country, Min Yong Ik got out his package of ginseng, without which no Korean gentleman ever travels at home or abroad, which formed the chief source of revenue in Korea, and which, from New York and Massachusetts, was the first article of commerce between the United States and China. He presented me with specimens of the root, which in the Chinese world is a catholicon.

A few days later these members of the royal embassy, which had come to America to ratify the treaty negotiated by our commodore, R. W. Schufeldt, U.S.N., and who had had audience of President Arthur in the Fifth Avenue Hotel, left for home by way of Europe and the Suez Canal, in the U.S.S. *Trenton*. Of the eleven persons in this special mission, six went home opposed to, and five in favor of, opening the long hermit kingdom to foreign civilization.



To-day, along with our gallant ship of Samoan memories, most of these men have disappeared from view. Min Yong Ik survived his many wounds from the assassins of December 4, 1884. So Kwang Pom, after bloody plots and turmoils, became first cabinet minister, then refugee, and poverty-stricken man among us for years. He returned after the expulsion of the Chinese by the Japanese in 1894, to be again cabinet minister in Seoul, and envoy in Washington, reaching it just in time to hear of a new revolution, and to step out from the legation as a private person to die a few weeks afterward. Kim Ok Kiun and Prince Pak, friends and companions of these Liberals, have also floated and sunk with the revolutions, one suffering assassination and becoming an immediate cause of the war in 1894-5.

When, in June, 1884, the Korean Liberals, who had seen the world or fractions of it, got together, they determined to "introduce modern civilization," as they thought the Japanese young men had done in 1868 by seizing the Mikado's person in Kioto, and reconstructing Japan in his name. A man of Occidental ideas would say, "To hatch the egg takes time and warmth." These Koreans proposed to reduce the hours and increase the heat. On the evening of December 4, 1884, Kim and his fellows succeeded in seizing the palace by fraudulently making use of the Japanese legation guard, and issued edicts in the King's name. They sent for the old royal ministers, and had their heads struck off as these entered the palace gates; but, after the battle between six-score Japanese deer-hunters and fifteen hundred Chinese infantry, the Japanese were driven out of Seoul, and the Korean Liberals fled for their lives. For the second time, the whole Japanese community, diplomatic, civil, and military, was expelled by the mob. The egg, despite the fire, had not hatched. The Korean method of moving a vote of censure failed for lack of a majority vote.

For nine years among the foreign legations of Tokyo, Kim Ok Kiun was looked on as an "international nuisance." In April, 1894, lured by the double forgery of a telegram and a bank draft, he went to Shanghai and was there promptly murdered. The corpse was sent to Chemulpo by the Chinese government in a man-of-war (afterwards captured by the Japanese), and quickly converted into carrion, which was exposed on the public highways of Korea. Then followed the war, with its one respectable land battle at Ping-Yang on Korean soil, the skirmishes in Manchuria, and the great naval triumphs. Under Japanese auspices, and led by one of the Mikado's ablest advisers, the reform of Korea was begun. A man of stainless honesty, as was Count Inouye, in Seoul, seemed like the proverbial white lotus springing out of the black mud. Of government, in the sense which that word connotes to Western ears, there was little in the peninsula, where political society had an agglomeration of feudal elements, rather than a monarchical system with a real head. So far from the old feudal clans having been extinguished, and their leaders reduced to a level with the gentry and nobility, they are still existent, and the ancient feuds intensely powerful. For a long time to come, the passionate instincts of clanship will supply the ruling motives rather than those nobler incentives which is only to come through time and education.

Life in Seoul since the critical year of 1886, when the searchlight of world publicity struck into the Korean cavern, is, as doubtless for centuries before, a story of plots and counterplots, bloody and brutal. The main question with native politicians is as to which vulture shall have the most spoil. So long, however, as Count Inouye was present, progress was made, and both the Queen, who led a mighty clan and host of hangers-on, and her implacable enemy, the Tai-Wen-Kun, or the King's father, were foiled. The reforms were so far-reaching, so vital, and, alas! so suddenly inaugurated, that only the constant presence of a man like Inouye, backed by all Japan's influence and wisdom, could make them reality. He assured the Queen, who justly feared her father-in-law — a wonderful counterpart of the present Sultan of Turkey—that "the Japanese government would not fail to protect the royal house." Thus allaying her suspicions against the man who had tortured and murdered thousands of Christians, and blown up one of his relatives with gunpowder, Count Inouye left Seoul September 15, 1895, thinking the Augean stable had been cleansed. Never was Hercules more disappointed.

The Queen, ablest woman in Korea, quickly led her clan again into power, and soon had the King and the kingdom under her thumb. Nominally, about seventeen thousand useless government employees and palace servants had been discharged, and her own personal attendants reduced from hundreds to a dozen. Within a few weeks she had summoned back women, eunuchs, servants, and every sort and description of people, of all ages and sexes, who began again the devastation of the treasury. Taking the hint, the Liberal Minister of Home Affairs, Prince Pak, under a guard of Japanese soldiers, fled the capital. It looked as if all Japan had been beaten by a woman.

The Emperor of Korea (seated), and the Crown Prince

Why the Tokyo government should have selected a pride-swollen military officer, still in his boots and spurs, right out of the camp and off the field, and send him to succeed Count Inouye, passes the power of the best well-wisher of Japan to guess. Yet it is now beyond doubt that the awful tragedy of October 8, 1895, was deliberately planned in the Japanese legation in Seoul. To shorten a long story, a motley crowd of native ruffians, mostly the *Kun-ren-tai*, or drilled Korean troops, escorted by Miura's legation guard, and accompanied by a brutal gang of Japanese *sosh*, or assassins, in Korean clothes, and led by the Tai-wen-Kun, moved upon the royal palace at daybreak. Rushing into the Queen's own apartments, a Japanese stabbed her to death, dragged out her body, poured petroleum over the corpse and clothing, and set them on fire. Thus did one of the ablest women in the history of Korea pass away.

Then a new government —Heaven save the mark! —made up of creatures nominated by the Japanese and controlled by the Tai-

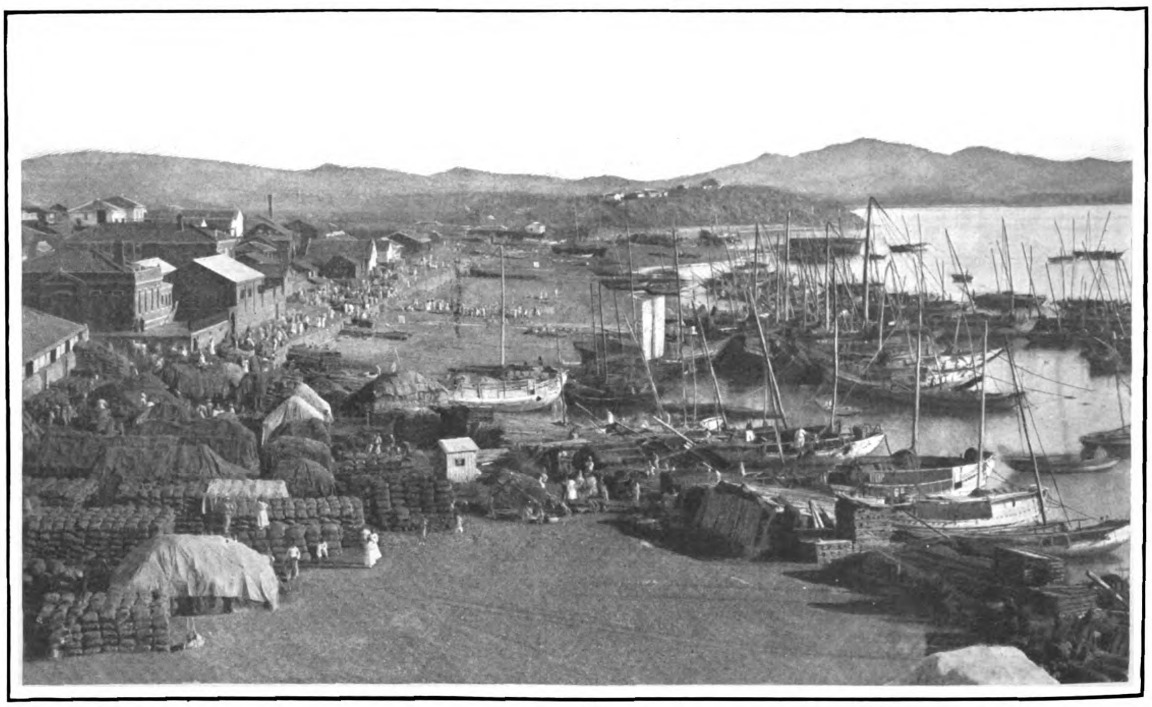
Wen-Kun, issued their edicts, degraded the murdered woman to the level of a servant, began a radical programme of reforms, made the King a puppet and a prisoner, and kept alive for many days the fiction that the Queen was alive. They even went so far as to conduct a mock trial of persons alleged to have been in the affair of October 8, and these judicial men of straw were actually put to death, in the name of justice, December 8. But that which roused the popular wrath and even led the lamblike King to plan a new and counter *coup d'état*, was an edict abolishing the fashion of coiffure in vogue for five hundred years, and compelling the people throughout the country to cut off their top-knots. The King and all his attendants had first to suffer personal indignity and brand of denationalization. Then, at all the city gates policemen with scissors began the task of cutting the top-knots. Tons of hair were sheared off. In vain was a counter attack upon the palace made by loyal Koreans, who hated the Tai-Wen-Kun and the Japanese, on November 27. It failed, and the leaders suffered death with those falsely charged as being in the affair of October 8.

The Tokyo government, on learning that for a second time the Mikado's soldiery had been dishonorably used, recalled Miura, and arrested forty-seven other persons. Incredible to the well-wishers of Japan, the whole gang was acquitted by the local court at Hiroshima on purely technical grounds. Despite the regret and mortification of the Mikado, of his advisers, and of the whole nation, Japanese prestige in Korea was momentarily ruined. In December the Japanese troops evacuated the country. The hundreds of advisers and helpers of the Korean government and leaders in enterprise and reform departed when their contracts expired.

The whole situation was so perfectly clear to all the foreigners in Seoul, namely, that the Japanese government was innocent and had been disgraced by one of its servants, that there was a unanimous request from all the legations, including that of Russia, that Count Inouye should return to Seoul, disarm the Kun-ren-tai, and occupy the palace with the Japanese troops, until the King could secure a loyal guard of his own soldiery. So liable to misconstruction was his plan, that the Tokyo government would not acquiesce, even after amply sufficient consent had been obtained by telegraph from the treaty powers. Though urged by both Great Britain and the new Japanese minister, M. Komura, the invited step was not taken. Honestly Japan declined, yet this gave Russia her opportunity—months, or years, perhaps, before it was expected.

Helped by his women, the King escaped from his "rebel cabinet" and his armed jailers. In one of the ordinary box-chairs of the female palace servants, he and the crown-prince passed the sentinels, without suspicion, before dawn at February 11, 1896. Like a frightened hare, he emerged before the gate of the Russian legation, where he was given entrance. He immediately issued edicts, ordering the heads of his cabinet officers to be struck off. Before night every one of his late ministers were fugitives or were murdered, two of them being frightfully mutilated by the mob in the public streets. Sixty-two Japanese lost their lives in the riot. Then the recession of the tide began again. All roads that led to the capital were full of returning conservatives rejoicing that the "civilization nonsense" was over, and expecting that their hands would soon be deep in the public crib. But revolutions do not go backward. The "cabinet" was abolished, and a "national council" was formed. Many hopeful and healthy reforms, following out those suggested by Count Inouye, were begun, and have since been honestly carried out.



Early in 1897 the American military adviser, General Dye, was set aside and the Russian Colonel Putiata, with three officers and ten drill instructors, arrived in Seoul, to train the native soldiers and to educate, during a two years' course, Korean young men of good families to be officers. The drill and words of command were Russian. Three thousand Berdan rifles were presented by the Czar to the King. The Korean army then consisted of fifty-five hundred men, of whom eight hundred formed the bodyguard of the King, and twelve hundred were in the provinces. The protocol just signed by Japan and Korea "for the purpose of maintaining a permanent and solid friendship" gives to Japan and not to Russia the cooperation of the Korean army.

A possible element of Muscovite strength in the Far East and of influence over the weak peninsulars is seen in Primorsk. Here are over twenty-five thousand Koreans, who have fled northward and crossed the Tunen to find food, employment, hopeful conditions of life, and a new faith that makes life worth living. Many of these are now Russian subjects and members of the Greek Catholic Church. In their neat dwellings, with grain, gardens, and fine cattle, taught by Russian teachers in day schools, the traveller sees in them, instead of the dregs of an oppressed race, a hardy, thrifty, happy peasantry. Whatever be the faults of Sclavism in our eyes, Russian civilization is ages ahead of the Korean product. On the principle of *quid pro quo*, the Czar and his statesmen have tried with varying success to make use of this lever in raising Russian prestige in the peninsula between China and Japan.

Whether the step taken by the King, October 12, 1897, by which, with imposing ceremonies and at the typical Korean hour of 3 A.M., before the altars to Heaven and earth, he was declared Emperor of Dai Han, and assumed the yellow robe and Ming emblem of imperial authority, was encouraged by Russia or not, is unknown. Officially, Korea is now an empire, and the weak monarch at Seoul is by name an Emperor. In contrast to the ancient Three Han, or states in the peninsula, he is now the sole ruler of Great Han or all Korea. The royal red has given way to the dragon yellow.

Because Japan honestly and fairly yielded control of the Korean palace, after having been shamed and humiliated by the conduct of one of her unfaithful servants, she has no idea of letting Korea become a Russian province. Being thrice armed because of her honorable conduct, and because her contention is just, Japan has again in the present crisis given Russia to understand that her claims on the peninsular kingdom are superior.

It is no matter of surprise that British and Japanese are working in harmony to resist, for a little while, at least, the advance of the Northern Bear. With the trade of both nations constantly increasing in the once hermit nation, the agreement of friendship just concluded between Japan and Korea will be to the advantage of both British and Japanese commercial interests in this new and hopeful market.

A View of Chemulpo Harbor, Korea, where the first Naval Engagement of the War took Place

Russia's Crisis in the East

By Wolf von Schierbrand, Ph.D.

HOW will Russia weather this present storm, and how will she withstand the effects of it?

Russia will be the sufferer in almost equal degree, whether she win or lose.

If she beats Japan with her land forces, Japan will retire from the mainland. Russia cannot follow her to dictate peace in Tokyo, for the Russian navy—this seems quite certain—is unable to cope with the Japanese. Russia being unable to dominate the seas, Japan, the island empire, will be safe within her own dominions. For Japan, therefore, defeat would mean at worst a loss of prestige, a heavy financial drain, and the temporary or permanent loss of the opportunity to commercially exploit Korea or annex it.

If Russia, on the other hand, is defeated by Japan, she must withdraw both from Korea and Manchuria. That would be followed by an enormous loss of prestige for her through the whole of Asiatic Russia and in the frontier states of China, Persia, Afghanistan, and Thibet. Russia's hold on Central Asia would relax, and for decades her ambitious dreams could not be realized.

These would be the main political and military effects in either case. But more important, far more important, to Russia would be the financial consequences. They would, in any event, be disastrous to her beyond computation. Russia is now, as anybody can see who will without bias study her financial and internal conditions, on the very brink of bankruptcy. This war will add enormously to her burden of foreign debt, already scarcely to be borne in its heavy loss by a country which is poor in capital and recuperative energies. It is to be expected that a financial crash will come to Russia in any case at the close of this war, a crash so awful that one stands aghast at the idea of it.

Incidentally this will hurt her creditor nations—France and Germany first, with Holland, Belgium, and England next. Little Belgium alone has 1650 million francs invested in Russian iron and steel works, railroads, factories, etc. It is safe to say that seventy-five per cent. or more of all foreign capital in Russia will be swept away by the indirect or direct outcome of this war.

As to Russia's finances, much misapprehension exists. Since M. de Witte became her financial prophet, in 1893, Russia has contracted a new foreign loan at least once every year. Between 1893 and 1900, 1579 million rubles were added by him to her foreign debt. The latter amounts at present to over 3800 million rubles, requiring annually 152 million rubles gold in interest, while her whole national debt is, according to Witte's last report, 6497 million rubles. Besides that, railroad mortgage bonds are held in Berlin to the amount of 225 million dollars. Between 1892 and 1902 the Russian net-work of railroads was enlarged by Witte at an expense of about $1,100,000,000. The Siberian and the Manchurian railroads alone ate up $750,000,000 of this, all of it representing borrowed capital.

Russia's railroad system has never paid interest, and does not now. Both the Siberian and Manchurian railroads having been built largely with Russian material, are flimsily constructed, and could be duplicated by England or this country at less than half the expense. In illustration of this, I will mention that the pood (thirty-one pounds) of these Russian rails costs the government 2.25 rubles, while English rails of far better quality had been offered at 70 copecks, or less than one-third, and that even then thousands of miles of the Siberian railroad tracks had to be subsequently replaced by rails of heavier and solider quality.

Something over a year ago France, which, as Russia's ally, had made loan after loan, refused to take up another loan. Witte had to place this new loan of $90,000,000 in Germany and Holland, but had to pledge the Chinese war claims as security. At this moment Witte is trying to contract a war loan of $50,000,000. As Russia's credit with France was exhausted even in time of peace, how will she fare now?

To gain an adequate idea of the straits to which Russia is reduced, two main factors must be considered, namely, her agriculture and her industry.

Witte has been given credit for the rise of Russian industry. Wrongly so. Three conditions are necessary for a nation to evolve a sound industry of its own: Capital, an industrially trained body of labor, and a well-developed middle-class, intellectually advanced and financially potent. Russia possessed and possesses not one of these requisites. Her entire industry is an artificial hot-house product. To the extent of two-thirds it has lived on railroad construction since its inception twelve years ago, and the remainder has likewise lived almost exclusively on government orders. With all that, there are but between two and three millions, out of a total population of one hundred and thirty-one millions, industrially employed. Under the abnormal impetus given by Witte the manufactured output rose from 577 to 1816 million rubles in 1897.

Since then, with the lull in railroad activity, has come an industrial depression. Shares of the principal industrial establishments have dropped from over 200 to 20 or 30. Foreign investors, particularly French and Belgian, have lost many hundreds of million dollars, and scores of the largest works have shut up permanently.

How insignificant in numbers and capital are the Russian middle classes is shown by the fact that the budgets of her 709 towns and cities (in Russia proper) amount altogether to but 67 million rubles. This is one-half the budget of Berlin alone, or about one-fourth that of Greater New York. With that, the towns in the interior of Russia steadily decrease. As to public education, the fact speaks for itself that Russia devotes but twenty cents per head to it, or one-half per cent. of her total budget.

Witte has been given much praise for establishing the gold standard for Russia. How did he do it? By forcing Russia's export at the sacrifice of the nation's welfare. Under his instructions the tax collector, early each autumn, has rigorously enforced the payment of taxes, compelling the 100 millions of peasants to sell their product in a low-price market and to purchase foodstuffs in the spring at higher prices or starve. The enormous export of cereals, cattle, etc., thus brought about has annually replenished Russia's gold reserve, ever since Witte established her gold standard in 1897. But this policy has pauperized the Russian peasant to an almost incredible extent, and has made the frequent famines (eight famines since 1882, five of them since 1892) murderous in their consequences.

Witte has revolutionized the sugar industry in Russia: the internal sugar tax yields him 65 millions, but the Russian consumer has to pay to the Russian sugar trust three or four times what Russian sugar brings at export figures. He has made the corn spirits (vodka) production and sale a government monopoly, yielding him from 300 to 400 millions per year. But the Russian peasant, whose sole pleasure is frequent intoxication, has to pay for his vodka four times what it costs.

Agriculture is by all means the most important industrial feature of the country. The curses from which it suffers are: The "mir," which means joint ownership and tax responsibility of the rural communes. This is the greatest root of evil. It kills individual enterprise, discourages diligence and economy in the individual, and makes the rise of the 100 millions of Russian peasants to something like rational human beings impossible. Another great drawback is the large number of holidays. The Russian peasant has between 150 and 170 non-laboring days in the year. Of almost equal importance is the exhaustion of Russia's famous "black-earth belt," comprising some twenty-three provinces, and forming the heart of the empire.

Slovenly and unwise tilling of this soil, once the most fertile in Europe, has impoverished it until at present much of it does not produce the taxes. In 1893 the peasants there were 119 million rubles behind with their taxes; in 1896 the figure was 146; and in 1900, after remitting 52 millions and spending another 207 millions during the famines, the taxes were still 116 millions behind.

In this "black-earth belt" at present twenty-five per cent. of the peasant holdings are without horses or cattle.

The simple truth is the Russian peasant, 100 million of him, is under present conditions slowly starving to death. His average earnings in the central provinces are seventeen and eighteen copecks (eight to nine cents) per day throughout the year; during the busiest harvest time they rise to an average of twenty-seven to thirty-six copecks (thirteen to sixteen cents a day); during the whole winter he and his family earn nothing. His diet consists of meal, flour and grits, cabbage and potatoes; no meat, excepting three times a year. His diet is insufficient, and less than in any civilized country. The hovel he lives in is two and a half yards long and one and one-half yards high, harboring the whole family and whatever cattle he possesses. These data are taken from official sources.

Is it a wonder that the Russian peasant has morally and physically degenerated? That the women are immoral, dreading maternity, and given to a frightful extent to infanticide? That the men are nomads, leaving wives and children for months, often years, trying to earn something in town or in far-away districts? That the recruiting in these central provinces shows progressively physical unfitness for the army? That the health of the women is bad, and that the rate of increase in the population in this "black-earth belt" has dropped to 0.26, against 1½ in the whole empire?

Witte himself, in his report for 1902, estimates the loss to the nation by famine during the preceding five years at $500,000,000. These famines must be considered a regularly recurring feature, owing to the pauperization of the whole peasant class, to the destruction of forests, and to the unwise system of agriculture. Yet nothing has been done, and nothing is planned by the Russian government to cure these frightful conditions; only palliatives have been tried and are proposed. The fiscal ownership of immense tracts, comprising two-fifths of the total area of European Russia, and mismanaged so that they yield but an average of 50 millions per annum, is another grave evil for Russian agriculture.

Enlightened Russians, among whom was Witte himself before he became Minister of Finance, hold that Russia could only recover some degree of prosperity by the abolishment of the "mir" and the establishment on a sound basis of the "zemstvo," that is, provincial and local self-government. It is very likely that after the close of this war Russia will find herself where she was in 1855, after the Crimean war, and that with a complete downbreak of her present purely autocratic government she will be compelled to introduce those two great reforms. Then, despite losses of untold extent, this present war would ultimately prove a blessing in disguise to the vast empire.

The War from an English Standpoint

By Sydney Brooks

LONDON, *February 24, 1904.*

OF the depth and genuineness of English sympathy with Japan, there can be no doubt. So far as one can judge at a distance of three thousand miles, there seems to be just as little uncertainty about the leanings of American sentiment. The Continent was not more unanimously on the side of the Boers than are England and America on the side of the Japanese. That there is a danger of a kind in this instinctive partiality, that it tends to blind the people on both sides of the Atlantic not only to probabilities but to actualities, is undeniable. The Continent made an egregious mistake in overestimating the result of the opening successes of the Boers. Is there not some risk that we, the English and Americans, may repeat their blunder and conclude too rapidly that the Japanese victories at sea foreshadow the ultimate triumph of the Island Kingdom? When all is said and done, a calm estimate of the chances immensely favors the Russians.

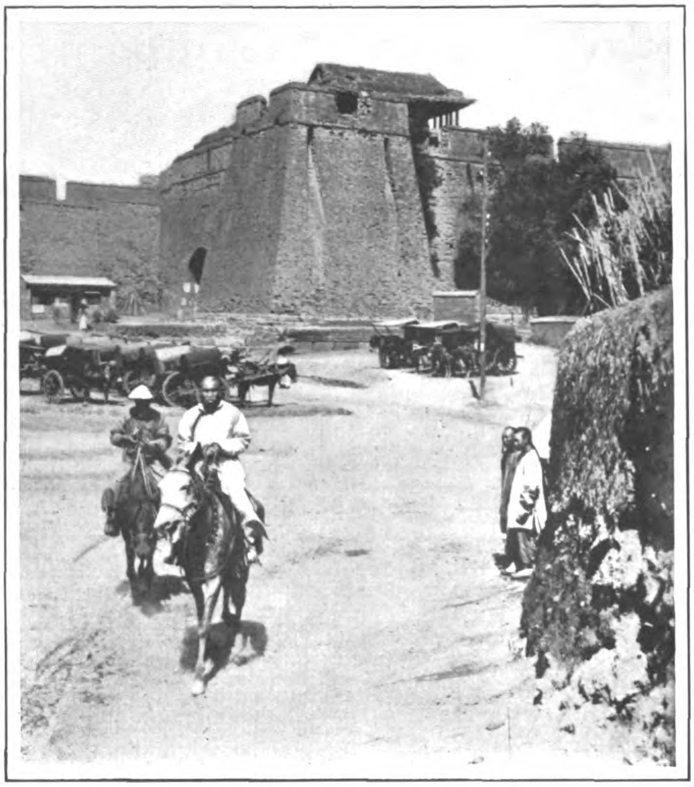
In wealth, numbers, and capacity of equipment the advantages are all on the Russian side. True, they are fighting at an enormous distance from their base, and have to depend on a single, badly laid line of railway, which traverses 1555 miles of unfriendly territory, whose people may conceivably regard the Japanese as liberators. But this obstacle has not prevented them from bringing to bear on the Far East a force whose strength on paper is 3115 officers, 147,479 men, and 266 guns; nor will it, I imagine, prevent them from doubling or trebling that force if necessary. Again, the Russians, like the British, always lose at first. The corruption which does undoubtedly permeate the bureaucracy and the impossibility of getting so gigantic and unwieldy a machine into working order at short notice, make defeats at the outset inevitable, and in a sense self-inflicted. Russia invariably needs time to pull herself together. The Turkish war was a synopsis of all Russian wars—the hasty and imperfect preparations, the run of disasters so swift and complete that Czardom seemed for the time to be toppling over, and then the slow gathering up and concentration of all her resources, the evolution and discovery of the right man—Russia is never without her Todlebens, and at a crisis nothing can keep them down—and the overwhelming and persistent pressure of all that huge empire. It means, therefore, little or nothing that so far the Japanese have substantially triumphed. They have placed themselves in a commanding naval position, and secured their shores from invasion; but they must expel Russia from Manchuria, and Korea before they can claim the final victory. And that is an enterprise compared with which the Crimean war becomes a mere episode.

The Napoleonic invasion of Russia can alone supply a parallel to the difficulties of so prodigious an undertaking. Fundamentally, Russia will be attacked at her strongest point. She excels in defence, and she may well hope and believe that if she can but hold her own the mere weight of metal will suffice to crush her adversary. The valor, extreme fascination, and efficiency of Japan should not make us forget her palpable inferiority in resources. There is no sacrifice, it is true, that her people are not willing to make. We have no experience of the precise amount of taxation they will bear, but no experience is needed. The last yen will be whole-heartedly at the service of the government in a struggle which all Japanese regard as one of life or death. But here she can claim no advantage over her enemy. The Russian people, if and when the government has exhausted its credit, will do as they have done in the past, and respond to every demand that is made upon them.

Again, the argument from necessity is equally balanced. Japan, it is said, cannot afford to see a hostile power permanently encamped on the Korean peninsula. But Russia can as little afford to see herself cut off from the Pacific, the Manchurian railway end in a *cul de sac*, and her hold over China and her position and prestige throughout Asia destroyed. For both powers the contest has its roots in essential and enduring conditions, which is one of the reasons why it had to be fought out, and why, when once begun, it will be fought to a finish. An antagonism so incurable, a diversity of national interests so fundamental, will not be reconciled by anything short of final victory and final defeat. I cannot bring myself to believe that this is a matter to be settled by a few campaigns, by a disaster here or a disaster there, or indeed by anything short of definite and indisputable triumph on one side or the other. In other words, this is a conflict not merely of the present, but of the future too, admitting of no compromise, susceptible to no mediation, and ushering in a struggle that may ring from pole to pole, and the end of which neither this generation nor the next will live to see. Take every possible alternative, and the conclusion seems still the same.

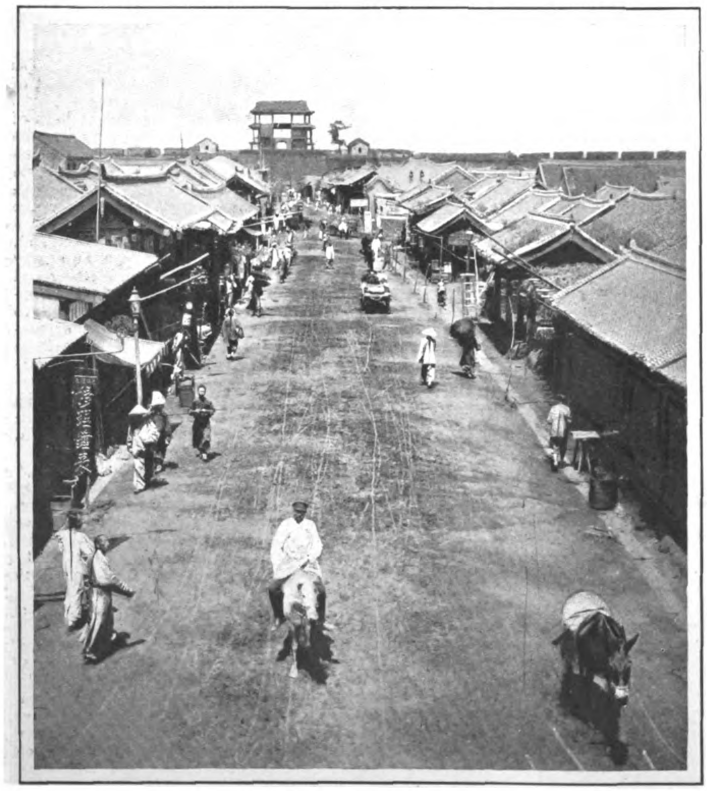
Imagine Japan victorious to the utmost stretch of her hopes, Russia driven from Manchuria, and her power on the Pacific annihilated—there will still remain the railroad to bring up fresh troops and prepare for the renewal of the strife. Or imagine the Japanese forced back into their own territory, and obliged to abandon Korea and the leadership of China—is it conceivable that they would for long submit to so decisive a frustration of their imperial ambitions? Or imagine, once more, Russia triumphant on land, and the Japanese equally triumphant at sea, Manchuria and Korea turned into Russian provinces but their value neutralized, their security endangered, by Japan's command of the sea—is there in such a situation the prospect of finality? It seems to me that this is essentially one of those conflicts where half and half solutions are out of place, where victory to be permanent must be irretrievable, and where in consequence the side with the longest purse, the greatest latent resources, and the command of the largest amount of potential strength, will be the last to be exhausted.

There is a feeling in England and throughout Europe, possibly, too, in the United States, that Japan has an ally in the internal condition of Russia; that the war may raise the popular discontent to the point of revolution; and that Russia may find herself powerless abroad by a stroke of paralysis at home. There is no warrant in history for such a supposition, and next to none in the actual conditions of Russia. That the elements of unrest have of late years multiplied in numbers and activity is true enough. That the amazing experiment which Russia is attempting is proving a failure even in her own eyes; that she cannot continue to educate her people without ultimately being forced into giving them representative government; that an autocracy is incompatible with industrialism; that a society cannot be organized on modern and ruled on mediæval lines—all this one may profoundly believe, and yet deny that it will have any influence on her effectiveness in the field. There were signs that Russia was inexorably tending towards if not an immediate, at any rate a not-far distant convulsion. That such a convulsion is bound to come is, if Western experience goes for anything, as certain as anything can be in the world of politics. But war in all times and under all conditions is an immense safety-valve. While it lasts there seems neither time nor interest nor unemployed energy enough for domestic agitation.



Moreover, the Russians are passionately patriotic. When the Czar has once directly and personally appealed to them, the wish to see holy Russia prevail dominates and absorbs every other emotion. To say that the war on the part of Russia is the war of a bureaucracy, and on the part of Japan of a people, is to say nothing that has any vital bearing on its conduct. It will not make the Russians less terrible in their resoluteness to win at any cost, nor will it diminish by a fraction the extent or eagerness of their sacrifices.

On the contrary, war re-establishes the closeness of contact between the Czar and his people; it brings him out into the relief that in times of peace is usurped by the bureaucracy, and makes him the public and visible symbol of the nation's wishes and ambitions. That the recoil of the war, whether it end in victory or defeat, may be far-reaching, that the forces it has diverted and headed off may return to their old channels with redoubled power, is probable. The Crimean war was an undoubted factor in bringing about the act of emancipation. The Japanese war may prove the precursor to the last great boon it is in the power of Czardom to grant, the boon of representative government. But that will come, if at all, when the war is ended, and not while it is still being waged. The Russian masses, like the masses in all countries, postpone everything to the accomplishment of victory, and there can be no graver miscalculation than to imagine that their discontent will hamper the prosecution of the war.



A more serious danger threatens Russia from the Near East. She cannot, with her multitudinous interests, engage in a war that is certain to tax her to the uttermost, without neglecting and uncovering some other points along the line of her political communications. As a rule, one is rightly sceptical of the extent to which the powers will seek to profit by the discomfiture or preoccupation of one of their rivals. The Boer war left Great Britain immensely exposed all over the world, but she fought it out without any loss to her permanent interests. It may be so with Russia. On the other hand, the novelty of finding Russia tied up, the certainty that so long as she is engrossed in the Far East she cannot maintain her position and activities in the Balkans, in Persia, or along the Indian frontier, and the chaotic conditions which at this moment obtain between Bulgaria, Macedonia, and Turkey, open up possibilities at once so grave and so uncertain that they cannot be more than indicated with any profit. To speculate on what Turkey may do, on whether England will assume the place of Russia and join with Austria in preserving peace in the Balkans, on what steps, if any, Germany will feel tempted to take to consolidate her influence at Constantinople, on whether Great Britain will seize the chance to strengthen her position in the Persian Gulf and to prosecute her mission in Tibet, is really a waste of time.

One can do no more than say that in all these quarters there are possibilities, and in some of them probabilities, that the Russo-Japanese war is peculiarly fitted to develop into actualities. And above and beyond them all, is the question whether England and France will be able to preserve their neutrality, whether the former if Japan is defeated, and the latter if Russia is defeated, will not be drawn automatically into the sphere of conflict. Tremendous as are these considerations, and vitally as they affect the future of Russia, they will not distract her for one moment from the immediate task on which she is engaged. Her position in the Far East, and the domination of China, which is bound up with it, is a prize as great as any that she is forced to relinquish or turn her back on for the time being nearer home; and to gain it she will fight as she has never fought before.

Books and Bookmen

By James MacArthur

"THERE is, after all," says Stevenson, "no house like God's out-of-doors." Never was there a more ardent believer in this truth than Mr. Robert W. Chambers. Summer or winter, whenever he can shoulder a gun or a rod, he calls his dogs, and is off to the woods. Perhaps no living writer, excepting Dr. Van Dyke, has whipped so many rivers on this continent or any other. For some years past his home, during most of the year, has been at the foot of the Adirondacks; he used to spend the winters in Florida, but of late years he prefers New York. His love of nature runs into his work, whether in painting or literature, and he would rather talk to you by the hour about some hunting adventure or out-of-doors sport than of his literary work, though none could be more generous in appreciation of other men's books. Mr. Chambers, his love for the country notwithstanding, is a New-Yorker, and was educated in Paris, where he studied painting under Benjamin Constant. He is still under forty, yet few men to-day can show such a record for versatility. He began his career as an artist, and even yet his study looks as much like that of an artist as of an author. He has contributed numerous articles on miscellaneous subjects to the magazines, and a good deal of fugitive verse. He wrote a drama called "The Witch of Ellangowan" for Ada Rehan, which was played at Daly's Theatre. His novels range over a wide and varied field of insight, actual knowledge and experience and historical research, and are too well known to call for characterization here. In one of his earliest books, *The King in Yellow*, recently reprinted in a new edition, one can discover that the terrible and abnormal, the eccentric and bizarre had a fascination for him at first, but this gradually resolved itself into a saner view of life, while his gift of narrative, vivid and picturesque expression, swift, subtle insight into character have long since given his historical fiction a distinguished place in our literature. Mr. Chambers fairly revels in depicting scenes of stress and strife, and the death-grapple of warring elements, whether in individuals or nations. I know of no one else who could have rivalled the lamented George W. Steevens, who lost his life at Ladysmith during the Boer war. My own opinion is that in Mr. Chambers the novelist, we have lost the greatest of war correspondents.

A New Photograph of Robert W. Chambers

Yet one more achievement must be added to the tale of Mr. Chambers's accomplished tasks. His keen sense of humor, especially of the ludicrous, has been turned lately on a certain species of imaginative tales which relate to the occult and wonder-working powers discovered in nature's mysterious garden. This work will be published in the spring. It is the comic side, so to speak, of that eccentricity and bizarrerie which assumed so serious and gruesome an aspect in his earlier stories, but this later experiment in fiction will be found to be much more exhilarating and entertaining. It gives Mr. Chambers another opportunity, too, to take us out-of-doors, where his charm is always at its best. I find, by the way, that I had almost forgotten to mention his successful adventure into juvenile literature a year or so ago with *Outdoorland*, which was followed a few months ago by *Orchardland*. It was inevitable that in time these should find a sequel in *Riverland*, which will be published in the autumn. It is not necessary to call the attention of the readers of the WEEKLY to his articles on hunting and fishing, which began recently in these pages, and will still be continued.

It is seldom that a purely commercial product gains the artistic and literary flavor which accrues to Apollinaris water. The late Sir Walter Besant once said, "This is an age of Apollinaris water," and Dr. Van Dyke, somewhere in one of his books, uses the comparison, "As sparkling as Apollinaris." References to Apollinaris will also be found in *David Harum*, and in the stories of Mr. Howells, Mr. James, Anthony Hope, and others that will doubtless recur to the reader's memory. The most interesting fact, however, is that the picture of the bubbling spring which decorates the label of every bottle of Apollinaris was drawn by Du Maurier—the most widely circulated and least celebrated of all his drawings. The drawing, I should say, was an act of friendship on Du Maurier's part. The original design bears his signature and is now in the possession of the Apollinaris company.

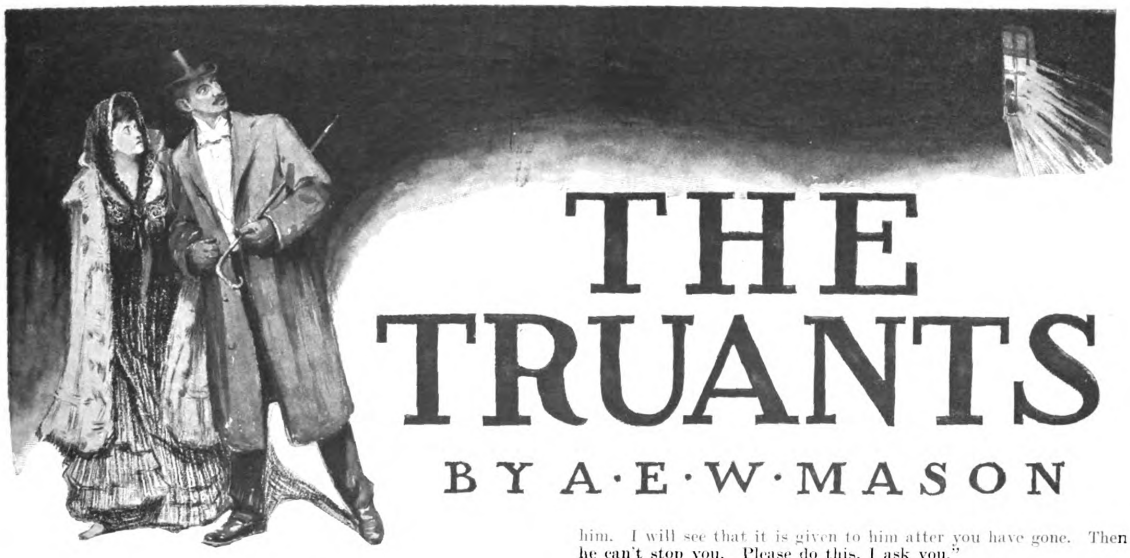
Sir William Ramsay, in acknowledging the toast to him and Lady Ramsay at the New Vagabond Club to which I referred last week, ventured a novel suggestion to writers of fiction, which may appeal to those whose imagination runs to business themes. A novel, he said, might be written on what would happen in the world if gold became, not worthless, but much cheaper than it was now. What would happen to a capitalist who had invested his money in stocks and shares? Would he be ruined, or would he be landed on the summit of prosperity?

The Dickens Society at Bristol lately wrote to Tolstoy for an expression of his opinion on the work of the great English novelist. "I think that Charles Dickens," writes Tolstoy, briefly, "is the greatest novel-writer of the nineteenth century, and that his works, which impressed the true Christian spirit, have done, and will continue to do, a great deal of good to mankind." This is characteristic of Tolstoy the moralist, but not of Tolstoy the critic, and illustrates how easily a great mind can fall into the jargon of commonplace. In the notices of the late George Gissing which his death recently called forth, few of the writers seem to know or fail to appreciate the importance of his volume on Dickens which, nevertheless, is one of the best biographical and critical monographs of the great novelist that has ever been written. Mr. Gissing's latest task was the abridged edition of Foster's *Life of Dickens* which he compressed into one volume.

In a corner of my library there is a number of slender, unpretentious-looking little volumes, which, nevertheless, I count among my most precious treasures. They are volumes of poems by "A. E.," Katherine Tynan Hinkson, W. B. Yeats, John Davidson, Dora Sigerson Shorter, and other Celtic singers. If you object that John Davidson is a Scot, still I say that he has the Celtic blood and fire. Several of these little volumes belong to Dora Sigerson Shorter, and I have just added another volume to the number, which has reached me, entitled *As the Sparks Fly Upward*. It is fully half a dozen years ago since Mr. John Lane first introduced Mrs. Shorter to her American audience in *The Fairy Changeling*. Mrs. Shorter is the daughter of a distinguished Celtic scholar and man of letters, the wife of Mr. Clement Shorter, the editor of the *Sphere* and the *Tatler*, and occupies a foremost place among that brave little band of Celtic poets who keep alive the fires of poesy in their native land. Celtic as Mrs. Shorter is to the core of her nature, one feels the stir of the Viking in the tang of her sterner ballads. There is a crooning and brooding note in her gentler moods, and a lyric joy in the eager abandon of her hours of love and song, "lover's kiss and maiden's laughter"; but it is the fierce, passionate mood I like best, as in "The Storm," which, like so many of her passionate lines, has the sigh and the sob of the harp in its wild chanting lay:

They say it is the wind in midnight skies
  Loud shrieking past the window, that doth make
Each casement shudder with its storm of cries,
  And the barred door with pushing shoulder shake.

Ah, no! ah, no! It is the souls pass by
  Their lot to run from earth to God's high place,
Pursued by each black sin that death let fly
  From their sad flesh, to break them in their chase.



They say it is the rain from leaf to leaf
  Doth slip, and roll into the thirsting ground,
That where the corn is trampled sheaf by sheaf
  The heavy sorrow of the storm is found.

Ah, no! ah, no! It is repentant tears
  By those let fall who make their direful flight,
And drop by drop the anguish of their fears
  Comes down around us all the awful night.

They say that in the lightning-flash, and roar
  Of clashing clouds, the tempest is about;
And draw their chairs the glowing hearth before,
  The casement close to shut the danger out.

Ah, no! The doors of Paradise, they swing
  A moment open for a soul nigh spent,
Then come together till the thunder's ring
  Leaves us half-blinded by God's element.

THE TRUANTS

BY A·E·W·MASON

CHAPTER V

PAMELA'S PROMISE

MILLIE'S enthusiasm for her husband's plan increased each day. The picture which his halting phrases evoked for her, of a little farm very far away under Southern skies charmed her more by reason of its novelty than either she or Tony quite understood. In the evenings of the following week, long after the footsteps overhead had ceased, they sat choosing the site of their house and building it. It was to be the exact opposite of their house of bondage. The windows should look out over rolling country, the simple decorations should be bright of color, and through every cranny the sun should find its way. Millie's hopes indeed easily outran her husband's. She counted the house already built and the door open for her coming. Color and light bathed it in beauty.

"There's my little fortune, Tony," she said, when once or twice he tried to check the leap of her anticipations. "That will provide the capital."

"I knew you would offer it," Tony replied, simply. "Your help will shorten our separation by a good deal. So I'll take half."

"All," cried Millie.

"And what would you do when you wanted a new frock?" asked Tony with a smile.

Millie shrugged her shoulders.

"I shall join you so soon," she said.

It dawned upon Tony that she was making too little of the burden which she would be called upon to bear, the burden of dull lonely months in that great shabby house.

"It will be a little while before I can send for you, Millie," he protested, but she paid no heed to the protest. She fetched her bank-book and added up the figures.

"I have three thousand pounds," she said.

"I'll borrow half," he repeated. "Of course, I am only borrowing. Should things go wrong with me, you are sure to get it back in the end."

They drove down to Millie's bank the next morning and fifteen hundred pounds were transferred to his account.

"Meanwhile," said Tony, as they came out of the door into Pall Mall, "we have not yet settled where our farm is to be. I think I will go and see Chase."

"The man in Stepney Green?" Millie asked.

"Yes. He's the man to help us."

Tony called a cab and drove off. It was late in the afternoon when he returned and he had no opportunity to tell his wife the results of his visit before dinner was announced. Millie was in a fever to hear his news. Never even in this house had an evening seemed so long. Sir John sat upright in his high-backed chair, and as was his custom bade her read aloud the evening paper. But that task was beyond her. She pleaded a headache and escaped. It seemed to her that hours passed before Tony rejoined her. She had come to dread with an intense fear that some hindrance would at any moment stop their plan.

"Well?" she asked, eagerly, when Tony at last came into their sitting-room.

"It's to be horses in Kentucky," answered Tony. "Farming wants more knowledge and a long apprenticeship. But I know a little about horses."

"Splendid!" cried Millie. "You will go soon?"

"In a week. A week is all I need."

Millie was quiet for a little while. Then she asked with an anxious look,

"When do you mean to tell your father?"

"To-morrow."

"Don't," said she. She saw his face cloud, she was well aware of his dislike of secrecies, but she was too much afraid that somehow at the last moment an insuperable obstacle would bar the way. "Don't tell him at all," she went on. "Leave a note for him. I will see that it is given to him after you have gone. Then he can't stop you. Please do this, I ask you."

"How can he stop me?"

"I don't know. But I am afraid that he will. He could threaten to disinherit you; if you disobeyed he might carry out the threat. Give him no opportunity to threaten."

Very reluctantly Tony consented. He had all a man's objections to concealments, she all a woman's liking for them. But she prevailed, and since the moment of separation was very near, they began to retrace their steps through the years of their married life and back beyond them to the days of their first acquaintance. Thus it happened that Millie mentioned the name of Pamela Mardale, and suddenly Tony drew himself upright in his chair.

"Is she in town, I wonder?" He asked rather of himself than of his wife.

"Most likely," Millie replied. "Why?"

"I think I must try to see her before I go," said Tony, thoughtfully, and more than once during the evening he looked with anxiety towards his wife. But in his look there was some perplexity too.

He tried next day. For he borrowed a horse from a friend and rode out into the Row at eleven o'clock. As he passed through the gates of Hyde Park he saw Pamela turning her horse on the edge of the sand. She saw him at the same moment and waited.

"You are a stranger here," she said with a smile, as he joined her.

"Here and everywhere," he replied. "I came out on purpose to find you."

Pamela glanced at Tony, curiously. Only a few days had passed since Warrisden had pointed out the truants from the window of Lady Millingham's house and had speculated upon the seclusion of their lives. The memory of that evening was still fresh in her mind.

"I want to ask you a question."

"Ask it and I'll answer," she replied with earnestness.

"You were Millie's bridesmaid?"

"Yes."

"You saw a good deal of her before we were married?"

"Yes."

They were riding down the Row at a walk under the trees, Pamela wondering to what these questions were to lead, Tony slowly formulating the point which troubled him.

"Before Millie and I were engaged," he went on, "before indeed there was any likelihood of our being engaged, you once said to me something about her."

"I did?"

"Yes. I remembered it last night. And it rather worries me. I should like you to explain what you meant. You said, 'The man who marries her should never leave her. If he goes away shooting big game, he should take her with him. On no account must she be left behind.'"

It was a day cloudless and bright. Over towards the Serpentine the heat filled the air with a soft screen of mist, and at the bottom of the Row the rhododendrons glowed. As Pamela and Tony went forward at a walk the sunlight slanting through the leaves now shone upon their faces and now left them in shade. And when it fell bright upon Pamela it lit up a countenance which was greatly troubled. She did not, however, deny that she had used the words. She did not pretend that she had forgotten their application.

"You remember what I said," she remarked. "It is a long while ago."

"Before that," he explained, "I had begun to notice all that was said of Millie."

"I spoke the words generally, perhaps too carelessly."

"Yet not without a reason." Tony insisted. "That's not your way."

Pamela made no reply for a moment or two. Then she patted her horse's head and said, softly:

"Not without a reason." She admitted his contention frankly. She did more, for she turned in her saddle towards him and, looking straight into his face, said:

"I was not giving you advice at the time. But had I been, I should have said just those words. I say them again now."

"Why?"

Tony put his question very earnestly. He held Pamela in great respect, believing her clear-sighted beyond her fellows. He was indeed a little timid in her presence as a rule, for she overawed him, though all unconsciously. Nothing of this timidity, however, showed now. "That was what I came out to ask you. Why?"

Again Pamela attempted no evasion.

"I can't tell you," she said, quietly.

"You promised."

"I break the promise."

Tony looked wistfully at his companion. That the perplexing words had been spoken with a definite meaning he had felt sure from the moment when he had remembered them. And her refusal to explain proved to him that the meaning was a very serious one, one indeed which he ought to know and take into account.

"I ask you to explain," he urged, "because I *am* going away and I *am* leaving Millie behind."

Pamela was startled. She turned quickly towards him.

"Must you?" she said, and before he could answer she recovered from her surprise. "Never mind," she continued; "shall we ride on?" and she put her horse to a trot. It was not her business to advise or to interfere. She had said too much already. She meant to remain the looker-on.

Stretton, however, was not upon this occasion to be so easily suppressed. He kept level with her, and as they rode he told her something of the life which Millie and he had led in the big lonely house in Berkeley Square; and in spite of herself, Pamela was interested. She had a sudden wish that Alan Warrisden was riding with them too, so that he might hear his mystery solved. She had a sudden vision of his face, keen as a boy's, as he listened.

"I saw Millie and you a few nights ago. I was at a close-by dance, and I was surprised to see you. I thought you had left London," she said.

"No; I am leaving," Stretton returned, and he went on to describe that idyllic future which Millie and he had allotted to themselves. The summer sunlight was golden in the air about them; already it seemed that new fresh life was beginning. "I shall breed horses in Kentucky. I was recommended to it by an East End parson called Chase, who runs a mission on Stepney Green. I used to keep order in a billiard-room in his mission one night a week, when I was quartered at the Tower. A queer sort of creature, Chase, but his judgment's good, and of course he is always meeting all sorts of people."

"Chase," Pamela repeated, and she retained the name in her memory.

"But he doesn't know Millie," said Stretton, "and you do. And so what you said troubles me very much. If I go away remembering your words and not understanding, I shall go away uneasy. I shall remain uneasy."

"I am sorry," Pamela replied. "I broke a rule of mine in saying what I did, a rule not to interfere. And I see now that I did very wrong in breaking it. I will not break it again. You must forget my words."

There was a quiet decision in her manner which warned Tony that no persuasions would induce her to explain. He gave up his attempt and turned to another subject.

"I have something else to ask—not a question this time but a favor. You could be a very stanch friend, Miss Mardale, if you chose. Millie will be lonely after I have gone. You were a great friend of hers once. Be a friend of hers again."

Pamela hesitated. The promise which he sought on the face of it no doubt looked easy of fulfilment. But Tony Stretton had been right in one conjecture. She had spoken the words which troubled him from a definite reason, and that reason assured her now that this promise might lay upon her a burden and a burden of a heavy kind. And she shrank from all burdens. On the other hand, there was no doubt that she had caused Tony much uneasiness. He would go away on a task which, as she saw very clearly, would be more arduous by far than even he suspected, troubled and perplexed. That could not be helped. But she might lighten the trouble, and make the perplexity less insistent, if she granted the favor which he sought. It seemed churlish to refuse.

"Very well," she said, reluctantly. "I promise."

Already Tony's face showed his relief. She had given her promise reluctantly, but she would keep it now. Of that he felt assured, and bidding her good-by he turned his horse and cantered back.

Pamela rode homewards more slowly. She had proposed to keep clear of entanglements and responsibilities, and behold! the meshes were about her. She had undertaken a trust. In spite of herself she had ceased to be the looker-on.

Drawn by William Hurd Lawrence

"It's all over," she said

CHAPTER VI

NEWS OF TONY

THE promise which Pamela had given was a great relief to Tony; he went about the work of preparing for his departure with an easier mind. It was even in his thoughts when he stood with his wife upon the platform of Euston Station five minutes before his train started for Liverpool.

"She will be a good friend, Millie," he said. "Count on her till I send for you. I think I am right to go, even though I don't understand—"

He checked himself, abruptly. Millie, however, paid heed only to the first clause of his sentence.

"Of course you are right," she said, with a confidence which brought an answering smile to his face.

She watched the red tail-light of the train until it disappeared, and drove home alone to the big dreary house. It seemed ten times more dreary, ten times more silent than ever before. She was really alone now. But her confidence in herself and in Tony was still strong. "I can wait," she said, and the consciousness of her courage rejoiced her. She walked from room to room, and sat for a few moments in each, realizing that the coldness, the dingy look of the furniture, and the empty silence had no longer the power to oppress her. She even hesitated at the library door with her fingers on the key. But it was not until the next day that she unlocked it and threw it open.

For Pamela, mindful of her promise, called in the afternoon. Millicent was still uplifted by her confidence.

"I can wait quite patiently," she said, and Pamela scrutinized her with some anxiety. For Millicent was speaking feverishly, as though she labored under an excitement. Was her courage the mere effervescence of that excitement, or was it a steady durable thing? Pamela led her friend on to speak of the life which she and Tony had led in the big house, sounding her the while so that she might come upon some answer to that question. And thus it happened that as they came down the stairs together, Millicent again stopped before the library door.

"Look!" she said. "This room always seemed to me typical of the whole house, typical too of the lives we led in it."

She unlocked the door suddenly and flung it open. The floor of the library was below the level of the hall, and a smooth plain of wood sloped down to it very gradually from the threshold.

"There used to be steps here once, but before my time," said Millicent. She went down into the room. Pamela followed her, and understood why those two steps had been removed. Although the book-shelves rose on every wall from floor to ceiling, it was not as a library that this room was used. Heavy black curtains draped it with a barbaric profusion. The centre of the room was clear of furniture, and upon the carpet in that clear space was laid a purple drugget; and on the drugget opposite to one another stood two strong wooden crutches. The room was a mortuary chamber—nothing less. On those two crutches the dead were to lie awaiting burial.

Millie Stretton shook her shoulders with a kind of shiver.

"Oh, how I used to hate this room, hate knowing that it was here, prepared and ready; I used to lie awake and think of it. I used to imagine it more silent than any other of the silent rooms and emptier—emptier because day and night it seemed to claim an inhabitant and to claim it as a right. That was the horrible thing. The room was waiting—waiting for us to be carried down that wooden bridge and laid on the crutches here each in our turn. It became just a symbol of the whole house. For what is the house, Pamela? A place that should have been a place of life and is a place merely expecting death."

Millie Stretton finished her outburst and stood dismayed, as though the shadow of those past days were still about her. The words she had spoken must have seemed exaggerated and even theatrical but for the aspect of her as she spoke them. Her whole frame shuddered, her face had the shrinking look of fear. She recovered herself, however, in a moment.

"But that time's passed," she said. "Tony's gone, and I—I am waiting for life now. I am only a lodger, you see. A month or two and I pack my boxes."

She turned towards the door and stopped. The hall door had just at that moment opened. Pamela heard a man's footsteps sound heavily upon the floor of the hall and then upon the stairs.

"My father-in-law," said Millie.

"This was his doing?" asked Pamela.

"Yes," replied Millie. "It's strange, isn't it? But there's something stranger still."

The footsteps ceased. Millie led the way back to her room.

"When I got home yesterday," she related, "I had Tony's letter announcing his departure taken up to Sir John. I waited for him to send for me. He did not. I am not sure that I expected he would. You see, he has never shown the least interest in us. However, when I went up to my room to dress for dinner I saw that the candles were all lighted in Tony's room next door and his clothes laid out upon the bed. I went in and put the candles out—rather quickly." Her voice shook a little upon those last two words. Pamela nodded her head as though she understood, and Millicent went on after a short pause.

"It troubled me to see them burning. It troubled me very much. And when I came down-stairs I told the footman the candles were not to be lit again, since Tony had gone away. He answered that they had been lit by Sir John's orders. At first I thought that Sir John had not troubled to read the letter at all. I thought that all the more because he never once, either during dinner or afterwards, mentioned Tony's name or seemed to remark his absence. But it was not so. He has given orders that every night the room is to be ready and the candles lit as though Tony were here still, or might walk in at the door at any moment. I suppose that, after all, in a queer way he cares."

Again her voice faltered, and again a question rose up insistent in Pamela's mind. She knew her friend, and it was out of her knowledge that she had spoken long ago in Tony's presence when she had said, "her husband should never leave her." It was evident that Tony's departure had caused his wife great suffering.

Millicent had let that fact escape. Pamela welcomed it, but she asked, "Was that regret a steady and durable thing?"

Pamela left London the next day with her question unanswered, and for two months there was no opportunity for her of discovering an answer. Often during that August and September, on the moors in Scotland, or at her own home in Leicestershire, she would think of Millie Stretton, in the hot and dusty town amongst the houses where the blinds were drawn. She imagined her sitting over against the old stern impassive man at the dinner, or wearily reading to him his newspaper at night. Had the regret dwindled to irritation and the loneliness begotten petulance?

Indeed, those months were dull and wearisome enough for Millicent. No change of significance came in the routine of that monotonous household. Sir John went to his room perhaps a little earlier than had been his wont, his footsteps dragged along the floor for a while longer, and his light burned in the window after the dawn had come. But that was all. For Millicent, however, the weeks passed easily. Each day brought her a day nearer to the sunlit farm fronting the open plain. She marked the weeks off in her diary with a growing relief. For news kept coming from America and the news was good.

Early in October Pamela passed through London on her way to Sussex, and broke her journey that she might see her friend.

"Frances Millingham is writing to you," she said. "She wants you to stay with her. I shall be there too. I hope you will come."

"When?"

"At the beginning of the New-year."

Millicent laughed.

"I shall have left England before then, Tony will have made his way," she said, with a joyous conviction.

"There might be delays," Pamela suggested, and again Millie laughed.

"I have had letters. I am expecting another. It should have come a fortnight since." And she told Pamela what the letters had contained.

At first Tony was a little bewildered by the activity of New York, after his quiescent years. But he had soon made an acquaintance, and the acquaintance had become a friend. The two men determined to go into partnership, a farm in Kentucky was purchased, each man depositing an equal share of the purchase-money.

"Six weeks ago they left New York. Tony said I would not hear from him at once."

And while they were sitting together there came a knock upon the door, and two letters were brought in for Millicent. One she tossed upon the table. With the other in her hand she turned triumphantly to Pamela.

"Do you mind?" she asked. "I have been waiting so long."

"Read it, of couse," said Pamela.

Millie tore the letter open, and at once the light died out of her eyes and the smile vanished from her lips. "From New York," she said, half-way between perplexity and fear. "He writes from New York," and with trembling fingers she turned over the sheets and read the letter through.

Pamela watched her, saw the blood ebb from her cheeks and dejection overspread her face. A great pity welled up in Pamela's heart, not merely for the wife who read, but for the man who had penned that letter—with what difficulty, she wondered, with how much pain! Failure was the message which it carried. Millicent's trembling lips told her that. The village of Roquebrune rose up before her eyes as she gazed out of the window on the London Square. What were the words the schoolmaster had spoken when, stripped of his dreams, he had confessed success was not for him. "We must forget these fine plans. The school at Roquebrune will send no Deputy to Paris." Pamela's eyes grew dim.

She stood looking out of the window for some while, but hearing no movement she at length turned back again. The sheets of the letter had fallen upon the floor, they lay scattered, written over in a round sprawling schoolboy's hand. Millicent sat very still, her face most weary and despairing.

"It's all over," she said. "The friend was a swindler. He left the train at a station on the way and disappeared. Tony went on, but there was no farm. He is back in New York."

"But the man can be found."

"He belongs to a gang. There is little chance, and Tony has no money. He will take no more of mine."

"He is coming home then?" said Pamela.

"No, he means to stay and retrieve his failures."

Pamela said nothing, and Millicent appealed to her. "He will do that, don't you think? Men have started badly before, and have succeeded, and have not taken so very long to succeed."

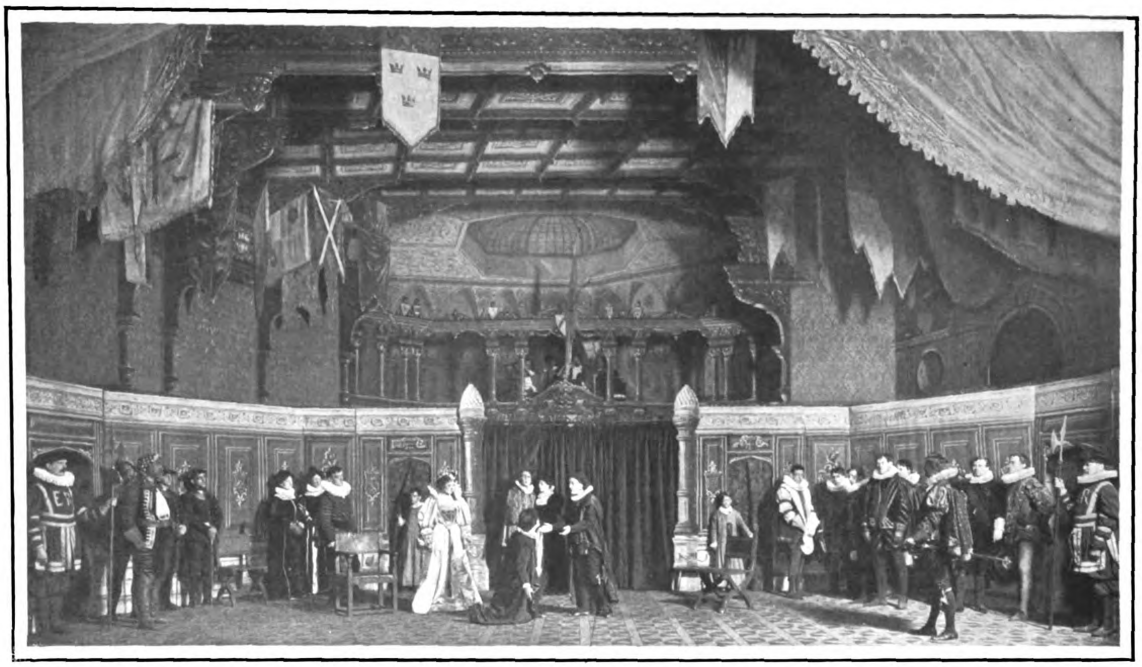
"No doubt," said Pamela, and she spoke with what hopefulness she could. But she remembered Tony Stretton. Simplicity and good humor were amongst his chief qualities; he was a loyal friend; and he had pluck. Was that enough? On the other hand, he had little knowledge and little experience. The schoolmaster of Roquebrune and Tony Stretton stood side by side in her thoughts. She was not, however, to be put to the task of inventing encouragements. For before she could open her lips again Millicent said, gently:

"Will you mind if I ask to be left alone? Come again as soon as you can. But this afternoon—" Her voice broke so that she could not finish her sentence, and she turned hastily away. However, she recovered her self-control and went down the stairs with Pamela.

"What if you told Sir John?" said Pamela. "It seems that he does, after all, care."

"It would be of no use," said Millicent, shaking her head. "He would only say, 'let him come home,' and Tony will not. Besides, I never see him now."

"Never?" exclaimed Pamela.



"No, he does not leave his room." She lowered her voice. "I do not believe he ever will leave it again. It's not that he's really ill, his doctor tells me, but he's slowly letting himself go."

Pamela answered absently. Sir John Stretton and his ailments played a small part in her thoughts. It seemed that the library was again to become typical of the house, typical of the life its inhabitants led. Nothing was to happen then. There was to be a mere waiting for things to cease.

But a second letter was lying up-stairs unopened on the table, and that letter, harmless as it appeared, was strangely to influence Millicent Stretton's life. It was many hours afterwards when Millicent opened it, and, compared with the heavy tidings she had by the same post received, it seemed utterly trifling and unimportant. It was no more, indeed, than an invitation from Frances Millingham, of which Pamela had spoken. Pamela forgot it altogether when she heard the news which Tony had sent, but she was to be affected by it too. For she had made a promise to Tony Stretton, and, as he had foreseen, she would at any cost fulfil it.

To be Continued.

A Scene from "Twelfth Night," as given by Mr. Greet's Players at the Knickerbocker Theatre

"Viola" (Miss Matthison), and "Olivia" (Miss Alys Rees) in "Twelfth Night"

"TWELFTH NIGHT" GIVEN AS IN SHAKESPEARE'S TIME

"Twelfth Night," presented in accordance with the customs of Shakespeare's time, was produced at the Knickerbocker Theatre on February 22, under the direction of Mr. Ben Greet. The company was that which has been seen in "Everyman," Miss Edith Wynne Matthison being the "Viola" and Mr. Greet the "Malvolio." The complete text of the play was spoken, with but a single intermission. There were no changes of scene, and neither curtain nor footlights were used. The stage was set to represent the panelled interior of Middle Temple Hall, where "Twelfth Night" was first produced in the year 1601. Instead of the usual theatre orchestra, a choir of musicians was seated upon the stage dressed in characteristic Elizabethan costumes

SOME CELEBRITIES IN CARICATURE

Works by more than sixty caricaturists are now on view at an exhibition which was opened this week at the Fifth Avenue Book Shop, New York. Among the artists represented are Max Beerbohm, the English caricaturist; the Italians Sacchetto and Leonetto Cappiello; Sem, the Parisian; and Carlo de Fornaro, the East Indian, most of whose work has appeared in America. The reproductions on this page show characteristic examples of the work of these artists, being caricatures of various well-known people

Correspondence

EQUALITY AND THE NEGRO

February 25, 1904.

To the Editor of Harper's Weekly:

SIR,—The discussion of the negro question in your columns has bristled with pertinent suggestions as to the true solution of the problem, many of them, however, being utterly fallacious, largely because they are based upon observations made through a spy-glass.

The Southern people who are most vitally concerned regard its solution as nothing more than a natural application of negro civilization to his environments in which is involved no theory of freemasonry or intimate association with him. His needs are our own, and we care for them on the basis that his intelligence and menial position deserves.

Negro civilization is practically one hundred years old, with a dull intelligence as a foundation, while our own has been more than a thousand years in crystallizing, and to insist upon social and political equality between a race of admittedly low intelligence, young in civilization, and one that has led the world for centuries is grotesque in its absurdity.

Theorists should let us alone; we know our business; we do not pretend to interfere in the problems of miner slavery in Pennsylvania coal-mines; New York can find its own answer to the question of tenement-house abuses; the negro question is purely local and needs in its answer no suggestion from theoretical spy-glass observers. To those of the race that aspire to social and political equality an invitation has been extended by several States, and we are the first to bid them Godspeed in its acceptance, because we have no use or place for them in our land. We know negro character, a knowledge that is an inherited instinct with Southern people; its vices and virtues have a proper compensation in our association with him. This State, like all others in the Southland, spends hundreds of thousands of dollars upon his public necessities; he has his free schools; free normals; free mechanical instruction; free asylums, and free penal institutions.

The South only asks to be left alone to work out its salvation; too many people put notions in the negro's head and give him the idea that he has the right to rest his feet on the front-porch banisters, and sit side by side with his superiors at the dining-table. They urge that he is equal to the responsibilities of political equality in which we have seen fit to differ with them by poll-tax disfranchisements.

It is only a simple question of a civilization one hundred years old naturally inferior to one which has been the triumph of centuries, and it is only natural that any right-minded well-informed man will resent equality, either social or political, in dealing with the negro question. I am, sir, ROBT. E. GOREE.

NEGROES NOT OUT OF PLACE

NEW YORK, *February 19, 1904.*

To the Editor of Harper's Weekly:

SIR,—As an admirer and constant reader of your valuable magazine, I hope you will find space in your columns devoted to correspondence for the few remarks I am about to make in answer to Mr. H. M. Rankin to his letter regarding the negro in your issue of February 20. That gentleman, in answer to a previous letter in one of your issues signed Delta Resident, in which he stated he had never seen the negro out of place is criticising him for his broad assertion, and names some of the recent appointments of our President to prove his assertion that the negro has always been out of place since his emancipation. The question I would like to ask Mr. Rankin is does he think that men and women of the negro race that are mentally able to assume the responsibility of any position to which they are appointed are out of place. The negro, as a loyal citizen of this great government, has a right to aspire to any position, municipal or national, within the gift of the Executive of either branch of the government. Probably Mr. Rankin, being a Southerner, has allowed his prejudice to overlook the fact that the negro since his emancipation has demonstrated his ability and his claim to exercise the rights of citizenship conferred upon him by the Fourteenth and Fifteenth Amendments to the Constitution by the acquiring of education and the accumulation of vast property interest throughout the Union.

More so than any of the poorer whites constituting the population of his native State, or, in fact, any State south of Mason and Dixon. And why shouldn't a broad-minded President recognize ability and thrift in any citizen of this great republic of which he constitutes the head. If he didn't, I assure you that he would not only be violating his oath of office, but a higher principle—the recognition of loyal citizenship and manhood. But as a young negro I am proud to say that Mr. Rankin is not voicing the sentiments of the loyal citizens of the South in his harangue, who are showing their feelings in this great question by contributing their mite towards the education not only of their former slaves, but towards the illiterate of their own race, and thereby sinking into oblivion this blot on our Western civilization. I am, sir,

CHARLES A. ASTWOOD.

A UNION OF CHURCHES

MORRISTOWN, NEW JERSEY, *February 25, 1904.*

To the Editor of Harper's Weekly:

SIR,—The letter of Mr. Byers, in your issue of February 27, suggesting the advantages of a union of the Christian churches, is very touching, and should appeal to all broad Christian minds. We fear that the ideal is and shall forever be impossible. On the other hand, perhaps no organic unity of Christian churches is needed to realize Christ's ideals. The only thing that is perhaps indispensable for civilization to be in peace with God is to incorporate in human laws the brotherhood spirit preached by Christ. Without that we may really fail to accept Christ as Christ wants to be accepted. I am, sir, JOSE GROS.

ROOSEVELT IN CALIFORNIA

SAN FRANCISCO, *February 14, 1904.*

To the Editor of Harper's Weekly:

SIR,—The writer having stated in a former communication, published in HARPER'S WEEKLY of the 13th inst., that President Roosevelt is not regarded by members of his party in this city and State, universally, as a candidate who can certainly win, it may not be amiss to assign reasons for such belief. This, the writer will undertake to do briefly and categorically.

First.—There are many thousands of Southern-born citizens in California. The majority of these, perhaps, are Republicans. These do not approve of the President's "negro policy." These felt affronted when, upon the occasion of the President's visit to this city last spring, he gave to a negro company of regulars stationed at the Presidio the position of "guard of honor" in the parade made in honor of the President. This incident rankled then, and it has not ceased to rankle in the breasts of all Republicans (to say nothing of Democrats) of Southern birth, sentiment, and sympathies resident in this State.

Second.—Lieutenant-General Miles has many warm friends and admirers as a man and as a soldier among Republicans and Democrats in this State. These heartily disapprove of the discourteous treatment accorded by the President to General Miles, both before and at the time of his retirement.

Third.—Organized working-men, as a cohesive body of voters, are very strong in this State. These do not find encouragement for the cause of trades-unionism in the attitude of the President as defined in and by his "open-shop" policy.

Fourth.—The "Panama policy" of the President does not meet with universal approval among the rank and file of his party in this State. Far from it, some of the most influential Republican papers outside San Francisco have been emphatic and unsparing in criticism and condemnation of such policy. These, to a very considerable extent, influence the opinion of their readers.

For these, and yet other reasons that might be mentioned, the politicians of his party are dubious in their minds as to the availability of the President as a candidate, upon the score of ability to carry California and the election. For it is believed that the same conditions of doubt obtain as to many other States.

It is proper to state, in conclusion, that the writer is a Republican (as was Lincoln) albeit he has not always voted that ticket during the past ten years. I am, sir,

JNO. AUBREY JONES.

THIRSTY PLAYS

NEW YORK, *March 1, 1904*

To the Editor of Harper's Weekly:

SIR,—In your admirable paragraph on Bernard Shaw's play, "Candida," which is now attracting the pleased admiration of all feminine New York, you state that the husbands triumphantly borne to this play by far-seeing wives emerge from the performance in the condition of "worms that have passed under a steam-roller." As the wife of one of the aforesaid husbands, permit me to suggest that this statement can only be accepted theoretically. There is a certain rubber-like upspring and buoyancy in the masculine temperament entirely inimical to the weak, energyless, and humble compressibility of the worm. No mere Shaw play, or steam-roller, can alter the average husband's conviction that he's being a pretty good fellow to his wife, all things considered. If his wife likes the play, let her see it, bless her, and no harm done to any one, expresses his average attitude. For himself, it is quite impossible to take seriously these things that attract women—long-haired piano-players, and now these Shaw plays. He excuses himself during the intermission. "Back in a minute, my dear. Thirstiest play I ever went to." I am, sir,

MARGARET BUCKINGHAM.

A CRITICISM ENDORSED

NEW YORK, *February 26, 1904.*

To the Editor of Harper's Weekly:

SIR,—In HARPER'S WEEKLY of February 27 your music critic, writing about the concert of American music given recently at the Metropolitan Opera House, makes some comments of which I must express my cordial approval. I have always had firm faith in the abilities of our American composers, and have regretted that the concert public has so little opportunity of hearing representative works by them. It did seem, therefore, as your critic says, that at a concert given ostensibly for the purpose of showing what the American composer can do, a more intelligent attempt might have been made to bring forward some of the really excellent music which is being produced by our native writers, instead of such inconsequential works as P. T. Miersch's "Norse Legend," Mr. Hadley's "Oriental Suite," and the trivial songs by C. B. Hawley and Mrs. Beach—which are, as you say, "well enough in their way, but neither representative nor important." I am, sir,

WILBUR J. STANDING.

What the Women of Japan Are Doing

By Mrs. Sadazuchi Uchida

IT is because of what we call *yamato damashii*, or the Japanese spirit, that I think we will win. This *yamato damashii* is something foreigners cannot understand. It is not only love of country, but love of honor.

The Japanese are small of body but large in spirit. Even the policeman on the street, whose pay is very small, does his duty well because of his *yamato damashii*, and would be insulted if offered a tip.

Because he is full of *yamato damashii* the Japanese soldier marches away to war, singing the songs that already the Japanese poets have written for the war with Russia; nor do the women of Japan shed tears when the men march away, nor even if their husbands and sons and brothers are brought home dead. It is not only an honor and a privilege to fight for Japan, but a greater honor, a greater privilege, to die for Japan. If an only son falls, a mother might weep, not because he has fallen, but because she has no other son to take his place.

An Empress Who Went to War

The women of Japan do not go out and fight to-day as they have done on rare occasions in the past. We had an Empress once who led an army into Korea and fought at the head of her soldiers. And even in the last century, when the Shogun made his last stand against the Mikado, nearly a thousand women and girls belonging to families attached to the Shogun fought behind and upon the castle walls, and many were killed.

It is different now. Only the men go out. But there is much left for the women to do, and there is not a woman in Japan who will shirk her duty. Not only must she take care of the family while the men are away, but she must work for the soldiers. Our Empress herself is the patron of the Japanese Red Cross Society, whose president is always a prince of the royal house. With her own hands the Empress prepares bandages and clothing for the men in the field; and so great was her personal interest in the men who fought in the war with China that at the close of the war she gave an artificial limb to every man who had lost one on the battlefield.

10,000 Women Volunteers

More than ten thousand women have already volunteered to go to the front to act as nurses. I cannot understand why they should be needed at the front, for there are so many men nurses. It is very cold in Manchuria at this time of year, and the Japanese women are not strong, and I should think they would be more hindrance than help in the field; but all who can leave home are anxious to go.

The women who act as nurses must lay aside their kimonos and wear the regular dress of a hospital nurse. Both before and since the war with China the women of Japan have attended the hospital training-schools, where instruction is given by American and European nurses, and there are now no better nurses in the world than those of Japan. Many of these nurses, as well as the women physicians, are widows of generals and other officers who were killed in that war. Others are very young girls, for in Japan the girls marry at from eighteen to twenty, and after they marry they have so much to do to take care of their families that they cannot give the time to study. When war comes along, however, they find time to work for the Red Cross.

No Old Maids

It is a common thing to see at the headquarters established in all the villages women seventy-five and eighty years of age working side by side with girls who have just begun to go to school. And of course there are women of all ages between. We do not have many old maids in Japan, for marriage is regarded as a duty, and as soon as a girl is old enough she is urged by her relatives to marry; but what few old maids there are, are generally either doctors or nurses, and they always volunteer.

Nor are the acts of patriotism and self-sacrifice confined to any one class of women. Even as all class distinction is put aside by the men in the army, which is composed of noblemen, merchants, students, and common laborers, so it is with the women who do their part at home. The Empress, whom I have met and who is a very clever woman, may be seen frequently visiting the military hospitals, often accompanied by a party of

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

INFANTS THRIVE on cow's milk that is not subject to any change of composition. BORDEN'S EAGLE BRAND CONDENSED MILK is always the same in all climates and at all seasons. As a general household milk it is superior and is always available.—[*Adv.*]

A WELL-APPOINTED home is scarcely complete without telephone service. Low rates. Efficient service. New York Telephone Company, 15 Dey Street, 111 West 38th Street. —[*Adv.*]

ABSOLUTE purity and highly nutritive—COOK'S IMPERIAL EXTRA DRY CHAMPAGNE. Made from the pure juice of grapes.—[*Adv.*]

DON'T neglect a Cough. Take PISO'S CURE FOR CONSUMPTION in time. By druggists. 25c.—[*Adv.*]

BRACES the nerves, builds up the blood, strengthens every way—Abbott's Angostura Bitters.—[*Adv.*]

ADVERTISEMENTS.

GRAND WIFE

The Kind Worth Having

A well-known lady of Carthage, Mo., says: "Although I do not drink tea or coffee myself, I have had a most interesting experience in my family, for about a year ago my husband began to fail in health. He would get so very nervous at times he would have to give up his work and come home. His eyes were failing him, and the doctor became alarmed—was afraid he was going to lose his sight. He also got very yellow in complexion; at times his blood ran cold—from nervous chills, the doctor said.

"In a few days he would return to work, still in that dull, chilly condition. He would drink coffee, coffee, coffee—'for a stimulant,' he would say (as he drank no liquor).

"His condition gradually got worse instead of better, until finally I made up my mind coffee had something to do with it; so I bought a package of Postum without telling him, and made it according to directions. He drank it, and seemed to like it; so I continued to make it, and before the first package was gone he began to get so clear of complexion and feel so well, gaining fast in flesh, he was so delighted he would get weighed every day.

"Finally, he talked so much about it (he had gained 10 pounds in 10 days) I could not keep it a secret any longer, and told him to give Postum the credit. The consequences are there has been no more coffee in the house since (and no doctor either).

"Postum is a delightful drink made according to directions; I have found no better way, as it is a rich golden brown when cream is added.

"I forgot to say husband's eyes are as strong as they ever were, he is well and hearty, does not sit around the stove chilled all the time as he did before." Name given by Postum Co., Battle Creek, Mich.

Coffee poison causes eye trouble in many cases as well as other ails, and is never suspected. A 10 days' trial proves things you will never forget.

Look in each package for the famous little book, "The Road to Wellville."

"99% of Camera value is in the lens"

The "Style B" Goerz lens lets light through with the least possible resistance—this is necessary for instantaneous photography. Our new formula for the Goerz Style B has produced a lens which enables the amateur to make pictures under conditions which have heretofore been considered unfavorable. When you buy a camera tell the man you want a Goerz Lens.

RATES TO ST. LOUIS WORLD'S FAIR.

Tickets to be Sold at very Low Rates via Pennsylvania Railroad.

For the Louisiana Purchase Exposition, to be held at St. Louis, Mo., from April 30 to December 1, 1904, several forms of excursion tickets to St. Louis will be placed on sale by the Pennsylvania Railroad on April 25, as follows:

Season Tickets, good to return until December 15, 1904, to be sold daily at rate of $38.80 from New York.

Sixty-day excursion tickets, final limit not later than December 15, 1904, to be sold daily at rate of $32.35 from New York.

Fifteen-day excursion tickets to be sold at rate of $26.25 from New York.

Tickets of the forms named above will be sold from other stations on the Pennsylvania Railroad at proportionate rates.

Ten-day special coach excursion tickets will be sold on May 10, and on other dates to be announced later, good going only on special coach trains, or in coaches on designated trains, and good returning in coaches on regular trains, at rate of $20.00 from New York, $18.50 from Philadelphia, and proportionate rates, approximating one cent per mile, from other points.

Excursion Tickets by Variable Routes. Season tickets and sixty-day excursion tickets will be sold via variable routes; that is, going by one direct route and returning via another direct route. Variable route tickets will be sold applying through Chicago in one direction at the same rates as apply for season and sixty-day excursion tickets to St. Louis, going and returning via the direct routes.

On all one-way and round-trip tickets, reading to points beyond St. Louis, a stop-over of ten days will be permitted at St. Louis on payment of a fee of $1.00 and deposit of ticket.

Vapo-Cresolene

CURES WHILE YOU SLEEP

Whooping Cough, Croup, Bronchitis, Coughs, Grip, Hay Fever, Diphtheria, Scarlet Fever

Don't fail to use CRESOLENE for the distressing and often fatal affections for which it is recommended. For more than twenty years we have had the most conclusive assurances that there is nothing better. Ask your physician about it.

An interesting descriptive booklet is sent free, which gives the highest testimonials as to its value. All Druggists.

court ladies; and the society women of Tokyo make quite a point of giving up some luxury, or saving money they might otherwise spend upon new kimonos or fine European gowns, to add to the war fund or contribute to the Red Cross treasury. Even the geishas, who would seem to be too light-hearted to think seriously of anything, give much money and sometimes spend time sewing for the soldiers. As for the peasant women, there are none more loyal in the empire.

A Heroic Mother

Perhaps you have heard the story of the peasant woman who sent her only son to fight for the Emperor in the war with China. She had always worked hard and saved all the money she could earn that her son might have an education, for you know we think much of education in Japan. He had served his term in the army, as all Japanese must who are of certain height and physically strong, and had then begun a business career, when the war broke out.

Although it meant that she must go back to hard work in the fields, the mother bade her boy join the army, and his was one of the first regiments to reach the front.

Every morning at daylight the woman went to the temple near her home to offer prayers to the god of war, not for the safe return of her son, but that he might prove worthy of the honor of fighting for the glory of his ancestors and of Japan.

One morning as she was returning from the shrine of Ojin she met a man who had come to tell her that her boy had been killed in the attack on Port Arthur.

With tearless eyes the mother turned and started in the direction of the shrine. The man, thinking she had not understood, called after her and told her again that her son was dead.

"Yes, I know," said the woman. "I go to thank Ojin for the honor he has conferred upon me. Would that I had another son to send to take his place."

Here again was the *yamato damashii* I tell you of. Are there many women in the world who feel like that? Yet that is the feeling of most of the women, and not only the women, but the men, of Japan. It is what makes of every Japanese a soldier who fights to win. It is what fills every Japanese woman with a passionate longing to do something to help, not only by parting with her loved ones, but by personal sacrifice and, if need be, braving the dangers of death and disease with those who are at the front.

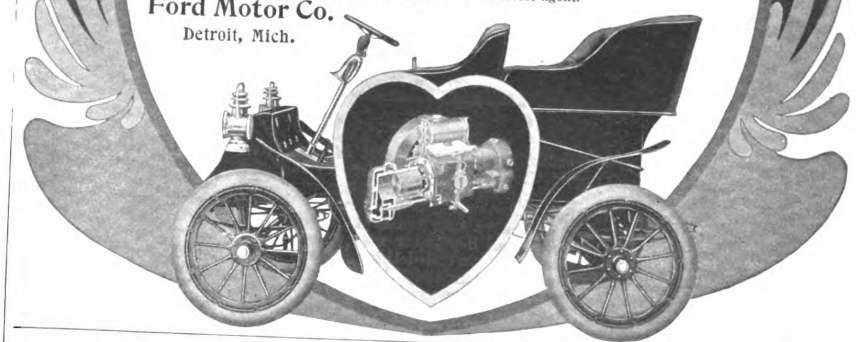
Seeing Thought

WONDERFUL experiments with the N-rays continue to be reported from Paris, and while in some quarters they are received with scepticism, yet the diversity of phenomena is most striking. That they are not heat effects, as is often claimed, the French investigators show by the fact that they are not transmitted by substances that are transparent to heat rays, while in several physiological experiments it was demonstrated that they can be emitted from a body below the temperature of the phosphorescent screen and the surrounding atmosphere. M. Charpentier obtained an increased luminosity of the sensitive screen with rays from a frog at a temperature below that of the laboratory, which was not diminished on heating the screen and then bringing up a cooler body. M. Macé in similar experiments used a living phosphorescent screen prepared from bacteria, and showed that the effects were not due to heat, as the phosphorescence of the screen diminished with a rise in temperature. Most interesting of the physiological experiments with the N-rays have been those where, by means of a phosphorescent screen, the effect of a muscular action such as the movement of the arm was traced to its motor centre in the brain or spinal marrow. It is even claimed that it is possible to gauge the activity of the brain by the intensity of the N-rays emitted as any mental effort acts to increase the luminosity on the screen. In this way we have the strange phenomenon of one being able to "see himself think," and a host of interesting experiments suggested.

The Heart of the **FORD** is the Motor

The popularity of the Ford is due to the power, simplicity and correct mechanical design of its double opposed motor.

The **Ford Keeps the Price Down**



You have to pay the Trust $1500.00 for a Tonneau car with a double opposed motor. The Ford is the pioneer of this type of machine and is the lowest price automobile of its class in the world.

Price with Tonneau $900.00; as a Runabout $800.00

We agree to assume all responsibility in any action the *Trust* may take regarding alleged infringement of the Selden Patent to prevent you from buying the Ford—"*The Car of Satisfaction.*"

New Conceptions in Science

By CARL SNYDER

THIS is not a dry and arid treatise, unintelligible to the general reader, but a clear, comprehensive exposition of the results of latter-day scientific research and discovery. The underlying romance of science and scientific method has never been more convincingly set forth than by Mr. Snyder. The book will be nothing short of a revelation to the average layman, while of abiding value to the scientific student.

Drawn by Sydney Adamson

IT proved to be a dreadfully mixed bag. But of that later. A month's strict application to business had left my faculties somewhat benumbed. The ripening vineyards, the winy odor of apples, the browning of brake and bracken, were eloquent signs to an expatriated Yankee that the first of September was at hand. At home the first of September meant dogs afield, the thunderous whir of grouse, autumn-tinted thickets from which twittering woodcock rose. Here in Normandy the first of September certainly meant neither grouse nor woodcock. What it did mean I was not very sure; but I was dolefully persuaded that it meant nothing except work for me.

Now mark what rewards a passionate devotion to duty sometimes brings. Seated at my open window, resolutely absorbing erudition, I heard a hearty and unmistakable voice hail me in English,—the voice of Georges Bonyn. There stood the artist, a big, sunburnt, pleasant-eyed fellow, looking like an Englishman in his tweeds and spats.

"Hello!" I said; "what are you doing down here?"

"Doing? *Ma foi,* who has a better right here? I was born across the river yonder. What are you doing in my country?"

I said I was stupefying myself with draughts from the fount of knowledge.

"Nonsense," he exclaimed, impatiently. "Come for a walk. I've something to suggest."

Desiring nothing better, I, however, declined.

"Oh *you!*" he said, with a shrug. "Let me tell you that it's the men that count who always believe they have leisure to live. Come out for a walk and a talk!"

That philosophy did apply to him. He was never in a hurry; he always had time to be companionable; and how he managed to do the work he did and win government commissions and medals nobody quite comprehended.

"Perhaps," thought I, "Fame and Fortune are hiding just around the turn of the road waiting to waylay me." So I put on my hat, filled my pipe, and went out.

We exchanged a silent grip of the hands. I fell into step beside him, and we sauntered forth into the autumn-tinted landscape. He had been making some sketches down the river, he said; had returned to spend a few days with his mother, across the river, and now was about ready to go back to Paris; but not quite ready.

"To-morrow will be the first of September," he observed.

There was subdued excitement in his voice.

"What of it?" I asked.

"What of it? Cristi! Don't you ever shoot?"

"Don't you dare tempt me! I left my gun in Paris; I'm here for work."

"Pooh! We're going to shoot, to-morrow, you and I."

"Certainly," I said. "Give me time to make a bow and arrow—"

"I've just the gun for you," he continued, serenely; "a Greener, six pounds, twelve gauge. We'll use one dog,—a pointer. It's all settled; Jacques will call you at daylight—"

"Now see here, Georges—"

"I r-r-riffuse to see here. At daylight we embark in my dog-cart. Don't keep me waiting. Have you ever seen me kept waiting? *Bon!* Then you are aware that I am to be dreaded."

"What is there to shoot?" I inquired, sulkily.

"What to shoot? Partridges, *parbleu!* And hares, and pheasants. Let me inform you this is no Tarascon, this country. There's good shooting all around us."

"Where? In the free shooting?"

"Exactly. After to-morrow, if you wish to shoot in the preserve, I can give you letters of introduction. Oh, it's no liberty, I assure you. Permit me,—Colonel d'Exelmans is my uncle. Also, he is what you call a bird. As for me, too much ceremony; too much what you call 'put-up job'! Eh? Damn the beaters! Damn the r-r-ritrivers! *Pour moi, tu sais, j'en ai soupé!* What? After all, there's much of the braconnier in me, thank God! When I can't load my own gun I'll ask for a pension."

"I also prefer free shooting and no favor," said I. "But we're so near Paris here that I should think the country would be overrun with ready-made sportsmen—*à la* Belle Jardinière."

"There'll be some. But it's my own country, and we ought to make a fair mixed bag. By-the-way, we'll stop for your permit at the Mayor's."

"A mixed bag, a mixed bag," I repeated. "There'll be only three ingredients, Georges."

"There'll be more," he said, darkly. "Wait until these ready-made Paris sports arrive with their unbelievable dogs. There are usually five ingredients in a mixed bag down here."

"That's pleasant," I said, sarcastically.

"Yes, very. All I ask is that they don't add a Yankee to that mixed bag and make the sixth ingredient."

We stopped at the Mayor's, where I paid for a permit after we had touched glasses. "A vot' santé, m'sieu! A votre santé, Monsieur le Maire!" And so down the path under stone walls fragrant with late climbing roses, past the limpid green waters of the stream, where a brick-colored punt swung, filled with children at play; and at last to the calm, slow-flowing river. A steam-launch flying the ensign of a yacht club was waiting for Bonyn. I bade him *au revoir,* and walked back to the inn.

No use to attempt work; the damage was done; the old dormant instinct awake and stirring, the blood quickening in every vein. An hour later Jacques arrived with my gun and cartridges and a pair of leather puttees. And so with these I dreamed and smoked and dawdled away the afternoon, until sunset brought dinner, and the new moon brought sleep.

I dreamed that troops were passing, drums beating loudly. After a while the crash of the drums awoke me. Jacques was beating the long roll on my window with his horny knuckles. It was dark; my good little servant came to the door with coffee, toast, and eggs; a horribly chilly bath gave me an appetite. Presently the crunch of wheels in the road warned me; and in another minute we were spinning away down the river road, enveloped in overcoats and the haze from our own breath. The sun was not yet up: a livid light lay over the vineyards; distant reaches of the river were tinted with pink.

"Not a pop of a gun,
Not a beagle's note,"

I paraphrased, teeth chattering.

"Your Bon Marché hunter never saw sunrise," he said. "Look: there's a skin of frost on the bracken. We may yet add three more ingredients to our mixed bag."

"What?"

"A stray snipe, perhaps a woodcock, possibly a coq de bruyère. Who knows? Quiet there, Toto!"

The beautiful big head of the old-fashioned Spanish pointer which had emerged from the robes at our feet was withdrawn. But the dog still quivered, and emitted faint whistling whines.

"Don't be impatient; there's work ahead," said Georges, patting the silky brown and white head. A moment later he drew rein; Jacques sprang to the horse's head, and we climbed stiffly out and stamped the frosty ground. A vast flat plateau stretched away to the south, dark against a sky pulsating, quivering with the tints of dawn. Guns were withdrawn from cases, barrels locked, fore-ends snapped fast, canvas pockets filled with cartridges, the collar removed from the silky neck of Toto.

"Drive out of gunshot," said Georges; "there ought to be a covey close in."

Away spun the dog-cart; Toto at heel danced impatiently. Then a motion of Georges' hand sent him forward like an arrow, wheeling, galloping, nose up, swinging, halting, then off again, cutting up his ground in a way that we read of more often than we see. The silence of the plain was tremendous; our footsteps on the stiffened ploughed ground accentuated the vast stillness.

"The frost checks Toto," whispered Georges. "The sun will remedy that."

Now, all around and above, the luminous sky shimmered like the bottom of a golden bowl; the gray plain brightened. Far away beyond the dog, a dark point zigzagged across the horizon, and the distant wild note of a snipe came faintly over the plain.

"Flushed stark," muttered Georges. "The sun will drive the frost out of the ground into their wings. Mark!"

Another snipe wheeled up, squak! squak! and darted off into the shimmering brightness.

"The dog's standing," I said.

And he was, like a rock. But the unseen covey began running, and Toto crawled on, flanked by us on either side. Suddenly the bunch flushed, and down went four, right and left, tumbling among frozen carrots and beets.

Reunions of the Grant Family

By Will Carleton

It is getting to be more and more an established custom for families to hold reunions in which the different branches and clans meet and talk over the old times, both of themselves and their ancestors.

One of the most interesting of these is the reunion of the Grants, all of whom trace their ancestry to Matthew Grant, who, in 1635, settled down upon the "Windsor meadows," by the side of the Connecticut River, a few miles north of where now stands the city of Hartford.

It is an interesting fact that Thomas Dewey was his near neighbor, and that from those men sprang two of the most celebrated of Americans thus far—General Grant of the army, and Admiral Dewey of the navy.

3000 Grants

Matthew Grant and his wife Priscilla lived and prospered, in a straightforward, sturdy way, and their descendants have done their full share toward multiplying and replenishing the earth; there are now living nearly 3000 of them.

This couple, who never expected fame, in 1637 came to Windsor from Dorchester, Massachusetts, which had for a few years been their home; and their descendants proved to be, for the most part, of the same modest, reliable stuff. Matthew was a surveyor and a keeper of the town and church records, and seems to have been a good all-around man generally. His descendants point out the place where his old house used to stand, and the whole territory about Windsor and East Windsor is still peopled, to some considerable extent, with the same quiet, straightforward race.

From such obscurely heroic beginnings sprang the line that produced the General Grant of Fort Donelson and Appomattox. No American war took place in which it was not represented—the old French war, the Revolution, and the war of 1812, all contained ancestors of Ulysses S. Grant. When the Mexican war came he was himself old enough to take part in it, and to be commended for his bravery. His history since, the world knows almost by heart. Since then, his son, General Frederick D. Grant, has worthily represented the family in our nation's army.

In 1899 the clans made a grand effort to get together and celebrate their past while clearing the way for more achievements in the future. They came flocking from fourteen different States, and gathered on the old meadows at Windsor. The president of the family, Ulysses S. Grant, Jr., was unable to be there, but the meeting was, notwithstanding, a great success.

All wore badges, with "clan-buttons" upon them, so that each could see at a glance how nearly related he was to another. It was the first time that any effort had been made to bring the tribes together, since they had dispersed two hundred years before.

An Anecdote of General Grant

These festivities have been kept up every year—sometimes enlivened or honored by the presence of members of the Ulysses S. Grant family. Among these has been Mrs. Cramer, General Grant's youngest sister, who occasionally gives reminiscences of her distinguished brother in his early days, when upon coming home from West Point vacations, he used to make a prisoner of war of his baby sister, shut her up in a closet, and then go about wondering where she was, till her plaintive cries drew immediate release and ignorant protest from the mother. It will be seen from this that the great captain carried with him his grim humor and his disposition to make captures, even in younger days.

The latest reunion of the Grant family, which is now incorporated, was at the Park Avenue Hotel, in New York, on Saturday evening, February 27. A large number were present, both ladies and gentlemen, and "the merry laugh went round," mingled with song and reminiscence, in a way that would have surprised the staid Matthew Grant, of Windsor, and his faithful wife Priscilla, especially as the revellers were celebrating the three hundred and third anniversary of the latter's birth.

Progress of Science

Radio-Tellurium

From Vienna comes news of a radioactive substance of increased intensity, which Professor Marckwald has recently isolated from Joachimsthal pitchblende, and to which he has given the name of radio-tellurium. This body possesses intense radioactivity, and especially great power in ionizing the air in its immediate vicinity, and in discharging Leyden jars without sparking. These effects were obtained from a few hundredths of a milligram of the new substance which in its most active form is not self-luminous. It is obtained with quite as much trouble as radium, and Professor Marckwald was forced to work over two tons of pitchblende in order to obtain less than four milligrams of the substance. The active matter is obtained finally, deposited on a plate of bismuth or copper, which has been immersed in the solution for a number of days. While this deposit is composed almost entirely of ordinary tellurium, nevertheless it carries down with it the minute traces of the substance to which is due the radioactivity, and which can be separated by precipitating the tellurium. The new substance possesses certain properties in common with polonium, and Madame Curie, the discoverer of the latter, has protested against a new name being given to it.

Chief of these points of agreement, is the fact that it emits only the α-rays which do not penetrate, but it differs from polonium in that its activity does not diminish to about one-half in the course of a year, but remains constant. This α radiation, according to Professor Marckwald, is so powerful that the impact of the rays will produce luminescence of a screen of phosphorescent zinc sulphide. These two statements appear to many physicists to be at variance, and they also do not consider that Professor Marckwald has obtained a new substance, though they appreciate the importance of his researches, and are awaiting further descriptions of his work. As certain sources of radium that have hitherto been employed are now threatened to be exhausted, and as the demand for radioactive material for medical and other scientific purposes is constantly increasing, experiments of this kind are attracting more than ordinary attention.

A New Telephone Repeater

The Hewitt mercury vapor lamp has been found to have other uses than as a source of illumination, and it is now to be used as a telephone repeater if practical tests confirm preliminary experiments and the claims made in a patent recently issued. Mr. Hewitt's lamp consists of a glass tube containing the vapor of mercury, supplied from a small amount of this substance at the bottom of the tube. On the passage of an electric current the tube is filled with a brilliant glow, which while not pleasant to the eye, on account of its deficiency in red rays, is nevertheless of wonderful intensity and efficiency, and is useful for many purposes. Mr. Hewitt has discovered that the electrical resistance of the mercurial vapor varies with changes of magnetism in its neighborhood, or in more technical language, the resistance will vary with changes in the magnetic flux. Accordingly, he inserts in a circuit containing the vapor lamp and a source of current at constant potential, a telephone receiver.

Ordinarily there will be no variation in the current, and consequently no sound in the receiver; but if an electro-magnet is connected with a speaking circuit and brought near to the tube, the undulatory current will produce variations in the intensity of the magnetic flux, and the telephone in circuit with the lamp will respond. In this way similar impulses may be transmitted and reproduced, as the column of mercury vapor is said to be very sensitive. An efficient telephone repeater has long been desired, and while mechanical devices have been contrived that have proved successful in the laboratory, few, if any, have survived in actual practice over long lines. The advantage claimed for Mr. Hewitt's invention is its increased sensitiveness, but actual trials over long lines will be required to demonstrate the soundness of these claims.

(Continued from page 406.)

"The first ingredient," said Georges, taking a fine cock bird from Toto's velvet mouth. "And," he added, "there goes the second ingredient."

Then I saw a curious and ludicrous sight. The sun had risen; the vast plain steamed golden vapor; and through it, apparently galloping across the edge of the world, went a great animal decorated with a pair of enormous ears. It was only a hare, but distance and mirage exaggerated the creature until it appeared like a jackass silhouetted against the horizon. We went on; the silence was broken by the far report of a gun.

"The Bon Marché is at it," observed Georges, grimly.

Presently the marked-down covey was winded. This time they lay snug, and we walked into them and dropped three more straightaway, I missing with my left barrel.

"Assez," observed Georges, though I judged that we had left more than a dozen. But it was good sportsmanship, and I very gladly swung off, prepared for the fresh covey which lay for us like Virginia quail. Out of it we took three, I using two barrels again to bring down a big red partridge,—the kind that some call a "Frenchman." As I stooped to pick up the bird, another flushed from my very feet and started off straight. Taking my time, I was on the point of pulling, when, with a roar, a pheasant blundered up to the right. I know my first barrel missed; at the second, I saw his tail fall slack. But so great was his momentum that he plunged into a thicket as though uninjured, and I turned to Georges, mortified and astonished. He, however, sent the dog in, and, after a few minutes, back trotted Toto with a magnificent cock-pheasant in his mouth, stone-dead.

"Three ingredients for a mixed bag," he said, smiling; "brown partridge, red partridge, and pheasant."

"Mark left!" I cried, and the crack of his gun answered. A hare, jumping up under my very feet, had doubled, dodged, and flashed past behind us. It was Georges's shot; and, "Four ingredients," he said, grinning, as he lifted the great furry creature by the ears and dropped him into his shoulder-sack. The popping of Parisian fowling-pieces now became more frequent. Standing on a bit of rising ground we looked down at a plain below. The plain was dotted with little squares of cover, bushes and young trees bunched into rectangular thickets. Here and there in the distance we saw specks moving, occasionally a smaller four-legged speck madly careering over the ground. These were the Paris Nimrods and their unspeakable dog kind. Standing a moment to survey the land, I caught sight of something running. It was a pheasant, and the next instant three more pheasants ran out of a bit of brush, made a half-circle, and ran into it again.

"Now look out for a hot corner and the Yankee ingredient," said Georges, briskly.

A few minutes later Toto was in the cover and we on either side. Then a shadow fled across our path; a cock-pheasant came sailing into the thicket, and Georges knocked him down with one barrel. Instantly three more pheasants flushed; and, at the same time, from all four corners of that cover, storms of shot swept, knocking the leaves all over us, rattling on our canvas coats and leather leggings. The Paris gentlemen were with us. That was the hottest corner I ever found myself in. Never had I seen such utterly reckless shooting. A rabbit bounced up, and sheets of shot sent me on a jump for the nearest tree. At moments, through the foliage, I caught glimpses of wild-eyed, sport-mad Frenchmen, gesticulating, shouting, bawling for their abominable dogs. Hot, perspiring faces peered from the brush; near-sighted eyes scanned the thicket. I knew that if I moved they'd shoot at me first and deplore the mistake afterward.

Anger replaced fear; I stepped out, gun poised, swearing to pepper the first man who raised gun until I was safe outside that infernal covert. Georges, laughing, led the way, calling in Toto. We had three pheasants and a rabbit. "But no Yankee that time; too peppery for an ingredient in a French mixed bag," he said, and roared with laughter at my fury.

Enraged as I was, I was also glad enough to get free from that bit of wood where maniac Gauls blazed away at everything moving, and the air rang with yaps of rabbit-running beagles and pellet-stricken mongrels. And from that incredible inferno I fled, too upset to add anything to my expressed opinion of the Parisian sport.

Drawn by Sydney Adamson

It was Georges's shot

Luncheon in the dog-cart calmed me. We deposited our game with Jacques, took a few fresh cartridges, emptied our wine-cups, and, pipes alight, swung off into the hill bracken, Toto leading and cautioned to work close. Rabbit after rabbit fell to Georges' gun; I missed two, and got no more chances until a hare ran into a charge of shot fired by me, and doubled up in fine style.

We met two Frenchmen, quiet, gray-eyed, sun-scorched gentlemen, not of the Parisian stripe. They showed us a brace of woodcock, but those were the only woodcock we saw that day. Nor were we able to add a snipe to the ingredients of our mixed bag. However, the unexpected cropped up as usual. A pair of mallards flushed from a cattle-pond in the edge of a thicket, and Georges dropped the drake. Later we struck partridges, but they were already very wild, having no doubt been hammered and pursued down wind by some of the Parisian horde; so we got but one shot and one brace. That monstrous game bird, the heathcock, we saw no sign of. I had never shot one, but Georges had, and said that one or two fell to his gun every year in the free shooting. I might have added to our mixed bag a beautiful roebuck that stood broadside on, watching me as I advanced. But my last deer had been shot; never again was I to draw trigger on that sort of game. To my surprise, when I told Georges, he seemed to understand.

Dusk was purpling the tops of the trees as we came out on the hill above the vineyards and looked down into the valley where the roof of my inn glimmered red. Rooks were flying in the red west; a few leaves fell from the beeches; the scent of burning brush was in the air.

"Well?" inquired Georges, after a long silence.

"You are right," I said. "Only the stupid find no time for leisure. Come to the inn; I have a biscuit and a glass of wine waiting."

"Ça y est," he murmured, shouldering his gun. And we began the descent.

Music

The Opera Season

MR. HEINRICH CONRIED'S first season of opera at the Metropolitan came to an end on March 5. The record of his accomplishment, in the matter of bare facts, is as follows:

There have been, in all, sixty subscription nights and matinées; this is exclusive of the "Parsifal" performances, the special "Ring" series (now in progress), two private benefit performances, and the thirteen Saturday-night performances at popular prices. In all, there were one hundred and one performances—fifty in Italian, thirty-seven in German, and fourteen in French,—whereby, it may be remarked, it will be seen that Mr. Conried has not been, after all, so superlatively Teutonic in his preferences as was feared. Twenty-seven different operas, or portions of operas, were presented. Of these, twelve were of the Italian repertoire, nine of the German, and four of the French. "La Dame Blanche," belonging, properly, to the French list, was sung in German as "Die Weisse Dame," while "The Magic Flute" was given variously as "Die Zauberflöte" and "Il Flauto Magico," which credits it to both the German and the Italian list. The record of presentations shows eleven performances of "Parsifal," eight of "Aïda," five of "Rigoletto," "Tannhäuser," "Pagliacci," and "Lohengrin," four of "Walküre," "Tosca," "Il Barbiere," "Tristan," "Magic Flute," "L'Elisir d'Amore," "Carmen," "Coppélia," and "Faust"; three of "Bohème," "Traviata," and "Lucia"; two of "Siegfried," the "Mefistofele" prison scene, and "Roméo et Juliette"; and one each of "Fidelio," "Die Weisse Dame," "Nozze di Figaro," "Rheingold," and "Götterdämmerung."

It is, on the surface, an excellent record, and it recalls memories of wholly delightful individual successes—"Parsifal," Caruso, Ternina, and some great "Tristan" performances, the admirable Mottl, the temperamental Vigna, some rich and artistic settings, an intelligent stage-manager (whose activities, however, were sadly hampered), Sembrich, Calvé (with reservations), a charming new ballet: these stand out in the memory as marking achievements of rare and important excellence; there are others, which we need not recall; but these that have been named were of prime consequence. That Mr. Conried succeeded so magnificently with his hazardous "Parsifal" venture; that he let us hear, for the first time, the delectable Caruso and the great master Mottl, and that best of Italian conductors Arturo Vigna; that he gave us several of the finest representations of "Tristan und Isolde" that we have heard in a decade; that many of his new stage furnishings were admirable; that he let us hear again such valuable and familiar friends as Alfred Hertz, Sembrich, Calvé, Gadski, Homer, Van Rooy, Plançon, Scotti, Campanari, Blass, and Reiss; and such welcome newcomers as Olive Fremstad, Edith Walker, Aïno Ackté (an unsatisfactory singer, though a most interesting actress), Klöpfer, and Goritz—for all of these things he deserves and has received abundant praise. But with all due regard for the difficulties of what was, for him, an unfamiliar undertaking, one must take note of shortcomings that were, to say the least, palpable.

Shall we be obliged to tolerate next season, one can imagine impatient subscribers as wondering, such representatives of the important tenor rôles of the French répertoire as Mr. Naval, Mr. Dippel, and the indescribable Mr. Riviere, garnered from the illustrious ranks of Mr. Savage's English Grand Opera Company? Or such "seconds" as Mme. Norelli, late of the same organization, and budding young sopranos borrowed from Mr. Conried's operatic training-school? And shall we have to content ourselves with such a *Tristan*, *Siegfried*, *Tannhäuser*, and *Lohengrin* as Mr. Krauss? We are indicating deficiencies which Mr. Conried cannot afford to ignore in laying his plans for future seasons. They may be noted here without in the least implying a forgetfulness of the many brilliant and excellent results which have attended his endeavors.

Wealth Against Commonwealth

By HENRY DEMAREST LLOYD

This is the most complete history in existence of the great combination of brains and capital which still remains the type and model of all trusts or monopolies. Mr. Lloyd has traced the growth of this institution from its origin to its vast proportions now, when it controls the trade of a continent, and is perhaps the most influential and most dreaded financial power in America.

Cloth, $2.50. Popular Edition, $1.00

HARPER & BROTHERS, PUBLISHERS, FRANKLIN SQUARE, NEW YORK

The Stories of Peter and Ellen

BY

GERTRUDE SMITH

Author of "The Roggie and Reggie Stories," "The Lovable Tales of Janey and Josey and Joe."

These stories tell all about the jolliest, happiest little brother and sister you ever knew. They have a pet pony and a monkey all their own, and make mud-pies, and they know all about fairies and such things. You ought to get acquainted with them.

Companion volume to "The Lovable Tales of Janey and Josey and Joe." Illustrated with Sixteen Full Pages in Color. Square octavo, richly Ornamented Cloth, $1.30 net (postage extra).

HARPER & BROTHERS, PUBLISHERS, N. Y.

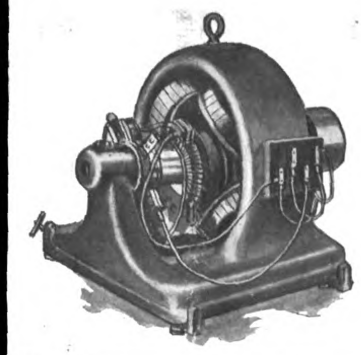
Six Beautifully Bound Books

With Illustrations by E. W. Kemble, Peter Newell, B. West Clinedinst, and J. G. Brown

Of all the books of the great humorist these are the ones that have made his name a household word wherever the English language is spoken.

Their Fun is Immortal—Worth Reading Twice

This is the first time that these volumes have been put within the reach of any but the rich, and published in a uniform low-priced set.



Everybody Can Afford Them

OUR OFFER—We will send you the entire set of six volumes, charges prepaid, on receipt of $1.00. If you do not like the books when they reach you, send them back at our expense, and we will return the $1.00. If you do like them, send us $1.00 every month for 11 months. In order to keep you in touch with us during these months, on receipt of your request for these books we will enter you as a subscriber for one year, without additional cost to you, for either HARPER'S MAGAZINE, HARPER'S WEEKLY, HARPER'S BAZAR, or THE NORTH AMERICAN REVIEW. In writing, state which periodical you want.

COMMENT

Now that Mr. Roosevelt's nomination for the Presidency is accepted as inevitable, Republicans are mainly interested in the selection of a nominee for the Vice-Presidency, and in the appointment of the chairman of the next national committee of their party. There seems to be no longer any doubt that Senator Fairbanks of Indiana will be nominated for Vice-President on the Republican ticket. There never was much doubt about the matter, provided Mr. Fairbanks' reluctance to resign his seat in the United States Senate could be overcome. That he has at last consented to take the second place on the ticket may be inferred from several facts. In the first place, his intimate friends, who would be certain to reflect his personal wishes, now speak of the nomination as assured. In the second place, the Indianapolis *News*, the Senator's home organ, has lately reversed its position with reference to this subject, and now declares that Mr. Fairbanks is in duty bound to bow to the will of his party. Finally, the Indiana State Committee has proclaimed its conviction that the Republican ticket should bear the names of Roosevelt and Fairbanks. Apparently, then, the matter is settled. It follows that the Democratic national convention will have to consider seriously the question whether it would not be expedient to choose a native of Indiana as its candidate for the Vice-Presidency. Experience has shown that State pride is a powerful factor in the Hoosier commonwealth; never since 1872 has the sentiment failed to show its prepotency, except in 1892, when Mr. Cleveland beat General Harrison even in Indiana.

As to the chairmanship of the Republican National Committee, a post the importance of which it is needless to point out, there seems never to have been any ground for the rumor that the place would be offered to Governor Odell of New York. A man less calculated to prove serviceable, except as regards his relations to a single railway magnate, it would be difficult to pick out. If, when running for the Governorship of New York in 1902, he came within a hair's breadth of defeat, Mr. Odell would scarcely be likely to evince more efficiency as the manager of Mr. Roosevelt's canvass. We are told, on what seems to be good authority, that the President's first choice is Senator Quay of Pennsylvania, who conducted successfully, it will be remembered, the Harrison campaign in 1888. It is well known that the state of the Senator's health would not now permit him to undergo the exhausting labors incident to the management of a campaign, but it is alleged that he has been requested to name a substitute. That, so far as we know, is the only basis for the rumor that his colleague, Senator Penrose, will be invited to assume the chairmanship. It is an interesting story that Mr. Roosevelt wishes to commit the charge of the campaign in the West to Mr. J. W. Blythe, general counsel of the Burlington Railway system, and long a conspicuous representative of Mr. James J. Hill. If Mr. Blythe should consent to discharge such a function, the inference would be that the Great Northern and Northern Pacific Railway companies have forgiven Mr. Roosevelt for his opposition to their merger.

If Mr. Roosevelt could carry Missouri, the calculations of political mathematicians would, of course, be upset. Those who have not examined the statistics of the past thirty years would say that such an event is impossible. As a matter of fact, in 1872, the Democratic majority over Republicans and Greenbackers combined was less than thirty thousand. In 1876, notwithstanding the impetus of the Tilden wave, the Democratic majority fell short of 55,000. In 1880, the Democratic majority over Republicans and Greenbackers was less than 20,000. In 1884, the Greenbackers had no candidate, yet the Democratic majority in Missouri was only about 21,000. In 1888, the Democratic majority over Republicans, United Labor men, and Prohibitionists put together, was less than 3000. In 1892 the Democratic candidate obtained the electoral votes of the State, but, as regards the popular vote, he was in a minority by upwards of four thousand. In 1896, Mr. Bryan's majority exceeded 56,000, but, four years later, it sank below 28,000. In 1902, the Democratic candidate for Justice of the Supreme Court in Missouri beat the six opposing candidates by about 27,000.

If these figures are examined in connection with the widespread and seemingly irremediable dissensions in the Democratic party of Missouri, Mr. Roosevelt's success in the State must be recognized as a possibility. If Mr. Joseph W. Folk, the District Attorney of St. Louis, who has sent so many machine politicians to jail, is not nominated for the Governorship, it is by no means unlikely that the reform element in the Democratic party will go over to the Republican camp and support Mr. Roosevelt for the Presidency. If, on the other hand, Mr. Folk is named for Governor by the Democratic State convention, as now seems probable, the machine politicians make no secret of their determination to desert their party. Already William Butler, the most conspicuous of the alleged Democratic "boodlers" in St. Louis, who, however, was acquitted by a jury, has openly joined the Republicans. He is credited with enough personal adherents to more than counterbalance the Democratic majority at the latest election. Whether Mr. Roosevelt, as a civil service reformer, would relish a victory due to assistance from such a source may be doubted, but the large tolerance exhibited by the Republican leaders to Mr. Addicks four years ago, indicates that the chairman of the Republican National Committee would not repudiate the votes which William Butler is said to control in Missouri. So true is it that politics makes one acquainted with strange bedfellows.

A good many far-sighted Democrats who desire to nominate a standard-bearer who can lead the party to victory are beginning to recognize the imperative necessity of abolishing the two-thirds rule at the St. Louis convention. For upwards of forty years that traditional regulation has lagged superfluous on the stage. It always ran diametrically counter to the fundamentally Democratic principle that the majority should rule. On what rational ground can two-thirds of the delegates to a national convention be required for the nomination of a candidate who can be elected President by a majority of one electoral vote? To those who hold that principles are of more importance than men, it must long have seemed preposterous that in Democratic conventions, a majority of one would suffice to frame the platform on which the party is to seek the approval of the voters, whereas two-thirds of the delegates have been required to name the nominee who has to stand upon the platform. To those, on the other hand, who think that a candidate's personality may possess a far greater vote-getting power than any formulation of principles, it must often have seemed outrageous that a third plus one of the delegates should have been permitted to set aside the deliberate and earnest choice of the majority. If Southern Democrats deem it desirable to let Mr. Roosevelt be elected President,

they can render the event almost certain by continuing to tolerate the two-thirds rule, and thus allowing a Bryanized third of the delegates to dictate a candidate doomed to defeat.

As regards the so-called "unit rule," whereby the whole vote of a State is cast for the candidate preferred by a majority of its delegation, we are inclined to take a different position. The unit rule, like the two-thirds rule is a relic of the ante-war epoch, but some reasons may be given for the retention of the former that cannot be pleaded in favor of the latter. The number of the States that are expected to instruct their delegates for Hearst is small, and, even assisted by those States, a majority of whose delegates might be willing to support that candidate, would be unable to muster, if the unit rule is enforced, a third of the national convention. The friends of Mr. Hearst will, therefore, endeavor to secure the repudiation of the unit rule in the New England States, in New York, Pennsylvania, Ohio, Indiana, and Illinois, in the hope of gaining a good many scattered delegates from those commonwealths. They have not the faintest hope of securing a majority of the delegation from any one of those States, with the possible exception of Rhode Island. They have much to gain, therefore, and little to lose by the abolition of the unit rule. Forewarned is forearmed. No strategical or tactical expedient to which recourse may honorably be made should be overlooked by those Democratic leaders who are resolved to bring their party back to its old moorings, and to put forward a platform and a candidate that will commend themselves to sane, conservative, and far-sighted citizens. For the unit rule there is something to be said. It stands on an altogether different footing from the two-thirds rule, which ought long ago to have been discarded.

We discuss elsewhere the recent drift of Democratic sentiment with reference to a nominee for the Presidency. We here confine ourselves to pointing out some possible local consequences of the outcome of the meeting of the Democratic State Committee of the empire commonwealth, which was held at Albany, on March 5. The committee decided that the State convention, called for the purpose of choosing delegates-at-large and district delegates to the national convention at St. Louis, should be held at Albany on April 18. There was no controversy about the date, but Mr. Charles F. Murphy, the leader of Tammany Hall, and ex-Governor Hill, differed with regard to the locality, the former preferring New York city, and the latter the State capital. In the end Mr. Hill's choice was, without opposition, approved, because it turned out that in 1900 the representative of Tammany Hall had agreed that the next State convention convoked for the naming of delegates to a national convention should meet either in Saratoga or in Albany. Upon the exhibition of the agreement, Mr. Murphy yielded, but it had been previously shown by the votes on incidental questions that the Hill members of the committee numbered twenty-six, and the Murphy members, only twenty-three. The proportion would have been reversed, but for the fact that State Senator McCarren and two other committeemen from Brooklyn voted on the Hill side.

There seems to be no doubt that Mr. McCarren's insubordination will provoke a determined effort on Mr. Murphy's part to oust him from the leadership of the Democratic organization in Kings County. It is already announced that Mr. William A. Doyle will hereafter be the dispenser of municipal patronage in the Borough of Brooklyn. As Mr. Littleton, the president of the borough, had shown himself indisposed, so far as the patronage at his disposal is concerned, to heed Mr. McCarren's recommendations, it looks as if the latter might find it difficult to control the primaries, which, on April 15, will choose delegates to the Democratic State convention. Assuming, for the sake of argument, that Mr. McCarren will be able to secure only a small fraction of the Brooklyn delegates, and that, consequently, Mr. Murphy may be able to dominate the State convention in spite of ex-Governor Hill, we would point out that the factional quarrel may have unpleasant consequences at the ballot-box next November. The Brooklyn Democracy is vehemently opposed to the effacement of its individuality by merger in Tammany Hall. If its desire for a measure of political autonomy should be ignored, it might happen that the Democratic nominee for the Presidency would lose the Borough of Brooklyn, and with it, the State of New York. This is a danger which no far-sighted political tactician should overlook. A sober second thought may convince both the leader of Tammany Hall and the leader of the Brooklyn Democratic organization that, if they sincerely desire the triumph of their party in the State and nation, they would do well to establish a *modus vivendi*. A bitter fight at the spring primaries would not augur well for Democratic harmony next autumn.

Many of our readers will note with satisfaction that a story which for a long time has been current in American newspapers, and which, up to March 2, has been uncontradicted, is now shown, on the authority of Mr. Cleveland himself, to be entirely unfounded. We refer to the story that, during his first administration, Mr. Cleveland invited a negro named Taylor, who, at the time was the Register of Deeds in the District of Columbia, to lunch with him, and that Taylor accepted the invitation. In a letter dated Princeton, March 2, Mr. Cleveland denounces the story as "a deliberate fabrication out of whole cloth." We presume that the foundation for the legend was the indubitable fact that Taylor, while Register of Deeds, was, like other officials of the District of Columbia, a visitor at the White House at one or more of the formal receptions that take place every winter. No refreshments are offered at such receptions, and nobody in his senses would draw from the fact that Taylor was not singled out for exclusion on such an occasion, the deduction that Mr. Cleveland believed in the social and political equality of the white and colored races. It would be as reasonable to draw such a deduction from the fact that, as President of the United States, Mr. Cleveland was bound to offer hospitality to the colored Minister from Hayti, who, it may be remembered, was, for a time, by virtue of length of residence, the Dean of the Diplomatic Corps, and, as such, was entitled to take precedence over any other diplomatist in Washington.

We doubt whether Senator Gorman and those Democratic colleagues of his who have opposed the naval appropriations bill are strengthening their party's hold upon the public confidence. Besides some other reasonable provisions, the bill proposes to add to our navy during the coming year one battleship and two armored cruisers. That seems but little enough to do in the way of naval expansion, when we bear in mind how the present contest in the Far East has demonstrated the tremendous importance of sea power. On paper our navy is at present not only greatly outclassed by that of England, but it is considerably exceeded by the navies of France, Germany, and even Russia, notwithstanding the recent losses of Russian vessels at Port Arthur and Chemulpo. It is scarcely becoming the sobriety and dignity of United States Senators to proclaim in bombastic vein their indifference to such statistics, and to assert for our war-ships a vast superiority, as regards gunnery and personnel, over those of possible opponents. We do not believe that there is a naval expert on earth who would describe our navy as at present qualified to cope with that of France. Such a duel would be venturesome in the extreme, even if all our war-vessels now built, building, or authorized were in a condition to fight, and were supplemented with the one battle-ship and two armored cruisers which the pending bill provides for. It has been recently acknowledged by the late Mr. Mulhall and other competent statisticians that our country is considerably richer than the United Kingdom, yet the appropriation now desired by our Secretary of the Navy is only about one-half what is asked for this year by the British Admiralty. This, although, when we started nineteen years ago with what was practically no navy at all, England's sea power was universally acknowledged to equal, if it did not surpass, that of any two other maritime nations. It is true that Great Britain has many more transmarine dependencies than have the United States. On the other hand, we have the Panama Canal to defend, and the Monroe Doctrine to uphold throughout the whole of the New World. We have no doubt that the effort of Senator Gorman and some of his Democratic colleagues to arrest the development of our navy will be viewed with gratification in Germany, and also by shrewd Republican politicians. Mr. Gorman himself seems to have misgivings touching the wisdom of his opposition to any further expansion of the navy, for he intimates that he would not like to conduct a Presidential campaign upon that issue.

The advocates of the expulsion of Mr. Reed Smoot of Utah from his seat in the United States Senate seem not unlikely to effect their purpose. They have changed their ground, however, since the case has been the subject of investigation by the Senate Committee on Privileges and Elections. They have renounced the hope of proving that the accused Senator himself is guilty of polygamy. He has but one wife. His opponents have fallen back upon the charge that, as a high official of the Mormon Church, Mr. Smoot must be held to have connived at the violation of the law by fellow members of the hierarchy. Whether or not plural marriages have actually taken place in Utah since 1890, conclusive evidence has been produced to show that Presidents and so-called Apostles have been guilty of polygamous practices; that is to say, they have continued to have children by their plural wives married before the date named. If Mr. Smoot was not willing to connive at such infractions of the law, why, it is asked, did he not denounce them publicly, or signify reprobation by resigning the high office which he held in the Mormon Church? Is he not chargeable with tacit approval of unlawful practices? In other words, a majority of the Committee on Privileges and Elections will ask the United States Senate to declare that no man holding a post of honor and power in the Mormon hierarchy is eligible to a seat in either House of the Federal Legislature. This, although he is admitted to be personally innocent of any violation of a State or Federal law. Is the establishment of such a precedent by the Senate reconcilable with the third section of Article VI. of the Federal Constitution, which provides that no religious test shall ever be required as a qualification to any office or public trust under the United States? How can a Mormon or a Moslem, though he may scrupulously refrain from personally breaking the law of the United States, or of the State in which he may happen to reside, be expected to denounce coreligionists for practices which are sanctioned by the religion which he believes to be inspired by God? There is no doubt that polygamy is sanctioned by the Koran, as well as by the Moslem gospel. Where religious duty and duty to the civil power conflict, as might conceivably be the case in the minds of Roman Catholics, could more be required constitutionally of a Catholic citizen than personal obedience to the law? This is a question the seriousness of which will be recognized by statesmen who have an eye to future contingencies.

It begins to look as if the Building Department of the city of New York would be unable to escape responsibility for the shocking loss of life caused by the collapse of the iron and steel skeleton of the Hotel Darlington. It is evident that responsibility cannot be evaded by attributing the catastrophe to the existence of a quicksand underlying the foundations of the building, for a quicksand had been discovered by the constructors of the adjoining Hotel Patterson, and adequate precautions had been taken to avert danger from that source. Neither can the disaster be imputed to the accidental explosion of a boiler in the basement. It is manifest that, if the boiler had exploded, steam would not have been observed escaping from it for hours after the fall of the structure. Unquestionably, the calamity was due to violations of the building law. It appears, moreover, that, at various times during the preceding seven months, the Building Department was notified by inspectors that the building law was being violated by the constructors of the Hotel Darlington. Why were not the warnings heeded? Why was not the erection of the defective structure stopped? That is a question to which a satisfactory answer will be exacted of Mr. Ahearn, the President of the Borough of Manhattan, because he appoints and can remove at will the Commissioner of Buildings. He has tried to excuse himself, it seems, for his failure to stop the erection of the building by the plea that the hands of the Department are, practically, tied in the matter of timely intervention. He alleges that, after the inspectors had notified the builders of the Hotel Darlington that they were violating the law, the Building Department could do nothing but go into court, in which case if the building had not collapsed, the contractors could have sued the city for damages.

In other words, the blame is put upon the law. As a matter of fact, the law, as it stands, invests the Building Department with ample powers of interposition for the safeguarding of human life. Where, in his judgment, a structure is unsafe or dangerous, the law authorizes the Commissioner of Buildings to serve notice on the contractors requiring the structure to be either made safe or removed. The persons thus notified are required by law to certify immediately to the commissioner their willingness or refusal to obey his order. If they assent, they must begin the securing or removing of the structure by one o'clock of the day following service of the notice. If they refuse, the law makes it the duty of the commissioner to have a survey of the building made within three days by competent persons, and, upon their report that the structure is unsafe, it is made the duty of the Corporation Counsel to bring the matter forthwith into court for trial by jury, whose verdict shall be final, and the court must give the trial precedence over every other business. Moreover, the law expressly provides that no officer of the Building Department acting in good faith shall be liable for damages by reason of a proceeding undertaken to avert a violation of the building law, and the possible disastrous consequences of such violation. So much for the pretext that a city official might be mulcted in damages if a building upon which work was stopped should happen to escape collapse. What Borough President Ahearn will have to explain is why, after being repeatedly notified that the Hotel Darlington structure was unsafe, the Building Department did not apply for an injunction stopping all work upon the edifice.

One of the surprises of the Far-Eastern war is the failure of the fort guns to do more damage to the attacking fleets. It was a matter of faith among the authorities that not even the strongest modern battle-ship could safely attack an effective modern fort, armed with long-range heavy guns. England is at present making a number of long-range fort guns for the defence of her south coast, and it is calculated that these guns will easily be able to throw a twelve or thirteen-inch shell across the Straits of Dover, so that it would not seem to be worth while for France even to take her Channel squadron out of port, much less to attempt to land in the face of such an overwhelming attack. But this is mere theory. The truth is, that, although the weight and range of these guns have been steadily increasing, the human powers which are to use them have not shown, and are not likely to show, a corresponding progress. While a gun can carry a shell across the Straits of Dover, the gunner who could make a hit at twenty miles is yet unborn; neither eyesight nor fineness of hand are equal to the task. Nor would the atmosphere permit it, if they were. Attacks by fleets are made by sea; and the sea is proverbially untrustworthy in the matter of weather. Air-currents, mists, uneven radiation, mirage, and a dozen similar causes deflect the shot and the vision which directs it. Moreover, no one nowadays is likely to attack a fort at close range in broad daylight. The Port Arthur bombardments were nearly all at night, and some of them in snow-storms. It is intelligible that a ship at sea can more or less locate a position on land, such as the Golden Hill above Port Arthur, over a town where there are certain to be some lights at least; but the fort has no lights to guide it in locating the ship, except the momentary flash of the guns, which give hardly any opportunity for aiming. In the case of the Vladivostok bombardment, it seems that the Japanese fleet was too far off to do any damage, and therefore too far off to receive any. It is also likely that the object of that attack was, to draw the Russian fire, in order to locate their forts; the Russians seemed to have divined this, and naturally abstained from firing.

Count von Waldersee's death came as a surprise, though he passed away in the fulness of years. The conspicuous part he played in the Chinese campaign is still so fresh in our memories, that we had come to think of him as a man still in the prime of life, with a possible future. In reality, however, he could already look back to a very full and brilliant career, when he retired from the German War Office, in 1891. He was then in his sixtieth year. His distinguished birth gave him advantages from the outset of his career, and, soon after he received his commission he was made aide-de-camp to Prince Charles of Prussia. He saw service in the struggle of Prussia against Austrian domination, which led up to the campaign of 1866, and the battle of Sadowa. Soon after, he was made military attaché to the German embassy at Paris, and was thus the medium through which the condition of the French army of Napoleon III. was made known to Bismarck

and von Moltke. When war was declared he was immediately attached to the person of King William of Prussia, with whom he went through the campaign of which Sedan and the siege of Paris are the most stirring memories. During a part of the Franco-Prussian war, von Waldersee was chief-of-staff to the Grand-Duke of Mecklenburg-Schwerin, and greatly distinguished himself as a brain-cell of the army of occupation. The same faculties a few years later brought him the appointment of assistant to von Moltke; and in this position he did a great part of the work which brought the German army to a high state of mechanical efficiency. Conflicting purposes and ambitions made his situation untenable, and he was removed from office in 1891, though the German Emperor continued to show him many personal favors.

At this point, Count von Waldersee's career seemed closed, and he retired to his Hanover estate, and settled down to an old age rich in memories. He had married, shortly after the close of the Franco-Prussian war, the widow of Prince Frederick of Schleswig-Holstein, who was a Miss Lee, of New York. His wife saw in von Waldersee the one man fit to take the place of Bismarck, and used the great social influence which her former marriage gave her to work for his success. But other counsels prevailed, and Caprivi got the coveted post. With the Boxer outbreak in China, and the march of the allies to Peking, a chance came to give public recognition to the distinguished German Field-Marshal. He was appointed generalissimo of the forces of the allies, but arrived in China after the relief of Peking, when the uprising was practically at an end. He has been charged with instituting the series of punitive expeditions which have been subjected to the gravest criticism, but his responsibility for these cruelties has been denied.

Questioned by Chairman Burrows in the Smoot inquiry, President Smith of the Mormon Church confessed that he had forty-two children. "Forty-two," he said, "twenty-one boys and twenty-one girls, and I am proud of every one of them." It would be instructive to learn how far this parental pride is reciprocated. How much subdivision will filial piety stand? With how warm a glow does a child's heart respond to the thought that he has a one-forty-second interest in a father? Mr. President Smith's family annals read like the records of a stock farm. By his legal wife he had eleven children. Pressed to disclose how many children had been born to him since the manifesto of 1890, he handed in a list: By Juliana—Edith and Rachel; by Sarah—Aseneth and Jenneta; by Edna—Martha and another; by Alice—Fielding, Jesse, and Andrew; by Mary—Silas, Agnes, James, and maybe Calvin. He wasn't sure about Calvin, but if there is a Calvin, he is proud of him. This incomplete list of thirteen children and five mothers includes less than one-third of this father's progeny. To the theory of the expediency of families like this the Mormon Church still frankly holds, though it professes to respect the letter of the civil law that prohibits them.

What is the controlling sentiment of the people of the United States as to the Philippines? Do they covet those islands? Do they wish them to continue to be an American possession, or would they prefer in due time and with credit to be quit of the responsibility of governing them? A committee has been formed to find out how we feel about this matter. It is called the Philippine Independence Committee, and its purpose is to press upon both the Republican and Democratic parties the policy of adopting resolutions at their coming national conventions, pledging to the people of the Philippines their ultimate national independence upon terms similar to those under which Cuba has become free. The list of the forty-two gentlemen who comprise this committee is impressive. It includes the names of President Schurman of Cornell, President Eliot of Harvard, Judge Gray of Delaware, Mr. C. F. Adams, of Boston, W. H. Baldwin, Jr., Mr. Carnegie, Mr. Howells, R. F. Cutting, Dr. Huntington, Dr. Parkhurst, and Bishop Potter of New York, and of other men of equal influence from many States. It is a very strong committee. It is circulating a petition asking the national conventions to pass resolutions as above described. Its petition is being signed by such men as Cardinal Gibbons, W. H. H. Miller of Indiana, and Francis Lynde Stetson of New York. Here is a highly respectable effort in a thoroughly respectable cause. We believe a considerable majority of the people of the United States would be glad to unload the Philippines in due time on such terms as Cuba got. But it will be argued with earnestness and much force that to promise, now, eventual independence to the Filipinos will work vast injury to the governmental work that is going forward among them. Secretary Taft, whose views about the Philippines we all respect, is pretty sure to say that the Filipinos are not yet fit either to have independence, or the promise of it. If the Republican convention should put into its platform such a plank as this committee wants, President Roosevelt would probably ignore it. He is not likely to be put to that test, but with the Democrats the petitioners will have a better chance. Nor is it unlikely that if Mr. Cleveland were elected on a platform calling for a promise of independence to the Filipinos he would do his best, as far as lay in him, both to have the promise made, and to have it made good.

The bill before the New York Legislature, authorizing the Niagara, Lockport, and Ontario Power Company to take an unlimited amount of water from the Niagara River above the Falls, has no friends except those who are pecuniarily interested in it. According to the Commissioners of the Niagara Park the privileges already granted by New York and Canada promise, when fully developed, to divert from the Falls more than one-third of the entire volume of the Niagara River. The Canadian power companies pay their government a low rental for the water they are permitted to use. We believe the American company now operating pays nothing, and is entitled to take 200,000 horse-power from the Niagara River without paying for it. The Lockport Company, if the bill now pending should be passed, would apparently be entitled to use the rest of the water in the Niagara River on the same profitable terms. If the Falls are not worth preserving as a spectacle, the people of New York State are at least entitled to profit by them as a speculation. Commissioner Pallas got $1500 for the city of New York for the $20,000 defacement he has suffered to disfigure the Public Library fence. The Legislature is invited to outdo him immeasurably in vandalism. If it accedes, it should beat him in thrift also. The water-power of Niagara controlled by New York is roughly estimated to be worth three million dollars a year. What would the Lockport Company be willing to pay for it?

Vermont, having lately extricated herself from the shackles of Prohibition, is making edifying experiments with the liquor trade. There are fourteen counties in the State. Last year, on the rebound from fifty years of restriction, nine of them voted for license. The results, it appears, were not satisfactory to the voters. The rum was bad, or got into the wrong people, or there was too much of it distributed. At any rate, when the license question came up again this spring, only three counties voted license. Perhaps next year the pendulum will swing back a bit, but however that is, it is plain that local option is working well in Vermont, and that the voters take an interest in it, and keep their eyes open and vote according to their judgment. That seems to us better than the state of things under Prohibition, when the larger cities, in which some liquor-selling is inevitable, were obliged to accommodate themselves to rules suited only to villages and the country districts.

South Carolina is credited with 222 homicides during the year 1903. The estimated number of homicides in the United States is about 10,000 a year. The population of the United States is about 76,000,000. The population of South Carolina is about 1,340,000. South Carolina's proper proportion of homicides is therefore about 175. It will be seen that she has seriously exceeded her allowance. The excess is attributed to Tillmanism in her State government. The acquittal of Lieutenant-Governor Tillman for the murder of Gonzales will be recalled. That sort of justice affects statistics.

The story of the embarrassments of the Copley Society of Boston, in connection with the exhibition of the portrait of Mr. Canfield, the card-expert, in the Whistler show, was all a fiction invented for the use of the newspapers of New York. There was no trouble whatever about Canfield's portrait. It has been several times exhibited, though it has never been catalogued as a portrait of Mr. Canfield.

How Long will the Neutral Powers be Neutral?

It is obvious that, in any discussion of the future attitude of the powers now neutral to the war in the Far East, a distinction must be drawn between the trend of popular sentiment and the position which a sober and wary estimate of national interest may commend to the governments of neutral countries. There are only three or four maritime powers of importance in which the course of their respective governments would probably, or at least conceivably, be shaped by a vehement outburst of public feeling. Those countries are France, the United States, Great Britain, and, perhaps, we should add, Italy; we have named them in the order in which the rulers for the time being would probably succumb to the pressure of popular opinion. We might not ascribe to our Federal government a degree of ductility second only to that which fairly may be imputed to the Executive power in France, but for the fact that the current year will witness a contest for the Presidency. Before attempting to indicate, however, the direction in which public sentiment seems to be tending in the three countries first named, it may be well to mark the position which has been deliberately assumed by their respective governments, and also by the Emperor of Germany. Alike in Paris, in Washington, in London, and in Berlin, neutrality has been formally proclaimed. It does not yet appear that, in practice, the neutrality asserted in theory has been violated. That France was tempted and urged to diverge from a neutral's duty may probably be taken for granted, because the squadron of Russian war-ships under Admiral Wirenius could have reached Far-Eastern waters had it been permitted to obtain supplies of fuel at French coaling-stations. That the permission was refused is evident from the fact that the squadron, having traversed the Red Sea, had to return to the Mediterranean. It is manifest that unless France shall modify the rigor of her compliance with a neutral's obligations in this particular, Russia's Baltic fleet and Black Sea fleet—even if the latter were allowed to pass the Dardanelles—would be practically powerless to reach the scene of naval operations in the Yellow Sea or the Sea of Japan. No more conclusive proof of a resolve to fulfil a neutral's duty could be given by the cabinet over which M. Combes presides, and in which M. Delcassé is the Minister for Foreign Affairs, than is implied in the reluctant renouncement by Admiral Wirenius of his intention to cooperate with his comrades at Port Arthur and Vladivostok. If any supplemental evidence were needed, it is afforded by the readiness with which M. Delcassé assented to Mr. Hay's proposal that China's neutrality and "administrative entity" should be respected, now and hereafter, by neutrals and belligerents alike. If M. Delcassé had personally contemplated eventual cooperation with Russia in the Far East, it is scarcely conceivable that he would have become a party to that self-denying ordinance.

The stability of the Combes cabinet is by no means assured, however. The pro-Russian party, which has a formidable following in the Paris press, and which, at the last important division of the Chamber of Deputies, would have overthrown the ministry, could it have secured thirty-nine additional votes, has singled out, for a primary object of attack, M. Pelletan's administration of the navy, which is regarded as open to grave criticism, not only by many naval experts, in whom their countrymen have confidence, but also by several members of the cabinet itself. M. Pelletan's performances are now the subject of close and by no means sympathetic scrutiny at the hands of a committee of the Chamber, and they may provoke a vote of censure which would cause the immediate displacement of the Combes government by a ministry of which the leading spirit would be M. Doumer, formerly Governor-General of Indo-China, and in which M. Hannotaux would assume the direction of foreign affairs. Now there is no doubt that both M. Doumer and M. Hannotaux believe that France ought to offer her aid to Russia in the Far East, just as Russia tendered her assistance to France when the Fashoda affair seemed likely to embroil the last-named power with England. That such a change of attitude on the part of the French government would be extremely popular in Paris no careful reader of French newspapers can doubt.

Here is where the danger of an immense widening of the area of conflict lies. If France remains neutral, the war will, of course, be localized. Should Russia suffer on land, however, a reverse comparable with that which she has already incurred at sea, her military, as well as her naval prestige, would be threatened with profound, if not permanent, eclipse. Not easily or quickly would she efface the ignominy of defeat, on land as well as on the ocean, at the hands of the Japanese, who, forty years ago, had not emerged from barbarism. If, on the contrary, the area of the conflict were suddenly expanded, the St. Petersburg government might plead that it succumbed to the overwhelming naval superiority of Japan's ally, Great Britain, and thus might manage to preserve its dignity at home and abroad. This is a matter of vital moment to the Czar Nicholas II., if not also to the Romanoff dynasty. There are many indications that the present contest with Japan is intensely unpopular among educated Russians unconnected with the army; and that, should it result in national humiliation, not only the war party, but the whole autocratic system, may be held to a stern account. On the other hand, a war in which England would be looked upon as the principal antagonist, and which would open a vista of conquest in India, would be entered upon with willingness, if not with enthusiasm, by the Russian people. That is why, should the Russian army, like the Russian navy, be beaten in the Far East, the St. Petersburg government may be impelled, by the instinct of self-preservation, to appeal with fervor for French assistance, well knowing that such assistance would inevitably have the effect of bringing England into the field. We are inclined to believe that such an appeal would be successful.

Let us assume, then, for the sake of argument, that France may be ultimately swept by the pro-Russian party into the Far-Eastern vortex, in which event England would be bound by treaty to side with Japan. It is probable that the entrance of their government into the war would be viewed with satisfaction by a majority of the English people, although many Liberals would regret the assumption of further fiscal burdens at this conjuncture. The important question left to be considered is, What would be the attitude of Germany and the United States in the case supposed? The course to be pursued by the German Empire would be exclusively determined by Emperor William II., but it is not easy to forecast the direction in which the mixed operation of self-interest and sympathy would impel him. On the one hand, recalling the age-long and intimate friendship of the Romanoff and Hohenzollern dynasties, he might desire to neutralize the effect that would be produced by French cooperation on the court of St. Petersburg, and this aim he might, to a large extent, attain by offering to become once more a party to the tri-partite compact which was formed in 1895, by which the Mikado was constrained to retrocede to China the Liau-tung peninsula. On the other hand, it will be obvious to the Emperor William II. that should Germany continue, in the case supposed, to observe a strict neutrality, the navies of England and France would seriously weaken one another, and, if the war were prolonged, would leave the naval force of Germany in a position of much greater relative strength than it has ever yet possessed. In the mind of a cool and long-headed sovereign, the latter consideration might prove preponderant, but in the German ruler's temperament there is an impulsive and a chivalric vein that renders it difficult to calculate how he will act under circumstances that appeal to his emotional nature.

One thing, at least, may be averred with confidence, namely, that so long as Germany shall hold herself aloof there is not the slightest danger of any departure on the part of the United States from their traditional avoidance of entanglement in foreign complications. Should the German Empire, however, array its navy and its army on the side of Russia and France—that is to say, should Germany complete the revival of the combination of 1895, which began the partition of China, and which threatened to bar us out of a large part of the Middle Kingdom, our State Department might be strongly tempted to lend support to England and Japan, which are committed to the "open door." Nor is there much doubt that, should events seem to force such a policy upon our Federal government, it would command the approval of that large part of our population—apparently, a majority—that sympathizes with Japan.

The Drift of Democratic Sentiment

Now that the election of delegates to the national convention has begun, it is possible to gather some scattered indications of the direction in which Democratic opinion is tending with reference to the platform and the candidate that should be put forward at St. Louis. We may say at once that of a reassertion of the Kansas City platform there is no possibility. Only a small fraction of the delegates will back Mr. Bryan's demand for a reaffirmance of discarded and exploded doctrines. The editor of the *Commoner* himself admits that the silver issue will play no conspicuous part in the coming campaign, though he would like the party, for the sake of consistency, to adhere to its former position with regard to the free coinage of the white metal at the ratio of 16 to 1. It may also be foreseen that during the canvass now close at hand Democratic speakers will have but little to say about the anti-imperialist averment that the Philippines should be forthwith evacuated. It is likewise manifest that the Democratic party will waste no time in denunciation of the President's isthmian policy, since about half of the Democratic Senators voted to ratify the canal treaty which was the outcome of that policy. That the St. Louis convention will stigmatize what has been called "government by injunction," and propose, by a Constitutional Amendment, to deprive the Federal courts of the time-honored and indispensable power of enjoining summarily acts believed by them to be detrimental to the public welfare, is also out of the question; for only by Bryanites would such a trammelling of the judiciary be desired, and the Bryanites this year will be unable to dictate the programme of the Democratic party. Having recognized distinctly

enough the planks that will be rejected, it remains for us to ask what positive recommendations the platform is likely to comprise. Some of these have been outlined by Mr. Cleveland in the inspiring appeal which he addressed to the Democracy through the columns of the *Saturday Evening Post*. As the ex-President pointed out, there is ample material for another victory in the platform of 1892, on which the Democracy swept the country, beating both Republicans and Populists, although the latter, now almost extinct, polled not far from 900,000 popular votes, and even managed to secure twenty-two Presidential electors. That was what the Democratic party accomplished when faithful to its traditional ideas: it overthrew the high-tariff Republicans upon the one hand, and the intemperate radicals upon the other. What it performed so easily twelve years ago it may reasonably hope to achieve in 1904, when, in at least two States, the Republicans are rent by factional dissension, and, in some of the States, are dissatisfied with their inevitable candidate, while the Populists have lost even the semblance of a party organization. Speaking subsequently to the publication of Mr. Cleveland's letter, Senator Daniel of Virginia took substantially the same view of the exigencies of the situation. Refraining from any detailed suggestion, he propounded a safe general rule for the formulation of a winning platform. Let the programme to be framed at St. Louis, he said, be made up of demands as to which all Democrats agree, and let it contain not a single plank as to which Democrats differ. It should not be difficult to construct such a platform, which, at the same time, should be neither non-partisan nor colorless. The platform of 1892 was Democratic in every fibre, and while it undoubtedly challenged and secured the support of many moderate and reasonable Republicans, it was particularly obnoxious to Republicans of the high-tariff and Force Bill stripe.

Unquestionably, it is impossible to give too much forethought and discretion to the preparation of the platform on which a great party means to go before the country. Nevertheless, experience has shown that the man who stands upon the platform may play an even more decisive part in a Presidential campaign. Of what avail, indeed, is the blazonry upon the ensign if the arm of its upholder is too weak to bear it to victory? Not only should a party deserve to win by the sanity, the equity, and the wisdom of its proclaimed intentions, but it must command success by the choice of a candidate who personifies confidence and hope, and who, by the purity and elevation of his record, invigorates the public heart and electrifies the public conscience. Among those who have been pushed into the foreground as more or less serious candidates for the Democratic nomination for the Presidency, there are some who fall deplorably short of the intellectual and moral stature prescribed for a true leader of men; and, again, there are others less obviously unequal to a commander's rôle. Beginning with a typical representative of the former class, we observe that Mr. Hearst has even a fainter prospect of attaining an influential position in the St. Louis convention than he seemed to have a week ago. It is now less probable than it then appeared to be that he will control the Iowa delegation. On the other hand, it still seems certain that the twenty delegates from Mississippi and the twenty-six delegates from Kentucky will support him, though we can imagine the chagrin with which Mr. John Sharp Williams will ask himself, *sotto voce*, "What am I doing in this galley?" and, although Colonel Henry Watterson, who has reluctantly promised to support Hearst, if nominated, also murmurs under his breath, "Is thy servant a dog that he should do this thing?" Be this as it may, we assume that Mr. Hearst will start with the forty-six delegates of the two States named. Nor do we doubt that to those should be added the twenty delegates of Kansas and the sixteen of Nebraska. That makes eighty-two. It is also possible that Mr. Hearst can also secure the eight delegates from Rhode Island. The six delegates from Nevada are promised to him as well. It is doubtful whether he can carry any other of the States between the Mississippi and the Pacific, though a fight will be made for him in all of them. He has no chance of gaining Minnesota, Wisconsin, Michigan, Illinois, Indiana, or Ohio, although, if the unit rule is not enforced, he may obtain a few scattered delegates from those States. In the South, outside of Mississippi and Kentucky, Mr. Hearst's friends are nowhere preponderant, and only in North Carolina, Florida, and Missouri are they formidable. The first choice of the Virginia, as of the Maryland and West Virginia delegates, seems likely to be Mr. Gorman. The South Carolina delegation will be controlled by Senator Tillman, who can hardly be expected to support Mr. Hearst, inasmuch as he is opposed to a reassertion of the Kansas City platform. The delegation from Georgia will undoubtedly favor a conservative candidate. The same may be said of Alabama, Tennessee, Arkansas, Louisiana, and Texas.

On the whole, our conclusion, from the signs visible at the present hour, is that the Hearst-Bryan combination will probably fail to secure a third of the delegates, which would be 332, on the assumption that the convention will number 994. It will fail, in our judgment, even should the unit rule be repudiated, and the failure would be certain and decisive if the unit rule were enforced. Before the convention meets, however, the leaders of the majority will be able to tell with a close approach to exactitude whether a rigorous enforcement of the *unit* rule is indispensable. Should the Hearst-Bryan combination fall considerably short of 300, it might not be absolutely essential to abolish the *two-thirds* rule, but, with an eye to the future, those who have the welfare of the party at heart will do well to discard it once for all. Moreover, it might be possible for the Hearst-Bryan coalition to rally some coadjutors against the favorite of the conservative majority, who could never be prevailed upon to vote for Mr. Hearst.

So far, then, as recent auguries permit us to judge, the conservative Democrats are certain to have a very large majority in the St. Louis convention. If they use the power at their disposal they will be able not only to frame the platform but to assure its acceptance by placing on it a candidate whom the people will elect. To accomplish this result they need only take two preliminary and precautionary measures. The abolition of the two-thirds rule is, as we have often pointed out, imperatively needed. On the other hand, it might happen that the enforcement of the unit rule would prove useful by depriving the Bryanized faction of some scattered delegates.

Race Rivalries in the Balkans

A REPORT comes to us from Berlin and Vienna that the Sultan has refused to consent to the plan of the powers for reforming the police of Macedonia. It was such a refusal to ratify a plan of the powers which led Russia to declare against the Sultan in the spring of 1877, the war which led to the liberation of Servia and Bulgaria and the transference of Bosnia and Herzegovina to Austria. Abdul Hamid was then a novice in the art of statecraft, yet the impression made on his mind by the fall of Plevna, the crossing of the Balkans at the Shipka Pass, and the arrival of the Russian army under the walls of Constantinople cannot have faded from his mind. If he takes the present course it is because he believes himself safe for the present, and knows that, if necessary, he can always revise his decision.

Another force now working in his favor is the perennial rivalry between the many Balkan races. It seems evident that, after a period of wavering, the Greeks have openly declared for the Sultan, and will work with him in the three vilayets of Kossovo, Monastyr, and Salonica, as well as in the field of international diplomacy. The view which Greece held concerning the decadence of Turkey had to be revised after the disasters of the late Greco-Turkish war, when the troops of the Sultan effectively occupied Thessaly, and were only prevented by international influence from marching on Athens. It must be remembered that the Sultan of Turkey has three or four times as many Greek subjects as the King of Greece, there being about eight million Hellenes under the rule of the Turks, if we consider Cyprus and Crete still Turkish territory. The cities of Asiatic Turkey, along the shores of the Levant, are full of pushing Greek merchants, and most of the trade and commerce of Constantinople is in the same hands. Greeks, too, are the best educated and most influential element in the vilayets of Macedonia.

Two elements further influence the attitude of the Greeks—a theological quarrel and a political and linguistic ambition. During the palmy days of Ottoman power, before the European nations intervened in the Balkans, the intrigues of Greek ecclesiastics were only equalled by those of Turkish viziers and pashas. Both had the same object: to obtain appointments by bribery, and then to recoup themselves by exaction. De Laveleye has described the Greek Church in Rumania as "a cascade of simony," and the same thing was true all over the Ottoman Empire. In the latest epoch of Balkan history a purely indigenous Slavonic Church came into existence in Bulgaria, and for thirty-four years it has propagated the Slav idea, as against Hellenism hardly less than against Turkish government. This the Greeks cannot forgive. They claim Macedonia as a Greek province, rather in virtue of ancient history than actual conditions; and their culture and ideals are incompatible with those of the Bulgarian and Servian Slavs. For these reasons the Slavs of the Balkans have no more persistent enemies than the Greek communities along the Turkish shore of the Aegean. The knowledge that Russia favors the Slavs, rather than the Greeks, in spite of dynastic alliances, makes the Greeks the opponents of Russian policy, and therefore for this reason also draws them towards the Turks.

The Albanians are a strong element of complication. It must be borne in mind that there are about a quarter of a million Albanians in Greece, and three or four times as many on the Adriatic coast of Turkey, in the vilayets of Scutari and Janina. These Albanians belong either to the Moslem faith, or are Greek or Latin Catholics, the difference of religion separating them more than unity of race binds them together. They have one common characteristic, however—a sturdy independence and a love of liberty, which means, for them, liberty to plunder and loot among the Slavonic villages. They are armed mountaineers, and prolong into the twentieth century the manners and customs of the Scottish borderers and moss-troopers, whose joy and delight in raiding their neighbors form the theme of centuries of ballads. The Albanians

are perfectly willing to recognize the Sultan so long as that recognition is purely theoretical and does not carry with it a legal obligation to respect the commandments, especially those which forbid to steal and kill. They are, therefore, up in arms at the present moment because the central authority has presumed to interfere in their mountain fastnesses, and they will go on fighting until the Sultan gives in and leaves them to their own devices.

Turks, Greeks, and Albanians have, therefore, their conflicting ambitions; but all make common cause against the Slavs. It would be pleasant to say that the Slavs are, and have always been, united among themselves, but, unfortunately, it would be untrue. On the contrary, there is no rivalry in all the Balkans so keen as that between the two Slav groups of Servians and Bulgarians, and the most recent Balkan war, in 1885, was between these two powers. Its cause was the revolt of Eastern Rumelia from Turkey, and its incorporation, with the consent of Germany, England, and Austria, in the principality of Bulgaria. Servia was so ill-pleased at this aggrandizement of her rival that she promptly declared war against Bulgaria, and marched her armies towards Sofia. The battle of Slivnitza raged for three days before the victory of the Bulgarians was decisive, and they in their turn marched on Belgrade. This bitter hostility between the Servian and Bulgarian Slavs has not diminished with time, and each is wildly apprehensive that the other will acquire Macedonia. The latter was, as we know, assigned to Bulgaria by the San Stefano Treaty, while Milan openly claimed it for Servia, and was even hailed openly as "King of Macedonia," when he rode forth with his army to Slivnitza.

There are, therefore, five distinct and keenly jealous races involved in the Macedonian question—Turks, Greeks, Albanians, Bulgarians, and Servians—and each one of these has international backing. Austria favors the Servians, and intervened to save them from Bulgaria after Slivnitza; Russia inclines to Bulgaria; Italy supports the Albanians, because she hopes to turn the Adriatic into an Italian lake, by absorbing the two Albanian vilayets; England supports Greece, from historic sympathy as well as from practical interest in Cyprus, Crete, and Egypt; and, finally, the Grand Turk is supported by his friend the Kaiser, who at present holds the balance of power. If we keep in mind this many-sided race war, and remember that it is complicated not only by the strife between Moslem and Christian, but also by the rivalry between the Eastern and the Western churches—the Latin and the Oriental rite—and, finally, that the Greek and Bulgarian churches are implacable rivals; if we add the commercial rivalries of the powers, we shall easily understand that the question of the Near East is more easily posed than answered, and we shall see why the Balkan region is viewed with such anxiety by every government in Europe.

Mobility of Condition

PRESIDENT TUCKER of Dartmouth College seldom has to suffer eclipse, but there was especial reasons why the address of ex-Secretary-of-War Root, in Chicago, on Washington's birthday, should have overshadowed the address on the same occasion in which Dr. Tucker answered the question, What has patriotism the right to demand of education? In this address, like President Eliot in his recent Faneuil Hall address, he dwelt on the need of preserving mobility of social development in a democracy if democracy is to be preserved. He urged that patriotism has a right to demand of educators in particular that "they keep not only the idea, but the fact, of democracy free and open to all men"; and to show that this ideal may be passing away, he pointed out the serious nature of the statement made by John Mitchell, in his recent book on organized labor, that "the average wage-earner had made up his mind that he must remain a wage-earner." "If this be true," said Dr. Tucker, "whatever may be the cause, then organized industry has ceased to be the aid and helper of democracy. For democracy requires as the first necessity of its existence mobility of condition as opposed to fixity of condition. The moment the average man of any class ceases to aspire, and accepts his condition as fixed, that moment he ceases to express himself in the spirit of democracy."

That the trades-union movement makes for class and caste, as against individualism, was the burden of President Eliot's recent complaint of the trades-unions. Dr. Tucker does not assert or deny the fact; he simply passes judgment upon the fact, if fact it be. To those who claim that our educational institutions are ceasing to be democracies, and that the caste spirit is entering in there, he replies, "The path of intellectual progress is open from the lowest place to the highest. There is not a college or university, however richly endowed, which acknowledges any distinction except that of brains, and which is not, therefore, as much the home of the poor man as of the rich man. . . . The interests of the higher education are bound up in democracy."

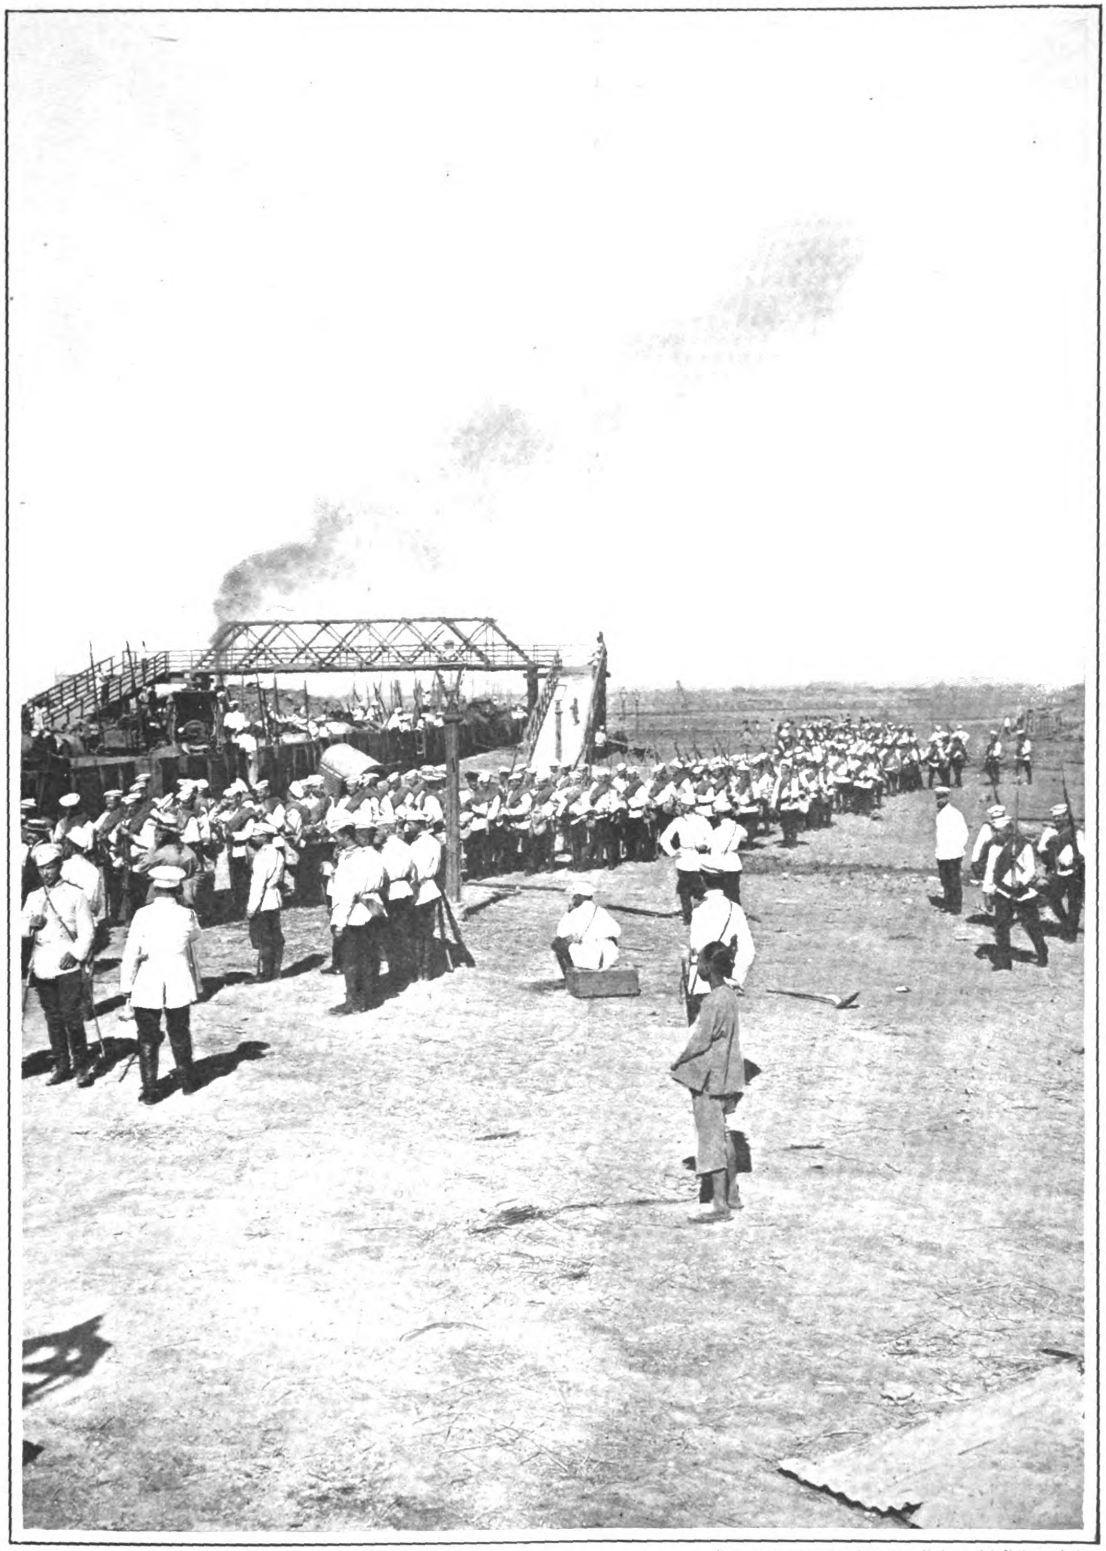
It is just because our educational institutions have been so essentially democratic, because they have fostered mobility of condition rather than fixity of station, because they have known no Dissenter or Established Churchman, no Catholic or Protestant, Christian or Jew, poor or rich, that they are in so much better case than the English universities, the poverty and backwardness of which make intelligent English statesmen and educators despair of bringing Great Britain abreast of the German and American competition.

There are manifold reasons why there should be close relations between our college-bred men and our wage-earners. Each should know the other better. But if the wage-earners of the country are to accept the class or caste ideal, as Mr. Mitchell intimates, there never can be full cooperation between them and the college-bred section of the community, for our colleges and universities are democracies, and not oligarchies, and they have as their ideal mobility and not fixity of status.

Matthew Arnold, after visiting us, returned home and wrote, "Considering, indeed, how rife are distinctions of rank and class in the world, how prone men in general are to adopt them, how much, beyond doubt, the Americans themselves are capable of feeling their attractions, it shows, I think, at least strong sense in the Americans to have forborne from all attempts to invent them at the outset, and to have escaped or resisted any fancy for inventing them since." More recently, Mr. Frederic Harrison, after studying us, went home to write that "the ease with which men can pass from one locality to another, from one climate to another, from one business to another, the entire absence of social barriers or class distinctions," was the characteristic note of the United States, and existed to an extent unknown to Europeans, and difficult for them to conceive of.

The Virginia Exposition

VIRGINIA is actively preparing to celebrate the three-hundredth anniversary of the landing at Jamestown and the founding of the first English-speaking American settlement.



It is indicative of the differences in the Puritan and the Cavalier temperaments that the landing of the Pilgrim Fathers has had so much of historic commemoration and celebration, while the landing in Jamestown is actually not mentioned under the heading Jamestown in the *Encyclopædia Britannica*. Sufficient unto the day was the joy thereof to the light-hearted, high-handed Virginian, and then, too, there was in his mental make-up somewhat of the element which goes to convince a man that self-esteem is the only esteem worth while. The patriarchal government and agricultural way of life, before the war, the marked class distinctions, and the great plantations stretching over wide areas and holding people at great distances from each other, discouraged that general and democratic commingling which makes for public glorifications and united efforts for good citizenship and organized growth, which is so marked a trait of New England. Virginians do indeed glory in their history, but there is little or no effort at making the "future copy fair the past." There is no such effort afoot as the Old South Society in Boston to bind all classes together in a common veneration for the past, an acknowledged public duty to the present, a promise of definite growth for the future. What there is of such feeling is still in the green, and will doubtless be forced into fuller growth by this undertaking of an exposition in 1907.

The site chosen for the exposition buildings is just outside of Norfolk, and is a high, dry neck of land, with a five-thousand foot frontage on Hampton Roads, where the great battle between the *Merrimac* and *Monitor* was fought. It is calculated that there are twenty millions of people within a day-and-a-night's journey from this spot, and it lies in the very centre of the points of historic interest. Within twenty miles of the radius of the ground selected for the buildings occurred two of the chief events of American history—the first permanent planting of an English-speaking colony at Jamestown, and the closing of the war for national independence at Yorktown. The James River, still dotted by some of the oldest and most beautiful residences in America, empties into the bay here; Newport News, one of the greatest ship-yards in the continent, is just across the water; and near at hand are the fields of McClellan's and Grant's campaigns. This harbor is undoubtedly one of the most beautiful in the United States, and a leading feature of the exposition will be a great naval and marine exhibit in Hampton Roads. The people of Virginia may reasonably expect to have a large assemblage of monitors, battle-ships, cruisers, gunboats, torpedo-boats, army transports, submarine-boats, and every kind of ship for sea-coast defence and naval warfare as part of their show. It will also be a fine opportunity for a display of yachts, launches, and sailing craft.

It is a surprising fact that during the year 1901 over eighty thousand people visited Jamestown. The efforts of the Society for the Preservation of Virginia Antiquities have culminated in the excavating of the two earliest foundations of the church erected in 1617, together with the original House of Burgesses, which held its first sitting in 1619, and various tombs of interest.

The official title of the Anglo-Saxon Settlement Tercentennial Exposition, which is highly unsuitable to the monosyllabic taste of this nation, will, it is to be hoped, dwindle before 1907 into the Jamestown Exposition, a name that tells quite enough of the purpose of the undertaking.

THE HEAD OF THE KOREAN ARMY IN THE ALLIANCE WITH JAPAN

The photograph shows Yun-Woong-Mel, the Korean Minister of War, with his son and grandchildren. Yun-Woong-Mel becomes an important figure in the Far Eastern crisis through the consummation of the treaty between Japan and Korea, whereby the latter's integrity and independence are guaranteed, and Japan receives the right to operate her forces in Korea. As a result of this treaty, the Korean government is said to have ordered its troops to join forces with the Japanese in the field. The Korean army numbers about 17,000 men, trained by European methods, and there is, in addition, a police force of 2000

How America Opened Japan to Trade

A personal account of the historic events leading to the opening of Japan to the world's trade, by Commodore Nicholson, who was navigating officer of Commodore Perry's flag-ship at the time of the expedition

By S. Nicholson, Commodore, U.S.N. (Retired)

AS navigating officer of Commodore Perry's flag-ship, on the occasion of his famous expedition to Japan, it fell to my lot to play a minor part in an episode of far greater historical importance than I then realized. For the Island Kingdom, which to-day holds a position in the forefront of civilization, was at that period a veritable hermit among nations, not even beginning to emerge from the darkness of barbarism. Its people, wholly ignorant of modern arts, were quite satisfied with their condition in this respect, and wished to have nothing to do with foreigners. The Dutch and Russians had secured commercial relations with them of a very restricted sort, at the expense of many discomforts and humiliations such as Americans would never have been willing to endure. What we wanted was the opening of the country to our trade. Perry was sent to accomplish that object, and his success in obtaining a treaty may be said to have marked the new birth of Japan.

Though fifty-one years have passed since the arrival of the American squadron in the Bay of Yeddo, many of the scenes and incidents of our visit are still vivid in my memory. I recall in particular the "calico forts," as the men on board of our ships called them, stretching for miles along the shores, and composing an extensive series of defences which might have been deemed formidable but for the fact that they were only painted scenery. They were, in fact, made of cotton cloth, built screen fashion, and ornamented with horizontal and vertical stripes which may have been intended to represent stonework. By the help of our telescopes and field-glasses we were able to view them close at hand, as it were—a possibility that could hardly have occurred to the minds of the Japanese—and thus they failed to terrify us to any great extent.

The Bay of Yeddo is an immense sheet of water, and we thought the scenery very beautiful—the lofty and symmetrical cone of Fujiyama, Japan's sacred mountain, towering in the distance, its summit clad in snow, and the landscape dotted with picturesque villages. It was charming weather, in the month of July, 1853, and on the water were floating innumerable trading-junks and other craft, including a great many government boats, some of them carrying soldiers, which flocked about our ships rather menacingly. They wanted to come aboard, to parley with us and doubtless to spy, but the commodore had given orders that this was not to be allowed, and, to convince the Japs that the prohibition was to be taken in earnest, we made a brave show of pikes and cutlasses, with sentinels at the gangways and guns and ammunition in readiness for use. One official, I remember, came alongside and held up a big piece of paper, on which were printed some words in large letters, in French, ordering us to go away immediately.

Commodore Matthew C. Perry, U.S.N.
Who commanded the expedition which opened Japan to the world

The Japanese had known that we were coming, but they never dreamed that we would dare to enter the Bay of Yeddo. They supposed, as a matter of course, that we would go to Nagasaki, to which port the Dutch and Russian traders were admitted under various humiliating restrictions. But the commodore, who was an exceedingly shrewd man, perceived that, if he adopted such a programme, he would be likely to be treated on the same basis as the other foreigners—a thing not to be endured, inasmuch as he came on a diplomatic mission, as an ambassador and the personal representative of the President of the United States.

Accordingly, we went direct to Yeddo, the capital of the country, prepared to play the biggest game of bluff imaginable. If the Japanese were exclusive, he would be equally haughty. If they told him to go away he would pay no attention. If they refused to negotiate, he would make himself, politely but firmly, so tiresome that they would be obliged to respond in some shape. Snubs would not count, because he could be equally snubby in return. While doing his best to preserve peace he would make it manifest that he could meet force with force. All through the game he was to insist on being treated by the Emperor on equal terms, and would not discuss the object of his mission with anybody who did not hold credentials as the personal representative of the monarch.

Though half a century has gone by I remember the commodore as well as if I had seen him yesterday. A tall and fine-looking man, he belonged to the type of old sea-dog that has passed away. Capable of using strong "cuss-words" under provocation, he was fond of his grog, and partook of the flowing bowl with a freedom that was considered becoming to a gentleman of the old-school and to an officer of the old navy. At the same time, he was a man of considerable learning, with a decided taste for literary pursuits, and during the expedition to Japan he kept a very elaborate and comprehensive journal, on which he would do some work every night. Soon after dinner he would go to bed, and at about 1 A.M. he would wake up, summon young Perry, his nephew, who acted as his amanuensis, call, like Old King Cole, for his pipe and his bowl, and start in to dictate.

What seemed to annoy the Japanese more than anything else was the surveying which, in a rough way, we conducted in the Bay of Yeddo. The commodore sent out boats to map the shores and take soundings—a proceeding which was continued day after day, notwithstanding demonstrations more or less threatening by the government officials and soldiers. But, as I have said, no attention whatever was paid to protests on this or any other subject, and meanwhile negotiations were beginning. Dignitaries of various degrees came to visit the ships, but were not permitted in most instances to board us — until finally the governor of the province arrived in much magnificence, seated on mats in a state barge. He was treated with politeness and condescension, the privilege of an interview not with the commander-in-chief, but with a couple of subordinate officers, being granted to him. He was informed that the commodore bore a letter from the President of the United States to the Emperor, and that it could be delivered only into the hands of a person duly authorized by the latter as his ambassador.

Naturally, the governor went away much impressed. There was some more delay, but at length the official returned with an autograph communication from the Emperor, enclosed in a beautiful sandalwood box, stating that he had appointed a prince of the realm one of his high counsellors, to receive the missive of President Fillmore. A date—two or three days later, I think—was set for the reception of the letter, the place appointed for the ceremony being on shore not far away, where, the governor explained, a temporary building would be immediately erected for the purpose.

Thus was accomplished the first great step in the series of events which culminated in the opening of Japan to modern civilization. It was quite a wonderful thing, indeed, when one comes to think of it—considering the fact that, up to that time, the Island Kingdom had absolutely refused to enter into any relations with other nations, save for the scanty trading privileges above-mentioned. We had entered the Bay of Yeddo in defiance of the laws of the country; we were staying there against the orders of the authorities, and we had persisted in communicating with the Emperor, notwithstanding the determined opposition of the government. The commodore had even gone so far as to say that, if nobody would carry his letter to the Emperor, he himself, with an armed force, would take it to the city of Yeddo.

As a matter of fact, however, the commodore's policy, seemingly so impudent, was the only one that could have accomplished the purpose he had in view. Bluff was what was required. Up to that period foreigners coming to Japan had invariably assumed an attitude of humility, soliciting favors which, when accorded, were haughtily and contemptuously granted. In many instances they were thrown into prison and otherwise mistreated. Perry, on the other hand, presented his request in the form of a demand, ignoring all opposition, and, while expressing intentions wholly friendly, showed a willingness to use force in case anybody interfered with him.

The ceremony attending the transfer of the President's letter was a dazzling affair. The day, I remember, was lovely, and on shore the scene was made gay by multitudes of flags, while regi-

ments of Japanese soldiers, in their quaint costumes, were drawn up in picturesque array. On our side no pains were spared to contribute gorgeousness to the occasion, the commodore, as he landed, being accompanied by a considerable force of marines and blue-jackets, and escorted by most of the officers of the squadron in full uniform. Accompanied by his suite he entered the great wooden house which had been erected for the occasion, where, after going through many forms of Oriental politeness, he placed in the hands of Prince Idzu, the Emperor's representative, the gold boxes containing the letter and his own credentials, the documents being written on vellum and bound in blue velvet. The boxes were of exquisite workmanship, each of them in a rosewood casket, and were carried by two beautifully dressed negro boys.

Having received the letter, the Japanese prince gave in return a communication in writing, stating that the government transacted all of its foreign business at Nagasaki, and requesting the commodore to leave the Bay of Yeddo at once.

Now this might have seemed rather discouraging, but the commodore did not view it in that light. He had accomplished his object, which was to place the President's letter in the hands of the Emperor of Japan. The ceremony being completed, he left the council-hall in state, as he had arrived, and returned to his ships, which had been moved up near to the landing-place, in order to command the scene of negotiations with their guns (their decks being cleared for action), in case of attempted treachery. In response to the order to leave, he did pull up his anchors—not to go away, however, but to steam further up the bay.

The squadron consisted of four vessels—two steamers, the *Susquehanna* and *Mississippi*, and the sloops-of-war *Saratoga* and *Plymouth*. It was not a very formidable fleet, but strong enough to whip any force the Japs could have mustered, inasmuch as their best war-vessels were only junks, and their few cannon were primitive and of small caliber. Doubtless they were much relieved to see us sail away, as we did after doing a little more surveying in the upper bay, and it may be that they thought they would never see us again, though the commodore had left word with Prince Idzu that he would come back in the following spring for the Emperor's answer.

Before the beginning of the next year the Japanese government sent word to Commodore Perry, through the Dutch traders, that the Emperor was dead. As it turned out, this was true, but our commander did not feel sure of it, and he was by no means disposed to accept the suggestion, conveyed with the message, that it would be impossible under the circumstances to renew the negotiations for a long time to come. Accordingly, early in February, 1854, we found ourselves once more in the Bay of Yeddo, our squadron on this occasion comprising eight vessels, three of which were steamers—the *Powhatan*, *Susquehanna*, and *Mississippi*. The others were the *Macedonian*, *Vandalia*, *Lexington*, *Southampton*, and *Saratoga*. The commodore made the *Powhatan* his flag-ship, and I was his navigating officer.

This time the Japs were convinced that we meant business. The Emperor appointed five high counsellors of state, three of whom were princes, to negotiate the treaty which had been requested by President Fillmore in his letter, and a building was erected to furnish a suitable setting for the ceremony. It was of wood, if I remember correctly, covered with some kind of cloth. The dignitaries, on the appointed day, came down from Tokyo on a magnificent barge, and all the resources of the fleet were employed to make the display on our side as impressive as possible. All told, the Americans numbered something like five hundred, including officers, sailors, and marines, occupying about thirty boats, which advanced toward the shore in line abreast. As we marched up the beach the bands played, and howitzers mounted in the bows of the boats fired in unison a salute of twenty-one guns in honor of the Emperor.

It was really a wonderful spectacle, and was additionally interesting because it represented the culmination of a great historical episode. Being only a junior officer I was not admitted to the inner apartment of the "Treaty House," as we called it, wherein the negotiations were brought to a final conclusion. The transaction consisted in the delivery to the commodore of the Emperor's answer, which expressed his willingness to make a treaty with the United States covering several important points. In the first place, certain ports were to be opened to our trade, and our ships were to be permitted to purchase supplies at prices to be fixed later. As for the rest, the most noteworthy item was that our sailors, when shipwrecked on the shores of Japan, were to receive succor, whereas previously they had been customarily imprisoned. Everything was very satisfactory, and the commodore, having offered to the high commissioners a draft of a treaty such as he thought would fill all requirements, withdrew.

Then followed the presentation of gifts, brought by the squadron, which had been specially prepared for the purpose in the United States. Among them, I remember, were baskets of champagne, casks of whiskey, several rifles, a telescope for the Emperor, half a dozen clocks, some stoves, and a quantity of vegetable seeds. But what delighted the Japanese most was a number of mechanical inventions, among which were lifeboats, telegraph instruments and batteries, and last, but not least, a locomotive and tender, with a passenger-car and rails complete.

The Japs went fairly wild over the railroad, though it was only a miniature affair, with a tiny locomotive that drew a car hardly big enough for one small child to ride in. Engine and car travelled on a circular track, and one high dignitary after another eagerly asked permission to make the trip, seated on top of the vehicle. Another gift that greatly interested them was a photographic apparatus for making daguerreotypes. Next to the railroad, however, the electric telegraph inspired them with most enthusiasm. We had brought wire enough for about a mile of line, and the Japs, quite naturally, regarded as positively miraculous the sending of instantaneous messages.

A few days later we made another visit to the Treaty House, for the purpose of receiving gifts sent by the Emperor. There was a great quantity of them, and my recollection is that they consisted chiefly of silk stuffs, fans, lacquer boxes, porcelain, and swords. Also, there was a collection of specimens of Japanese money—which was rather surprising, in view of the fact that up to that time the coin of the realm had not been allowed to go out of the kingdom. All of these presents, I understand, have been packed for many years in wooden boxes in the national museum, and only the other day it was suggested that it might be worth while to place them on exhibition as relics of historical interest.

By this time the feeling of uneasiness in regard to our intentions had passed away, and was replaced by marked friendliness and cordiality. Formalities were somewhat relaxed, and the Japanese, in order to afford us amusement, brought upon the scene a number of wrestlers, who gave us an exhibition of their prowess. They were all very big men and enormously powerful. The wrestlers of Japan form a caste by themselves, never marrying outside of it, and thus they have attained great stature and size through a process of breeding such as, so far as I am aware, has not been applied to human beings in any other recorded instance. They used to belong to the feudal daimios under the old régime, who took great pride

in them, and were accustomed to enter them in contests for prizes.

The occasion I describe was one of much merriment, indeed, and of general good feeling. Our marines were put through a drill, and the bands from our ships furnished lively music. When we took our departure the Japanese commissioners accepted an invitation to dine on board the *Powhatan*, and, when they came, we took care to give them a good time. The commodore entertained the high dignitaries in his cabin.

Probably we juniors had an even jollier time, because it was less formal, on the quarter-deck, where a banquet had been spread for the officers of the fleet and the subordinate Japanese officials. We gave them plenty of good things to eat, with wine and punch. When they went away, according to native custom, they carried with them, tucked into their sleeves, every available fragment of the feast.

On the thirty-first day of March the commodore went again to the Treaty House, and signed drafts of the treaty in Japanese, Dutch, and Chinese, receiving at the same time from the commissioners drafts signed by them. It was agreed in these documents that the ports of Simoda and Hakodadi should be opened to American ships, with privilege of buying coal and other supplies; that our shipwrecked sailors should be humanely treated; that exchange of money should be permitted, and that we should be allowed to have consuls resident at certain places in Japan. The business thus completed, the commodore presented Prince Hayashi, the chief commissioner, with an American flag, and a banquet, at which we were the guests, followed. I wish I could say that we found the feast as enjoyable as the Japs did ours; but the fact is that most of their dishes do not appeal to the Yankee palate. I particularly remember the clams, which were certainly the most beautiful I have ever seen, their shells resembling tortoise-shell.

View near Yokohama, where Perry landed in 1853

From stereographs copyright, 1904, by Underwood & Underwood, N. Y.

Thus was brought to a successful conclusion, mainly through the cool courage and shrewd common sense of Commodore Perry, this important diplomatic mission, the success of which may be said to have opened Japan to civilization and to have brought about her admission into the fellowship of nations.

It has been said that wonder is the beginning of knowledge. The Japanese are, beyond all other people, inquisitive, and it was this characteristic of theirs that most excited our attention when we first met them. They marvelled to see our ships move against the wind, and, not being allowed to come aboard, their artists approached the vessels in boats, to sketch them. They were constantly taking notes on bark paper with hair pencils. Even our buttons excited their curiosity, and, when one could be obtained as a gift, it was put away as a much-prized treasure. The Chinaman betrays no such quality; he wonders at nothing, or, if he does, he carefully conceals the fact. Perhaps it is because of his curiosity that the Jap has made such progress in the world—a progress which in fifty years has enabled his country to absorb all that the Western nations know. But, probably, it would be putting the fact more correctly to say that the curiosity of the Japanese is merely a manifestation of the superior intelligence which has enabled him to achieve the marvels placed to his credit.

Russia and the War

By Sydney Brooks

LONDON, *March 2, 1904.*

EXTERNALLY the war marks for Russia the end of a period of transition. What one may call the era of natural expansion, at any rate of unresisted expansion, is over; she has touched the zone of strife, and her empire, like all empires, is henceforward subject to the fundamental law of combat and warfare. It is amazing, perhaps the most amazing feature of her imperial progress, how long she has evaded the workings of this law. Only a few generations ago Russia, the same Russia that now stretches from the Baltic to Chinese waters, from the Arctic to the Black Sea, and before long will debouch on the Mediterranean and the Persian Gulf, was a land-locked state. How she burst the bonds that held her and spread towards all points of the compass with the seemingly irresistible sweep of an ocean in flood, till her empire grew to be nearly three times as large as the United States, and her sway extended over a population of one hundred and forty millions—all this makes up, perhaps, the most magical and imposing narrative that modern history has to unfold. The popular mind of the non-Russian world has never quite understood the motive-power behind this colossal expansion. It still persists in attributing it to the peculiar craft, subtlety, wisdom and aggressiveness of Russian diplomacy. But that is a quite erroneous superstition. The real reasons of this wonderful growth are far simpler and more natural. They are to be found partly in the migrating instincts of an agricultural population, and partly in the necessities of self-defence against nomadic tribes. The slow conquest of northern Asia has been an effortless, peaceable, almost automatic movement—just as instinctive as the impulse that drove the American pioneers across the Alleghanies, through the Middle and Far West and onwards to the shores of the Pacific, and that urged the English to plant their colonies by every sea. If one can detect in it any deliberate purpose, the thread of any high political motive, it is the legitimate one of finding an outlet to the sea. Everywhere in sight of the water Russia is nowhere in control of it. The Black and Caspian Seas are to-day inland lakes—the latter being absolutely isolated, and the former only accessible through a dangerous channel that can be opened or closed at the will of Constantinople. Ice makes the Baltic unnavigable for eight months in the year, and the passage through it into the North Sea is at the mercy of any power commanding the straits between Denmark and Sweden. To plant herself by the sea is still as it was in the days of Peter the Great, the goal of Russian ambition. Nowhere, except at Port Arthur, has that goal been satisfactorily reached, and if the present war ends in confirming the Czar's hold on his distant outlet to the Pacific, it will have amply repaid the exertions and sacrifices it demands. It is not only because the orthodox Russian regards Constantinople as the devout Catholic regards Rome that Russia is irresistibly drawn towards the Turkish capital. It is that the possession of Constantinople insures an exit to the Mediterranean. To debouch on the Mediterranean and the Persian Gulf is the key to Russian policy in Asia Minor.

For an Englishman or an American, to whom the sea is as much a highway as a railroad or Piccadilly or Broadway, it is difficult to appreciate the extremities of Russian exasperation at being denied access to it. Americans perhaps may faintly conceive it if they will imagine the mouth of the Mississippi to be, as it once was, a Spanish possession. No rational man will consider it as other than the bounden duty of the Russian government to do whatever it can to break down an obstacle so utterly destructive of the full and free development of the country, or, when once a gap has been made, to defend it with all the might of the empire. Undoubtedly this motive has always been a factor in directing the course of Russian expansion, but not, I think, a controlling or even a very influential factor. In essentials the movement across Asia has always been more of a popular and unconscious than a deliberate and bureaucratic movement. The process, it is true, has been facilitated by the autocratic form of government, but it has been still more largely helped onward by the geographical position of the country. Asia is much more a continuation of Russia than an alien colony, and the *muzhiks* who swarmed over the Ural Mountains before serfdom chained them to the soil, found themselves in a land identical with their own. Towards the north, east, and south their expansion, in short, was a spontaneous movement following the line of least resistance. Towards the west, on the other hand, where Sweden and Poland alternately threatened the future of Czardom, it was the government by means of war and conquest that pushed the Russian frontiers to their present position.

In the direction of the Hindu-Kush, Afghanistan, and Central Asia the imperial advance has been rather in the nature of a series of annexations made in self-defence. Those annexations will only cease on the day that Russia encounters a power strong enough to maintain order within its boundaries and to prevent its subjects from committing depredations on their neighbors. The wild panics into which England is periodically thrown by the approach of Russia to the Indian frontier are due at bottom to ignorance of the reasons and motives of Russian expansion. Russia has neither the desire nor the ability to conquer India. That she is glad to use her influence there to stir up difficulties as part of the diplomatic game is true enough; but what she fundamentally seeks is the security of her frontiers from tribal attacks.

The Russo-Japanese war is the first clear signal, long foreseen but none the less historical, that the period of unresisted expansion is over, and that from now onwards whatever Russia is to win and hold must be fought for. At three vital spots, besides the Far East, difficulties if not disasters are swiftly accumulating. Those spots, of course, are the Balkans and Asia Minor, where Teuton and Slav are being dragged into unescapable collision, and the Persian Gulf and Central Asia, where each year finds Russian and British interests nearer and nearer to a climax. Great Britain, Germany, and Japan, not deliberately and by agreement, but simply in pursuance of strictly national policies, are all working with an identical aim. Each is striving to cut off Russia from the warm waters, the Germans by dominating the Sultan and pegging out German colonies in Asia Minor, the British by their maintenance, never more rigid or determined than to-day, of the *status quo* on the Persian Gulf, the Japanese by their decisive challenge to the Russian control of Manchuria and Port Arthur. Stripped of all accessories and irrelevancies, the policy of each of these powers is to keep Russia a virtually land-locked state. Whether they will succeed or not is a matter that belongs so entirely to the future that it is hardly worth while discussing to-day. The important thing is to note the similarity of interests and ambitions in this vital particular and to realize that, however it may end, the present war is no detached incident, but the prelude to a wholly novel era in the expansion of Russia—an era in which the "glacier-like movement" is to be brought to the test of war.

On the other hand, if the war, externally, marks the end of a transitional period, internally it synchronizes with the beginnings of a climax. It comes just at a time when the manifold forces of unrest and agitation and social and political disturbance appear to be heading towards some decisive issue. The development of those forces will be apparently retarded but really advanced by the war. That is to say, while the conflict rages the revolutionary elements in Russia are more likely than not to remain quiescent, from patriotism, self-interest, or the sheer impossibility of competing with a war; but directly peace is restored, and especially if peace brings with it Russian defeat or a mere half-and-half victory, these pent-up forces will undoubtedly overflow with a fresh volume and violence. Even if the victory beyond all reasonable expectation proves to be conclusively Russian—that is, even if the Japanese are ultimately beaten both by land and sea—the subterranean movements that at this moment imperil the Russian polity will not be checked thereby from bursting forth with redoubled energy. One must remember that the domestic situation in Russia has materially changed within the last twenty years, and that the change is not away from, but in the direction of, revolution. The difference, of course, consists in and is due to, the growth of industrialism. The students and peasants who hitherto have been the chief agents of unrest, have now a new and formidable ally in the artisan. Industrialism has won a footing and is swiftly multiplying its activities. Already it is on record that well over two millions of the population are engaged either in mining or manufactures. M. Witte made it the pivot of his policy to encourage industrial development. He claimed for it that in the long run it will supply the only possible remedy for the agricultural situation. The peasant, always within an arm's length of famine, cannot unaided work out his salvation. The capital needed for the restoration of the land cannot, as things are, be raised on the land. By opening up new employments in the towns M. Witte hoped eventually to shift the burden of taxation on to the shoulders of the manufacturers, and thus supply the state with the means of staying the agricultural decline. In a word, M. Witte's policy was to call on the towns to make good the deficits of the country.

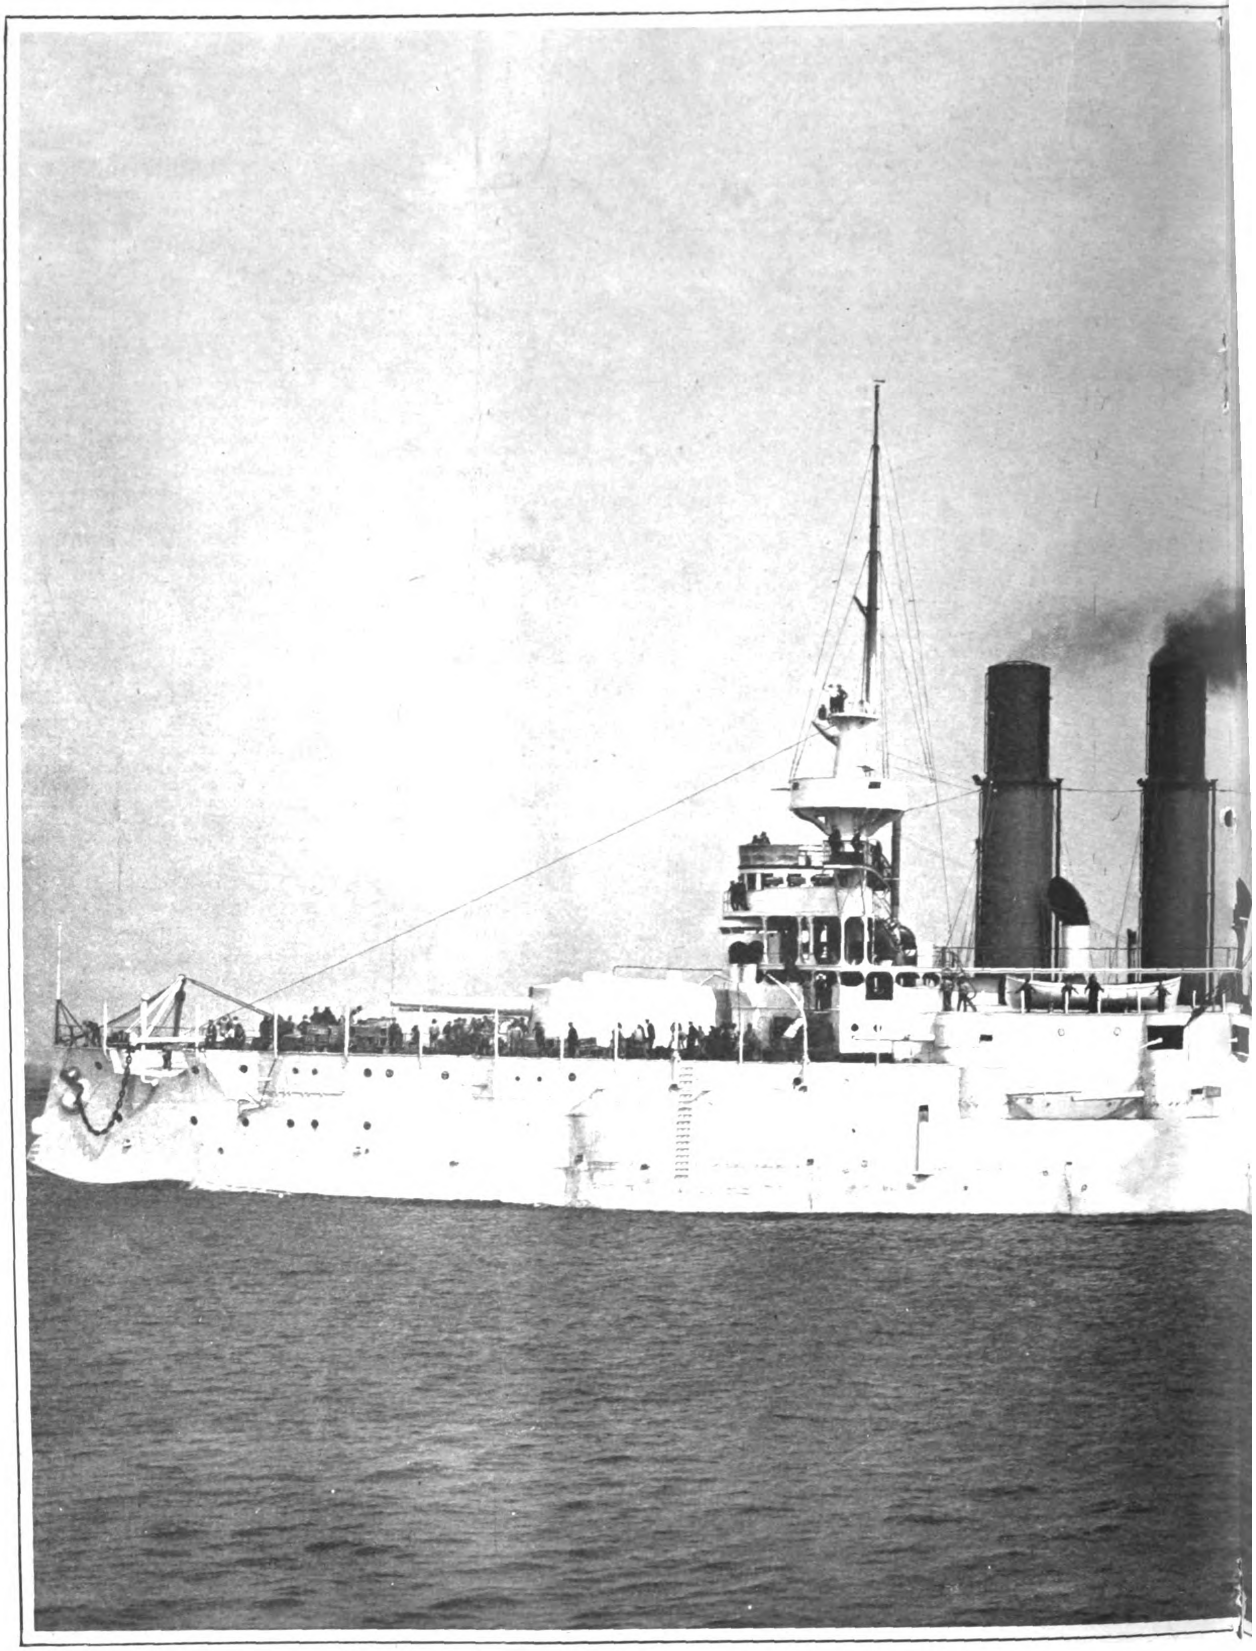
Undoubtedly the experiment had to be tried. At the same time, Russia and the *muzhik* being what they are, it is an experiment fraught with tremendous risks. Hitherto the towns have been merely islets in the rural ocean, and the solidarity of the commune has protected the *muzhik* from the propaganda of revolution. But now there has been introduced into the national structure a new artisan class little likely to accept or be acceptable to the pure gospel of autocracy and orthodoxy. From all descriptions of the *muzhik* there rises the conviction that, once freed from his foundations, he has within him the makings of a thorough-paced revolutionist; and the conviction has not been weakened by his behavior under the stimulus of industrialism. Student riots and peasant riots are an old tale in Russia and have never been more than sporadic, though the student disturbances of 1899-1902 seemed for a while to portend an organized revolt. Petitions from the nobility for representative government are also a familiar phenomenon. What is new is to find the working-man, himself a novelty and an ominous one, clamoring for his political rights and pursuing them by all the weapons of Western agitation. When you get thirty thousand people shouting "Down with autocracy," cheering for liberty, and listening with unrestrained enthusiasm to revolutionary speakers, you may be sure that a movement is on foot which will not be very seriously affected by such a manifesto as the Czar issued a year ago, and which nothing but full and final success can satisfy. To forward industrialism and yet expect to keep all things as they were; to grant concessions under pressure and yet be disappointed when the pressure is increased; to favor education and yet resolve that it shall bear no political fruit; to enlighten the people and yet hope to preserve autocracy; to raise the nation industrially and intellectually to the level of its neighbors and yet to exclude it from political life; to admit liberty here and there and yet to think it can be stayed from permeating the entire nation; to emancipate the serfs and yet be astounded at the rise of a new spirit of individualism and independence; to be at once modern and mediæval, Chinese and American, an autocracy at the top and communistic at the base—this is the grand experiment in contradictory opposites that Russia is now making. That it is beginning to break down, that there are wide and serious breaches in the impossible structure, is patent to Europe and to America if not to St. Petersburg. Even without the war the inevitable could not have been long delayed; now that war has come the inevitable is brought a sudden and mighty step nearer.

Alexeieff, Viceroy of Russia

By Charles Johnston

ADMIRAL E. I. ALEXEIEFF is "a master mind, a master will, altogether a masterful man," in the apt phrase of Senator Beveridge, who met him three years ago at Port Arthur. Admiral Alexeieff has toiled for years at the building of a new region of Russian influence, a region nearly as large as the combined area of France and Germany, and with a fringe of possible future acquisitions many times greater, only to see the whole of his lifework threatened with dissolution. In this lifework he has accomplished miracles almost, facing conditions of great and unexpected difficulty, amid surroundings alternately picturesque with the glamour of the East, and squalid with intrigue and physical wretchedness. Through all these difficulties Admiral Alexeieff has acted with constant resolution, force, rapidity, and constructive power. He has only once made a serious miscalculation and been caught off his guard; yet that one failure menaces with dire consequences all that went before.

Admiral Alexeieff first comes into prominence in the years following the China-Japanese war of ten years ago, when Japan invaded and effectively occupied southern Manchuria, including the Liao-tung peninsula, vividly called in Chinese "The Regent's Sword." Japan demanded from China the whole of Manchuria, as well as Formosa and the adjacent Pescadores Islands, and a heavy cash indemnity. China consented to the cession of southern Manchuria and Formosa, but asked for a remission of a part of the cash. Then Russia came into the story, with Germany on the one arm, and France on the other. Japan was forced off the Asian mainland, but took a large payment from China in lieu of Manchuria, with a Russian guarantee for its liquidation. At that point, with the signing of the Shimonoseki Treaty, the present quarrel in the Far East began. Japan's thwarted hopes turned to steady hatred of Russia, and a desire to be revenged, soon or late. She at once began to take measures for that revenge, and faced the problem with thoroughness and imaginative breadth. Japan arranged to have built in England, as first among naval powers, four of the heaviest and strongest battle-ships the world had yet seen, with two somewhat smaller ones, and six powerful armored cruisers. Russia saw that these preparations were aimed at her, and began to build up a Pacific fleet. Admiral Alexeieff first comes into world history as commander of Russia's fleet in the Far-Eastern waters.



He was made governor of the new Russian province in Manchuria, which was called the province of Quan-tung, and also continued in command of the Russian Pacific fleet. He had his headquarters at Port Arthur, and immediately threw himself heart and soul into the arduous and vexatious work of building up this new region of Russian life. Only in our frontier towns in the West have we anything to compare with the rapidity of Russia's constructive work. New cities, altogether European, grew up at many points, notably at Harbin and Dalny.

On June 29, 1900, at the time of the Boxer uprising, Alexeieff was made "commander-in-chief in time of war of the Russian force detached for service in China." Admiral Alexeieff was already at Port Arthur by that time, supervising in person the disposition of the Russian fleet and army. He held a council of war with Admiral Seymour, Admiral Kempff, and others, and decided that it would be impossible to relieve the beleaguered legations at Peking without a much larger force, though there were already 20,000 soldiers of all nations at Taku and the neighborhood. Here Admiral Alexeieff came into collision with Japan. He was mainly instrumental in blocking a plan proposed by England that the powers should give a mandate to Japan to restore order in China. Alexeieff insisted that Japan might bring as many troops as she wished, but must not be put in a position of privilege as regards the other powers.

Meanwhile, events were happening in Manchuria which were

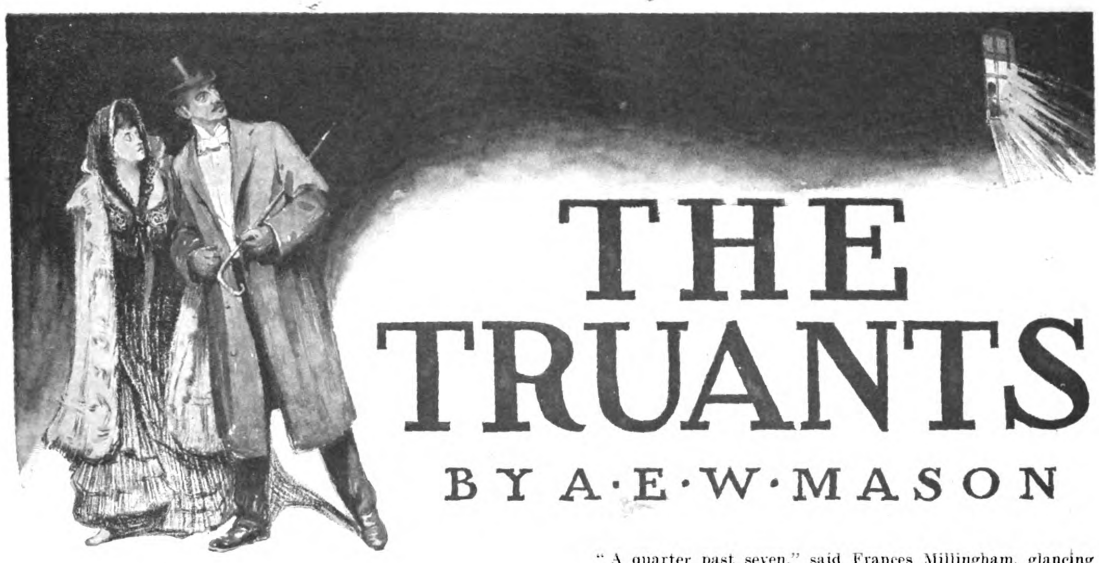
Books and Bookmen

By James MacArthur

WHEN Miss Johnston's first novel, *Prisoners of Hope*, was published, she was only twenty-eight, and in five years she has written four novels. *Sir Mortimer*, which has been appearing serially in HARPER'S MAGAZINE, is now published in book form, with Mr. Yohn's beautiful pictures in color and tint. The book is worthy of Miss Johnston at her best, and she has never done anything so full of charm and dignity and sweetness. Her fancy seems to have grown more radiant with the flowering of her genius in a clime of chivalry and beauty; and the glow and glory of the dream that stirred Raleigh and Sidney, Nevil and Drake to sail out to the setting sun, have fallen upon her imagination of that wondrous world and thrilled the story of Sir Mortimer and his love for sweet Damaris into language that is like melody to a song. It is the language of exquisite romance, reflecting the character of the period; the gentle euphuism of its poets and courtiers, and the strong mettle of its stalwart men on land and sea. As in Sir Philip Sidney and several of his compatriots, these two characteristics are combined in Miss Johnston's hero, so that we find Sir Mortimer Ferne, a gallant cavalier who sings the praise of his lady in verse, and addresses as "Dione" the fair Mistress Damaris Sedley, whose worshipper he is; while his valor, his proved courage, his unstained honor as a gentleman and a soldier are beyond reproach. Miss Johnston knows the value of a dramatic introduction for a hero of romance, and Sir Mortimer is the centre of a scene in the Triple Tun Tavern at the opening of the story, which at once commands attention and arouses interest in his subsequent adventures. About the long table in the Triple Tun's best room there was none so good to look at, so stout of heart and speech, so brave and honorable a knight as Sir Mortimer Ferne. Suddenly upon this fair and irreproachable shield there is thrown a malicious slander by a fellow adventurer who was with Sir Mortimer at Fayal in the Azores two years before this meeting. The slanderer is silenced; no breath of calumny can soil the escutcheon of Sir Mortimer Ferne. But the incident serves to knit two men together in a friendship that was as Jonathan and David's; it urges Sir Mortimer to beseech Damaris for a charm of true love before setting out on the expedition against the Spaniards; it also sounds an ominous note of impending disaster which was to rise up between Sir Mortimer and all that England, love, and honor meant to so true and brave a knight of good Queen Bess. Damaris loves Sir Mortimer with a pure and piteous passion that clings to him through the days of dishonor and evil report, but her lover is moulded on the pattern of Lovelace's lines:

> I could not love thee, dear, so much,
> Loved I not honor more.

Once again, Sir Mortimer leaves England, where his honor lies under an evil cloud, and seeks to retrieve his good name in an adventurous and vengeful voyage to the Spanish Main. The closing scenes are dramatically conceived, and the climax is a masterly stroke of constructive skill and execution. The curtain falls on a picture of beauty that leaves a sense of realization of things desired. "I can see no romance in English history," Stanley Weyman once said. *Sir Mortimer* has been conceived with the divining eyes of one who has seen the romance in English history. Certainly Miss Johnston's new novel is one of the most charming romances of the Elizabethan period, and worthy of the noble company of poets, soldiers, wits, adventurers, and lovers that graced the age and were the sinews of England's early supremacy.



Sir Mortimer is more purely an experiment of the imagination than any of her previous books. Colonial traditions and legendary lore of Indian and pioneer in the early days of American conquest have been the material that has gone to the making of her fiction until now, and one may trace her early influences to inherited tastes and sympathies. She comes of a long line of Virginian ancestry, originally emigrating from Scotland to Virginia in 1727. Her progenitors have always been more or less prominent in the local history of their times, and the stirring of the blood has come down through these turbulent generations to find a literary repository in Miss Johnston's delightful tales. She was born in 1870, and spent most of her childhood and girlhood in Buchanan, Virginia. Her health was delicate, and she had to be carefully nurtured, so that she received her early education at home, which was of a very desultory nature, and gained for the most part from old-fashioned books in an old-fashioned library, where she was allowed to browse at will. She was also fond of out-of-doors, and her love of nature grew with her love of literature. There was scarcely a stream or mountain path or bit of woods for miles around her native town that she did not explore. The Natural Bridge of Virginia was only twelve miles away, and the Peaks of Otter half that distance. In her sixteenth year her family removed to Birmingham, Alabama. Four years were spent in New York, and off and on she has travelled a good deal both in this country and abroad. Recently her home has been in Richmond, but she is now travelling in Europe. It was by no easy road Miss Johnston came into her success as a novelist. For years she had to contend with delicate health and the absorbing cares of domestic responsibility. She was only about twenty when her mother died, and she had to become the head of a large household. Her writing was at first largely recreative, something that could be taken up at odd moments when nothing more pressing demanded her attention. *Sir Mortimer*, as a work of historical romance, will greatly enhance her reputation, and as a story of love and adventure, told as none but Miss Johnston could tell it, it is likely to exceed in popularity any of her previous novels.

Mary Johnston
Author of "Sir Mortimer"

Those who have revelled in *The Adventures of Hajji Baba of Ispahan* should hasten to secure a copy of *Saïd the Fisherman*. Like Morier, the gate that opened the Orient and disclosed its singularly unchanging characteristics and picturesque customs to Mr. Marmaduke Pickthall, was the British diplomatic service. What James Morier did for the Persian people of a century ago Mr. Pickthall has now done for Turkish Palestine prior to the bombardment of Alexandria. When *Hajji Baba* was published in 1824, the ripened product of Morier's Persian experiences and reflections cast in the form of an inimitable tale at once became a favorite with the cultured reading public, and passed speedily through several editions. Only a few years ago a new edition was issued; but although the book is prized as a contemporary portrait of Persian manners and life, and valued for its scenic and dramatic properties and for its memorable portrait of Hajji Baba, it has long ceased to capture the popular imagination, if indeed its popularity ever existed outside the cultured classes. *Saïd the Fisherman* would almost seem to have been written with *Hajji Baba* in mind as a brilliant precedent. Saïd, like Hajji Baba, is an Oriental of the Orientals, typical *not* merely of the life and surroundings, but of the character and instincts of his countrymen. Like Hajji Baba, Mr. Pickthall's hero, too, is all craft and cunning and cupidity, an adventurer, one part good fellow and three parts knave, living by his wits, a victim of roguery and an egregious rogue himself, splendid in Oriental mendacity and daring in the lust of imagination. No narrative was ever more rigorously written from the inside; even the historical facts are not allowed to interfere with the rigid diagnosis of Saïd's rise and progress, decline and fall between 1860 and 1882, and are relegated to an appendix. The author has, I understand, lived in Syria for years like a native, and the absorption of his environment has produced the most extraordinary and startling results. One has only to read the pathetic recital of Saïd's wanderings in London to discern how completely the author has come into possession of the Oriental mind, and divined the heart of the East. Even the imagery that paints for us the sky, the light of dawn, moonlight, sunrise and sunset, hills and valleys, woods and waters, mosques and minarets, Turks and Franks, is Oriental in its color and quality, and has the glow and warmth of the East in its diction. *Saïd the Fisherman* is a picture of unrivalled humor and verisimilitude, and comes near to being, if indeed posterity may not claim it to be, a classic of the Orient that takes rank with Morier's immortal work.

THE TRUANTS

BY A·E·W·MASON

CHAPTER VII

THE LADY ON THE STAIRS

WHITEWEBS, Frances Millingham's house in Leicestershire, was a long white building with many level windows. The square main block of the building rose in the centre two stories high, and on each side a wing of one story projected. Behind the house a broad lawn sloped to the bank of a clear and shallow trout-stream, with an avenue of old elms upon its left and a rose garden upon its right. In front of the house a paddock made a ring of green, and round this ring the carriage-drive circled from a white five-barred gate. Whitewebs stood in a flat grass country. From the upper windows you looked over a wide country of meadows and old trees, so flat that you had on a misty day almost an illusion of a smooth sea and the masts of ships; from the lower you saw just as far as the nearest hedgerow, except in one quarter of the compass. For to the southwest the ground rose very far away, and at the limit of view three tall poplars, set in a tiny garden on the hill's crest, stood clearly out against the sky, like sentinels upon a frontier. These three landmarks were visible for many miles around. Pamela, however, saw nothing of them as she was driven over the three miles from the station to Whitewebs.

It was late on a February evening, and already dark. The snow had fallen heavily during the last week, and as Pamela looked out through the carriage windows she saw that the ground glimmered white on every side; above the ground a mist thickened the night air; and the cold was piercing. When she reached the house she found that Frances Millingham was waiting for her alone in the big inner hall with tea ready, and the first question which she asked of her hostess was,

"Is Millie Stretton here?"

"Yes," replied Frances Millingham. "She has been he e a week."

"I couldn't come before," said Pamela, rather remorsefully. "My father was at home alone. How is Millie? I have not seen her for a long time. Is she enjoying herself?"

Pamela's conscience had been reproaching her all that afternoon. She could plead in her own behalf that upon the arrival of Tony's letter, with its message of failure, she had deferred her visit into the country, and had stayed in London for a week. But she had not returned to London since, and consequently she had not seen her friend. She had heard regularly from her, it is true; she also knew that there was yet no likelihood of the hoped-for change in the life of that isolated household in Berkeley Square. But there had been certain omissions of late in Millicent's letters which began to make Pamela anxious.

"Yes," Frances Millingham replied. "She seems to be happy enough."

Lady Millingham related the names of her guests. There were twelve in all, but the first ten may be omitted, for they are in no way concerned with Pamela's history. The eleventh name, however, was that of a friend.

"John Mudge is here too," said Frances Millingham, and Pamela said, with a smile,

"I like him."

John Mudge was that elderly man whom Alan Warrisden had seen with Pamela at Lady Millingham's dance, the man with no pleasure in his face. "And Mr. Lionel Callon," said Frances. "You know him."

"Do I?" asked Pamela.

"At all events he knows you."

It was no doubt a consequence of Pamela's deliberate plan never to be more than an onlooker, that people who did not arouse her active interest passed in and out of her acquaintanceship, like shadows upon a mirror. It might be that she had met Lionel Callon. She could not remember.

"A quarter past seven," said Frances Millingham, glancing at the clock. "We dine at eight."

Pamela dressed quickly, in the hope that she might gain a few minutes before dinner wherein to talk to Millicent. She came down the stairs with this object a good quarter of an hour before eight, but she was to be disappointed. The stairs descended into the big inner hall of the house, and just below the roof of the hall they took a bend. As Pamela came round this bend the hall was exposed to her eyes, and she saw below her not Millicent at all, but the figure of a man. He was standing by the fireplace, on her left hand as she descended, looking into the fire, indeed, so that his back was towards her. But at the rustle of her frock he swung round quickly and looked up. He now moved a few steps towards the foot of the stairs with a particular eagerness. Pamela at that moment had just come round the bend and was on the small platform from which the final flight of steps began. The staircase was dimly lit, and the panelling of the wall against which it rested dark. Pamela took a step or two downwards, and the light of the hall struck upon her face. The man came instantly to a dead stop, and a passing disappointment was visible upon his upturned face. It was evident that he was expecting some one else. Pamela, on her side, was disappointed too, for she had hoped to find Millicent. She went down the stairs and stopped on the third step from the bottom.

"How do you do, Miss Mardale?" said the man. "You have arrived at last."

The man was Lionel Callon. Pamela recognized him, now that they stood face to face; she *had* met him, but she had retained no impression of him in her memory. For the future, however, she would retain a very distinct impression. For her instincts told her at once and clearly that she thoroughly disliked the man. He was thirty-three in years, and looked a trifle younger, although his hair was turning gray. He was clean-shaven, handsome beyond most men, and while his features were of a classical regularity and of an almost feminine delicacy, they were still not without character. There was determination in his face, and his eyes were naturally watchful. It was his manner which prompted Pamela's instinct of dislike. Assurance gave to it a hint of arrogance, familiarity made it distasteful. He might have been her host, from the warmth of his welcome. Pamela put on her sedatest manner.

"I am quite well," she said, with just sufficient surprise to suggest the question: "What in the world has my health to do with you?" She came down the three steps, and added, "We are the first, I suppose?"

"There may be others in the drawing-room," said Callon, with a glance towards the open door. But Pamela did not take the hint. For one thing, no sound of any voice was audible in that room; for another, Mr. Callon was plainly anxious to be rid of her. Even as he was speaking, his glance strayed past her up the staircase. Pamela disliked him; she was, besides, by him disappointed of that private talk with Millicent which she desired. She was in a mood for mischief. She changed her manner at once, and crossing over to the fireplace engaged Mr. Callon in conversation with the utmost cordiality, and as she talked she began to be amused. Callon became positively uneasy; he could not keep still; he answered her at random. For instance, she put to him a question about the number of guests in the house. He did not answer at all for a moment or two, and when he did speak it was to say,

"Will the frost hold, do you think?"

"There's no sign of a thaw to-night," replied Pamela, and the sounds for which both were listening became audible: the shutting of a door on the landing above, and then the rustle of a frock upon the stairs. Mr. Callon was evidently at his wits' ends what to do, and Pamela, taking her elbow from the mantelpiece, said with great sympathy,

"One feels a little in the way—"

"Oh, not at all, Miss Mardale," Callon answered hurriedly, with a flustered air.

Pamela looked at her companion with the blankest stare of

surprise. "I was going to say, when you interrupted me," she went on, "that one feels a little in the way when one has brought a couple of horses, as I have, and the frost holds."

Callon grew red. He had fallen into a trap; his very hurry to interrupt what appeared to be almost an apology betrayed that the lady upon the stairs and Mr. Lionel Callon had arranged to come down early. He had protested overmuch. However, he looked Pamela steadily in the face, and said,

"I beg your pardon, Miss Mardale."

He spoke loudly, rather too loudly, for the ears of any one so near to him as Pamela. The sentence too was uttered with a note of warning. There was even a suggestion of command. The command was obeyed by the lady on the stairs, for all at once the frock ceased to rustle and there was silence. Lionel Callon kept his eyes fixed upon Pamela's face, but she did not look towards the stairs, and in a little while again the sound was heard. But it diminished. The lady upon the stairs was ascending, and a few minutes afterwards a door closed overhead. She had beaten a retreat.

Callon could not quite keep the relief which he felt out of his eyes or the smile from his lips. Pamela noticed the change with amusement. She was not in the mind to spare him uneasiness, and she said, looking at the wall above the mantelpiece:

"This is an old mirror, don't you think? From what period would you date it?"

Callon's thoughts had been so intent upon the stairs that he had paid no heed to the ornaments above the mantelpiece; now, however, he took note of them with a face grown at once anxious. The mirror was of an oval shape, and framed in gold. Under the pretence of admiring it, he moved and stood behind Pamela, looking into the mirror over her shoulder, seeing what she could see, and wondering how much she had seen. He was to some extent relieved. The stairs were ill-lighted, the panelling of the wall dark mahogany; moreover, the stairs bent round into the hall just below the level of the roof, and at the bend the lady on the stairs had stopped. Pamela could not have seen her face. Pamela, indeed, had seen nothing more than a black satin slipper arrested in the act of taking a step, and a black gown with some touches of red at the waist. She had, however, noticed the attitude of the wearer of the dress when the warning voice had brought her to a stop. The lady had stooped down, and had cautiously peered into the hall. In this attitude she had been able to see and yet had avoided being seen.

Drawn by William Hurd Lawrence

He stood looking into the mirror over her shoulder

Pamela, however, did not relieve Mr. Callon of his suspense. She walked into the drawing-room and waited with an amused curiosity for the appearance of the black dress. It was long in coming, however. Pamela had no doubt that it would come last and in a hurry, as though its wearer had been late in dressing. But Pamela was wrong. Millicent Stretton came into the room dressed in a frock of white lace, and at once dinner was announced. Pamela turned to Frances Millingham with a startled face,

"Are we all here?"

Frances Millingham looked round.

"Yes," and Lord Millingham at that moment offered his arm to Pamela. As she took it, she looked at Millicent, who was just rising from her chair. Millicent was wearing with her white dress black shoes and stockings. She might be wearing them deliberately of course; on the other hand, she might be wearing them because she had not had time to change them. It was Millicent, certainly, who had come down last. "I beg your pardon, Miss Mardale," Callon had said, and it was upon the "Miss Mardale" that his voice had risen. The emphasis of his warning had been laid upon the name.

As she placed her hand on her host's arm, Pamela said,

"It was very kind of Frances to ask Millie Stretton here."

"Oh no," Lord Millingham replied. "You see, Frances knew her. We all knew, besides, that she is a great friend of yours."

"Yes," said Pamela. "I suppose everybody here knows that?"

"Mrs. Stretton has talked of it," he answered, with a smile.

The "Miss Mardale" might be a warning, then, to Millicent that her friend had arrived, was actually then in the hall. There was certainly no one but Millicent in that house who could have been conscious of any need to shrink back at the warning, who would have changed her dress to prevent a recognition. And Millicent herself need not have feared the warning, had there not been something to conceal, something to conceal especially from Pamela, who had said, "I have promised your husband I would be your friend." There was the heart of Pamela's trouble.

She gazed down the two lines of people at the dinner-table, hoping against hope that she had overlooked some one. There was no one wearing a black gown. All Pamela's amusement in outwitting Callon had long since vanished. If Tony had only taken her advice without question, she thought. "Millie's husband should never leave her. If he goes away he should take her with him." The words rang in her mind all through dinner like the refrain of a song of which one cannot get rid. And at the back of her thoughts there steadily grew and grew a great regret that she had ever promised Tony to befriend his wife.

That Millicent was the lady on the stairs she no longer dared to doubt. Had she doubted, her suspicions would have been confirmed immediately dinner was over. In the drawing-room Millicent avoided any chance of a private conversation, and since they had not met for so long such avoidance was unnatural. Pamela, however, made no effort to separate her friend from the other women. She had a plan in her mind, and in pursuit of it she occupied a sofa, upon which there was just room for two. She sat in the middle of the sofa, so that no one else could sit on it, and just waited until the men came in. Some of them crossed at once to Pamela, but she did not budge an inch. They were compelled to stand. Finally, Mr. Mudge approached her, and at once she moved into a corner and bade him take the other. Mr. Mudge accepted the position with alacrity. The others began to move away. A couple of card-tables were made up. Pamela and John Mudge were left alone.

"You know every one here?" she asked.

"No, very few."

"Mr. Callon, at all events."

Mr. Mudge glanced shrewdly at his questioner.

"Yes, I know him, slightly," he answered.

"Tell me what you know."

Mr. Mudge sat for a moment or two with his hands upon his knees and his eyes staring in front of him. Pamela knew his history, and esteemed his judgment. He had built up a great contracting business from the poorest beginnings, and he remained without bombast or arrogance. He was to be met nowadays in

many houses, and while he had acquired manners, he had lost nothing of his simplicity. The journey from the Seven Dials to Belgrave Square is a test of furnace heat, and John Mudge had betrayed no flaws. There was a certain forlornness too in his manner which appealed particularly to Pamela. She guessed that the apples, for which through a lifetime he had grasped, had crumbled into ashes between his fingers. Sympathy taught her that the man was lonely. He wandered through the world amidst a throng of acquaintances, but how many friends had he, she wondered. She did not interrupt his reflections, and he turned to her at last with an air of decision.

"I am on strange ground here," he said, "as you know. I am the outsider, and when I am on strange ground I go warily. If I am asked what I think of this man or that, I make it a rule to praise."

"Yes, but not to me," said Pamela, with a smile. "I want to know the truth to-night."

Mudge looked at her deliberately, and no less deliberately he spoke,

"And I think you ought to know the truth to-night."

Mudge, then, like the rest, knew that she was Millicent's friend. Was it for that reason that she ought to know the truth?

"I know Callon a little," he went on, "but I know a good deal about him. Like most of his acquaintance I dislike him heartily. Women, on the other hand, like him, Miss Mardale—like him too well. Women make extraordinary mistakes over men, just as men do over women. They can be very blind—like your friend."

Mudge paused for an appreciable time; then went on steadily.

"Like your friend, Lady Millingham, who invites him here."

Pamela was grateful for the delicacy with which the warning was conveyed, but she did not misunderstand it. She had been told indirectly, but no less definitely on that account, that Millie was entangled.

"Callon has good looks, of course," continued Mudge, and Pamela uttered a little exclamation of contempt. Mudge smiled, but rather sadly.

"Oh, it's something. All people have not your haughty indifference to good looks. He is tall, he has a face which is a face and not a pudding. It's a good deal, Miss Mardale."

Pamela looked in surprise at the stout, heavily built, bald man who spoke. That he should ever have given a thought to how he looked was a new idea to her. It struck her as pathetic.

"But he is not merely good-looking. He is clever, besides persistent, and so far as I can judge, untroubled by a single scruple in the management of his life. Altogether, Miss Mardale, a dangerous man. How does he live?" he asked, suddenly.

"I neither know nor care," said Pamela.

"Ah, but you should care," replied Mudge. "The answer is instructive. He has a small income, two hundred a year, perhaps—nothing compared, with what he spends, and he never does an hour's work, as we understand work. Yet he pays his card debts at his club, and they are sometimes heavy, and he wants for nothing. How is it done? He has no prospect of an inheritance, so post-obits are not the explanation."

Mr. Mudge leaned back in his chair, and waited. Pamela turned the question over in her mind.

"I can't guess how it's done," she said.

"And I can do no more than hint the answer," he replied. "He rides one woman's horses; he drives another woman's phaeton; he is always on hand to take a third to a theatre, or to make up a luncheon party with a fourth. Shall we say he borrows money from a fifth? Shall we be wrong in saying it?" and suddenly Mr. Mudge exclaimed, with a heat and scorn which Pamela had never heard from him before: "A very contemptible existence, anyway, Miss Mardale. But the man's not to be despised, mind! No, that's the worst of it. Some day, perhaps, a strong man will rise up and set his foot on him. Till that time he is to be feared," and when Pamela by a gesture rejected the word, Mudge repeated it. "Yes, feared. He makes his plans, Miss Mardale. Take a purely imaginary case," and somehow, although he laid no ironic stress on the word imaginary, and accompanied it with no look, but sat gazing straight in front of him, Pamela was aware that it was a real case he was going to cite. "Imagine a young and pretty woman coming to a house where most of the guests were strangers to her; imagine her to be of a friendly, unsuspecting temperament, rather lonely, perhaps, and either unmarried or separated for a time from her husband. Add that she will one day be very rich, or that her husband will be. Such a woman might be his prey, unless—"

Pamela looked up inquiringly.

"Unless she had good friends to help her."

Pamela's face, distressed before, grew yet more troubled now. The burden of her promise was being forced upon her back. It seemed she was not for one moment to be allowed to forget it.

"I'll tell you my philosophy, Miss Mardale," Mudge continued, "and I have inferred it from what I have seen. I do not believe that any man really comes to good, unless he has started in life with the ambition to make a career for himself, with no help other than his hands and his brains afford. Later on he will learn that women can be most helpful; later on as he gets towards middle life, as the years shorten and shorten, he will see that he must use whatever extraneous assistance comes his way. But he will begin with a fearless ambition to suffice with his own hands and head." Mr. Mudge dropped from the high level of his earnestness. He looked towards Lionel Callon, who was seated at a card-table, and the contempt again crept into his voice. "Now that man began life, meaning to use all people he met, and especially women. Women were to be his implements." Mr. Mudge smiled suddenly. "He's listening," he said.

"But he is too far away to hear," replied Pamela.

"No doubt, but he knows we are speaking of him, Look, his attitude shows it. This, you see, is his battle-ground, and he knows the arts of his particular warfare. A drawing-room! Mr. Lionel Callon fights among the teacups. Cajoling first and God knows what means afterwards. But he wins, Miss Mardale, don't close your eyes to that! Look, I told you he was listening. The rubber's over, and he's coming towards us. Oh, he's alert upon his battle-ground! He knows what men think of him. He's afraid lest I should tell what men think to you. But he comes too late."

Callon crossed to the sofa and stood talking there until Frances Millingham rose. Pamela turned to Mr. Mudge as she got up.

"I thank you very much," she said, gratefully.

Mr. Mudge smiled.

"No need for thanks," said he. "I am very glad you came to-night. For I go away to-morrow."

Pamela went to her room and sat down before the fire. What was to be done? she wondered. She could not get Lionel Callon sent away from the house. It would be no use even if she could, since Millie had an address in town. She could not say a word openly.

She raised her head, and spoke to her maid,

"Which is Mrs. Stretton's room?" and when she had the answer she rose from her chair and stood, a figure of indecision. She did not plead that John Mudge had exaggerated the danger. For she had herself foreseen it long ago, before Millie's marriage, even before Millie's engagement. It was just because she had foreseen it that she had used the words which had so rankled in Tony's memory. Bitterly she regretted that she had ever used them, greatly she wished that she could doubt their wisdom. But she could not. Let Millie's husband leave her, she would grieve with all the strength of her nature; let him come back soon, she would welcome him with a joy as great. Yes, but he must come back soon. Otherwise she would grow used to his absence; she might find his return an embarrassment—for it would be the return of a stranger, with the prerogative of a husband; she might even have given to another the place he once held in her thoughts. And the other might be a Lionel Callon. For this was Millicent's character. She yielded too easily to affection, and she did not readily distinguish between affection and the show of it. She paddled in the shallows of passion, and flattered herself that she was swimming in the depths. Grief she was capable of—yes, but a torrent of tears obliterated it. Joy she knew, but it was a thrill with her, lasting an hour.

Pamela walked along the passage, and knocked at Millicent's door, saying who she was. Millicent opened the door, and received her friend with some constraint.

"Can I come in?" said Pamela.

"Of course," said Millie.

They sat opposite to one another on each side of the fire.

"I wanted to see you before I went to bed," said Pamela. "You have not told me lately in your letters how Tony is getting on."

Millie raised her hand to shield her face from the blaze of the fire. She happened to shade it also from the eyes of Pamela. And she made no reply.

"Is he still in New York?" Pamela asked, and then Millie replied.

"I do not know," she answered, slowly. She let her hand fall, and looked straight and defiantly at her friend.

"I have not heard from him for a long while," she added, and as she spoke there crept into her face a look of disdain.

To be Continued.

The War

By Clinton Scollard

ERELONG in far Korean fields the spring
Its variegated fairness will renew;
Blue blossoms will reply to skies as blue;
Their olden litany the birds will sing.
There will be blithe brook-laughter, and the ring
Of lover's voices when the dusk and dew
Fall, and the stars their ancient march pursue
Through night's vast spaces with majestic swing.
Aye, but before the vernal tide shall pass
The flowers shall know a sad and sanguine dye;
All song be drowned by a portentous roar!
Laughter and love seem but a dream, alas!
And every star down-looking from the sky
Behold a scene to brood on and deplore.

"Candida" at the Vaudeville Theatre

Mr. George Bernard Shaw's comedy, "Candida," is playing at the Vaudeville Theatre, presented by Mr. Arnold Daly and an excellent company. Mr. Daly plays the part of "Marchbanks," a young poet, who is in love with "Candida," the attractive wife of the "Rev. James Morell." "Marchbanks," who is a friend of the household, informs the "Rev. Mr. Morell" that he is unworthy of his wife, and they discuss the point together. The minister becomes convinced that his wife is not indifferent to "Marchbanks's" attractions, and finally demands that she choose between them. "Candida" replies that she will choose the weaker, and names her husband; for, whereas the poet can do without happiness, the minister cannot

"The Man of Destiny"

Mr. George Bernard Shaw's one-act comedy, "The Man of Destiny," is being played as a pendant to "Candida" at the Vaudeville Theatre, Miss Dorothy Donnelly and Mr. Daly having the two principal parts. The action takes place in 1796 at an inn in northern Italy. "Napoleon" ("the Man of Destiny"), who is stopping there, learns that some despatches intended for him have been stolen. A lady, also stopping at the inn, informs "Napoleon" that one of the letters contains news of his wife's infidelity. "Napoleon" recovers it from the lady, who has stolen it in disguise. She convinces him that to acknowledge its receipt would involve a scandal that would endanger his career, and they finally conclude to burn it

MISS HENRIETTA CROSMAN AS "SWEET KITTY BELLAIRS"

Miss Crosman plays the part of "Sweet Kitty Bellairs" in the play of that name, adapted from Agnes and Egerton Castle's novel, "The Bath Comedy." The play is having a prosperous run at the Belasco Theatre, and it is announced that Mr. Belasco will continue its production, with Miss Crosman in the title rôle, for still another season. A description of the action of the play, and of the part taken by Miss Crosman, was given in the February 13 issue of the "Weekly"

Correspondence

THE NEGRO AND THE FOURTEENTH AMENDMENT

ATLANTA, GEORGIA, *February 20, 1904.*

To the Editor of Harper's Weekly:

SIR,—HARPER'S WEEKLY tentatively suggested last summer the theory that the so-called "New Negro Crime" grows out of the enactment and existence of the Fifteenth Amendment. I expressed the opinion in the columns of that paper that the writer had almost found the truth, but that in missing it at all he had missed it entirely. A correspondent writing from Bolivia, South America, inquires as to my meaning in this.

The evidence upon which HARPER'S WEEKLY bases is "working hypothesis" is in the alleged fact that *since* the disfranchisement of the negro in Mississippi the crime in question has ceased in that State. If the premise were true it would furnish some slight basis for the hypothesis, though there would still remain two natural inquiries:

First—Is there no other cause in Mississippi equally probable as an explanation?

Second—Why does not the *same* cause produce the same effect in other States?

Without any statistical data at hand as to conditions in Mississippi, my confidence in my own judgment of the negro and his crime impels me to disbelieve the premise, and to believe on the contrary, not only that the crime in question has not ceased in Mississippi, but that the conduct of the negroes in that State is, and will continue to be, in all respects the *same* as in the other Southern States.

The Fifteenth Amendment has been in the South a diminishing factor in the political problem *for* twenty-five years, and in Georgia has almost reached the vanishing-point. I think the negro vote in this State is valued by only three elements, and is potential for three purposes only:

First—The Republican machine relies upon the negro as a support in Republican caucuses to give it representation in the national Republican councils.

Second—The Liquor Dealers' Association regards it as a valuable potentiality against the ever-threatening purpose of the Prohibition Democrats to constantly curtail its political power and cut off its right to license.

Third—The Democratic machine holds the possible negro vote as a constant menace over the heads of the Democratic masses to prevent revolt against machine methods.

Three times in Georgia the machine has permitted the negroes to vote in order to whip the party back into obedience. It is a common observation of thinking people here that the negro vote is the safest and surest element of Democratic party strength in State elections.

Aside from these cases the negro is not taken into consideration in Georgia politics. The class of negroes who commit the crime in question not only do not vote at all, but they do not know that they can vote, and most of them would probably not know what you were talking about if you spoke to them of an election.

The Fifteenth Amendment deals with a single function of citizenship. Even if the legislative and judicial departments of government desired to enforce it, the cumbersome procedure necessary would break down of its own weight. If HARPER'S WEEKLY will study the Fourteenth Amendment, however, I think it will presently light upon the truth. That act was far less brutal in its methods than the Fifteenth Amendment, but for that very reason was more far-reaching and dangerous. Only that part of it is important here which undertakes to compel in all State statutes absolute equality of application to the white man and the negro. In scope it effects almost every relation of life. In practice it is self-executing, and nullifies every State law which contravenes it. In theory it proceeds upon the idea that the two races are governable by the same laws and capable of adjustment to the same institutions. To this theory all State legislation is by the Fourteenth Amendment required to conform.

The theory is manifestly untrue. Yet, upon it, as a justification, a large part of local autonomy is withdrawn from the people among whom the negro lives, and they are compelled, with an imperious insistence that does not even permit remonstrance, to adjust their institutions to bald contradictions and shape laws that shall consist with the impossible.

Now the negro is a low type of mankind, proven by his entire history to be incapable of growing in industry, intelligence, or virtue by any inherent capacity of his own. So far as I am advised no group of this race ever rose above pure animalism except those who were subjected to the training and restraints of that system of feudalism commonly called "slavery" in America. These were controlled rigidly but kindly, and developed considerable industrial capacity, some slight morality, a crude but correct religion, moderate intelligence, remarkable docility, and a higher degree of personal fidelity to their masters than history records in any other case. The significant phenomenon in regard to the acquirement of these virtues lies in the fact that they were in their origin entirely extrinsic to the negroes themselves. Their fidelity to their masters, marvellously demonstrated during the civil war, was of the same general type that is manifested in domestic animals, higher, of course, in degree, but similar in character; similar also to the affection of children for their parents and teachers. In both the latter cases I believe it is commonly observed that the more rigid and exact the control, the higher is the measure of affection and cheerfulness in obedience.

To be freed from this tutelage was of itself in the case of such irresponsible and unevolved natures inevitably bound to cause retrogression in development. When this negative factor was aided by the positive act of giving him an enforced equality before the law and the tying of the hands of the natural governors, his inability to control his own indolence, impulses, and lusts, produced, and is still producing, a progressive viciousness. In view of his history I do not see how anything else could possibly have been expected. Northern people, who see comparatively few negroes, find it impossible to believe that the negro is lapsing into barbarism, and point with confidence to many individual cases which seem to disprove it. As a matter of fact, however, the apparent exceptions are in almost every case more nearly white than black. There are quite a number of men of mixed blood who show high qualities of citizenship. Those pure negroes, or those in whom the negro predominates, and who have shown any marked capacity or advancement, were generally reared as slaves. There may be some younger persons of pure negro blood who, as the result of exceptional assistance from external sources, may appear to show capacity for advancement. I do not know of any such, and should be somewhat sceptical as to their existence. The negro is highly imitative, and persons whose knowledge of them is limited may easily mistake mere adaptation for assimilation.

The negro being the kind of person I have indicated, is consequently prone to crimes of violence, robbery, and lust. He realizes but slightly, if at all, the moral principle involved in such things, and tends toward crimes of these kinds exactly as lower animals do. Finding himself free to follow his own inclinations, and lacking capacity for self-control, except as it comes to him from extrinsic training or compulsion, he rarely ever premediates crime, and rarely ever fails to commit those of the classes named when opportunity and inclination happen to coincide. If he is hungry he steals; if he is angry he fights; if he is in a lustful mood and happens to see an unprotected female, God help her.

As I have said above, the Southern people, who are confronted with the imperative necessity for governing and restraining the negro, are, by an outside power, denied, in large measure, the right to frame their own laws and institutions, and required to govern the negro under the same laws as the white man. This is to require bricks without straw. It would be no more absurd to suppose that the laws of England to-day would have been adjusted to the times of Alfred, or that they are adaptable to the Congo Free State. It was inevitable that the attempt should fail. The curious inquiry is how anybody could expect anything else. Either the laws would have to be stern enough for the condition of the less-evolved race, in which case the higher race would be suffocated and its hard-earned liberties destroyed, or else they would have to be adjusted to the higher race, in which case they are wholly inadequate for the discipline of the other.

The requirement existing, the Southern States have endeavored, as far as possible, to conform in their laws. Individuals of the white race, however, as such, in large measure, mitigate the evils which would otherwise result, by personal control and mastery, constantly and jealously watching every threat of outbreak, and endeavoring to prevent the negro from ever taking the bit in his teeth, knowing full well, by the teachings of San Domingo and Hayti, and all history, that if he ever gets his head, only the most disastrous consequences can result. Sometimes, in spite of all precaution, the natural result of the incongruous and absurd system, develops in some peculiarly heinous outbreak of savagery. In such cases the same sort of retaliation follows that used to occur on our Indian frontiers. That is to say, extra judicial punishment is inflicted, of a sort measurably similar to the provoking crime.

My correspondent manifests so earnest a purpose to get at the truth that I believe the foregoing reflections cannot fail in time to direct his research into the proper channel. I am aware that to state frankly the bald truth of the case, will in many quarters be regarded as a species of brutality. Nevertheless, truth justifies itself, let contemporary men say what they will. You have many a time seen a watch-dog of some fierce breed that was gentle and amiable toward his master and his family and faithful to the last extremity. Why? Because from birth he was so taught and trained, and, above all, because at all times he was controlled and never permitted to show his teeth without punishment. Now suppose that, from some outside source, restraint came upon the master, and he were compelled to govern the dog by the same rules he used with his children, and never permitted to check an evil tendency. Perhaps no irreparable lapse of morals would entirely overcome the training of a lifetime or destroy its influence in the individual, but how about its young? Would they grow up docile and friendly and safe custodians for the master's children? To ask the question is to answer it.

Academic philanthropists insist that the negro is entitled to absolute equality before the law, and the Fourteenth Amendment nullifies every law of a State that discriminates. This ignores the palpable and unbroken teachings of all history. Nothing possibly can come of such monstrous folly but suffering and sorrow. In time the utter *grotesquerie* of such laws must wipe them away in a whirlwind of popular scorn and amazement. Then, when the Southern people are left to govern the negro according to the teachings of reason, order will be completely restored, friendly relations will be reestablished, peace and industry will prevail, and the negro problem will disappear as well as the so-called "New Negro Crime," together with most of the other negro crimes. Until then the impossibility of *legally* governing the negroes under the terms of the Fourteenth Amendment will continue to produce increasing barbarism among the negroes and the misfortune of constantly recurring and extra-legal methods of control and restraint.

I am, sir, HOOPER ALEXANDER.

Progress of the War

Up to the time when this issue of the WEEKLY goes to press, the struggle in the Far East has had the following definite results: On the Russian side, nine war-ships have been put out of action by the Japanese—the *Czarevitch*, *Poltava*, *Pallada*, *Norik*, *Askold*, and *Diana*—all of which were disabled at Port Arthur in the first twenty-four hours of the war, and the *Variag* and *Koreitz*, disabled at Chemulpo. The *Retvisan* was beached in the Port Arthur engagement of February 9, and was subsequently used as a stationary battery; she received further damage in the engagement of February 29. Five Russian commercial steamers were captured by the Japanese during the first week of the war, and the cruiser *Boyarin* and the transport *Yenesei* were sunk by accidental contact with a mine. It is claimed by the Japanese that one of the Russian destroyers was sunk in the course of the unsuccessful attempt which was made on February 24 to bottle up the Port Arthur squadron.

By a treaty which has been consummated between Japan and Korea, the latter's independence and integrity are guaranteed, and Japan receives the right to operate her forces in Korea. As a result of this treaty, Japan's position in Korea is justified, and she escapes the charge of violating international law by carrying on war in neutral territory. She also receives the aid of the Korean government, which is said to have ordered its troops, numbering about 17,000 men, to join the Japanese forces in the field.

Up to the time of writing, there have been no land engagements of importance between the two armies. Japanese troops are occupying Chemulpo, Seoul, and the country between Ping-Yang and the Yalu, and are said to have landed at Possiet Bay, twenty-five miles west of Vladivostok. The main Russian forces have retired from Port Arthur to Liao-Yang, further up the line of the railway. At the same time, a portion of the army has crossed the Yalu and is facing the Japanese troops at Wiju, Korea. The Russian headquarters have been established at Harbin.

March 2.—A report from Tokyo, dated March 1, reports the defeat of a body of Russian cavalry by the Japanese near Anju, Korea.

March 4.—Ten Japanese transports are said to have been sighted approaching the Liao-tung Gulf, under escort.

March 8.—News was confirmed to-day of a bombardment of Vladivostok by the Japanese on the afternoon of Sunday, March 6. A fleet of Japanese war-ships, consisting of five battle-ships and two cruisers, approached Vladivostok from the direction of Askold Island, and bombarded the town for almost an hour. No damage to the town or fortifications resulted, but several persons are reported to have been killed. Viceroy Alexeieff's report to the Czar, containing an account of the attack and bombardment, is as follows. It was sent from Mukden, under date of March 7:

"Supplementing my telegram of March 6, I most humbly report that at twenty-five minutes past one P.M. five out of seven of the enemy's ships opened fire on Forts Suvaroff and Linevitch, on the town, on the roadstead, and along the valley of the river Obyassneniye.

"The firing lasted until a quarter past two P.M., at which hour the Japanese squadron began to steam to the southward, disappearing out of sight at half-past five P.M. There were no losses on the batteries or the fortifications; in the town one seaman was wounded, and one woman was killed.

"According to information just received, the enemy's squadron again appeared in sight of the fortress at eight o'clock this morning."

A later message from the Viceroy says:

"The commandant at Vladivostok reports that yesterday's bombardment resulted in no serious damage to the port. The fortress did not return the enemy's fire.

"To-day, at midday, the enemy again entered Ussuri Bay and approached the point from which they bombarded the harbor on March 6. They left again, making for the open sea."

It is reported that a body of Korean soldiers, enraged at the brutality and excesses of the Russians stationed near Anju, attacked the troops on February 26, killing thirty of them, which is said to have resulted in forcing the Russians beyond the Yalu River.

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

CEREAL FOODS

without cream are not appetizing, but good raw cream is not always easy to get. BORDEN'S PEERLESS BRAND EVAPORATED CREAM is superior to raw cream, with a delicious flavor and richness. Use it for general cooking purposes. Borden's Condensed Milk Co., proprietors.—[*Adv.*]

RESIDENCE Telephone Service pays for itself in car-fare saved. It saves time, too. Low rates. Efficient service. New York Telephone Company, 15 Dey St., 111 West 38th St.—[*Adv.*]

BITTERS that benefit mind and body: Abbott's Angostura build up wasted tissue, brighten up the mental, and make new men and women.—[*Adv.*]

AN infant forty years ago. To-day a mighty giant. COOK'S IMPERIAL EXTRA DRY CHAMPAGNE. America's favorite.—[*Adv.*]

USE BROWN'S Camphorated Saponaceous DENTIFRICE for the TEETH. 25 cents a jar.—[*Adv.*]

CHILDREN like PISO'S CURE. It is pleasant to take and cures their coughs. At druggists. 25c.—[*Adv.*]

ABBOTT'S ANGOSTURA BITTERS

C. W. ABBOTT & Co., Manufacturers. Temporary location No. 224 South Charles St., Baltimore, Md., U. S. A., February, 1904.

To Customers and Friends:—Our warehouse and laboratory at No. 17 South Charles St. was destroyed by the great fire of Sunday, February 7th, which will necessitate our asking some indulgence of our customers. The limited stock saved, and which can be procured, we propose to distribute that all may be served. This temporary plant will be in thorough working order within a month. It is our intention to erect a new and more commodious laboratory on the old site as soon as debris can be cleared away and new survey made.

While our mercantile community has received a severe blow, energetic methods already adopted give promise that a larger, better-equipped, more prosperous city will arise out of the ashes. The beautiful side of this visitation is the magnanimous offers of help from so many sources.

Let us have your orders; we may, and probably will, only ship part of it at once. Quality must not be sacrificed, which is the main reason for asking this indulgence of small shipments for a while.

Any report that may tend to divert your business from us we hope you will contradict.

Thanking you for past favors, we remain, Yours truly, C. W. ABBOTT & Co.—[*Adv.*]

ADVERTISEMENTS.

FLY-FISHING

By ROBERT W. CHAMBERS

Drawn by Sydney Adamson

SUCH a lot of fudge and stuff has been written about fly-fishing that a voice in the wilderness can have little effect. Fly-fishing is a sport that requires wisdom, experience, and skill — sometimes. Sometimes ignorance achieves equal results with the artificial fly. Fly-fishing as an art is charming; as a science it is an unmitigated nuisance to intelligent people. Fly-fishing is not the *only* fishing. There are many minds so constructed that they contain but one idea. Fly-fishermen, of course, do not monopolize this kind of mind, yet among fly-fishermen intolerance is generally rampant.

As a cold matter of fact, there is not only nothing disgraceful in bait-fishing, but, on the contrary, it is, under certain circumstances, as delightful a sport as fly-fishing. Many a fly-fisherman can cast an artificial fly, but few are able to cast a live fly with the delicacy and accuracy necessary. And that is one kind of bait-fishing. I have no patience with the twaddle of the elect who roll pious eyes heavenward, consigning the bait-fisherman to perdition, and thanking God that they are not as their neighbors. Nor have I the slightest respect for the word of those anglers who proclaim that where a trout takes a bait he could be forced to take a fly under the auspices of one of the elect. It is not true.

Here is an axiom: Any angler who cherishes preconceived notions regarding methods of angling does himself small credit. Anything is likely to happen in angling; no two streams can be fished in the same manner, no two trout behave in the same way. The beauty of angling lies in the fact that it is a lesson which requires constant study, and yet is never learned.

I remember once meeting, in the depths of the forests of northern Europe, an Englishman. He was a big, bluff, healthy, kindly specimen; he was stranded all alone upon the platform of a little narrow-gauge forest railway. He had his rod in his hand, and a wild expression on his broad wholesome visage. My attention was called to him by his hearty swearing, and I saw him towering in the midst of a ring of chattering peasants, who were attempting to give him information in a tongue he did not understand. Extricating him, we moved off toward the stream together. He was, it appeared, the president of a British angling club; and we chatted very pleasantly until we reached the stream. He was very courteous, insisting that I choose my own ground.

"I want to say one thing," said I, diffidently. "This stream ought to be fished up, not down."

"That is bosh," he said, frankly.

I knew the water; I wanted him to take home a creel full of good trout, and I tried my best to get *him* to try my up-stream fishing. No. He knew that no stream should be fished up. The result of that afternoon's trip astonished him, but did not alter his conviction. Three or four days on the stream, and as many almost empty creels left him mad, but unconvinced. He was a good man; he was president of an important angling association; but he couldn't raise a fin fishing down-stream and he wouldn't fish up-stream.

As I rolled away in the train a week later he poked his big red jolly face in at the window of my compartment, and said,

"Good-by! Good luck! There's nothing in fishing up-stream!"

And yet I had never missed a heavy creel on that water; and, what is more, he knew it.

More lies have been told about fly-fishing!—how many, many anglers have returned to display good creels—"and every fish taken on a fly, sir!" Yes, a fly with the hook tipped with worm. An angler's pleasure is to find out what the trout will take and then supply them. If it is a fly, well and good. It is a clean and workmanlike manner of taking trout. If they will not touch a fly, then perhaps a long cast with a cricket, or a moth, or a stone-fly, or gnat, or grasshopper, or even a beetle may raise the brooding fish.

Perhaps he needs the sparkle of a spinner, perhaps the undulating coil of a humble "barnyard hackle," perhaps the ventral fin of a shiner or of his own kind, perhaps a silvery strip of skin from the neck of a pullet. Or he may demand a minnow, or, alas! a mouse. This latter tidbit I have never been able to bring myself to use, except when artificial. And no doubt I have lost many a big trout by my squeamishness; but when it comes to using the more highly organized creatures as lures, I revolt. Nothing ever disgusted me as much as the spectacle of a huge pike taken on a moor-hen.

Often in August, when the water is several degrees hotter on the surface than on the bottom, trout seek the spring holes; and often nothing can induce them to rise through the strata of lukewarm water to take a surface fly. Then your cut-and-dried angler sniffs, damns his luck, and goes home. Yet, a red fly sunk where, through intimate knowledge of the bottom of the lake or river, the angler knows there is a spring, will bring the lurking trout springing up with peculiar savagery.

Many, very many, of the big trout taken in Maine waters are not taken on a fly, but on great bunches of worms which are let down to the bottom of deep waters. If one cares to use that sort of tackle there is no reason why one should not. It's all a question of taste. To many a big line, a sinker, and a hook loaded with worms, and a long solemn wait in a boat, is not attractive. It is not to me. Yet, if I wanted a big trout and could not get one on a fly or on a minnow or spinner, I should feel perfectly free to try the sinker and worms if it pleased me.

It requires, I think, more delicate skill to make a long cast with bait than with an artificial fly. I can see the horrified visages of the "old 'uns," fly-anglers dyed in the wool, at this blasphemy. Yet it is true; and why not admit it? Another thing: I do not believe that any angler can surely and repeatedly strike a trout on more than twenty-five or at the most, thirty feet of line, using a five-ounce rod. I believe that beyond that the trout strikes himself every time. Not for a moment do I deny the utility of long casts. Indeed, I believe in thorough whipping always; yet it is hazard, not skill, that hooks the trout beyond twenty-five feet. Now let the "old 'uns" howl!

Show me an angler who makes pretty casts and I am all interest. Show me that same angler who is unable to make a cast without a back cast, and I'll show you a man who doesn't understand his metier. Fly-fishermen of a certain type affect to sneer at the use of the fin. It is certainly not a fly in any sense, and those anglers who use the fin, and claim its kinship to the fly—notably the ibis, Montreal, and Parmachene, do themselves and their absurd claim great harm, and truly merit ridicule from the elect. As a matter of fact, the fin is a clean, light substitute for a minnow. No trout ever took a fin with the notion that he was rising to a fly; but every time he rises he mistakes that fin for a minnow, which is perfectly legitimate and reasonable to anybody except an "old 'un."

Speaking of the minnow, and, incidentally, of my callow days, I recall a mortifying experience of my own which is amusing enough to mention. For two months I had been monopolizing a splendid trout stream in Germany, bringing in good creels, sometimes good fish, and sometimes only medium fish. I thought I had measured the limit of the stream with a three-pounder, and never imagined there was anything bigger lurking in the pools.

One late afternoon a gamekeeper came down to the water where

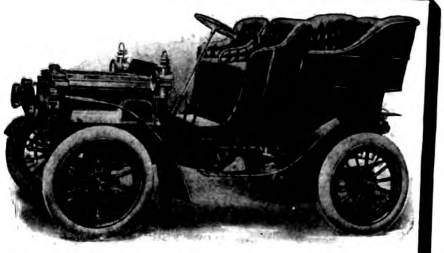
I was fishing. I had a fine creel to show, but the gamekeeper, an old friend of mine, only nodded tolerantly, observing that there were bigger trout in the water. Whereupon began a discussion concerning methods, I roundly abusing anybody who used anything except the artificial fly, and asserting that I could raise with a fly any fish in that water that he could raise with anything else. To my amusement the old man accepted the challenge, appearing an hour later with a rod and a bucket in which some small and exceedingly grotesque and ugly little fish were lying. These fish were speckled; their heads appeared to be as large as the remainder of their bodies, and two winglike fins spread out apparently from under their gill covers.

I began casting; the old gamekeeper watched me with watery eyes. After a while I was fast to a fine three-pound trout, landing him nicely in good order. The old man remarking that I never seemed to exceed the three-pound limit, and that I couldn't with a fly, cast out with one of the ugly little fishes as bait. In about two minutes he was fast to a thumping trout that began racing about, tearing through the water at a lively rate. Immediately I saw that he was bigger than anything I had seen in two months' experience in that stream. And he proved to be, for when the old man landed him he scaled five pounds on my pocket scales; and at the lodge five pounds three ounces and a half.

Once or twice in a season an angler may find a big fish "in position" for feeding, at which time the fish will rise to a fly. This period of complacence may occur at any time of the season, though usually in the spring or autumn. As a rule, an angler ought to be able to tell in an instant, on seeing a big trout, whether that trout is "in position"—that is, whether a fly dropped lightly would provoke his curiosity. At most times of the year a fly, if it does not frighten an old hook-jawed speckled veteran, appears to bore him. He will swerve slightly, sometimes back away, sometimes drift sideways toward a projecting ledge, and disappear. But on those rare occasions where he has taken up a position in comparatively shallow water, stemming the current with a delicately nervous vibration of tail and fins, the chances are that he will sail to the surface after any floating morsel that appears to be palatable.

Streams change in many ways from season to season; so do their finny inhabitants. For example, I knew one fine trout river in which, during three years, yellowish flies were preferred by the trout at all seasons, beginning with the "yellow May," early in spring, and followed by the "duns," "ants," "yellow hackles," "oak-flies," and "professors," and even including the "yellow cally." All that was changed in another year or two; tinsel and brilliant hackle were at a discount; claret bodies and woolly bodies and the mallard wing, with a touch of dull green or red like the colors in an "Abbey" or "Grizzly King" were what the trout required.



There has been much nonsense written about flies. In some streams trout have absolutely no choice, and will, at any season, rise to one fly as quickly as to another. There is a so-called list of stock flies supposed to be reliable standbys. This list includes the "coachman," "black gnat," "professor," "red ibis," "brown hackle," and "Parmachene Belle." Experience demonstrates that trout are likely to take one of these flies if they take anything. But trout seldom do what they are likely to do. I have seen a pool whipped with "coachman," "emerald coachman," "leadwing coachman," and "canary coachman" without a sign of a rise. Then, the first cast with a "royal coachman" brought two trout out of the water.

There is no affectation in a well-stocked fly-book. A single added speck of color or the substitution of wing for hackle or the elimination of the tail may make all the difference in the world to the trout. I know of streams where no trout will touch a tailed fly; I know of other waters where nothing but a tailed fly scores.

It is not always a clever dodge to match from your fly-book the fly on which the trout are feeding. I've done it many times with blank result. Sometimes when the trout are

Columbia

LIGHT GASOLENE TONNEAU

12–14 Horse Power (Honest Rating)
Weight 1700 lbs. Price $1750.
Canopy Top, - - - $200 Extra

New system of control makes the two-cylinder opposed motor, which is placed forward in a removable bonnet, as flexible as a steam engine with none of its defects and limitations. High gear available for all ordinary speeds and grades. Gear changing by positive levers—no notches, no indices—making this the easiest of all gasolene cars to operate. Speed, two to thirty miles per hour. Lubrication automatic. Tonneau seats of full carriage size. Materials and workmanship highest grade in every detail.

24–30 Horse Power Touring Car (Chicago-New York Record) - - - - $3500
30–35 Horse Power Touring Car - - - - - - - - - 4000
Light Electric Runabout, new model - - - - - - - - 850

Catalogue of Columbia Gasolene Cars and Electric Pleasure Vehicles will be sent on request; also separate catalogues of Electric Town Carriages of the coach class and Commercial Vehicles.

Drawn by Sydney Adamson

I saw him towering in the midst of a ring of chattering peasants

rising to grasshoppers a fly is the more deadly; the contrary is the case, too. There is a puzzling, disheartening, and even maddening phenomenon to be seen on trout waters at evening,—the rising and apparent feeding of scores of fish, not one of which will look at any artificial fly tossed to them. Every experienced angler has encountered this state of things; every intelligent angler deduces an explanation of his own for the irritating indifference of the trout.

So I may, perhaps, advance my theory, which is that the trout are *not* feeding, but are playing with the tiny gauze flies which settle on the water. To support this I have to cite cases where trout splashed up repeatedly after the same fly which was lying quiet on the water; and twice I have seen trout reject flies seized in play. Added to these reasons I have never found the flies in the stomachs of trout hooked by accident through fin or back during one of these twilight fantazzias.

These swarms of flies, I believe, excite and perhaps, like the "red ibis," irritate the trout, who play with them and seize them without any intention of feeding. I am perfectly willing to have this theory disproved.

Alexeieff, Viceroy of Russia

(Continued from page 429.)

soon to compel him to return thither. On July 16 the Chinese army bombarded the Russian town of Blagovestchensk, and attacked the Russian ships on the Amur River. The Russians in Siberia were swept by a panic similar to that which spread over India when the great mutiny began, and at once prepared, as they thought, to sell their lives dearly. The Chinese in Blagovestchensk were suspected of aiding the attack from across the river, and the Russian settlement, in fear of massacre, practically annihilated the Chinese population of their Siberian town. For diplomatic reasons it has been agreed to support the view that the Chinese government had no part in the Boxer outrages, even though Prince Tuan was head of the Tsung-li Yamen when the Peking legations were besieged. But in Manchuria this fiction was impossible. The governors of the three Manchurian provinces at first promised protection to the Russians, who had then only 5000 Cossack railroad guards in all Manchuria; but shortly after the Chinese officials made a total change of front. On June 22 the vice-governor of Mukden overthrew the governor, and openly took command of a Boxer band. Boxer proclamations appeared all over Manchuria, and the governors of Tsi-tsi-har and Kirin told the Russian railroad officials they could no longer answer for their troops. On July 24 a forged proclamation from the Chinese Emperor, ordering the imperial army to join the Boxers, was found at Telin, a few miles from Mukden, and also proclamations from the three Manchurian governors, saying that the Russian officials were ordered to hand over the railroad, when they would be convoyed across the frontier by Chinese troops. It was put on record at the time that "the attack on Russian territory along the Amur, and on the Russian railroad in Manchuria, was altogether official, coming from unquestionable Chinese authorities, and based on positive orders from Peking."

Russia's political position in Manchuria was defined by a telegram from the Foreign Office at St. Petersburg to the powers, dated August 12: "As soon as general order is restored in Manchuria, and all necessary means are taken to safeguard the railroad, the construction of which is guaranteed by a special formal agreement with China with reference to the concession granted to the Chinese Eastern Railroad Company, Russia will withdraw her army from the territory of the neighboring empire, providing that the action of other powers shall not hinder this."

A week earlier the Russians under Admiral Alexeieff bombarded Newchwang, and two days before the sending of the telegram quoted he established a provisional Russian government at that city, and hoisted the Russian flag from the custom-house.

After Peking fell, and the main Russian settlements in Manchuria were relieved, Admiral Alexeieff found himself compelled once again to build up the frame of Russian influence and commerce. The railroad had been wrecked, the telegraph lines cut, and the bands of robbers again infested the country. He set to work with might and main, and practically reconquered the whole of the three provinces. Once more Russian trade began to flourish; capital came in through the Russo-Chinese bank; there were not less than eighty thousand European settlers in Manchuria, and their colonies greatly throve. In the words of a distinguished American, "The Chinese inhabitants of Manchuria became so well satisfied with Russian rule that they would not willingly go back to the former régime."

The diplomatic strife foreshadowed by Admiral Alexeieff's refusal to give a special mandate to Japan, and the Japanese commander's subsequent vote against Russian control of the land-forces presently became more defined. Admiral Alexeieff naturally felt that, after Russian concessions had been attacked by Chinese troops, under written orders from Chinese governors, and after Russian leased areas and settlements had been threatened with destruction, Russia stood in the position of a conqueror towards Manchuria; he also felt that his work, and that of his assistants, in restoring order and protecting civil rights in Manchuria, at a great cost of men and money, gave Russia something very like sovereignty over the three provinces of Manchuria, and this view, which he steadily held in mind, determined his course in subsequent negotiations.

England had, from the first, apprehended a preponderance of Russian power, and had made the treaty with Germany, in the autumn of 1900, with the idea of checking Russia. A series of negotiations followed. In April, 1901, Admiral Alexeieff sought a number of special privileges in Manchuria, and had gained the consent of Tseng, the Tartar general, and representative of the Manchu court. England and Japan objected, and the matter was dropped. Russia made another attempt to secure a formal recognition of her special position in Manchuria, in the spring of 1902, and this time the protest came from Mr. Hay, who held that, while China owed indemnities to all the powers, she could not lawfully alienate any of her resources by granting monopolies to Russia.

A convention between Russia and China was finally signed on April 8, 1902, the text having been previously submitted to England and Japan, who had entered into an anti-Russian treaty in February of that year. The convention provided for Chinese sovereignty in Manchuria, for the protection of Russian interests there, and for the evacuation of the three provinces by Russia, at intervals of six months, "in the event of there being no trouble whatever, and if the conduct of other powers should not oppose obstacles thereto." The evacuation was to begin on October 8, and would, therefore, have been completed on April 8 of the present year. Russia withdrew large numbers of troops in October, 1902, and April, 1903, but in October, 1903, a hitch arose with the Chinese authorities, objections were made by Japan, and the situation with which we are all familiar was gradually reached. Through these negotiations the influence of Admiral Alexeieff preponderated, in recognition of which he was appointed Viceroy of the Far East a few months ago. His later history is still being written large in events whose outcome is as yet obscure.

Progress of Science

Disease Caused by Sunlight

WHILE the rays of the sun possess a stimulating and beneficial effect in disease, and can be used with advantage as a therapeutic agent, yet, according to recent investigations, they also may act injuriously and cause disease. That there is a difference in the therapeutic value between the actinic rays, or those located at the violet end of the spectrum, and the red rays was appreciated by Finsen, and the former were used in the treatment of such skin diseases as *lupus vulgaris*, or tuberculosis of the skin, while the latter were found effective in cases of smallpox. One of the most recent researches in this department is by Professor Fermi, and is given in a late number of the *Archiv für Hygiene*. In these experiments a large number of human subjects were exposed to direct sunlight for varying periods, and in a large percentage of cases it was found that there resulted the following set of symptoms: cephalagia (headache), dryness of the nasal mucosa, snuffling, coryza (cold in the head), pharyngitis, weariness, slight conjunctivitis, dryness of the lips, fever, pseudo-influenza, constipation, insomnia, epistaxis (nose bleed), and various pains. From this list of symptoms experienced by his patients and from the observed coincidence of certain diseases and meteorological conditions, Professor Fermi concludes that exposure to the sun's rays is a predisposing factor in coryza, influenza, hay fever, and epidemic meningitis. It is stated that, notwithstanding the resulting ill effects, only a few more than half (fifty-three per cent.) of the subjects found the treatment disagreeable, the remainder distinctly enjoying it. While such experiments cannot be taken as conclusive, that the sun acts as a cause of disease, nevertheless they seem to indicate that there is room for further investigation of the subject, and it may be that in the near future the range of phototherapy will be broadened, and that sick-rooms will be arranged so as to supply light or darkness or rays of any desired color or wave length as may be required for the disease under treatment.

N-Rays and Digestion

That the processes of digestion, as well as mental and muscular activity, seem to cause the emission of N-rays, is the conclusion reached by M. Lambert, in France, after a series of interesting experiments. He believes that these curious rays are produced by ferments, especially by those concerned in the digestion of albumenoid matter. In his experiments on digestion, M. Lambert placed a small quantity of fibrin in tubes containing in one case activated pancreatic juice, and in another artificial gastric juice made by mixing a five-per-cent. solution of pepsin with a .4-per-cent. solution of hydrochloric acid. From these tubes the N-rays were emitted, and were detected not only by producing increased luminescence of a phosphorescent screen, but also photographically, thus removing the subjective element from the experiment. As a result of these experiments, M. Lambert believes that in the course of digestion the fibrin undergoes strains which act to produce N-rays, just as various other bodies under tension or strain, as was shown by M. Blondlot.

The "Equinoctial" Fallacy

Among the popular fallacies relating to the weather that persist in spite of the efforts of meteorologists is the occurrence of a "line," or "equinoctial" storm, on or about September 21. Notwithstanding various statistical and other studies, this storm or gale is still anticipated, and while some storms have occurred at this season occasionally, yet there have not been sufficient recorded to justify the name or the customary anxiety for its occurrence. A further contribution to the literature on the subject has recently been made in a tabulation of the daily rainfall at Boston between September 14 and 28, for the thirty-two years from 1872 to 1904. On September 21, during this period, measurable quantities of rain fell but six times, while for the week of which September 21 was the middle day, there were only twelve years when the total weekly precipitation exceeded one inch.

Convenient in form, perfect in quality, brilliant in appearance, no sugar made can equal it in excellence. Every piece sparkles like a cluster of diamonds, the result of its perfect crystallization. You will be pleased the moment you open a box. YOU WILL BE BETTER PLEASED WHEN YOU HAVE TRIED IT IN YOUR TEA, COFFEE, ETC.

Music

The "Parsifal" Nuisance

THE report that Mr. Henry W. Savage contemplates a production of "Parsifal" in an English version has produced something like consternation among those whose love of Wagner's great work is genuine and profound. It is difficult to believe that Mr. Savage has convinced himself that he can attain anything approaching an artistic result in such a venture; if he has actually done so, he will assuredly be disillusioned; but more likely he is bent merely upon making his pecuniary hay while the "Parsifal" sun is highest. "Parsifal" given with an English text, hideous in its conflict of verbal and musical accents, with singers anything but first rate, with inadequate stage space and mechanism—the idea is nothing short of preposterous. If Mr. Savage has been deluded by the success of Mr. Conried's superb production into the belief that New York will tolerate anything less than the best in a presentation of "Parsifal," he will be effectually enlightened in the event. Who, one wonders, has he in mind for the part of his English-speaking *Parsifal*—Mr. Joseph Sheehan?

Of the reported intention of the visiting French Grand Opera Company to give "Parsifal" in French, at the Casino Theatre, one forbears to speak. The thought is only less harrowing than the idea of Mr. Richard Mansfield's reported project of a production of Wagner's music-drama without the music.

It will be surprising if some enterprising manager does not soon announce a "Parsifal" season at Manhattan Beach, in conjunction with Mr. Pain's fireworks.

The Longy Club

The Longy Club of Boston, composed of ten players of wind instruments, members of the Symphony Orchestra, gave a concert of chamber-music last week at Mendelssohn Hall, marking their first appearance in New York. Their programme comprised a Mozart quintet for oboe, clarinet, horn, bassoon, and piano; Reinecke's sonata, "Undine," for flute and piano; a Handel trio, in sonata form, for two oboes and bassoon; and a "Suite Persane," by A. Caplet, for two flutes, two oboes, two clarinets, two horns, and two bassoons. The gentlemen of the Longy Club are accomplished artists, masters of their several instruments, and their discovery of New York as a field of musical endeavor holds out agreeable possibilities for future concert seasons. They play, individually, with dexterity, with beauty of tone, with admirable sympathy and effect; and their ensemble work is marked by an excellent balance, clarity, and precision. These men are masters of technique, musicians of feeling and intelligence.

The Whistler of Composers

Mr. Philip Hale, who is as acute and sympathetic in criticism as he is erudite in equipment, wrote appreciatively concerning the orchestral "Nocturnes" by Claude Debussy, recently performed in Boston. These "Nocturnes," produced on this occasion for the first time in America, moved Mr. Hale to recall the analogy traced by some between the tone-poet Debussy and the painter Whistler; and although Mr. Hale does not accept the comparison with entire seriousness, there is unquestionably a certain felicity in the parallel. Hear Mr. Hale's own eloquent description of the "Nocturnes," —which it is a pity, by the way, we should not before this have heard in New York:

"In the first nocturne there is the unchangeable appearance of the sky with the slow and melancholy march of the clouds. Do you demand architecture in music? Here is the architecture of clouds, vaporous and impalpable. And this festival, with its indescribable entrance of the procession,—one of the most marvellous effects in all music,—this festival is a mere cloud chimera, without the vulgarity of reality. The festival is one held by the inhabitants of the air; the procession is a sleep-chasing. And these voices of sirens arising from the argent billows—is there not the dream-picture of the sea, with its rhythm and its flavor, and its nocturnal haunting voice of seduction?"

DR. LAVENDAR'S PEOPLE

Mrs. Margaret Deland's new book of stories concerning Dr. Lavendar and the other dwellers of Old Chester seems to have awakened the interest in these characters created by the publication of "Old Chester Tales." Speaking of the leading character, the Chicago *Interior* says that "Dr. Lavendar takes precedence over all country parsons with the possible (only possible) exceptions of the Vicar of Wakefield and Balzac's Village Priest. Let no one who loves the fine things of the soul pass this book by." **$1.50**

Booth Tarkington's CHERRY

Says the *Interior*, speaking of Booth Tarkington's dainty new comedy: "Anything more utterly delicious than the comedy of this narrative can scarcely be conceived. It is simply beyond price or praise. The humor of it all is so exquisite it moves one far beyond laughter, to the point of tears." The book is attractively made and is illustrated in color. **$1.25**

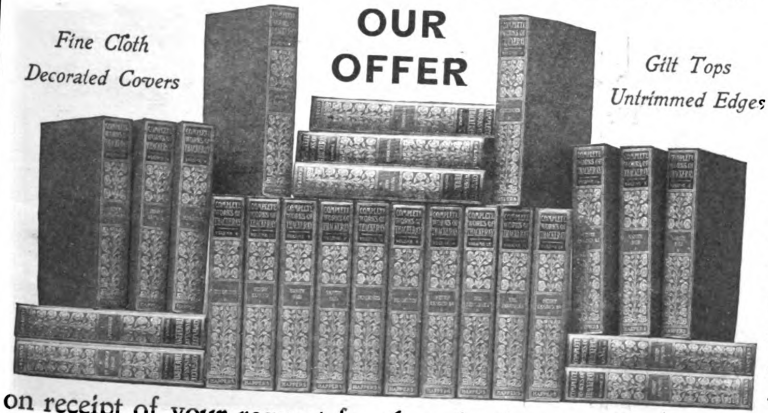
William Makepeace Thackeray
Complete Writings

IN TWENTY-FIVE VOLUMES

A Set of Thackeray is not a Luxury—it is a Necessity



THACKERAY'S creations place him at the head, perhaps, of the English novelists of the nineteenth century. His characters are always human. There are no immaculate heroes, no perfect heroines, no utterly unredeemed persons of either sex to be met with in the pages of his books. He conceived it a duty to describe the world as he saw it, and he drew his characters with admirable realism, and with a marvellous insight into the natures of men and women. We take pleasure in announcing a new edition of Thackeray's complete works, and we feel confident that this edition will meet with the approval of all lovers of good library books.

We Double the Cost of Our Brewing to Give You Pure Beer

We spend fortunes on cleanliness.

For instance, we wash every bottle four times, when one washing—done, as it is, by machinery—seems more than sufficient.

We clean every tub, every boiling vat, tank or barrel, every pipe and pump, every time we use it.

We bore wells down 1400 feet to rock for pure water.

We cool the beer in filtered air.

We filter the beer by machinery.

We store Schlitz beer for months in refrigerating rooms until it is well fermented—until it cannot cause biliousness.

We sterilize every bottle after it is sealed.

All this doubles our necessary cost—an enormous item on our output—over one million barrels annually. Yet we pay it all—just to have Schlitz beer pure—just to have it healthful for you. Those who enjoy it pay none of this extra cost, for the price is the same as standard beers anywhere.

Ask for the Brewery Bottling.

HARPER'S MAGAZINE

for APRIL

Honfleur the Sedate

Mr. Thomas A. Janvier recently made a trip along the French coast in the interests of the Magazine. This is the first of a number of picturesque articles which he will write. Honfleur is one of the old French fishing villages—a town which, as Mr. Janvier says, "has left its future behind it." The article is illustrated by Walter Appleton Clark, who made the trip with Mr. Janvier.

ENGLISH

Professor Lounsbury, whose papers on questions in the use of the English language have attracted such widespread attention, contributes another interesting article, which he calls "To and The Infinitive"—the final word on a much-discussed idiom.

SCIENCE

Professor Heyn, the famous German scientist, writes on "The Life and Diseases of Metals"—an article which reveals the fact that copper, steel, etc., are scarcely less liable to disease than human beings.

EDUCATION

President Charles F. Thwing, of Western Reserve University, tells of the great Scandinavian University of Upsala—where Linnæus lived and worked.

SHORT STORIES

There are stories of every type in this Magazine, eight of them in all. Among the authors are Edith Wharton, George Duncan, Mary Raymond Shipman Andrews, Mary Tracy Earle, James Branch Cabell, and Mary Applewhite Bacon.

HISTORY

Basil King, the novelist, brings to light a curious and romantic story from the history of the Commune—the story of the love of a royal princess for a commoner.

TRAVEL

Louise Morgan Sill tells of a trip "Through Inland Seas," a charming account of a wandering journey over the Great Lakes, giving a vivid picture of the people and life on those great waterways.

NATURE

The nature article of the number is by Ellis A. Apgar, who writes on the question of "The Reproduction of Plant Life"—a valuable paper richly illustrated from paintings by Frank French, engraved by the artist.

PICTURES IN COLOR

Howard Pyle contributes three full-page paintings in full color to the April Magazine, and there are many others in tint. Among the artists represented in black-and-white are Albert Sterner, Walter Appleton Clark, Lucius Hitchcock, Henry Hutt, and F. C. Yohn.

Mary Johnston's Great Novel, "Sir Mortimer," Concluded

HARPER'S BAZAR

For April — **The Special Spring Fashion Number** — *For April*

The mere announcement of the forthcoming publication of this number is sufficient. It has been for thirty-five years a most important annual, universally recognized as the leading authority of the year on fashions in America. It will contain

50 Pages of Fashion Text and Pictures

from the great fashion centres of the world—Paris, London, Vienna, and New York. The illustrations are the work of distinguished fashion artists—Ethel and Guy Rose of Paris, and A. M. Cooper, of New York; the text is by A. T. Ashmore, the eminent fashion authority. Every American woman needs and should have the April Bazar. In addition to the fashion pages, the annual Spring Fashion Number will contain the following interesting features:

Pussy Willows . . . **Annie Webster Noel**
A Short Story. Illustrated by F. Y. Cory

What Women Read . . . **Agnes Repplier**

Child-Life in the Tenements . **Clarice M. Burd**
Illustrated by F. G. Holmes

Family Episodes . **Marion Foster Washburne**
Studies in Domestic Relation—No. 2. Illustrated by George Wright

The Garden . . . **Harriet Prescott Spofford**
A Poem. Illustrated by James Verrier

The Masquerader . **Katherine Cecil Thurston**
A Novel. Chapters X., XI., and XII. Illustrated by Clarence Underwood

Our Paris Letter . **Flora McDonald Thompson**

COMMENT

IT was expected that the United States Supreme Court would affirm the decree issued by all four judges of the United States Circuit Court for the District of Minnesota in the Northern Securities case. It was by no means expected, on the other hand, that the decision of the highest Federal tribunal would be reached by the narrowest possible majority, that is to say, by five against four; much less that, of the five justices concurring in the decision, one, Justice Brewer, arrived at it by reasoning materially different from that set forth in the opinion read by Justice Harlan, which, therefore, must be termed a minority opinion. This was true also, it will be remembered, of the insular cases; there, too, the majority decision was not accompanied by a majority opinion. There is, in truth, no end to the unexpected features of the action of the United States Supreme Court in the present instance. The three Democratic members of that tribunal, Chief-Justice Fuller and Justices Peckham and White, who were popularly counted among the opponents of the Northern Securities merger, were among the four dissenting justices who refused to sustain the adverse decree of the Circuit Court. It had also been taken for granted that the fourth dissenting justice, Mr. Oliver Wendell Holmes, would look with unfriendly eyes on the fusion of the Great Northern and Northern Pacific interests, though we ourselves should have been inclined to place him among those who recognize in the conglomeration of capital an irresistible tendency of the time.

Another surprising fact remains to be chronicled, namely, that Chief-Justice Fuller and Justices White and Peckham, who now dissent from the decision adverse to the Northern Securities merger, were members of the majority in the first important case that arose under the anti-trust act, the case of the United States against the Trans-Missouri Freight Association. We add that if Justice Brewer's opinion be carefully read, it will be found to contain a suggestion which, if adopted, would, apparently, be pronounced lawful by a majority of the court, a majority made up of the Chief-Justice and of Justices Brewer, Peckham, White, and Holmes. We refer to the suggestion that had Mr. James J. Hill been individually the owner of a majority of the stock in the Great Northern Railway Company, and had he seen fit, individually, to purchase a majority of the stock of the Northern Pacific Railway Company, such purchase could not have been prevented by Congress. At another time we may refer at length to this and some other remarkable features of the opinions read by members of the United States Supreme Court on March 14.

It is somewhat difficult for outsiders to account for the fury evinced on March 9 by members of the House of Representatives, without distinction of party, when they received from the Post-office Department a supplemental report in compliance with the request of Mr. Overstreet, chairman of the Post-office Committee. It will be remembered that, among other abuses stigmatized in the report of Mr. Bristow, Fourth-Assistant Postmaster-General, attention was directed to the practice of increasing the allowances made to local post-offices for rent, clerk hire, and other purposes, beyond the amounts authorized by law. Mr. Bristow pointed out that many of these unlawful allowances had been made at the request of members of Congress, whom, however, he refrained from naming. With a fine assumption of indignation, Chairman Overstreet of the Post-office Committee demanded that a full list of the members of Congress who had been guilty of such practices should be sent to the House of Representatives. He was taken at his word. A list of no fewer than 151 Senators and Representatives was forwarded, and the extent to which each of them had secured an increase in the allowances for local post-offices was precisely indicated. The Republican leaders propose to stifle discussion of the subject by referring the report to a committee, which would have privately examined the question whether the requests of the members of Congress named had been justified.

It is hard to see why any innocent man should object to such treatment of the report. It turned out, however, that a very large majority of the House of Representatives were exasperated that the Post-office Department should have presumed to spread the names of 151 members of Congress on the record, and thus have compelled them to justify their conduct. They seemed to have foreseen that it might prove difficult to vindicate some of their transactions in the eyes of upright constituents. Vituperative epithets were hurled against Fourth Assistant Postmaster-General Bristow, who was at first presumed to be responsible for the supplemental report. Thus Mr. Grosvenor, the well-known Republican member from Ohio, denounced "the Bristow report" as "conceived in iniquity, born in sin, and as having travelled its course until it had struck the public in the United States as an attack on a body of men as free from wrong-doing, corruption, crime, and irregularity as any equal number of men on the face of the earth." If his fellow members are as guiltless of wrong-doing as Mr. Grosvenor asserts, why would they not welcome an opportunity of proving their innocence? When, subsequently, it turned out that Mr. Bristow had nothing to do with the preparation of the supplemental report, another Republican, Mr. Hill of Connecticut, branded the anomalous editor as "a liar and a scoundrel," amid frantic cheers and shouts of approbation. The truth is that the supplemental report was prepared by the First Assistant Postmaster-General in pursuance of peremptory orders issued by his official superior. If Representatives are enraged to find themselves called upon to explain the grounds on which they requested and procured an increase of allowances to local post-offices, they must blame, first, Chairman Overstreet of the Post-office Committee, for demanding a list of the alleged transgressors, and, secondly, Postmaster-General Payne and President Roosevelt himself, for complying with a demand which, on the face of it, seemed reasonable and creditable. Representatives only disgrace themselves when they talk about the department "giving them away," and threaten to "get even" with it.

There is reason to believe that State Senator McCarren will secure most of the delegates from Kings County to the Democratic State Convention, to be held in Albany on April 18. All but three of the members of the executive committee of the Kings County Democracy have publicly approved of the position taken by him at the recent meeting of the Democratic State Committee, the position, namely, that New York's delegation to the Democratic national convention should be instructed to advocate the nomination of Chief-Judge Alton Brooks Parker. As ex-Senator Murphy of Troy is now on friendly terms with ex-Governor Hill, it may be assumed that the delegates from Rensselaer County, upon whose support Mr. Charles F. Murphy, the leader of Tammany Hall, has hitherto been counting, will also be arrayed upon the Parker side. As there seems to be no doubt that the delegates from Erie County (Buffalo) will pursue a similar course, the ascendancy of Judge Parker's friends in the State convention may be taken for granted. They will be able, if they choose,

Digitized by Google

Public Domain, Google-digitized / http://www.hathitrust.org/access_use#pd-google

to instruct New York's delegation to present Judge Parker's name to the Democratic national convention.

Would it be wise to do so if the proposal to instruct for Parker meets with vehement opposition on the part of representatives of that section of the State to which the national Democracy must look for a majority if it desires to carry New York? What would the endorsement of Judge Parker amount to, considered as a moral mandate, if it came mainly from delegates representing districts notoriously Republican? Would it not be wiser for ex-Governor Hill and Mr. C. F. Murphy to get together and arrange that no positive instructions should be given to New York's delegation, but that the Parker majority of the State convention should confine itself to an expression of preference? If experience had shown that a united New York delegation could always impose its will upon a Democratic national convention, instructions for Judge Parker would be justified in the eyes of his friends. That is by no means the case, however. In 1880 the New York delegation was instructed to present at Cincinnati the name of Samuel J. Tilden, who, in the opinion of his fellow Democrats, had been shamelessly robbed of the Presidency four years before. The Democratic national convention, however, ignored the claim of Samuel J. Tilden, and nominated Winfield S. Hancock for the Presidency. In 1892 the New York delegation was, by a unanimous vote of the State convention, instructed to present the name of David B. Hill. Not only did the Democratic national convention decline to accept the candidate proposed by the New York delegation, but it nominated Grover Cleveland, to whom the New York delegates were vehemently opposed. In view of these precedents, it is doubtful whether any true friend of Judge Parker will insist upon instructions from the New York State convention, if they can only be secured at the cost of protests from the great city which must be relied upon to furnish a Democratic majority.

The fact that six of the eight delegates who will represent Rhode Island in the Democratic national convention have declared themselves supporters of Mr. W. R. Hearst, and intend to apply the unit rule to their two recalcitrant colleagues, will no doubt encourage the friends of that candidate in Mississippi, Kentucky, and Iowa, where of late they are said to have shown fewer signs of strength than were exhibited at an earlier date. It appears that some of the district conventions held in Illinois have instructed their delegates to vote for Hearst, but there is no doubt that the State convention to be held on May 12 will favor some other candidate, and insist upon the enforcement of the unit rule. We have formerly pointed out the improbability of Mr. Hearst's obtaining majorities in the delegations from a sufficient number of States to give him a third of the delegates in the national convention through the enforcement of the unit rule. At the hour when we write, he seems much more likely to lose than to gain by a rigorous adherence to that principle. The unit rule is based upon the time-honored Democratic assumption that the majority should prevail. Applied to the proceedings of a national convention, the unit rule signifies, of course, that a majority of the delegation from a given State shall have the right to cast the whole vote of that State. Such a majority has just as good a right to determine the candidate for which its State shall vote in the convention as a majority of the Presidential electors have to name the man who shall occupy the White House.

But, while the unit rule is strictly in keeping with a fundamental principle of the Democracy, the "two-thirds rule" is flagrantly opposed to it. It is monstrous that, while the platform of a great party can be framed by a majority of one in a national convention, the designation of the man who is to stand upon the platform should be held to require the votes of two-thirds of the delegates. This regulation, which was invented with the aim of benefiting the Southern States, may now gravely injure them, for, if the Hearst-Bryan combination, by securing a little more than a third of the delegates, can prevent the nomination of a sound, high-minded, and thoroughly trusted Democrat, the next President of the United States will inevitably be Mr. Roosevelt. Do far-sighted Southerners feel assured that their new State constitutions would be safe under a Roosevelt régime? If they have any doubt about the matter they had better use the power that they will possess in the Democratic national convention to abolish the two-thirds rule, and thus render certain the selection of a conservative nominee at St. Louis.

It looks as if the committee of the United States Senate, which has been examining the charges against Senator Smoot of Utah, would report in favor of expelling him from the Senate. It also looks as if the two-thirds vote which the Federal Constitution makes necessary in such a case would be secured. It has not yet been determined, however, on which of two grounds the expulsion of the Senator will be proposed. That he is not himself a polygamist is acknowledged. It is, on the other hand, admitted that the actual, the preceding, and the prospective presidents of the Mormon Church, together with most, if not all, of Mr. Smoot's fellow "apostles," maintain polygamous relations, and that their maintenance of such relations is known to him. Nevertheless, it does not appear that, either publicly or privately, Mr. Smoot has ever protested against the unlawful practice. It follows, according to his opponents, that he may be justly charged with conniving at a violation of the law. It will, perhaps, be on the score of such constructive connivance that his expulsion from the Senate will be demanded. To the plea that the utmost which can be required of a Mormon is that he shall refrain personally from law-breaking, and that he cannot be expected to rebuke a practice which is sanctioned by the Mormon religion, his opponents reply that the original "revelation" enjoining or permitting plural marriages was suspended by a new "revelation" some years ago. Mr. Smoot, therefore, cannot pretend, they say, that the injunctions of his religion and those of the civil power conflict, and, consequently, to expel him from the Senate for constructive connivance at the violation of a statute would not run counter to the constitutional provision that "no religious test shall ever be required as a qualification to any office or public trust under the United States."

We have once more recurred to this matter because the more carefully the Smoot case is considered the more dangerous appears the precedent that would be established by the expulsion of the Senator on the latter of the two grounds mentioned, if not also on the former. In other words, Mr. Smoot's case is not analogous with that of a Moslem citizen of the United States, who, while himself a monoganist, should deem it his duty to refrain from rebuking a fellow Moslem for marrying the four wives permitted by the Koran. To make the case analogous, it would be necessary to assume that the permission given by Mohammed had been revoked or suspended by a revelation regarded by orthodox Moslems as of equal authority. Had such an event occurred, a Moslem, so Mr. Smoot's assailants assert, would be guilty of constructive connivance at crime if he failed to protest against the practice of polygamy on the part of fellow believers. That is one of the grounds on which the demand for the Utah Senator's expulsion may be based. The other ground is that the evidence given before the committee of the Senate has shown that a Mormon apostle's obligation to comply with the wishes of the Mormon Church, as these are formulated by its highest authorities, is recognized by him as superior to his obligation to obey the Constitution and laws of the United States. He cannot, therefore, conscientiously take the oath prescribed as a condition precedent to membership in the United States Senate, and is, consequently, unfit to discharge the functions of a Senator. This, it will be remembered, was precisely what the Know-Nothings of the fifties said about faithful adherents of the Roman Catholic Church. They alleged, should a mandate of the Pope come in conflict with a Federal statute a faithful Catholic would hold himself bound to obey the former. He is, therefore, they concluded, disqualified from holding office under the United States.

It is not Mr. Roosevelt's nomination, but his election, that may be threatened by the factional quarrels within the Republican party in the States of New York and Ohio. There seems to be no justification for the resentment recently evinced toward the President by Governor Odell, for there is no reason to suppose that Mr. Roosevelt ever saw the report of the Post-office Department, which includes Mr. Odell in the list of persons said to have requested an increase of the

Digitized by Google

Original from UNIVERSITY OF CALIFORNIA

allowances made to certain post-offices. If Mr. Odell never made such a request, or if the request was a proper one, it should be easy for him to establish the fact. If he made an improper request, he should blame for the exposure of his offence not Mr. Roosevelt, but the First Assistant Postmaster-General, who, in the absence of Mr. Bristow, was directed by Postmaster-General Payne to furnish the information desired by Chairman Overstreet of the House Committee on Post-offices. As for Mr. Roosevelt's wish to maintain neutrality toward the struggle between Mr. Odell and Mr. Platt for the leadership of the New York Republicans, it is a creditable one; and it is the Senator rather than the Governor who has cause to complain that the President has leaned more to one side than to the other.

If Senator Hanna had lived, and if the irritation now evinced by Mr. Odell had been provoked somewhat earlier, it is possible that the Governor might have tried to dissuade the New York State convention of his party from instructing its delegates to support Mr. Roosevelt in the national convention. It is now too late for Mr. Odell to secure an uninstructed delegation from New York, even if there were anybody except Mr. Roosevelt to vote for. Since Mr. Hanna's death, however, and Mr. Fairbanks's assent to the wish of Republican leaders to name him for the Vice-Presidency, the President has had no rival for the Republican nomination. No less futile than Mr. Odell's irritation is the exasperation exhibited by Governor Herrick and Senator Dick of Ohio at Mr. Roosevelt's apparent determination to make Senator Foraker the dispenser of Federal patronage in their State. They might like to withhold from the President the support of the Ohio delegation, but it is too late to do so. We must not assume, however, that because nothing can avert Mr. Roosevelt's nomination, he can afford to neglect the signs of disaffection on the part of the controllers of the Republican machinery in two such States as New York and Ohio, which, between them, cast fifty-nine electoral votes. As we have often pointed out, the Republican plurality in the State of New York at the last election of a Governor (1902) was less than nine thousand, and we may add that in 1892 the Republican plurality in Ohio was so small that Mr. Cleveland actually secured one of the twenty-three Presidential electors. A little relaxing of vigilance and energy on the part of the Republican machine might be fatal to Mr. Roosevelt in either of the States named.

It seems to be settled that a separate commission for the government of the canal zone will not be created, but that Congress will pass the bill introduced by Senator Morgan, which makes the territory acquired for canal purposes a government reservation of the United States, subject to civil and military law, under the control of the President of the United States, which control shall be exercised through the canal commission recently appointed for the purpose of directing the completion of the waterway. Under Senator Morgan's bill, the laws of the Republic of Panama will continue operative in the canal zone until they shall be superseded, in whole or in part, by laws of Congress. It follows that the laws of the United States respecting citizenship, immigration, naturalization, and the importation of contract labor will not be applicable until Congress shall otherwise direct. The existing canal commission is authorized to legislate with reference to all local matters in the canal zone, but all laws enacted by the commission must be first approved by the President, and are liable, of course, to be set aside by Congress.

Another important feature of the bill is the authority given to the President of the United States to declare—on the request of three members of the commission—the canal zone in a state of insurrection, and to employ military force for the preservation of order. We add that, under the provisions of the Morgan bill, the fiscal operations of the Panama commission are, like those of the civil government established in the Philippines, to be conducted through the War Department, upon which is thus imposed an additional burden that, if the cabinet were properly organized, would be assigned to a secretary of the colonies. The one obvious objection to the bill is that the canal commission, as at present constituted, is made up exclusively of naval, military, and civil engineers. It includes no jurist qualified to frame provisional laws for the canal zone. Neither does the commission include any high medical or hygienic authority recognized as competent to prescribe the sanitary regulations which, when the canal zone becomes more densely peopled, will be indispensable. These objections are partly met in Senator Morgan's bill by a provision that a surgeon-in-chief shall be appointed to control the sanitation of the canal zone and of the cities of Panama and Colon. By a wise precaution, it is stipulated that subordinate officers of the health service shall be appointed or removed by the surgeon-in-chief, and not by the canal commission. It seems to us almost equally important that a legal adviser of the commission, qualified to frame laws for the canal zone, should be authorized.

An incident of interest in the week ending March 5 was the completion of the northern member of the twin tunnels contemplated by the Hudson Improvement Company between the river-front of Jersey City and Morton Street on the New York bank of the North River. The completion of this tunnel was a remarkable engineering feat, because the New York and New Jersey sections, though begun and executed from opposite sides of the river, fitted together with absolute exactitude when they arrived at the place of junction. It is obvious that even a hair's-breadth of deviation from the right direction at an early stage of the work would have caused a serious, if not fatal, divergence of the two sections at the point where they met. This tunnel has been some thirty years a-building, but no such delay will be encountered by its competitors, which are projected or under way. The Knickerbocker Improvement Company is already engaged in constructing a tunnel from the foot of Cortlandt Street, New York city, to Jersey City, and the letting of contracts for the prospective tunnels of the Pennsylvania Railroad beneath the Hudson and East rivers is officially announced. There is reason to believe that the tunnels last named, which will be simultaneously pushed, will be completed within three years. Coming generations will marvel that, up to the fourth year of the twentieth century, New York, the second city in the world, consented to be cut off by the Hudson River from all that part of the United States which lies west of that waterway. Up to 1904—nearly three centuries from the settlement of Manhattan Island — the only means of crossing the North River from the city of New York has been a ferry-boat, unless one could spare the time needed to proceed by train to Albany or to Poughkeepsie, whence a bridge was thrown over the river not many years ago. It was undoubtedly the political influence of the Pennsylvania Railroad that foiled the repeated attempts to secure the construction of a bridge across the North River from Manhattan Island to New Jersey, but New-Yorkers will forgive the railway for condemning them so long to isolation, now that the proffered atonement has taken the form of tunnels by which passengers will be conveyed quickly and safely under the river, and delivered at a station in the heart of the great city.

Seldom can the affairs of a private corporation be looked upon as of national interest, yet the second annual report of the United States Steel Corporation may justly be so regarded, both by reason of the number and geographical distribution of its stockholders and bondholders, and because of its influential relation to one of the chief industries of the country. It is well known that the net earnings of the corporation for the year 1903 — by net earnings we mean what is left after deductions have been made of the expenditures for maintenance, for interest on bonds, and for the fixed charges of subsidiary companies—were considerably lower than they had been in the preceding twelvemonth, the exact figures being $109,171,152, as against $133,306,763. Owing to the shrinkage in net earnings, the dividend on the common stock was at first reduced from four to two per cent., and subsequently suspended. The dividend of seven per cent. on the preferred stock continued to be paid, although, owing to the conversion of a considerable amount of this stock into five-per-cent. bonds, the aggregate amount of the dividends paid on the preferred stock in 1903 was but $30,404,173, as against $35,720,177 in 1902. We add that on December 31, 1903, there was a balance of undivided surplus amounting to $66,096,618. On that day, moreover, the tonnage of unfilled orders on the books aggregated 3,215,123 tons of all kinds of manufactured

products. Obviously the corporation should be able, in 1904, not only to meet all needful expenditures and all fixed charges, but also to pay the regular dividend of seven per cent. on its preferred stock. Whether it will be able to resume the payment of a dividend on its common stock depends, obviously, on the question whether a marked improvement will be witnessed in the iron and steel business. The reduction in the earnings of the corporation in 1903 was, of course, due to the material change which had taken place in the condition of the iron and steel industry. The business of the subsidiary companies, like that of outside companies, suffered by reason of the falling off in orders. The difference in the management of this corporation from that of some outside companies was that, in the case of the former, the effect of dwindling orders upon profits was shown accurately from time to time in published official statements. That is the kind of publicity which investors have a right to demand, and which, in the case of this corporation, has been forthcoming without legal compulsion.

In the English Parliament Mr. Balfour has formally declared against the food tax, which is the real kernel of Mr. Chamberlain's fiscal scheme, because it is the only possible basis for colonial preferences. Unless Canadian wheat and Australian meat be favored, the whole scheme falls to the ground, and, says Mr. Chamberlain, the Empire falls with it. Mr. Balfour is, therefore, a declared opponent of the colonial preference plan, and all those who support him in the coming elections will do so on that basis. Mr. Chamberlain's following has defined and catalogued itself. He can count on one hundred and ten votes, leaving the Premier about one hundred and sixty. Mr. Chamberlain's followers showed the other night in the House that they are irreconcilable, when they compelled Mr. Balfour to withdraw a resolution initiated by himself, which condemned the food tax. Therefore Mr. Chamberlain and his hundred and ten will go to the country on the food tax, and Mr. Balfour will oppose it.

From the erstwhile Conservative and Unionist ranks there emerges a third party—that led by the Duke of Devonshire in the Lords, and by Winston Churchill in the Commons. The shade of Lord Randolph Churchill broods over this third party, since he was as hostile to Mr. Balfour as to Mr. Chamberlain, and would infallibly have become Prime Minister had death not cut short his brilliant career. There can be no doubt that, in the confusion and dislocation of these three parties, the Liberals will make substantial gains; the more so that many fine old Tories, disgusted with the present ministry, have declared that they will not stand for reelection. The important fact in all this conclusion is the definite knowledge that Mr. Chamberlain will lead a compact phalanx of a hundred or more votes, allowing for losses at the election. He and Mr. John Redmond will then be in somewhat similar positions, and with almost equally numerous and well-disciplined forces. It would be an acute stroke of statesmanship if they agreed to split their differences and divide the world between them. For it is evident that, whatever advantages distant Canada might draw from a food tax, Ireland, which is already the garden of England, would draw still greater advantages. Ireland is, therefore, financially interested in Mr. Chamberlain's success. It is quite conceivable that, if the matter were properly put, Mr. Chamberlain might so far overcome his distrust of home rule as to cooperate with Mr. Redmond.

It takes high powers of clairvoyance to ascertain from the cabled messages in the daily papers what is going on in the East. The papers have made ample provision for getting the news, but it is one thing to have a man in Manchuria or Korea or Japan who has a story to tell, and another thing to get his story over the wires by which stories must come. St. Petersburg discloses what it sees fit; Tokyo does the like; and Shanghai sustains its old reputation for imaginative work. Now and then we get a bit of news by cable which eventually turns out to be partly true, but as a rule the telegraphic news is desperately unreliable. Accordingly, the first-hand testimony of a living witness about anything concerning the Russo-Japanese war is welcomed with relief by discouraged readers. Such a bit of testimony appears on another page of this issue of the WEEKLY, in Mr. Melville E. Stone's account of conditions at St. Petersburg at the time the war broke out. Our readers will find in his story a particularly lucid exposition of the causes of the war and of the reasons why war at last took Russia so much by surprise. Mr. Stone, whom our readers know as the general manager of the Associated Press, tells of being at the royal ball on Monday night, a week before the Japanese attacked the Russian ships at Port Arthur. It was a magnificent ball. The Czar spoke to Mr. Stone, and hoped he was enjoying himself. Mr. Stone said it did not look like war to see so vast an assembly so intent on pleasure. To which the Czar replied, "But remember the Duchess of Richmond's ball the night before Waterloo." They both laughed, but the Saturday following the Japanese ambassador, under orders from home, asked for his passports, and on the following Monday night fighting began.

Addressing the Yale students in Battell Chapel on March 13, Bishop Potter talked of the prevalence of surprising unfamiliarity with the Bible. He told of stopping at a Christian home in Massachusetts, where he asked for a Bible, and found there was none in the house. He told of a group of young men discussing Kipling, none of whom could tell what the curse of Reuben was; and of a Washington dinner party where an allusion to the widow's cruise stumped all of the guests except the one who made the allusion. But he also said (hoping that he would not be tried for heresy for saying it) that the great religious reaction following the Reformation tended to place the Bible in an artificial position, putting in place of an infallible man an infallible book whose authority was final. We infer that in the Bishop's opinion the Bible is not an infallible book. He certainly thinks it is not so familiar to contemporary readers as it should be, but the fact — if accepted—that the book is not infallible is not at all an argument against its being made familiar to all readers in our part of the world who pretend, or aspire, to pass for educated persons.

Readers ought to know the Bible thoroughly, but they ought to know it for what it is, and nothing that modern scholarship can disclose about its derivation and authorship should be either shunned or concealed by its friends. That the rising generation should know it less familiarly than their fathers did is a loss, but unless they know it more truly and intelligently than their fathers did, it will not be a loss that is entirely without compensations. It will be observed that the Mormon chiefs who have been testifying recently know their Bibles well. It can hardly be doubted that the old habit of accepting as authoritative and infallible everything between the covers of the Bible was one prevailing fact that made possible the astonishing careers of Joseph Smith and Brigham Young. They simply adapted a prevailing habit to their own uses. They could hardly have made their forged Bible go except among people who were trained from infancy to accept a Bible without question as a book to be taken as it stood as the handiwork of the Deity, and obeyed as their preachers interpreted it. The Old Testament is a remarkable depository of ancient tradition, history, and literature. To know it familiarly for what it is is vastly worth while. To worship it, in conjunction with the New Testament, as a fetich, was always a mistake, and has always, at times, led ignorant people into error, and enabled astute and unscrupulous deceivers to beguile them.

Justice Holmes, in his dissenting opinion in the Northern Securities case, declared his satisfaction that "only a majority" of his brethren adopted an interpretation of the law which, in his opinion, would disintegrate society, as far as it could, into individual atoms. Justice White confessed to the conviction that the case involved principles which, as stated by the majority of the court in the principal opinion, were "destructive of the government, destructive of human liberty, and destructive of every principle upon which organized society depends." Not only on the gridiron is the strenuous life pursued. In councils of the learned, too, it may, at times, intrude. Identity of judgment, then, turns less on what is true than on the power of several minds to catch one point of view.

Some Recent Views of the Negro Problem

In a paper on "The Negro," contributed to the March number of *McClure's Magazine*, the author, Mr. Thomas Nelson Page, insists that the future of the colored race is the Southerner's problem, and that the Northern whites should stand aside and let the Southerners solve it. To start with such a premise is a very grave mistake. So long as the Union lasts, and the Federal Constitution is upheld, it is obvious that the political future of the negro is a matter of considerable concern to the Northern whites. At present the number of Representatives in Congress and of Presidential electors—if we exclude the two electors-at-large corresponding to the United States Senators—allotted to Louisiana, Mississippi, and South Carolina, are proportioned to the respective populations (including both the white and colored elements) of those States. As a matter of fact, under the new State Constitutions of those commonwealths, the Representatives in Congress and the Presidential electors allotted to those States are chosen by majorities of the white voters alone, the colored citizens being, practically, disfranchised. As a matter of law, it is questionable, to say the least, whether the United States Supreme Court will ultimately sanction such a virtual disfranchisement of the colored race, which certainly was not contemplated by the Fourteenth and Fifteenth Amendments of the Federal Constitution. We repeat that, under such circumstances, to assert or to imply that the political future of the colored race is exclusively a Southerner's problem is a serious mistake. Not only are Northern whites plainly interested in the solution of the problem from a political view-point, but it is equally obvious that, only by appealing to their intelligence, sense of equity, and racial sympathy, can Southern whites hope to generate such a volume of favorable public opinion at the North as will restrain the United States Supreme Court from invalidating the State Constitutions of certain Southern commonwealths, and as will also restrain Republican majorities in both branches of the Federal Legislature from passing force bills whereby the military power of the country would be used to compel the wholesale admission of colored citizens to the franchise. These are some of our reasons for thinking that Mr. Thomas Nelson Page is on the wrong track when he tells his white brethren at the North that the solution of the negro problem is no concern of theirs. We ourselves hold the opposite opinion. We believe that all white men in this country who have at heart the maintenance and development of civilization are jointly interested in effecting such a workable and permanent adjustment of the relations between the colored people and the whites as shall assure to the blacks opportunities of industrial and educational progress, and of gradual elevation in the social scale, while safeguarding the political and social ascendency of the white race. Only by cordial cooperation on the part of whites, North and South, will the negro problem ever be solved, complicated as it is by constitutional requirements of doubtful wisdom and expediency.

We pass from Mr. Page's postulate, which would be absurd if it were not calculated to be harmful, to an earnest and fruitful discussion of the subject by another Southerner, a native of Kentucky, Professor Nathaniel Southgate Shaler, now of Harvard University, who devotes some eighteen pages of his new book, entitled *The Citizen*, to an examination of the negro question. Professor Shaler begins by pointing out that the negro is here to stay; that we can never rid ourselves of him by deportation, and that, in fact, we would not if we could. To the toil of the blacks we owe the greater part of the agricultural products of ten States, and somewhere near a sixth of the fruits of all the tillage of this country. For many years there was, indeed, a hope that the negroes would in some way disappear, either by returning to Africa as colonists, or by fading away before the competition of the whites, in the manner of other primitive races, or through the effects of the Northern climate, which was supposed to be deadly to all tropical folk. It is now certain that they will not fade away; their annual gain in numbers appears to be quite as great as that of the white population. Experience also shows that the blacks are unwilling to return to the land whence our forefathers brought them. To send them forth against their will would be an iniquity which no civilized people could perpetrate. Moreover, we repeat, we could not spare their services. For these reasons they are to abide in this commonwealth, to help it or to harm it, as the whites, who are still the masters of their destinies, shall in large part determine. Professor Shaler is by no means one of those who hold that at present the blacks are, as a body, qualified for a citizen's functions. He does believe it, however, to be the duty of every true white citizen to see what can be done to help this people, so that they may be set upon the way of ultimate advancement to the dignity of citizenship.

How shall this be done? The question cannot be answered without an adequate knowledge of the history of the blacks in the United States. Professor Shaler reminds us that, when the first European colonists settled in this country, nearly three hundred years ago, they at once found themselves in grave need of laborers. They were themselves few in number, and had to win a wilderness to their needs. Experiments with indentured white men proved that a sufficient supply of labor could not be procured from the mother country, which itself was still scantily peopled. Experience also shows that neither reward nor punishment would make an effective laborer of the red man. At this stage of an attempt to solve a problem seemingly insoluble, the English colonists discovered, as the Spaniards had discovered before them, that at the price of a few strings of beads or a gallon of rum, a man could be bought in Africa who would be fairly docile and an excellent, enduring laborer. The average cost of purchasing Africans and of transporting them to the American coast was but a few dollars—scarcely more than the expense of bringing cattle across the sea. As soon as this source of labor became widely known it was turned rapidly to account.

Here we are cautioned by Professor Shaler not to judge of the moral, any more than of the economic, side of the slave trade, as we should if the business were transacted in our own time. All our ideas as to the evils of the institutions of slavery, when the sufferers are of an alien and lowly race, are very modern—not much more than a century old. They constitute a part of the later gains in the field of morals. To our ancestors of the seventeenth century the process of enslaving savages was about as much a matter of course as the capture of wild beasts. Attention is also directed to the fact that it cannot be fairly maintained that, in the seventeenth and eighteenth centuries, the enslaved negroes were debased by the change from their native countries to America. Professor Shaler points out that, on the contrary, they gained in opportunities of life, for they came into contact with a superior race; they were thus trained out of barbarism and into a Christian civilization. So that they and their descendants had a chance of rising to a plane of life which has never been attained, and most likely never will be attained, by others of their kind. Another point often overlooked, but upon which due stress is laid by Professor Shaler, is the help which the negroes, considered as laborers, gave to the colonies south of the Hudson, and, in a less degree, to the more northern settlements as well. This help was of the utmost value to the development of the English power on this continent. There is, indeed, grave doubt whether our people could have maintained their place against the Indians, the French, and the Spaniards without the assistance they derived from the gentle and laborious folk from Africa. The political conditions of the time were such that the English colonists needed quickly to become strong, and the needed strength could not have been won by their own hands. Thus, while we of to-day see that there was an immoral quality in the slave trade, it for a time proved exceedingly helpful to a good cause.

Professor Shaler proceeds to testify from his personal experience that the system of slavery in this country during the term of its existence—somewhat more than two centuries—was, on the whole, as little iniquitous as an institution in its nature essentially evil could well be. The masters were generally merciful. Their close relations with their servants broke down the instinctive dislike which is so effective a bar to sympathy where white men are brought but casually in contact with black people. Where a black was a household servant or a laborer on a small plantation looked after by his master, he generally had an opportunity, such as has never been given to any other primitive man, to rid himself of savagery and to learn the most important lessons of a Christian civilization. That he has been lifted in less than seven generations to where we now find him, to an average station that no savages have ever acquired, is due to the instruction which was forced upon him as a slave, and could not have come to him under other conditions.

Passing to the problem presented by the emancipation of the negro and the reconstruction legislation, Professor Shaler begins with the assumption, unequivocally declared, that the social recognition of negroes ought not to go so far as to assure their admission to the homes of the whites on the same basis as determines the entrance of persons of our own race. It is, indeed, pronounced very undesirable that the two peoples should ever be linked by marriage, for the offspring of such marriages are almost always weak and short-lived. Whenever whites and blacks have formed a mixed race it has proved decidedly inferior to either of the parent stocks. We thus have to accept nature's limitation on such intercourse, yet it is a limitation that need not bear hardly on either case, because it is for the best interests of both.

In Professor Shaler's opinion, it is the part of the far-sighted, conscientious citizen at the North, as well as at the South, so to deal with the negro problem as to promote the education of the blacks in ways that will serve to fit most of them for the modest yet honorable position of trained workmen, leaving the ordinary instruments of the higher education accessible to the abler colored youths, as they should be to all who are qualified to receive such schooling. At the same time, the fair-minded white should protest against that indiscriminate dislike of negroes as a race which all Americans, except those who have been brought into intimate relations with them in their youth appear to feel. That the instinctive prejudice, though strong, is not ineradicable, is shown by the close and sympathetic relations which were often developed between masters and servants in the old days of slavery, and which

were the redeeming features of an evil institution. Professor Shaler, in a word, would make white people at the North, as at the South—and more especially at the North—recognize that the blind dislike of any man on racial grounds is unworthy of them. He considers it, in fact, disgraceful that, large-minded as Americans in general are, so many of them should be influenced by a motive essentially brutal—one from which the cultivated peoples of the Old World have long ago escaped.

Judge Parker and the Democratic Nomination for the Presidency

SOME of the friends of Chief-Judge Alton Brooks Parker, of New York, think that they see a resemblance between his position at the present time and that occupied by Governor Grover Cleveland, of the same State, twenty years ago. Mr. Cleveland was at that time unknown to the national Democracy; it was, indeed, reported that he had never been in Washington. Even in the State of New York he had been very little known before 1882, outside of Erie County, in which he had been successively Sheriff and Mayor of Buffalo. What suddenly gave him distinction was the victory gained by him in 1882 over Judge Folger by a phenomenal majority, due largely to the abstention of "Half-Breed" Republicans from the ballot-box. But for that majority, which proved illusory, he would never have been considered a candidate for the Presidency in 1884. It is also true that, although Sanford E. Church, a former Chief Judge of the Court of Appeals, played a great part in New York politics, and was often talked of for the Governorship, and even for the Presidency, it is improbable that Judge Parker would have been mentioned for either office but for the fact that in 1897—the year after McKinley carried New York by a plurality of 268,000—he was chosen chief justice by a plurality of nearly 61,000, a plurality mainly due to the circumstance that the Low Republicans in New York city did not vote for his Republican competitor. Judge Parker's friends go on to argue that, if undivided support had been given to Mr. Cleveland by the New York delegation to the Democratic national convention in 1884, he would have been received with more enthusiasm throughout the nation, and would not have come within a hair's breadth of losing the State of New York in the ensuing November. They want, if possible, to save Chief-Judge Parker from the pitfall which so nearly proved fatal to Governor Cleveland, by allaying the opposition of Mr. Charles F. Murphy, the leader of Tammany Hall, and thus securing a unanimous delegation to St. Louis. There is no doubt that if this plan could be carried out Judge Parker's chance of receiving the nomination for the Presidency would be materially improved.

There is another point of view from which the present situation may be instructively compared with that of 1884. During the campaign of the year last mentioned, Samuel J. Tilden was yet alive. He was believed by his party to have been elected President in 1876, and all Democrats also recognized that the Cincinnati convention had made a grave blunder in 1880, when it nominated General Hancock, instead of ex-Governor Tilden. But for the fact that in 1884 Mr. Tilden was known to have become seriously weakened, mentally as well as physically, and to be, indeed, very near to death, he would unquestionably have commanded the zealous support of the New York delegation, and would have been the nominee of the national convention. No protest on his part would have availed. The party would have conscripted him to be its standard-bearer. We need not point out that, in the eyes of the national Democracy, Grover Cleveland, the only man who, since the civil war, has reared the Democratic ensign on the White House, holds to-day an even loftier position than was occupied by Samuel J. Tilden twenty years ago. Moreover, while the latter was in the last stage of decrepitude, the former is still in the prime of physical and intellectual manhood. Under the circumstances, Chief-Judge Parker is necessarily overshadowed by the ex-President to a far greater extent than Mr. Cleveland was by Mr. Tilden in 1884.

Especially would the vast difference in respect of national eminence between Chief-Judge Parker and ex-President Cleveland be brought out impressively should the Southern States make up their minds to exercise at St. Louis an ascendency proportionate to their contribution to the Democratic Presidential electors. What the masses of the Southern whites think of the ex-President was eloquently set forth on March 14 in the House of Representatives by Mr. Patterson of Tennessee, when he recalled the memorable fact that the only oasis in the desert of non-representation, which has been the unhappy lot of the Southern States since the termination of the great rebellion, was to be found in the two administrations of Grover Cleveland. During the eight years of his tenancy of the White House he never hesitated to go to the South for cabinet advisers, or for justices of the United States Supreme Court, or for ambassadors and ministers to foreign powers. Mr. Patterson reminded his colleagues in the House how, during Mr. Cleveland's first term, the Northern press teemed with denunciation of what it called the awful spectacle of the South again in the saddle. Mr. Cleveland, however, withstood the storm of objurgation, as he has withstood every other storm that has gathered about his head, and, by his unreserved recognition of Southern men, did more to extinguish sectionalism than any other man has accomplished. That Mr. Cleveland was human, and may have made mistakes, Mr. Patterson did not deny, but he laid stress upon the fact that those mistakes were not against the interests of the Southern people, and, whatever they may have been, they were but as specks upon the sun of his high character, glowing patriotism, and unblemished honor. Mr. Patterson did not mention Judge Parker's name, nor could it well be bracketed with that of the ex-President. It is, we repeat, a serious disability under which Judge Parker labors in the present canvass—the fact that the people cannot forget the ex-President's record. That was, as we have said, a disability to which Mr. Cleveland himself was not subjected twenty years ago, because then, Mr. Tilden, although living, had undergone permanent eclipse.

Worse than the Sixteenth Century

ALL Christendom has been taught to hate the sin committed in the New World by those ruthless Spanish and Portuguese conquerors and colonists who forced the natives to labor, to extract from mine and forest whatever there was that seemed more valuable than lives of men—gold at first, and long afterward rubber; who sometimes resorted to torture when the untrained laborers lagged or rebelled at their tasks; and, finally, almost exterminated the Indian population in certain regions, not because they really liked to see their servants perish, but because they did not know that hard work would kill the constitutionally feeble indigenes.

As Dr. J. Hampden Porter has shown in his chapter on native races (*United States of Brazil: A Geographical Sketch*, Washington, 1901), "Spanish and Portuguese taskmasters never understood how men, more vigorous in appearance than their own peasantry, could die from exertions to which the latter would have been fully equal." All Christendom, even early in the sixteenth century, when reports of the first European atrocities came out of the West, began to learn to hate that particular kind of sin, without loving the sinner; and as time passed sentiment in every civilized community little by little became so thoroughly educated in this respect—abhorrence of the most cruel methods of exploiting savage countries became so ingrained—that it was taken for granted that no Christian nation would ever again be identified with such practices. Accordingly, when *The Curse of Central Africa* was published last year, it seemed easier to believe that the two authors of the book had been guilty of gross exaggeration than that a thousand Belgian officials in the Congo Free State were actually now engaged in committing worse crimes than those which stained the names of Spaniard and Portuguese.

But it is impossible to overlook the testimony of Mr. Casement, British consul at the capital of the Congo State. His official report, recently issued by the British Parliament, and at the British Foreign Minister's request now being submitted to nearly all of the European powers, gives a circumstantial account of the horrors which he personally has witnessed, together with stories of systematic oppression which are apparently confirmed by the statements of missionaries and traders, and by admissions of the accused officials themselves. No good purpose would be served by reproducing here all the details of Mr. Casement's account; it is a revolting story of wholesale murder, maiming, and ingenious torturing. By such means natives who collect rubber in the African forests are driven to work hard enough to satisfy Belgian taskmasters; the black soldiers employed by the government punish with death or imprisonment children and women of their own race when the men fail to bring a sufficient quantity of rubber to the collecting stations. The same story is told of a total disappearance of the inhabitants of vast regions that was told by indignant Spanish missionaries who investigated the misconduct of the Spanish soldiery in the New World nearly four hundred years ago; the same uncertainty is expressed as to the number of aborigines exterminated, and the number of those who have fled away in terror.

We have carefully chosen our words when stating that Mr. Casement's report sets forth "worse crimes" than those which Las Casas, the Apostle of the Indies, described with the uncharitableness of a passionately zealous reformer, and which European and American historians have ever since vied with each other in recounting. If we must accept as equally true the assertions of Las Casas and those of Mr. Casement, then the woe inflicted upon Africans of the Congo region by the Belgians constitutes a graver offence, and one more injurious to the reputation of Europeans, than the woe inflicted upon the Indians in various parts of Latin America by the Spaniards, and upon those of the Amazon region by the Portuguese. A graver offence it must be called, be-

cause the conquerors of America were pioneers in this sort of exploitation, painfully learning by experiment what the Belgians of to-day learned at school: the latter stand accused, therefore, of sinning against the light, the clear teaching of history, the more humane general usages of the twentieth century. More injurious to the reputation of Europeans it must be called, because the charge is advanced (and powerfully supported by a letter from Lord Cromer to the British Foreign Office) that the system resulting in the extermination of negroes in Central Africa has been maintained "with the knowledge and connivance of the Congo government," which has the King of Belgium at its head; whereas the Peninsular governments framed, and made at least some earnest efforts to enforce, merciful regulations for the protection of the Indians. The junta which was summoned in Spain in 1511 declared, King Ferdinand approving, that the Indians were "a free people, a people to be Christianized, and not enslaved." Historians of the present time, who realize that Las Casas exaggerated frequently and with harsh emphasis, will not prejudge the case of the Belgians. The right to inquire into the abuses with which the Congo administration is charged; to separate truth from error; and to apply such measures of correction as the situation may be found to require, resides in the powers that created the accused government. A "free" state has *not* been established in equatorial Africa, in the sense that European adventurers entrusted with control there shall be at liberty to put twentieth-century civilization on a lower plane than that of the sixteenth century.

Railroads in the Philippines

SIR WILLIAM VAN HORNE has given some very good advice touching projected railroads in the Philippines, drawn from his experience in Cuba. Sir William declares that the success which has attended his efforts in Cuba is largely due to the methods employed in dealing with the native inhabitants. Had he and his colleagues been guided by a short-sighted policy of chipping off a little here and a little there, at the expense of the native, in Sir William's opinion he would have been doomed to failure. Seeds would have been planted which would have borne bitter fruit for generations. He endeavored not only to obtain, but even more, to deserve the confidence of the natives from the very outset, as the basis of operations. He employed only native labor in constructing the four hundred miles of the Cuban railroad, and awarded no building contracts. To have done so would, in Sir William's view, have been suicidal. His success in Cuba convinces him that the same policy should be followed in the Philippines if the dual object of the American government—to educate the Filipinos in respect for the Americans, and confidence in them, and, at the same time, to bring about the industrial development of the islands—is to be secured.

The government has three alternatives in constructing the projected Philippine railroad: it could either build the line with its own forces, or it could let contracts for construction, or, thirdly, endow with sufficient power some company whose interests would be the same as the government's interests. The annual cost to the American government of providing for eight hundred miles of Philippine railroad would be no more than the annual cost of maintaining a single regiment. If by the constructing of railroads the necessity of a standing army should be removed, and a native constabulary established, the inestimable benefit is apparent.

The Housekeeper's Talents

"A MERE MAN" has written a series of articles in the Baltimore *Sun* on the deficiencies of his womankind. No business on earth, he asserts, is so ill-managed as housekeeping; no other artisan is so stupid, so extravagant, so unprogressive as the housekeeper. There is much to be said on the side of the "Mere Man's" assumptions. Home, in the minds of most men, is synonymous for paradise, and doubtless it often falls short. On the other hand, there are many who, if they could be translated into paradise, would find halos unbecoming, a disagreeable glare to the golden streets, and milk and honey nauseous. Meanwhile, the "Mere Man" should have begun by taking stock of the demands made upon a good housekeeper.

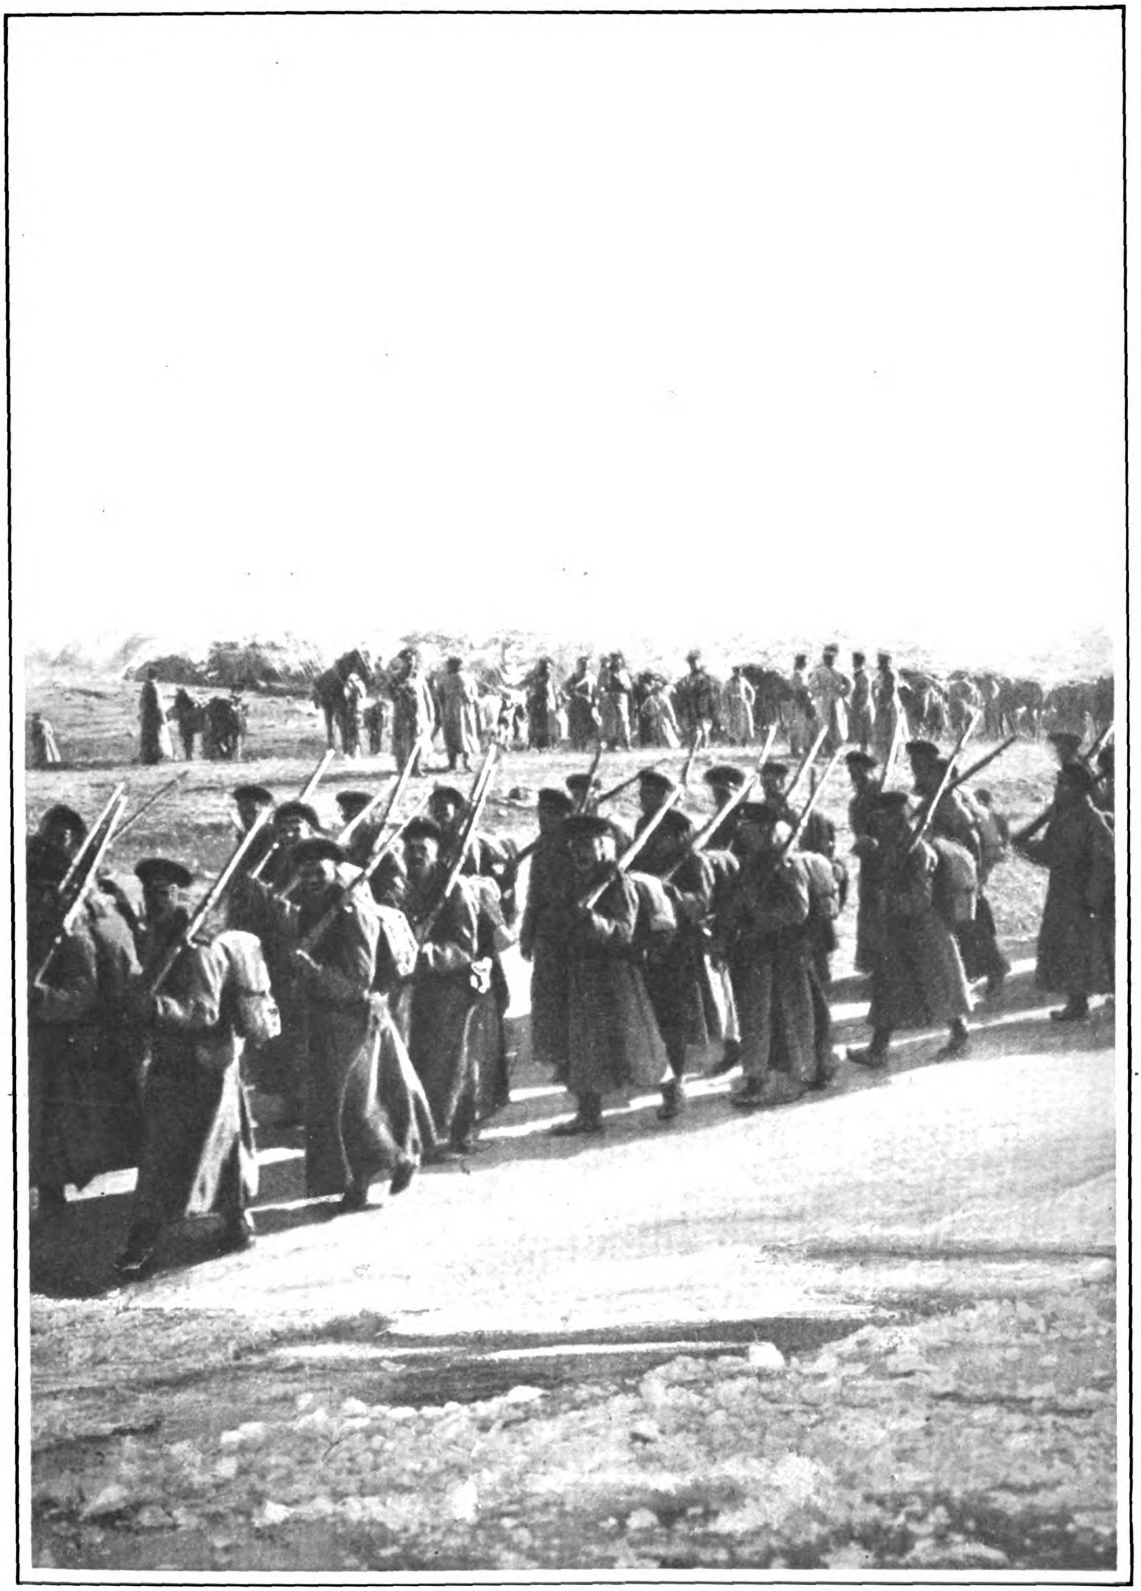
He simply states that men learn their business and improve and expand it, whereas a woman never learns her business and carries it on as badly in the twentieth as in the first year. But there are both imbeciles and unfortunates among men whose businesses deteriorate. There are bankrupts whose businesses fail. There are listless men and dullards whose businesses remain at low level from end to end of life. All such, too, are human and apt to find their counterparts among women. The main point of the "Mere Man's" contention is, however, that housekeeping is perfectly easy and would improve if put into the hands of men. There is an interesting and quite authentic case, known to physicians, of a man who married a very successful business woman. Her salary was so much larger than his that they reversed the order of things; she continued her business, and he ran the home. Within three years he was a total nervous wreck, and was warned by his physician that no man had the endurance to be a housekeeper. This was despite the fact that he was filling the functions of housekeeper pure and simple, and was let off the usual burdens of social life and child-rearing.

A housekeeper must have a good head for details, a commanding presence, dignity, patience, and self-restraint. From six o'clock in the morning until ten o'clock at night she must be ready to be a law—a quiet and yet prevailing law—to the two most unruly classes of humanity—children and servants. We are assured that she must know chemistry, hygiene, cooking, bookkeeping, trained-nursing, dressmaking, dyeing, fine needlework, embroidery, knitting, something of mechanics, carpentry, plumbing, marketing, and buying of all sorts, mending, from stockings to old mahogany, cleaning of all kinds, including old brass, silver, nickel, marble, wrought-iron, paints, woodwork, chimneys, glass, stained-glass, and all sorts of laundry work, gardening, papering, picture-hanging, house-draping, care of animals, primary-teaching and kindergarten work. There are housekeepers who, in addition, prepare their sons for college and earn their own dress-money. The housekeeper must also keep young and good-looking, be bright and interesting, and interested when her husband comes in from business, and carry on a large social connection. Is a "Mere Man" sure he wants to apply for this position?

Mrs. Gilman has pointed out in her recent book, *The Home*, that housekeeping and home-making are passing through a transitional period. There is nowadays no such thing as a class of trained servants. In this country a domestic servant proud of her work and her position is unknown. In England the genus is fast dying out. Domestic work is slowly shifting over to machinery, or being done by organized public labor, such as laundries, bakeries, caterers, women's exchanges. While this transitional period lasts every gap must be filled by the untiring, ever adaptable housekeeper. She has no choice. She cannot resign her position. She must stick to the business and see the difficulties through.

The competent housekeeper, the "Mere Man's" experience to the contrary, keeps inventories of all her belongings, of the linen closet, the china-pantry, the silver, the kitchen, and cleaning utensils. She goes over it twice a year, correcting and renewing, and sets aside a given sum for depreciation and unavoidable wear and tear. The average housekeeper is a better housekeeper two years after she has gone into the business, and improves steadily as time goes on. Despite enormous difficulties she usually has a very smooth-running machine after five or six years.

The wonder of it all is not that housekeeping is so badly done, but that considering the lack of proper technical training of domestic servants and the excess of talents demanded for the business, there is still such a preponderance of cheerful, beautiful, orderly homes.



Men's Opinion of Women

A CORRESPONDENT, whose letter is printed in this issue of the WEEKLY, complains, in discussing woman suffrage, that most men who consider women in general as unequal to a share in the affairs of government except their own wives, as to whose exceptional capacity they are always ready to testify. Why is this? she asks. Is it merely such gallantry as monogamy constrains, or is it the sane judgment of a judicious man upon the capacity of the woman with whom he passes his life?

Conceding for the sake of argument that the fact is as our correspondent states it, it is conceivable that married men form their opinions of their own wives by close personal observation, and base their notions of other women on what their wives tell them. Women are usually much more decided and comprehensive in their views about other women than men are, and that is quite natural, for, as a rule, their opportunities of observing other women are much better as well as more frequent than those of men. It is reasonable that a married man should lean on his wife in shaping his ideas of other women.

But the argument that women ought not to vote because their mental capacity is not equal to that exercise is seldom used in these days. It is ridiculously easy to find a multitude of women who are fitter to vote, so far as mental capacity goes, than the average man. It is easy, too, to find individual women with a decided interest in, and talent for, public affairs, who ought to vote if they care to. Still, it is argued, and we think soundly, that the mass of women are not, on the whole, as well qualified to vote as the mass of men, and to force the suffrage on all women would swell the electorate enormously without any gain in average intelligence. It is possible, of course, that the average woman might learn to vote intelligently and honestly. So might the average man, but his proficiency is not great enough as yet as to encourage the hope that the electorate can be improved by watering it.

The Strength of Japan

An account of the rise of Japan as a world power, her military resources, and the organization and strength of her army and land forces in time of war

By Charles Johnston

WE are only beginning to appreciate the significance of the New Japan. Taken in its largest sense, it means the rebirth of the Oriental nations, not only the Mongolians, but also the natives of India, Persia, and Central Asia. We may not recognize it yet, but the time is at hand when we shall have to receive and treat all these races as equals, dropping from our creed the article of white supremacy. Within less than forty years Japan has forced her way to the front, asserting her jurisdiction over Europeans and Americans within her dominions, allying herself with the first naval power in the world, and gaining recognition as a fighting force of the first value. Whatever be the merits of the present controversy in the Far East, whatever be the outcome of the struggle for Korea and Manchuria, the present war will give the Asiatic a new standing among the nations, and other Asian lands will have their share in this promotion. Certain Oriental nations have triumphed in one or another department of culture: the Arabs in algebra and chemistry; the races of India in philosophy, geometry, and astronomy; the Chinese in artistic craftsmanship; yet none of these victories of peace sufficed to gain for them equal recognition and just dealing from the Western nations. Nothing but armed force would suffice, and Japan's significance lies in this, that she is the first Asian power thoroughly to master the modern science and mechanism of war. Her full international standing was gained, not so much by her Constitution, as by the conduct of the Chinese war, and the bearing of her army in the march to Peking.

The Japanese army has thus its universal significance, as well as its present importance in practical world politics. Viewed in this light, we can see that its development, like that of the New Japan itself, was made possible by the concurrence of several things—first, the feudal system, which bred a governing class, an order of men accustomed to command and to be obeyed, from whom the generals and officers of the army, as well as the statesmen and lawgivers, are drawn. Japan has perpetuated her governing class in the present orders of nobles and gentry, the latter corresponding to the feudal *samurai*. Second, we must count the immense class of small farmers, who for ages have had to strain every nerve, to exert the utmost self-reliance, to make a living from their two-acre farms; from this sturdy class, with their out-of-door training in a rigorous climate, are drawn the tough and wiry privates of the Japanese army. A third element of success lies in the Japanese gift for craftsmanship, the perfect command of materials exercised through centuries, the skill in working metals, which made it so easy for the Japanese to construct and run their own arsenals, and even invent and perfect their own service rifles. Finally, we must count the entire openness of the Japanese mind. They had nothing to forget, nothing to unlearn; Japan had never produced a religion to turn men's minds to dreams of another world; she had no poetry, no literature, no music, no outlet at all for moral energies, beyond a trick of decorative art, pleasing but never profound; therefore all her mental energies were instantly available when circumstances, in the form of Commodore Perry's squadron, brought her the message of modernity.

Since that time Japan's energies have flowed wholly in material channels; nothing has been drawn away for the finer and deeper part of life. She wastes little time over religion; she has no romanticism; she has no gift for poetry of feeling or expression, and leaves the higher criticism severely alone. Turned wholly to the material world, possessed of boundless energy, and with a guiding class of superior men, her highly trained and finely equipped army is the almost inevitable product of the conditions of her life. The first thing which makes it a success is immense organizing power. The fifty millions of Japanese are not merely an Oriental mob—they are all ticketed, recorded, and catalogued by a system of registration more complete than that of any Western land. The number of males arriving at the age for military service is known with mathematical exactitude, and the conscription works with German precision. From Germany, in fact, Japan has drawn the form and organization of her army, just as her navy, even including the best of her battle-ships, is a British creation. The division of the Japanese army into the active army, the *landwehr*, and the *landsturm* carries us straight to Prussia, and the age for conscription is the same—twenty in time of war, seventeen in special emergency, with liability for service extending to the fortieth year. The uniforms and accoutrements carry out the German idea; and again and again visitors to Japan have commented on the German appearance of the Mikado's troops, the German precision of their drill, the truly Teutonic mastery of detail, shown in the organization of their military districts, their general staff, their military academies and schools.

Japan has seven great military centres, scattered through the four chief islands, all connected with each other and with the ports by railroads, which thus make the rapid mobilization of the whole force comparatively easy. The most northern army centre is in the half-desolate island of Yezo, or Hokkaido, which stretches northward towards frozen Sakhalin; Sapporo, a city of forty thousand inhabitants, is the seat of its barracks, fortress, army stores, and drill-grounds. Thither the hardy recruits of the northern island wend their way, and for three years their lives are those of Oriental Germans—eternal drilling, cleaning of accoutrements, rifle practice, artillery drill, the hard routine of a soldier's life. Their barrack buildings have a wholly modern and European air, the uniforms are very like those of the Prussians, and, at a short distance, one might imagine them sturdy recruits of the Kaiser and the Fatherland. On one point I am without information. Japan's music has been described as "strumming and squealing," and I know not what barbaric melodies take the place of the "Wacht am Rhein."

In Honshiu, or Hondo, the great central island of Japan, as

large as Great Britain, and more densely populated on the average, there are five great military centres. The most northerly is at Sendai, a city of eighty or ninety thousand inhabitants, some two hundred miles north of Tokyo, on the railroad leading up towards Yezo. Tokyo itself, with its population of a million and a half, is the centre of the next military district; the local arsenal is extremely up to date, turning out supplies of the new Japanese service rifle, an improvement of the locally invented Murata, and making ammunition at the rate of a million rounds a day. Nagoya, with a quarter of a million inhabitants, on the railroad west of Tokyo, is the next great garrison town; and thence the railroad continues to Osaka, on the Inland Sea, where the cannon and many of the small-arms are made. Osaka is the second town in the empire, with nearly a million inhabitants, and its garrison is one of the strongest centres of military force in the Mikado's dominions. The fifth army centre in the great island of Hondo is at Hiroshima, a town with a hundred and twenty-five thousand inhabitants, at the extreme southwest of the island, near the Shimonoseki Straits, and therefore opposite Fusan and southern Korea. Lastly, there is Kumamoto, in the southern island of Kiushiu, close to the great port of Nagasaki, which for generations was the one door to Japan for the outer world.

Soldiers of Japan's Modern Army

Each one of these seven cities, from Sapporo in the northern island to Kumamoto in the extreme south, is the heart of a military world, with its roll of conscripts, its bureau of enrollment, its depot of arms and ammunition, its drill-grounds, in which the sturdy sons of farmers are marched up and down in their German uniforms, taught to expand their chests with extension motions, formed in ranks, in squads, wheeled to the right, wheeled to the left, broken into the double—in short, turned into highly finished military machinery of the most approved Teutonic type. If we keep in mind the situation of these seven towns, strung along the railroad which is the backbone of Japan, it is quite easy to see how well the whole thing is planned, for the two purposes of ample recruitment and easy transport to the sea. It is easy to realize how, by merely following rules and schedules long ago worked out, the reserves of time-served men could be gathered into the barracks in each district, uniformed and fitted for service, and sent south by train to Osaka and Nagaski, on their way to the ports of Korea.

The brain of the Japanese army is the general staff at Tokyo, made up of men who have given years to the study of German military science in the school of von Moltke, and who have the old feudal gift of commanding men in large masses. There is a Staff College, where the brightest officers study the advanced branches of strategy and tactics; there is also a military academy, a cadet school, and schools of artillery and engineering. No element is spared which makes for success; and throughout the whole there is the same fervid energy, the same intense concentration, the same gift for material details and material laws, gained by the entire exclusion of the imaginative and emotional nature, of all the softer elements of life.

According to the last available figures, the Japanese active army, distributed in twelve divisions through the seven great garrison towns, is directed by eight thousand officers: the military hierarchy culminating in two field-marshals, Marquis Yamagata and Marquis Oyama. There are three full generals — Viscount Nozu, Viscount Sakuma, and Count Katsura; twenty-one lieutenant-generals, and forty-eight major-generals complete the list of general officers. The Emperor Mutsuhito, popularly known as the Mikado, or "Honorable Gate," is the titular commander-in-chief of the army. Under the Emperor is the Minister of War, Lieutenant-General Terauchi at present filling that post. Then comes the actual commander-in-chief of the army, with his chief of staff, and so on, in a fashion undistinguishable from that of the best-equipped Western nations.

As the rank and file of the Japanese army is drawn from the small peasant class, who have no cattle, and live on the produce of their tillage, the army is nearly vegetarian in habit, and is less difficult to support in the field than an equal body of beef-eating British troops. Nevertheless, the task of feeding the immense body of men carried by Japan's sixty or seventy transports from Nagasaki to the various ports of Korea is a sufficiently formidable one, calling once more on the Japanese power of organization which has played the supreme rôle in the nation's

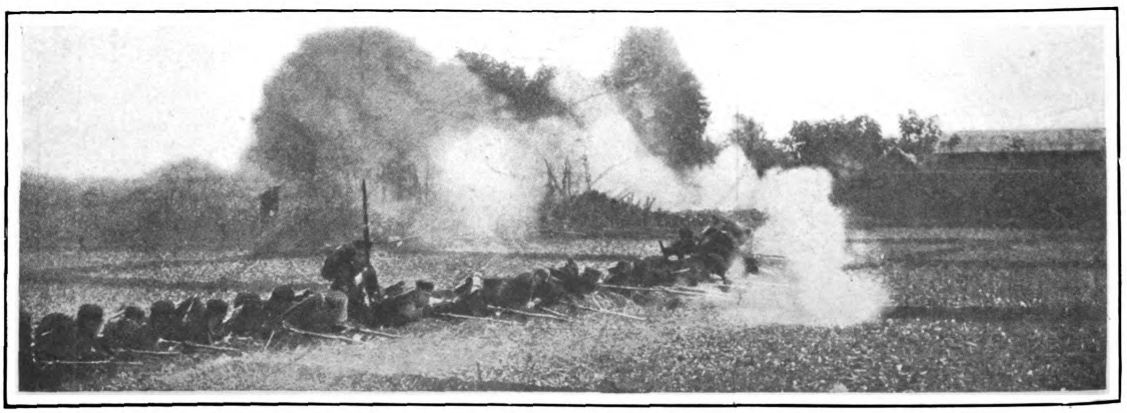
modern growth. It may be stated as a general truth that no nation has ever satisfactorily handled the difficult question of transport and commissariat, unless it has first gained success in commerce and trade. For the problems of transporting troops and feeding them are analogous to the practical problems of commerce, and draw upon the same faculties. The fact, therefore, that the Japanese have built up a series of successful steamboat lines, and have within a brief period raised their exports to the value of $130,000,000 a year, and their imports to an even higher figure, demonstrates their ability to grapple successfully with the more difficult problem of conveying a hundred thousand men to Korea, and clothing, feeding, and sheltering them after they get there.

The food problem is lightened by the fact that Korea has for years been the granary of Japan, so that it is simply a question of buying rice on the spot, instead of carrying it in ships to Japan. Of course there is in either case the question of payment; but the Japanese war loan has been so rapidly subscribed for, and the private contributions have been so great, that there is no immediate stress in that direction.

We all recognize the fact that the Japanese general staff, and the Japanese army as well, will be on well-known ground during most of the coming campaign. The names of Chemulpo, Seoul, Pingyang, Anju, the Yalu, Port Arthur, and Newchwang, which are so familiar to us now, all had their place in Japan's one great modern contest—the Chinese war of ten years ago. It would be fascinating and full of interest to go over the ground in detail, from Fusan and Wonsan to the heart of Manchuria, recording the different exploits of the Japanese armies at each point, telling of the really wonderful and valiant resistance of the greatly inferior but brave Chinese troops who opposed them; and from the successes and shortcomings of ten years ago attempting to generalize as to the military qualities and deficiencies of the Mikado's troops, and their probable performance in the immediate future. This would, however, carry us too far afield. We may say that in native toughness, absolute lack of nerves, and personal daring, among both officers and men, the Japanese troops showed well. In the material problems of transport and commissariat they were remarkably efficient, even through the very trying months of a Manchurian winter and a very severe and trying campaign. In all that books can teach or academies instil of military art they also excelled. But, so far as one can discern from the detailed histories of the war, there was nothing that could rightly be called military genius or inspiration—only talent of a very high order and endless energy vigorously applied. The great interest of the coming months will be to see in which of the two races lies the capacity of divination, the creative genius which finally triumphs in war, and which books and academies can only imitate and record, but never teach.

The great movements in the world's history have largely been determined by this quality, which was with the French in the days of the first Napoleon, but wholly failed them in 1870; which Marlborough possessed in an eminent degree, never since equalled in England; the quality that made Suvòroff and Skobeleff eminent in Russia; the power by which von Moltke conceived and led up to the battle of Sedan.



It is hardly necessary to say that we are not in a position to give accurate figures as to the number of troops at this moment under arms. The Japanese general staff, adhering to the Asiatic tradition of war, will neither tell the number of its troops or admit its losses. But we can make an approximation. The numbers of the Japanese army are limited, not by the difficulty of finding available conscripts, but by the cost of training them; many fine young men are refused every year, even after the most rigorous medical tests have eliminated the physically unfit. In ordinary circumstances something like fifty thousand recruits are accepted yearly, and are turned into barracks to be trained. As the period of active service is three years, it follows that Japan has about a hundred and fifty thousand men actually uniformed and in barracks, at the seven military stations described, at any given moment. These same men become reservists after their three years' service, and as they are reckoned among the first reserve for four years and four months, there will, at any time, be some two hundred thousand of these men, between the ages of twenty-three and twenty-seven, with three years' training to their credit. We may, in case of emergency, add the *landwehr*, consisting of men who have passed through the standing army and reserve; and as the term of service in this second reserve is five years, we shall thus have some two hundred and fifty thousand men, between the ages of twenty-seven and thirty-two, to add to the active army and first reserve. These men also have three years' service to their credit, and include the veterans of the China-Japanese war of 1894-5. It is probable, therefore, that Japan has half a million available and fully trained soldiers, all under thirty-three years of age, with much more raw or partly-trained material, made up of the able-bodied conscripts refused for lack of funds to train them in the active army.

Japanese Soldiers in Winter Quarters in Northern Japan

Japan will, naturally, keep a large body of troops in each of the seven garrison towns, and also in the numerous forts along the coast. Her immense coast-line, of nearly twenty thousand miles, will demand a considerable garrison at numerous points. Japan has, therefore, only a part of her total army available for operations on the mainland of Asia, in Korea, and Manchuria. How many will depend on circumstances, which are constantly changing.

It is probable that she has about a hundred thousand men now in various parts of Korea, chiefly between Seoul and Pingyang, with other bodies at Wonsan on the east coast, at Fusan in the south, at Masampo close to Fusan, and at various points between Fusan and Chemulpo. We are not in a position to say how many are at each point, and it would be inconclusive, though interesting, to say how many are likely to be in different strategic situations. Only after the war will the exact data be available, and it is unprofitable to replace them with surmises.

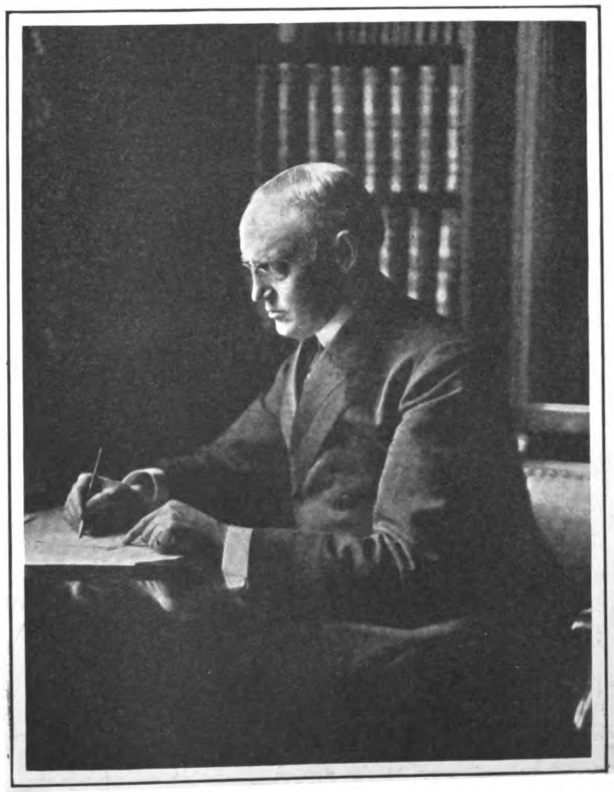
The Russian View of the War

By Melville E. Stone

General Manager of the Associated Press



IT happened that I was in St. Petersburg during the last days of the diplomatic negotiations between Russia and Japan, and during my stay I was honored with a private audience of the Emperor. In the course of the conversation he talked of some of the conditions and the outlook. While I am not privileged to repeat what was said, I believe that, by reason of his long-time commitment to the cause of universal peace and by reason of the special conditions existing, he did not want war, and that no large preparations were made by the Russian government for war. There were two great parties among his advisers—one led by Alexeieff and Bezabrazoff, with an element of the army and navy, who were for war; the other, led by Count Lamsdorff and ex-Minister de Witte, with Kuropatkin, the Minister of War, and, in fact, including almost the entire ministry, who were most anxious for peace. I do not think it would be fair to say the Emperor's views on the subject were influenced to the extent that he would have declared war, but I think he was misled by Alexeieff, who was his Viceroy in the Far East, and who did not believe that the Japanese would fight, and who therefore was opposed to making too many concessions to them. The consequence was that the negotiations, which the reader will remember were opened by Japan and not by Russia, and which were presented in the form of a demand by Japan for a consideration by Russia of proposals to maintain the independence and integrity of Korea and the embodying of these proposals in treaties—these negotiations went on to the crucial point before the fact was appreciated in St. Petersburg. A history of the situation shows that there were disputes along divergent lines, which were most natural on both sides, and which brought the two nations to the striking-point certainly before Russia appreciated the danger, because the Russians did not and could not appreciate the Japanese attitude. The Japanese attitude was this: In 1895 they were at war with China. As a result of that war they defeated the Chinese and took possession of Port Arthur. Then, upon the demand of Russia, Germany, and Great Britain, but chiefly of Russia, in order to maintain the balance in the Far East and to preserve the peace of the world, the Mikado, at a great personal sacrifice and humiliation to himself, creating a precedent the like of which had never been known before in world history, issued a proclamation, much against the wishes of his people, releasing the Japanese hold in Manchuria.

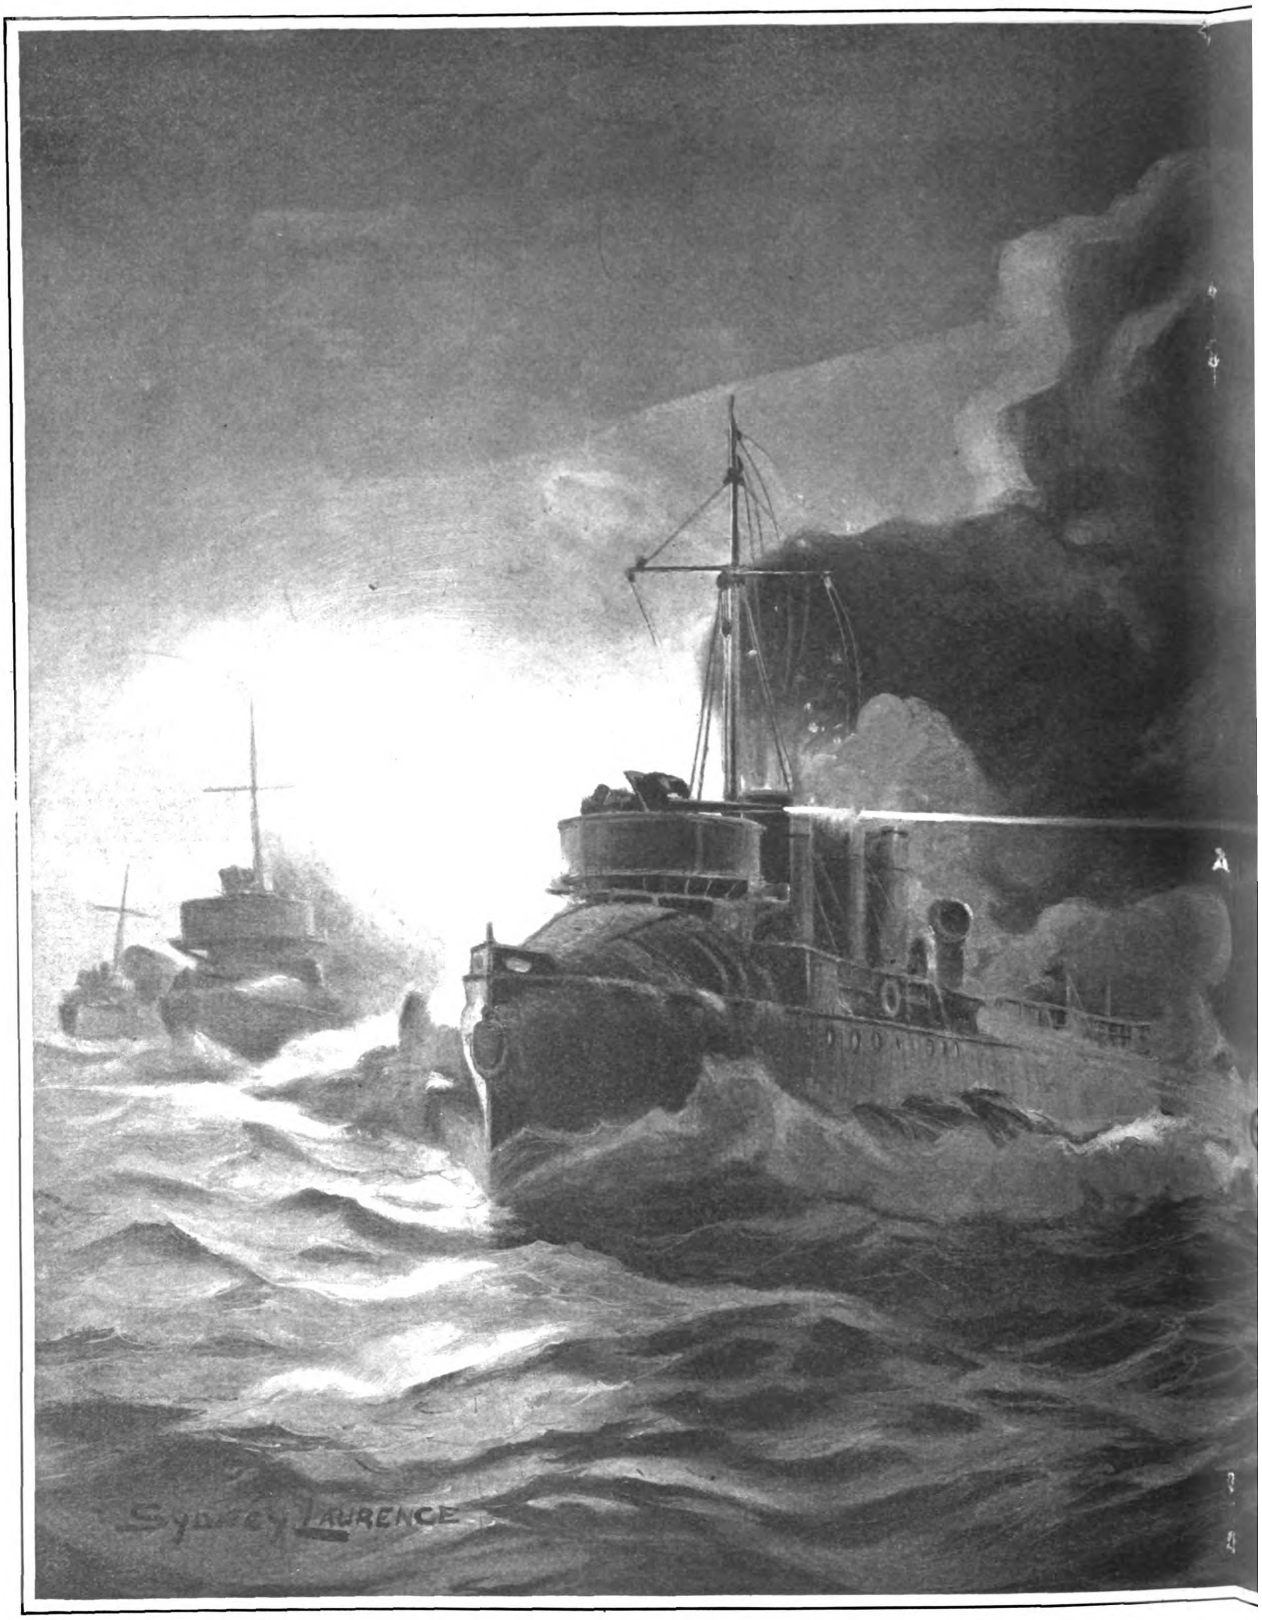
This was immediately followed by the organization of the Russo-Chinese Bank, and the lease in the name of the Russo-Chinese Bank of the territory over which the Trans-Siberian Railway ran to Port Arthur and Dalny. To the Japanese that looked very much like a demand that they give up Port Arthur in order that Russia might succeed them.

On the other hand, the Russians took an entirely different point of view. First of all they wanted an open port. They could not get through the Baltic, and the only passage from the Black Sea was through the Dardanelles. Vladivostok, their port in the Far East, is for more than nine months ice-bound. I would not say that this did not influence them; doubtless it did. At any rate, the Russo-Chinese Bank secured the lease. Their right to do this I think nobody can question. It was done entirely under the forms of law. Whatever complications subsequent events may have led to, that was the condition in which the world found Russia and Japan last summer when Japan asked for some formal negotiation which would alter the situation and give Japan a sphere of influence in Korea in return for Russia's occupation of Manchuria. At that time Russia, of course, was entirely satisfied with conditions as they were and was not anxious to enter into negotiations of any nature, and so she declined.

Russia was unquestionably influenced very largely in her attitude throughout the negotiations preceding the war by fear of the "Yellow Peril." As they said in St. Petersburg, if the United States, with 3000 miles of ocean between her and the Chinese, found it necessary to adopt a Chinese exclusion law, and if Great Britain at that moment was in the throes of a discussion as to whether they should adopt one for South Africa, how much more had Russia to fear, who had 3000 miles of Siberian border in direct connection with Chinese territory. The Russian workmen could not live and compete with Chinese cheap labor. Already the Chinese were peaceably invading Siberia, making it impossible for Russia to carry out her one great hope—that of making it possible to supply the fertile valleys along the eastern coast of Siberia with the surplus population from western Russia. I think their idea of Manchuria was to use it as a "buffer"—a country which should be occupied by Chinese, but under certain control by Russia. One thing they fought off most strongly was the demand of Japan and the United States for the privilege of making a settlement in Manchuria. Then the question of a neutral zone came up. Russia was perfectly willing to have a neutral zone, but they wanted it south of the Yalu River. Japan said, "No, we will make it on both sides." So the negotiations went on, Japan growing more impatient and demanding things which seemed to Russia almost impertinent, and Russia sitting still, saying, "We have no desire to negotiate anything." I think it is only fair to say that the Russians held the Japanese somewhat in contempt, and were therefore disinclined to enter into negotiations with them.

There were two other reasons why the responses to the demands of Japan were slow. First, because the Russian is temperamentally slow; he is never in a hurry. Second, because the Russian system of bureaucracy makes it impossible for the Russian government to act quickly. For years the government has always taken all sorts of reports from every one having anything to do with any matter of importance. If it is the building of a railroad, the matter is brought up before the Emperor. He immediately sends for his ministers, who, with their subordinates, down to the lowest man, issue their orders for reports. These reports come back from hand to hand until they all finally reach the Emperor. So when the Emperor was called upon to make answer to the most simple elementary demand of Japan, the whole subject had to be gone over by all the officials concerned. An order was even sent out to Alexeieff, who in turn passed it down to his subordinates for reports. This naturally caused long delays.

Melville E. Stone



General Manager of the Associated Press

Finally, on the night of the 4th of February, after months of negotiations, Russia sent her answer to the last demand of Japan, forwarding it to Alexeieff to go from him to Baron de Rosen, the Russian minister at Tokyo, to be delivered by him to the Japanese government. I saw Minister de Plehve that night at a social gathering and had some talk with him. I also saw M. Kurino, the Japanese minister at St. Petersburg, and I may say that nobody in St. Petersburg had the faintest idea that the situation was critical, and nobody dreamed that they were living over a volcano. The utmost calm prevailed. I talked with M. Kurino at the royal ball, which was held on the Monday preceding his departure from St. Petersburg, and I am perfectly sure he had no idea that war was imminent and that on the following Saturday he would present his demand for his passports. The ball was the most sumptuous they have ever had. There were 3300 people present. This, with the fact that there were 1500 waiters and 500 cooks and that each guest at the ball sat down to a hot dinner, gives some idea of it.

That night there was no idea of war. There was more or less solicitude in St. Petersburg lest the tone of the British press might encourage the Japanese

Books and Bookmen

By James MacArthur

THERE is no more modest man of letters in London today than Mr. Henry W. Nevinson, and yet there are few whose work is more worthy of deep and sincere admiration. What he has accomplished is meagre, indeed, but the quality of it is as fine gold. Mr. Nevinson has found journalism an exacting taskmaster, and only at intervals has he been able to roam at will in the field of literature. He has been for many years a member on the staff of the London *Daily Chronicle*, and during the Greek and Turkish war and the Boer war he acted as war correspondent for his paper. The fruit of these expeditions was given in his two books, called *The Thirty Days' War Between Greece and Turkey* and *Ladysmith: The Diary of a Siege*. For the past five years Mr. Nevinson has been the literary editor of the *Chronicle*, where his work often appears over his bare initials, though the marks of his style are sufficient to distinguish him as a writer.

Whether of necessity or choice, I have never ceased to regret that Mr. Nevinson should be called upon to spend his undoubted talents in anonymous journalism since I read his first book, *Neighbors of Ours*, published in 1895. It appeared on this side with the commonplace title *Slum Stories of London*. It is a masterly piece of work, and has never been sufficiently recognized. Among all the stories dealing with slum life I know of none to approach this volume for humor and veracity, for the realism of its human nature, and the stamp of truth which carried the conviction that in their blood and bones these "low" people were "neighbors of ours," and of like passions as ourselves. And in telling a story Mr. Nevinson has that simple power of relating an every-day occurrence which arouses fresh interest and imparts the touch of wonder which transforms the ordinary into the extraordinary. The humor is oftentimes grim and poignant with pathos, as, for instance, in the story "A Man of Genius." "My pore 'usband," says Amy, "why, 'e ain't 'ardly to be called a man, 'avin' nothink only a genius and a wooden leg." Sam comes home late one night with "a bit o' drink on 'im." "Next minute Sam's wooden leg 'ad carried away the lock, and 'e was in the room ragin' about like a quodded explosion . . . and yer could 'ear the clo's shriek as 'e pulled 'em in 'alves bit by bit." "That's all right," says the woman from the floor above, "'e ain't only breakin' up the things. That's a mercy for 'er. 'E's got a good 'eart, same as my own man, as 'ud break all the bits o' things in the 'ouse sooner nor lay a bloomin' finger on me. It's a blessin' to 'ave a man with a good 'eart." But these stories are not all bitterness and irony; there are bright bits of comedy and sentiment, and the humorous point of view is well sustained in the character of the spokesman of the tales, the ubiquitous coster, Jacko Britton. "Little Scotty," though somewhat irrelevant in the collection, one is almost tempted to pronounce a masterpiece; and for sheer humor nothing could be better than "Mrs. Simon's Baby." One story, "The 'St. George' of Rochester," would seem to indicate that Mr. Nevinson is capable of a more sustained effort in fiction than he has yet attempted. "In the Spring" is a beautiful idyll told with a poetic simplicity that is almost Wordsworthian. Old Groun'sel has been "had up" before the magistrate for an alleged attempt at burglary in the house of Mary Whitmore, "widder, three times married and left comfortable." In his defence, the simple-minded old man—"a 'armless lunatic"—says, "I was in the forest yesterday evenin' gatherin' up my plants, and on a sudden there comes over me the smell o' the May, layin' thick like a sweet-smellin' mist, the air bein' still and warm. All smells is good for the memory, but there ain't no smell in the world so good for it as the smell o' the May. So I says to myself, 'Every time as you smell that there May, you kind o' seem to go back to that Whitsun with Mary, as then was. Now, it bein' like that with you, ain't it likely enough as she'd go back after the same manner? If she got a smell o' the May, p'r'aps she'd call you to mind, for all you bein' a bit older nor what you was then.'" But Mary was not amenable to May blossom, and she resents the reference to her early lovemaking—"me a widder of three 'usbands as 'as always kep' 'erself respectable." The case is dismissed, and next morning old Groun'sel is found "layin' quite dead, curled up as if fast asleep in a cart under one o' the railway arches." A second volume of stories, different in character, called *In the Valley of Tophet*, appeared a year later, but their unrelieved gloom and depressing quality doomed them to unpopularity. The Valley of Tophet was a mining district, and the stories were for the most part grim and relentless studies of the lives of the miners. And yet they served to denote the author's power in dealing with the tragic commonplace. About two years ago he followed a pagan mood, and wandered with his vagrant fancy over the bosom of the warm earth, playing a tune on the pipes of Pan. *The Plea of Pan* is full of the wine of life, and is palpitant with the beauty and poetry of nature. But the best book of all that he has written is *Between the Acts*, a collection of strange little stories and dramas, of various themes, interspersed with lyrics and ballads, that has just been published, and which is deserving of serious attention from those who really care for the things that matter in literature.

Henry W. Nevinson
Literary editor of the London "Daily Chronicle" and author of "Between the Acts"

The title does not mean that these stories have anything to do with the theatre. "The pleasantest times in a drama are generally the intervals between the acts," says Mr. Nevinson in his preface. "In most cases the drama of life is also divided into acts, and only when the drop-scene has fallen are we conscious of the strangeness and significance of each division. . . . In the following scenes, then, I have tried to represent only certain casual episodes and situations which I have observed or imagined in the successive acts of a life to which fortune has granted a share of variety." Thus the first two sketches, to some extent more personal than any of the others, are memories of childhood and boyhood that have been recalled by the lifting of the curtain. The portrait of old Forbes, the Scotch gardener at his grandfather's, who "labored from morn till eve, always with the same rapt look, as one occupied with the burning depths of eternity that lurked below the garden beds," is next of kin to Stevenson's *Memories and Portraits*. These are the only essays in the book, but we could not spare them; indeed, since Stevenson, there is no other writer who has such a knack of picturesque writing and felicitous phrasing, of happy humor, "of joy in widest commonalty spread." Several stories like "Sic Vos Non Vobis" and "The Pinnacle of Fame" are offshoots of the journalistic life. "The Last Rag" is worthy of a place with the best of his slum stories. "In Twenty-Four Hours," an episode of the Greco-Turkish war, and "The Relief of Eden" and "Of Your Charity," inspired by the Boer war, are the most haunting and powerful stories in the book, excepting, perhaps, "A Little Honey," which is a novel in epitome. Some transient scene or passing word may have been the starting-point of these stories, which, treasured by memory, have been shaped by the imagination, and, to quote his own words, "suffused with a strange light and touched by a romance of happiness or sorrow, unobserved while the parts were being played." *Between the Acts* is a rare and memorable book, instinct with sympathy and charity for all men and women—a book that sends its shafts with sureness of aim between the joints and pierces to the marrow.

The Mormon Church on Trial

Following is an account based on the Reed Smoot proceedings before the Senate Committee of the trial of the Mormon Church, its attitude toward home life and marriage, its influence over its members, and the part taken by the Church in affairs of national interest

By Philip Loring Allen

WASHINGTON, *March 15, 1904.*

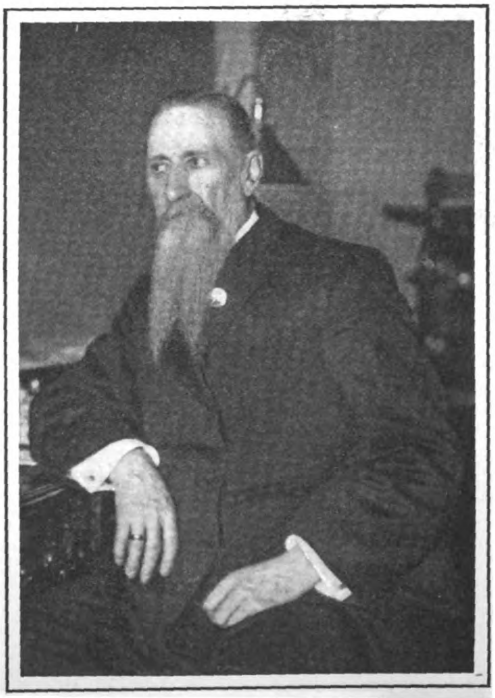
SIX Methodists, two Congregationalists, two Presbyterians, an Episcopalian, a Baptist, and a Unitarian compose the tribunal before which the Mormon Church is on trial at Washington. Four years ago the precedent was laid down that a polygamist should not sit in Congress. That was the first test since the Statehood of Utah of the relations of Mormonism to the United States government. The second test is the Reed Smoot case. If he is unseated it must be on grounds which would apply equally to any member of the Mormon hierarchy.

Without question, many of the good people who signed the thousands of petitions which have poured into the Senate "praying an investigation of the charges made and filed against Hon. Reed Smoot, a Senator from the State of Utah," supposed that these proceedings would be practically a repetition of those in the Roberts case. Some members of the Committee on Privileges and Elections, even, supposed up to the date when the hearings began, that Mr. Smoot was charged with being a polygamist. A great deal of talk was heard, too, during the summer months of the awful nature of the "apostle's oath," which would be found subversive of the Senator's obligation to his country. This, too, as it turns out, has no part in the testimony.

Those who listened to the first day's testimony heard a great deal about the details of Mormon history, belief, and practice, but very little, indeed, regarding the man whose seat was in jeopardy. "This evidence is all very damaging" was the unspoken thought of a great many, "but where does Smoot come in?"

If any high officer of Joseph Smith's Church is to represent his State at Washington, Reed Smoot is perhaps the one to whom the anti-Mormons would make the least objection. How the weeks of sensational testimony concern him is explained in briefest terms in a colloquy which occurred at the second day's hearing.

"I want to say," said the prosecuting counsel for the protestants, "that we do not believe, in the light of all the testimony that will be presented to the committee, documentary or otherwise, that Senator Smoot could by any possibility put himself up against the command of his associates."



"You mean in his vote as United States Senator?" asked one of the committee.

"Yes," was the reply, "in his vote as Senator, and that is an inference which cannot be escaped in view of all these facts."

It is not anything said about Senator Smoot, but the effort to prove that the apostolate and first presidency of the Mormon Church constitute a propaganda of polygamy that has drawn the daily crowds to the committee room door.

To the door, and no farther, it may be said, with ninety-nine out of a hundred of the curiosity-seekers. The smallest of rural chapels is larger than the chamber picked out for this investigation about which the people of this country have read more in the last month than on any other topic except the war in the Orient. Crowding every available inch of space, sixty chairs can be placed in the room. Thirteen of these are for the committee, fourteen more for the Mormon witnesses, a half-dozen for the lawyers, a group for the press. The hearings, in Congressional parlance, are "public," but a seat within earshot has been a rarely obtained privilege.

The committee over which Senator Burrows of Michigan presides is one of the weightiest of the Senate—Senators Hoar of Massachusetts, McComas of Maryland, Foraker of Ohio, Depew of New York, Beveridge of Indiana, Dillingham of Vermont, Pettus of Alabama, Dubois of Idaho, Bailey of Texas, Overman of North Carolina, and Clarke of Arkansas. Under the strain of following the long hours of testimony, all of these Senators display little mannerisms. The chairman sinks far back in his chair and dangles his eyeglasses from their cord over his forefinger. The venerable Senator Pettus throws his head forward and looks over his glasses. Foraker leans intently over the table. Dubois sits erect and alert and never asks a question without pointing at the witness with his long lead-pencil. Bailey absently tears paper into strips. One of the least conspicuous figures in the whole proceedings is the respondent, the junior Senator from Utah.

Joseph Fielding Smith, President of the Mormon Church, testifying before the Senate Committee

"If Macaulay's New-Zealander should wander some day into the Senate gallery," said a Washington political observer not long ago, "and were told by his guide that among the ninety Senators on the floor below him was one of a group of arch conspirators, plotting 'to subvert the ends and aims of the United States government,' and owing to a secret allegiance above his oath to support the Constitution, he would pick out two-thirds of the other Senators before his finger pointed to Reed Smoot." Tall and lank, of frank and pleasant smile and hearty manner, with the healthy tint of a man fond of the open air, loose collar, short hair, and heavy drooping mustache, he would be set down as a first-rate type of the Westerner who does not carry his "breeziness" to the point of exaggeration.

The witness whose testimony created the greatest interest, Joseph Fielding Smith, president of the Church of Jesus Christ of the Latter-day Saints, sustained by his Church as "prophet, seer, and revelator," would be taken by a stranger in the street as a man of power and of dignity, and yet there is little of the look of otherworldliness which one unconsciously expects in the man whom 350,000 of his fellow countrymen regard as the chosen servant of the Most High, and the bearer of His messages to the earth. Under a five days' fire of questions, he spoke as one having authority, to be sure, but it was the authority of the specialist, the scholar, the man accustomed to handling terms of precision, rather than of one who spoke with the tongues of men and of angels. His words were chosen deliberately and uttered slowly, his voice thin, and the tone in which he answered questions so low that those at the other end of the room found it hard to understand. His only gesture was an up-and-down movement of a long forefinger. The elderly president of a Western normal school, forced by circumstances to discuss his private affairs before an unfriendly tribunal, would have borne himself much as did this head of a great religious body, and of commercial enterprises so varied that they supply the people's wants with everything from street-car rides, knit goods, and improving literature to theatricals and salt-water bathing.

It was with an almost academic manner that President Smith made the declarations which flashed to the ends of the earth—his acknowledgment that he had retained his plural wives and that all of them had borne him children since the manifesto of 1890 against polygamy. It is probable that friends and his enemies were equally surprised by the frankness of his declarations on these matters of personal conduct. About minor matters of detail he spoke with hesitation and indefiniteness, and yet this uncertainty disappeared entirely when he came to those matters about which the ordinary man would feel most reluctant to testify. Evidently he had steeled himself beforehand to give without evasion those answers which the sensation-hunters of the country were most anxious to pounce upon.

On very few occasions did he show signs of deep feeling. Once, after a score of questions about the marital relations of his friends and associates in the Church, he rose in his place, and leaning forward until his face was within a few feet of that of his questioner, declared that he did not propose to let himself be put in the attitude of an informer. "If there is anything I despise," he exclaimed through shut teeth, "it is an infamous spotter and informer, and I am not one of those." Yet there were tears in his eyes when he spoke of his wives and children, and "the law which I have presumed to face in preference to disgracing myself and degrading my family by turning them off and ceasing to acknowledge them and to administer to their wants." "Not the law in relation to plural marriage," he hastened to explain. "That I have not broken. Neither has any man broken it by the sanction or approval of the Church." "My family" was always his expression, though Senators in their questions often found it more natural to speak of "your families."

This "family" of five wives and forty-two sons and daughters was not present at the hearing, and,

indeed, could not have been accommodated in the room. At the mere mention of it the spectators were horrified or amused, according to their varying susceptibilities. The picture it calls up, however, is not, at all events, that of a graybeard taking to himself a bevy of youth and beauty. The last of President Smith's wives will be ready in five years more to celebrate her silver wedding. The oldest he married almost forty years ago.

What has been gained or lost by the sweeping admission of the polygamous conditions still prevailing in Utah is a question that must resolve itself in the minds of the committee. Some saw in President Smith's declaration that he would take his chances with the law of the State, and that the national government had nothing to do with his private affairs, nothing but a flat defiance, a direct flinging in the country's face of the old question, "What are you going to do about it?" But that is hardly the whole story.

"Gentlemen," said the old Mormon, "you have shown a great deal of leniency in permitting me to express my views here. But the Church itself—I understand your point, that the Church forbids me to violate the law, and I admit it does—but the Church gave me those wives, and the Church cannot be consistent with itself if it compels me to forsake them and surrender them."

"The Lord giveth and the Lord taketh away," quoted Senator Bailey.

The testimony passed successively into channels of theology, practical ethics, politics, and constitutional law, and as its aspect changed, the various Senators who sat about the long table entered by turns into the examination. Senator Hoar, the product of generations of New England liberalism, and long himself the president of the American Unitarian Association, was quickest to seize the fine-drawn points of doctrine. It was under his sharp questioning that President Smith, and President Lyman of the apostles, after him, were forced to acknowledge that in the position they took they were putting themselves in opposition not only to man-made law, but also to what they themselves believed a divine revelation. It was at his request, too, that President Smith promised to present the committee members with copies of the standard works of the Church, the *Book of Mormon*, the *Book of Doctrine and Covenants*, and *The Pearl of Great Price*, it being conceded that the Senators could furnish their own Bibles. It may be said that the theological part of the examination has been chiefly in the hands of the Massachusetts Senator.

Senator Reed Smoot on the Witness-stand

"I will illustrate what I mean," he said one day, "by the injunction of our scripture—what we call the New Testament."

"Which is also ours," interjected Mr. Smith.

"The apostle says," continued Mr. Hoar, "that a bishop must be sober and must be the husband of one wife."

"At least one," interposed the Mormon again.

"Well," observed the Senator, amid great laughter, "we don't construe it that way in our Church."

Senator Foraker, a Methodist, was another of the committee who showed an accurate understanding of the phases of church belief. Thus, one day, the counsel for the protestants was asking a series of questions as to the Mormon conception of God.

"Then the Almighty," said Mr. Taylor, "does not speak by revelations directly to them?"

"Yes, sir, but men obey it or not just as they please. And they disobey if they wish with perfect impunity."

"In your conception of God, then, He is not omnipotent and omniscient?"

"Oh yes, I think He is."

"But do you mean to say, you, at your pleasure, obey or disobey the commands of Almighty God?"

"Yes, sir."

"And that is the kind of God you believe in?"

"That is exactly the kind of God I believe in."

"I wanted you to define him," remarked the attorney.

"I do not understand this to be," put in Senator Foraker, "anything but the doctrine of free moral religion, which every good Methodist believes in."

Senator Bailey of Texas, the keen constitutional lawyer, was another of the Senators who followed up, with inexorable logic, the admissions of the Mormon witnesses. "I will say to you very frankly," he said at an early hearing, "that I do not have much patience with a doctrine which does not receive a revelation commanding a change of conduct until there is a statute compelling it."

If Senators Hoar and Foraker took most interest in the doctrinal phases of the case, Senator Dubois was the only one of the committee to take issue squarely with the Church head on questions of fact concerning the Mormon organization. As leader of the anti-Mormon forces in Idaho, he is perhaps the only Senator on the committee to be credited with first-hand information regarding Mormonism. "Not above three per cent." was President Smith's estimate of the number of Mormons having plural wives at the time of the Woodruff manifesto in 1890. Senator Dubois put the percentage at 23¼. "The only difference between us, Mr. Smith," he said, with a smile, "is that we start from different premises. When you are computing the proportion of Mormons who practised polygamy you count all the infants in arms on the other side. I don't."

Smith's mantle will, according to the unbroken custom of the Church, fall at his death upon the president of the twelve apostles, Francis Marion Lyman, who, during the five days of the first president's testimony, sat by Mr. Smoot's side waiting for his turn to go before the committee. A huge, brawny man, of florid face, full cheeks, flowing beard and hair of tawny red, projecting brows over small eyes, low collar, and careless dress, he was a very different figure from the first witness. "I prefer to affirm," Smith had said when he went to the witness-chair. Lyman took the usual oath without hesitation. With the same apparent endeavor to be frank in his answers to the committee, he lacked Smith's facility at thrust and parry with the quick-witted Senators.

"How do you know," asked Senator Hoar, "that Mr. Smoot does not know you are a polygamist?"

"Because I don't know that he knows it," was Lyman's response.

"You can prove it by him," he suggested a moment later, and, as a third suggestion, "I think Mr. Smoot accepts it as a fact, but I don't think he knows it."

This line of questioning was one of the few points in the early days of the investigation when any effort was made to bring out the exact extent to which the apostle-Senator had knowledge of and sanctioned the unlawful acts of his associates. President Smith's testimony that he had never discussed his family affairs with Mr. Smoot made it at least certain that the subordinate had not in so many words advised the head of the Church to give up four of his wives. Later on the attorneys tried to show a connection in a less definite way.

"Was he (Smoot) at St. Louis in company with you and your wife?" asked Mr. Taylor.

"I met him there several times at the hotel," answered President Smith.

"He knew she was your wife, did he not?"

"I think he did; I cannot say what he knew."

Three minutes later Senator Overman launched directly into the fundamental question, the answer to which was a foregone conclusion.

"Did Senator Smoot ever advise you to give up living with your plural wives?"

"Not that I know of," said Mr. Smith. "I do not think that Mr. Smoot has ever attempted to interfere with my family relations. I do not know that he knows anything about them, except what I have told you here to-day."

"Did he ever discuss the matter with you in any way?" persisted Senator Overman, and obtained the answer, "Never to my knowledge."

The only calls of Mr. Smoot which his superior could remember were at what he termed his "official residence," the house at Salt Lake City where he lived with his first wife.

In many years, certainly, there has not been such a demonstration of the tenets and organization of Mormonism as this inquiry has sent broadcast. From the questions of Senators and the intense interest of spectators it was evident from the first that not half a dozen people in the committee room had more than the vaguest idea of what the word "Mormon" meant. Even the terms

The Senate Committee on the Mormon Question in Session at Washington

have been strange. A Senator's remark, "I thought you said 'State,'" apropos of a description of the Mormon system of dividing the Church's membership into "stakes," took the wrinkles out of many foreheads puzzled by the same word.

More than once the visitors from Salt Lake have been through the trying experience of having some phases of their belief laughed at by reason of their complete unfamiliarity to Eastern ears. This was the case when Smith described the ceremony of marriage "for eternity" between two persons both of whom are already dead. A titter went up from all over the room when the questions on this point were answered, and President Smith took the merriment with extremely good grace, he leaning back in his chair and smiling tolerantly.

"We have rejected a polygamist. If we now eject a monogamous apostle," Washington is now asking itself, "will the next contention be that Utah must not be represented even by a respectable layman of the Mormon faith? And if that proposition is accepted where will it end? Will the enemies of other churches and associations attempt in a new form the purposes of the Anti-Masons and the Know-nothings?"

Perhaps a partial answer may be found in the comments which observing Westerners, hostile to the Mormon domination, have made on one of President Smith's answers on the stand. The question arose as to a certain delegate in Territorial days, afterwards a Senator from Utah. "Was he a Mormon?" was asked. "He was classed as a Mormon, but he was a poor one," came the answer. "That remark might be made the text of a sermon," said one of the men classed as an out and out anti-Mormon. "Our hostility will cease if Utah can send to Washington Mormons who represent her interests so well that neither their fellow religionists nor the Gentiles can tell whether they are one thing or the other."

With the request that he do what he could to reach the witnesses that the sergeant-at-arms had not been able to locate, the committee dismissed President Smith at the end of the seventh day of the hearing. What was the net result of his testimony? Compare the admissions that came from his lips with the declarations that tended to offset them. It was admitted that about half the members of the supreme governing bodies of the Church are living now in polygamy, defying the law of Utah. Yet Smith's two counsellors and both the apostles appointed since his presidency are monogamists. It was admitted that the works which Mormon missionaries carry out into the world in their efforts to make converts contain the revelation in favor of polygamy, but not the second revelation or manifesto forbidding it. Yet the president declared this was due to a mere oversight, the manifesto being known to every one, and promised that it shall be included in the next edition of the Church's standard works. It was admitted that Senator Smoot had to obtain the consent of the twelve apostles and the first presidency before becoming a candidate for United States Senator. Yet President Smith protested that this consent is required merely in order to insure that the work of the High Church offices is not interfered with, and that any other official member could have obtained the same consent without difficulty.

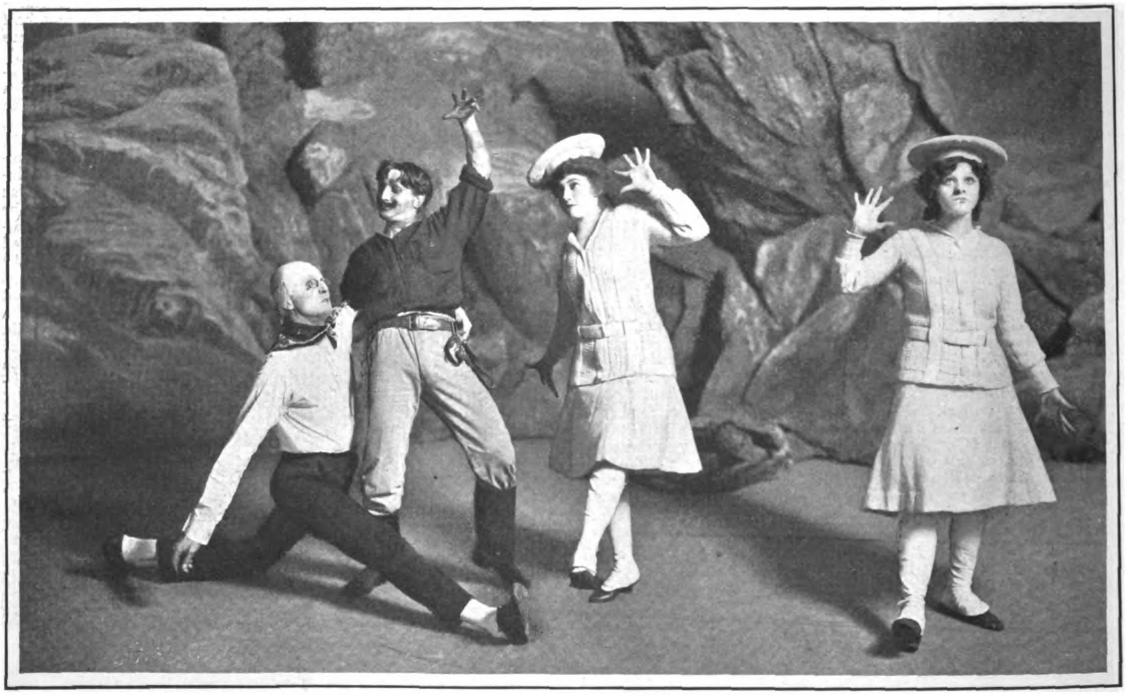
What would have happened to Mr. Smoot if, failing to obtain the necessary permission, he had persisted in running for the Senate? "He would have been considered in poor standing with his brethren," said President Smith. "He would have been considered insubordinate and probably have been disciplined," said Apostle Lyman. Yet both declared that he could have resigned his apostleship and remained a lay member in good standing. Again the case comes down to the fundamental question. How strong is the tie that binds Apostle Smoot to his Church? Is he "so woven into the organization that he cannot be extricated without cutting himself off entirely," or is he one of "the freest and most independent people of all the Christian denominations?"

The Contrast

By Alfred H. Louis

Thou hast held to the coast
With the port safely near.
Be it so! Make no boast
Of thy prudence and fear!

My sails have been spread
O'er the stormiest seas;
So the Soul earned her bread,
What mattered Life's ease?



Thou hast served for the dross
I could but disdain;
But my profit in loss
Shall be part of thy gain.

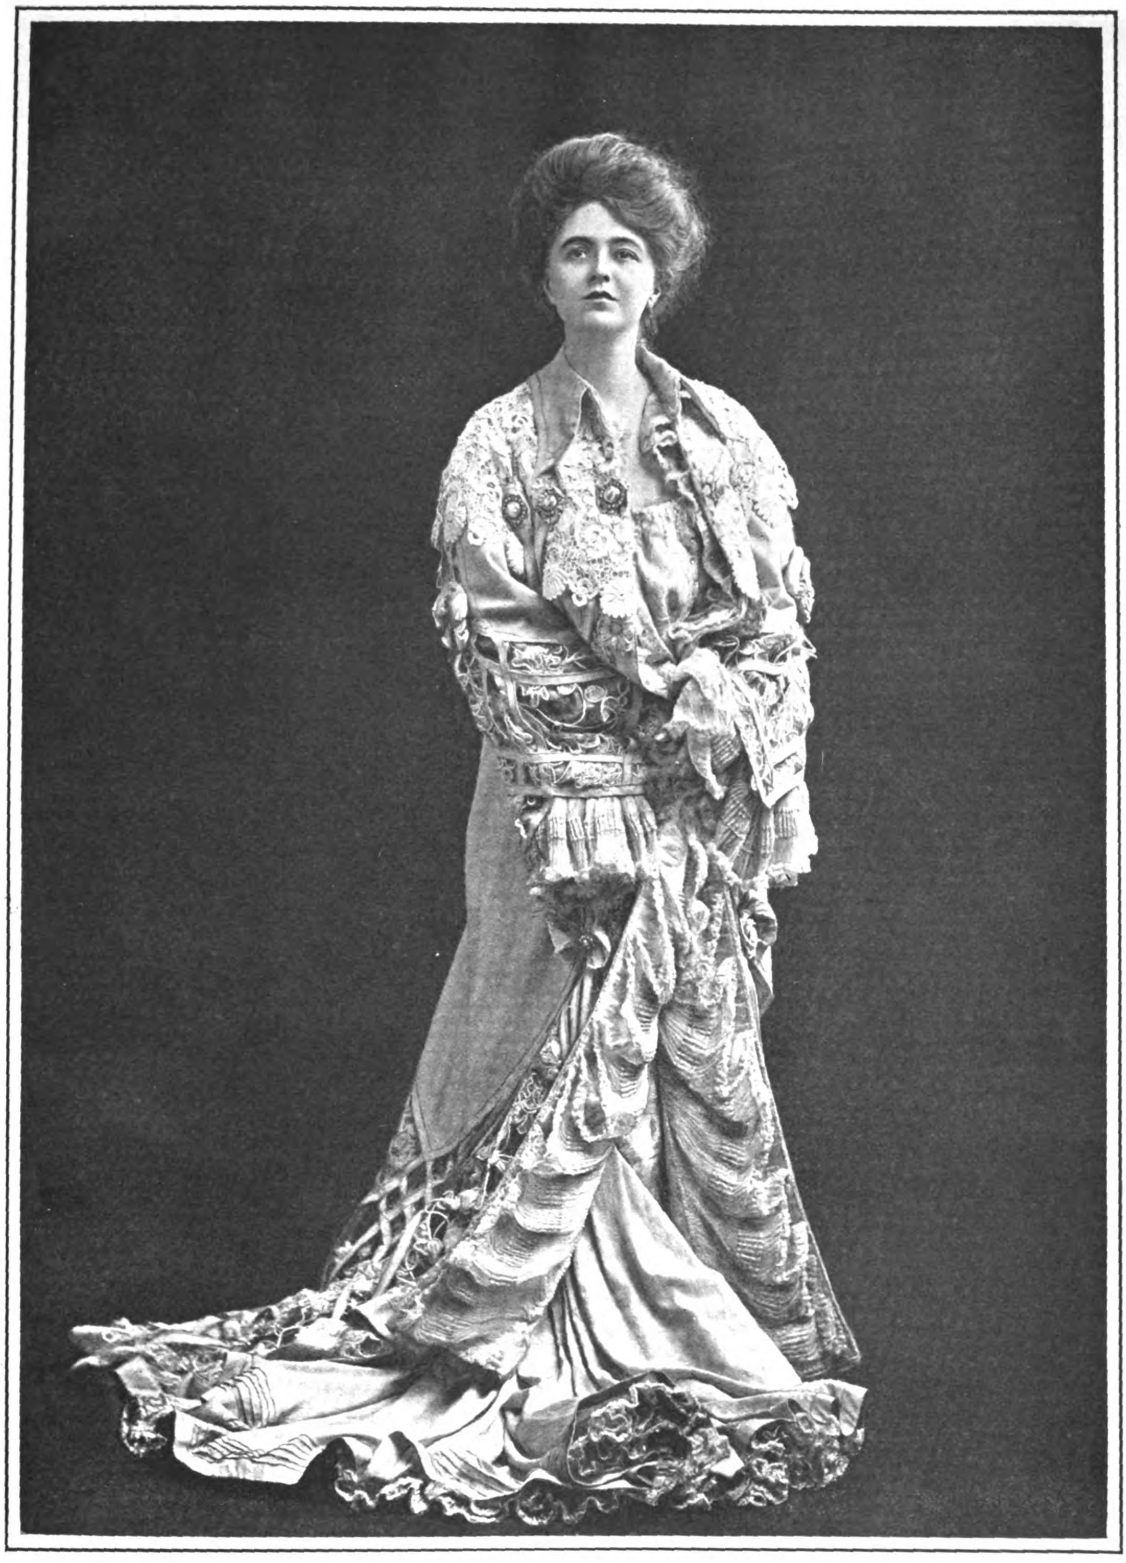
Grace George and Margaret Illington in "The Two Orphans"

"The Two Orphans" will be revived with an all-star cast on March 28 at the New Amsterdam Theatre under the direction of Mr. A. M. Palmer, who had charge of the original production of the play thirty years ago. Three companies will close their present engagements to enable their stars to appear in this production. Mr. Kyrle Bellew will leave "Raffles" to play the part of the "Chevalier Maurice de Vaudrey"; Miss Grace George will leave "Pretty Peggy" to play "Louise," one of the orphans; and Charles Warner will leave "Drink" to take the part of "Jacques Frochard," the outlaw. Margaret Illington will play the second orphan, "Henriette," and other rôles will be taken by such well-known players as Annie Irish, Elita Proctor Otis, Clara Morris, E. M. Holland, and James O'Neill



A Scene from "The Tenderfoot," at the New York Theatre

"The Tenderfoot," an "operatic comedy," so called, by Richard Carle and H. L. Heartz, was produced at the New York Theatre February 22. Richard Carle, the author of the book, plays the leading comedy part. "Professor Zachary Pettibone," a Vermont tutor in charge of a travelling party of young women. The slight thread of plot deals chiefly with the professor's niece "Marion," who is a Texas heiress. She has been tricked into a marriage with "Paul Winthrop," the colonel of the Texas Rangers, who had kissed her against her will at a military masquerade and wooed her as a cowboy. Like "Petruchio" with "Katherine," in the "Taming of the Shrew," he finally subdues her will; and at the end the bride follows her husband in an aggressive Indian campaign, dressed in man's clothing

MISS JANE OAKER IN "THE PIT"

Miss Oaker plays the leading part of "Laura Dearborn" in "The Pit," produced at the Lyric Theatre February 10. The action of the play, a dramatization of the novel by Frank Norris, centres about the speculative activities of the Chicago Stock Exchange. "Curtis Jadwin" (Mr. Lackaye), a successful speculator, is in love with "Laura," and she consents to marry him, at the same time dismissing her other suitor, the artist "Sheldon Corthell." After his marriage "Jadwin" pays more attention to his business than to his wife, and is especially engrossed in a great wheat deal which he is trying to put through. "Laura," weary of his neglect, is about to elope with "Corthell," who has renewed his attentions to her, when "Jadwin," ruined, returns home broken in spirit. In this crisis his wife realizes that her duty is to him, and she renounces "Corthell"

Correspondence

THE STATUS OF TUSKEGEE INSTITUTE

TUSKEGEE, ALABAMA, *March 2, 1904.*

To the Editor of Harper's Weekly:

SIR,—So many of your readers are interested in the work of the Tuskegee Normal and Industrial Institute that I feel it is my duty from time to time to keep them informed of the condition, the progress, of the institution.

At present we have an average attendance of 1441 students in all of the departments, representing thirty-five States and seven foreign countries. In all the departments there are 143 instructors, officers, and employees.

Since the institution was founded we have sent out as workers in various fields about 6000 men and women, who have finished a full or partial course, and who are doing good work.

The institution has property, including land, buildings, personal property, valued at $684,346 36. The present endowment is $1,042,931 28. The annual current expense is about $155,000. To meet this we have resources as follows:

Income from endowment	$40,000
State appropriation	4,500
John F. Slater fund	12,000
General education board	10,000
Miscellaneous sources	5,433
Total	$71,933
Leaving to be collected each year	$83,067

This amount has to be secured each year for current expenses, mainly by personal appeals, to say nothing of the large amount it is necessary to spend annually at a practically new institution for permanent improvements and for insurance as well.

Our needs at present are mainly in two directions—money for current expenses and increase of the endowment fund to $3,000,000.

Contributions may be made to the current expense fund in the form of $50 scholarships in larger or smaller amounts.

Contributions may be made to the endowment fund in the form of $1000 for a permanent scholarship, or in smaller or larger amounts.

Some of the special needs, aside from the two items mentioned, are improvement and equipment of the farm, $15,000; improvement of the steam-plant and water-works, lighting, etc., $12,000.

There has seldom been a time when the institution was more in need of friends than it is at the present time. It is hoped that this frank statement will result in a generous response.

I am, sir,

BOOKER T. WASHINGTON, Principal.

ROOSEVELT IN CALIFORNIA

LOS ANGELES, CAL., *March 10, 1904.*

To the Editor of Harper's Weekly:

SIR,—Referring to the letter of John Aubrey Jones, of San Francisco, in which he claims that President Roosevelt is far from being acceptable to the masses of the Republican party of this State, I beg to differ with Mr. Jones, having travelled very near all over this State in the year past, and, having made it a point to always make inquiries as to what the *voting* people think of President Roosevelt, not only among Republicans, but Democrats as well, I find that the people who do the voting—mind you, the voting—are for Roosevelt, and if President Roosevelt secures the nomination California will give him the largest majority ever given any Presidential candidate. I am, sir,

SHERMAN A. SIDDALL.

THE DEMOCRATIC CANDIDATE

WASHINGTON, D. C., *February 29, 1904.*

To the Editor of Harper's Weekly:

SIR,—As a Democrat concerned for the success of my party I have been greatly interested in your editorial suggestions with reference to the approaching national campaign. Your writings, however, clever and interesting as they are, have not convinced me of the wisdom of nominating Mr. Cleveland for a third term. What his party strength may be in the East I do not pretend to know. Of his weakness in the West I am quite positive. If you have any interest at all in the success of the party drop the name of Grover Cleveland from the list of eligibles. He may be all you claim for him as a man, but he is not a possibility for the nomination, and is, in my opinion, very far from being a possibility as a successful candidate.

Not only did he bolt a Democratic nomination, but he is the idol of other bolters and the leader of a faction which hopes to control a large party whose membership he and his friends have been persistently insulting since 1896. His nomination would provoke such a split in the party that Missouri, Kentucky, and other Democratic States would surely vote for Roosevelt.

To press the name of Mr. Cleveland on the party is to widen a breach which we want to close. It makes radicals of those whom you sneer at as "Bryan Democrats"—a term which is insulting in itself. I am a personal friend of Mr. Bryan. I voted for him twice, and do not regret it. But I am not a "Bryan Democrat"—I am just a Democrat.

Whatever success the campaign of Mr. Hearst is having, beyond that which is controlled by mercenary motives, is due to the course of Mr. Cleveland and his unwise friends. We know that both Bryan and Cleveland have had their day in court, and we want new men, but if we are compelled to choose between them we will take Bryan and loyalty to the party rather than Cleveland and treason.

But the party is not so poor as to be limited to a choice among any two or three individuals. Cleveland is out of it. So is Bryan. Hearst? Well, the Bible says that *if* one is faithful over a few things he will be made ruler over many. As Mr. Hearst does not regularly attend the sessions of Congress and properly execute the commission which has been given him there is no apparent reason why he should be entrusted with a greater responsibility.

But here in the East you have Parker, who has a record of successes; Edward M. Shepard, a great Democrat, who would command the support of a united party; Olney, a man of power, whose political wanderings in 1896 are forgiven; Gorman, and, no doubt, scores of others. Try one of these. I am, sir,

CONGRESSMAN.

JAMES SMITHSON AND THE SMITHSONIAN INSTITUTION

NEW YORK, *March 2, 1904.*

To the Editor of Harper's Weekly:

SIR,—In your issue of January 9 you render a tribute to a man long dead, and much deserving the gratitude and respect of those who come after him. I do not agree with your statement, however, when you describe him as the founder of the Smithsonian Institution in Washington. While it is undoubtedly *his*, he was in possession of his neglected English grave, in Genoa, as you state, long before his generous idea, backed by his more generous bequest, took form and shape. If I remember it right, it was not until he had (metaphorically) knocked at the door of every kingdom in civilization, and been *snubbily* turned away, before the great and growing republic of the Western Hemisphere, after due reflection, *consented* to accept the Englishman's money and become his perpetual executor, well knowing it was no trifling task and responsibility to thereby challenge the criticism of the whole monarchical world. In rendering honor to this remarkable man, late in the day, though in full measure (as you remarked), the United States has faithfully discharged a difficult task in keeping this unique and beneficent institution abreast of the age. Will you not call attention to the work, little known outside of Washington, and give the public some information and some pictures?

I am, sir, E. S. CANFIELD.

RUSSIA'S FRIENDSHIP

BONNYCOT, ANCHORAGE, KENTUCKY, *March 4, 1904.*

To the Editor of Harper's Weekly:

SIR.—For thirty years I have been a constant reader of HARPER'S WEEKLY, have been glad to recognize its even-minded impartiality on all subjects, among so many partisan publications, and its unswerving pointing of the way to all that is best in America, but it does seem to me you exaggerate Russian friendship for us.

Russia did send her ships to our shores on a friendly visit during the war, but it was from *no friendly feeling* for the North. It was with the endeavor to emphasize and intensify the feeling then existing between England, her enemy then and now, and the United States.

She cared not a rap whether North or South was successful. Nor is there one iota of historical evidence that Russia offered or ever intended to offer her ships to the North. That idea is simply the imaginings of sentimentalism.

As to her refusal to join other powers in any movement to embarrass Mr. Lincoln. When France made such a proposal to England and Russia, the latter did not refuse, as she could not let England and France be drawn closer by any such mutual agreement, but when England first, and promptly, declined the suggestion from France, then, and not till then, did Russia refuse.

The fact is, Russia is for Russia, as she should be, but she wastes friendship on nobody.

America's sympathy is with Japan, and rightly so. Japan's aims are more nearly in keeping with our broader and more human desires, and Russia's falseness and broken promises are repugnant to all right-thinking people. I am, sir,

CHAS. BONNYCASTLE ROBINSON.

WIVES AS VOTERS

March 15, 1904.

To the Editor of Harper's Weekly:

SIR,—I have long felt much interest in a curious psychological point concerning men in their estimate of the intellectual power of women. I am not a woman suffragist, because I do not know enough about the subject as yet to reach a decision for or against it. But, why is it—and doubtless there must be some person among your constituents who can throw light upon my inquiry—why is it, I say, that most men who consider women *en masse* as mentally unequal to a share in the affairs of government, do not include *their own wives* in the feminine multitude whom they thus criticise? "Ah, *my* wife, yes, she would certainly be fitted for the task; but you forget that my wife is an exceptional woman." Which is all very well until you question the next man, who says precisely the same thing. Now, is this the blindness of man's devotion to the one woman; or is it merely the polite, formal gallantry that husbands are in honor bound to display when occasion demands; or, is it the truth—the sane judgment of a judicious man upon the capacity of the woman with whom he passes his life? If it is the truth, and the strength of a whole (sex) depends upon the strength of its parts (the individual woman), then do not men thus proclaim women equal to the work of intelligent voting? If this is only "feminine" and "ingenious," let somebody—even if it be a man!—instruct me.

I am, sir, MARGARET BUCKINGHAM.

Who It Was

A well-known New York clergyman was telling his Bible class the story of the Prodigal Son at a recent session, and wishing to emphasize the disagreeable attitude of the elder brother on that occasion, he laid especial stress on this phase of the parable. After describing the rejoicing of the household over the return of the wayward son, he spoke of one who, in the midst of the festivities, failed to share in the jubilant spirit of the occasion.

"Can anybody in the class," he asked, "tell me who this was?"

A small boy, who had been listening sympathetically to the story, put up his hand.

"I know," he said, beamingly; "it was the fatted calf."

Advice to Mothers.—Mrs. Winslow's Soothing Syrup should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

THE MOTHER'S FRIEND,
when nature's supply fails, is Borden's Eagle Brand Condensed Milk. It is a cow's milk adapted to infants, according to the highest scientific methods. An infant fed on Eagle Brand will show a steady gain in weight.—[*Adv.*]

Telephone Service lightens the cares of house-keeping, saves time, and prevents worry. Low rates. New York Telephone Company, 15 Dey Street, 111 West 38th Street.—[*Adv.*]

Ring up your grocer and ask for a box of Champagne wafers and some Cook's Imperial Extra Dry Champagne.—[*Adv.*]

Strong and better men and women are those who use Abbott's Angostura Bitters. At druggists.—[*Adv.*]

In many cases of Asthma Piso's Cure for Consumption gives relief that is almost equal to a cure.—[*Adv.*]

ADVERTISEMENTS.

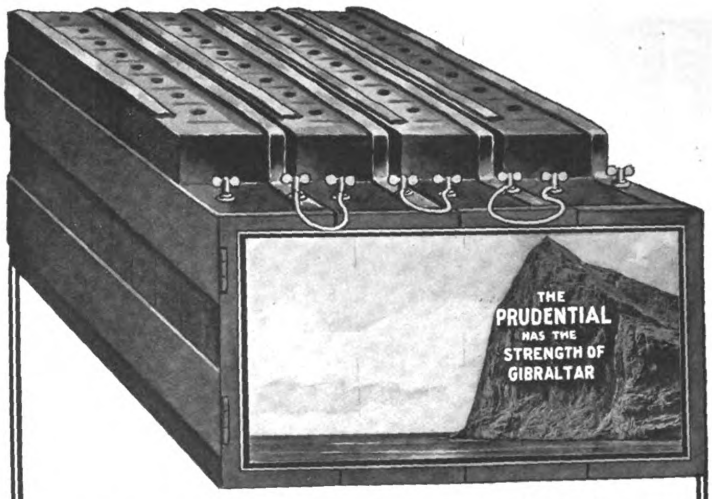
DOCTOR DID IT
Put on 36 lbs. by Food

Feed a physician back to health and he gains an experience that he can use to benefit others. For this reason Grape-Nuts food is daily recommended to patients by hundreds of physicians who have cured themselves of stomach trouble. One doctor says:

"Although a physician, and trying to aid and assist my fellow-beings to enjoy good health, it must be admitted I formerly did not enjoy the best of health myself. In January, 1899, I only weighed 119 pounds. At this time I was living in the Ohio valley, and began to think I had about seen my best days. One day, about 3 years ago, I had an opportunity to try Grape-Nuts food for my breakfast. I liked it so well that I ate three teaspoonfuls three times a day, and have regularly used it up to the present time, and I now weigh 155, a gain of 36 pounds, and enjoy the best of health.

"Not only has Grape-Nuts made this wonderful change in me, but through it I have helped my friends, relatives and patients. The sustaining power of this food is simply wonderful.

"I have one patient, who is a section hand on the C. & O. R. R., who eats nothing in the morning but four tablespoonfuls of Grape-Nuts, and yet does his very hard work up to lunch-time, and enjoys the best of health and strength.



"I could name a great many cases like this, and I still prescribe Grape-Nuts in my practice every day." Name given by Postum Co., Battle Creek, Mich.

Ask any physician about the scientific principles on which Grape-Nuts food is made. He'll tell you the principles are perfect.

Then a 10 days' trial proves that the principles are carried out in the food ("all the good of the grains so treated that any one can digest it all"). Shown in renewed physical strength and brain energy.

"There's a reason."

Look in each package for the famous little book, "The Road to Wellville."

THE TRUANTS

BY A·E·W·MASON

SYNOPSIS OF CHAPTERS

In the opening chapter Pamela Mardale is introduced to the reader as a young society woman of London, beautiful and of rare personal charm. Into her early life has come a mysterious influence which dominates and directs her whole career. What this strange influence is only two of her friends suspect—a young schoolmaster who knew her as a child at Roquebrune, and Alan Warrisden, who is in love with her, and who, though his proposal of marriage is refused, determines to win her. Late one night at a ball, Pamela and Warrisden, while seated on a balcony, observe a young couple leaving a house across the street. Warrisden remarks that there seems to be an air of mystery about them, and that no one appears to know who they are; whereupon Pamela says that she knows something about them, and she gives Warrisden what information she possesses. The young couple are husband and wife, Tony and Millicent Stretton, who live in a gloomy house presided over by the rich but unjust father of the young man. They are in reality kept prisoners by the whims of the tyrannical old man, and it is only by playing truant and going out by stealth late at night that they are able to enter at all into the life of the outside world. This practice they keep up for a year, but finally both of them grow extremely weary of their monotonous life, and in a moment of exasperation Tony determines to go to America to make his fortune, while Millie is to be left behind and sent for as soon as her husband is able to establish a home. Tony has some misgivings about leaving Millie, for he has been warned by Pamela Mardale that she should never be left alone; but at last he departs, after Pamela has promised to be a stanch friend to his wife. Some months later, while Pamela is calling on Millie, two letters arrive. One is from Tony and contains the news that he has lost all of his small fortune and will have to make a new start; the other is from a friend, Lady Millingham, inviting Millie to stay with her at the beginning of the New-year. Millie accepts; and when Pamela, who has also been invited, arrives there she finds that her warning to Tony is having a disagreeable justification. For on the very evening of her arrival she discovers that Millie has become infatuated with Lionel Callon, a gentlemanly adventurer, who is also a member of Lady Millingham's house party. John Mudge, a friend of Pamela's, whom she finds at the Millingham's on her arrival, warns her of Callon's character, and insinuates that he is scheming to ingratiate himself with Millie so that he may take advantage of the wealth which will come to her on the death of Tony's father. Late that evening Pamela visits Millie in her room, and inquires about Tony.

CHAPTER VIII

GIDEON'S FLEECE

MILLICENT was reluctant to add any word of explanation. She sat with her eyes upon the fire, waiting, it seemed, until Pamela should see fit to go. But Pamela remained, and of the two women she was the stronger in will and character. She sat with her eyes quietly resting upon Millicent's face, and in a little while Millicent began reluctantly to speak. As she spoke the disdainful droop of her lips became more pronounced, and her words were uttered in a note of petulance.

"He *would* stay to retrieve his failure. You remember?" she said.

"Yes," replied Pamela.

"I wrote to him again and again to come home, but he would not. I couldn't make him see that he wasn't really a match for the people he must compete with."

Pamela nodded her head.

"You wrote that to him?"

Millicent lifted her face to Pamela's.

"I put it, of course, with less frankness. I offered him, besides, the rest of my money, so that he might try again. But he refused to take a farthing more. It was unreasonable, don't you think? I could have got on without it, but he couldn't. I was very sorry for him."

"And you expressed your pity too?" asked Pamela.

"Yes, indeed," said Millicent, eagerly. "But he never would accept it. He replied cheerfully that something was sure to happen soon, that he would be sure to find an opening soon. But of course he never did. It was not likely that with his inexperience he ever would."

Tony's own words had recoiled upon him. On the evening when he had first broached his plan to Millicent in Berkley Square, he had laid before her, amongst others, this very obstacle, thinking that she ought to be aware of it, and never doubting that he would surmount it. The honesty of his nature had bidden him speak all that he had thought, and he had spoken without a suspicion that his very frankness might put in her mind an argument to belittle him. He had seemed strong then, because he knew the difficulties and counted them up when she omitted them. His image was all the more pale and ineffectual now, because, foreknowing them well, he had not mastered them.

"I wrote to him at last that it wasn't any use for him to go on with the struggle. He would not tell me how he lived, or even where. I had to send my letters to a post-office, and he called for them. He must be living in want, in misery. I wrote to him that I had guessed as much from his very reticence, and I said how sorry I was. Yet in spite of what I wrote"—and here her voice hardened a little; she showed herself as a woman really aggrieved—"in spite of what I wrote, he answered me in a quite short letter, saying that I must not expect to hear from him again until he had recovered from his defeat, and was reestablished in my eyes. I can't understand that, can you?"

"I think so," Pamela answered. She spoke gently. For there was something to be said upon Millicent's side. The sudden collapse of her exaggerated hopes, the dreary life she led, and her natural disappointment at the failure of the man whom she had married, when once he stepped down into the arena to combat with his fellow men—these things could not fail to provoke in a nature so easily swayed from extreme to extreme as Millicent's, impatience, anger, and a sense of grievance. Pamela could hold the balance fairly enough to understand that. But chiefly she was thinking of Tony—Tony hidden away in some lodging in New York, a lodging so squalid that he would not give the address—and vainly seeking for an opportunity whereby he would make a rapid fortune; very likely going short of food, and returning home at night to find upon his table a letter from his wife of which every line cried out to him with a contemptuous pity: "You are a failure. You are a failure. Come home." Pamela's heart went out in pity too. But there was no contempt in her pity. She could not but admire the perseverance with which, on this the first time that he had ever walked hand-in-hand with misery, he endured its companionship.

"I think I understand," she said. "You say he answered you in that short way in spite of what you wrote. I think it was not in spite of, but because."

Millie Stretton shook her head.

"No, that's not the reason," she replied. She gave one herself, and it fairly startled Pamela. "Tony no longer cares for me. He means to go out of my life altogether!"

Pamela remembered what store Tony had always set upon his wife, how he had spoken of her that July morning in the Park, and how he had looked at the moment when he spoke. It was just because he cared so much that he had taken his wild leap into the dark. That, at all events, she believed, and in such a strain she replied. But Millicent would not be persuaded.

"Before Tony went away," she said, stubbornly, "he let me see that he no longer cared. He was losing the associations which used to be vivid in his memory. Our marriage had just become a dull, ordinary thing. He had lost the spirit in which he entered into it."

Again Tony's indiscreet frankness had done him wrong. The coon song which was always to be associated in his mind with the summer night, and the islets in the sea, and the broad stretch of water trembling away in the moonlight across to the lights of the yachts in Oban Bay, had become a mere coon song, "sung by some one." Millicent had often remembered and reflected upon that unfortunate sentence, and as her disappointment in Tony increased and the pitying contempt gradually crept into her mind, she read into it more and more of what Tony had not meant.

"I am sure you are wrong," said Pamela, very earnestly. "He went away because he cared. He went away to keep your married

life and his from fading away into the colorless dull ordinary thing it so frequently becomes. He has lost ground by his failure. No doubt your own letters have shown that. And he is silent now to keep what he has. You have said it yourself. He will not write until he is able to reestablish himself in your thoughts."

But would Tony succeed? *Could* he succeed? The questions forced themselves into her mind even while she was speaking, and she carried them back to her room. The chances were all against. Even if he retrieved his failure, it would be a long time before that result was reached—too long, perhaps, when his wife was Millicent, and such creatures as Lionel Callon walked about the world. And he might never succeed at all; he was so badly handicapped.

Pamela was sorely tempted to leave the entanglement alone to unravel itself. There was something which she could do. She was too honest to close her eyes to that. But her own history rose up against her, and shook a warning finger. It had a message to her ears, never so loudly repeated as on this night. "Don't move a step! Look on! Look on!" She knew herself well. She was by nature a partisan. Let her take this trouble in hand and strive to set it right, her whole heart would soon be set upon success. She was fond of Millicent already; she would become fonder still in the effort to save her. She liked Tony very much. The thought of him stoutly persevering, clinging to his one ambition to keep his married life a bright and real thing in spite of want and poverty and even his wife's contempt appealed to her with a poignant strength. But she might fail. She had eaten of failure once, and after all these years the taste of it was still most bitter in her mouth.

She fought her battle out over her dying fire, and at the end two thoughts stood out clearly in her mind. She had given her promise to Tony to be a good friend to his wife, and there was one thing which she could do in fulfilment of her promise.

She walked over to her window, and flung it open. She was of the women who look for signs; no story quite appealed to her like the story of Gideon's fleece. She looked for a sign now quite seriously. If a thaw had set in, why the world was going a little better with her, and perhaps she might succeed. But the earth was iron-bound, and in the still night she could hear a dry twig here and there snapping in the frost. No, the world was not going well. She decided to wait until things improved.

But next day matters were worse. For one thing, John Mudge went away, and he was the only person in the house who interested her at all. Furthermore, Lionel Callon stayed, and he announced some news.

"I have been chosen to stand for Parliament at the next election," he said, and he named an important constituency. Pamela noticed the look of gratification, almost of pride, which shone at once on Millie's face, and her heart sank. She interpreted Millie's thought, and accurately. Here was a successful man, a man who had got on without opportunities or means, simply his own abilities; and there far away in New York was her failure of a husband. Moreover, Callon and Millicent were much together; they had even small secrets, to which in conversation they referred. The world was not going well with Pamela, and she waited for the fleece to be wet with dew.

After four days, however, the frost showed signs of breaking. A thaw actually set in that evening, and on the next morning two pieces of good news arrived. In the first place, Pamela received a letter from Alan Warrisden. There was nothing of importance in it, but it gave her his actual address. In the second, Millie told Frances Millingham that she had received news that Sir John Stretton was really failing, and although there was no immediate danger, she must hold herself in readiness to return to town. This to Pamela was really the best news of all. This morning, at all events, Gideon's fleece was wet. She looked out some trains in the railway guide, and then sent a telegram to Warrisden to come by a morning train. She would meet him at the railway station. The one step in her power she was thus resolved to take.

To be Continued.

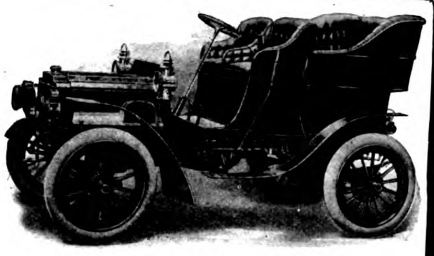
SPECIAL FEATURE

World's Fair

SAINT LOUIS

Buckingham Club Building, new and strictly fire-proof, fronting on Forest Park, with 300 handsomely furnished suites of rooms for the exclusive use of members and their families. Will open April 30th, 1904

People of high social and business standing, desiring the best accommodations in St. Louis during their visit to the World's Fair, are joining the Club. All applications for membership must be approved by the membership committee. The Board of Directors of this Club is composed of the most prominent business men of St. Louis.



If interested, send us your name and address, with references, and club book and full particulars will be furnished you. Early attention is important, as only a limited number of members will be accepted. Address

THE HEART OF HYACINTH

By ONOTO WATANNA
Author of "A JAPANESE NIGHTINGALE," Etc.

Japan—the land of flowers—is the scene of this new love story by the author of "A Japanese Nightingale." It is marked by all the daintiness and naive charm of style of the earlier book. The story is even more original. Bound in lavender cloth, with gold and colored decorations; delicately colored illustrations and quaint Japanese decorations on every page. A marvel of artistic book-making.

(Continued from page 465.)

people and cause them to force their government into declaring war. They thought there might be a crisis, but not immediately.

Suddenly, on Friday, February 5, M. Kurino, much to his surprise, received a cable message to ask for his passports, and on Saturday at four he had presented this demand, which was immediately followed by a counter demand by Russia for the passports of Baron de Rosen, the Russian minister at Tokio. On Sunday morning, the 7th, every one in St. Petersburg awoke to the fact that diplomatic negotiations were broken off. Even then nobody in official circles and nobody in Russia thought that it meant immediate war. They had expected at the utmost that it would call for an ultimatum from Japan. I think it is only fair to say that they expected an ultimatum, and it was in the minds of some that the matter might be relegated to The Hague. Next day they began to discuss the meaning of this sudden breaking off of diplomatic relations. They were offended because negotiations were broken off before Japan received their official reply, although that reply was on the way. On Monday they continued to discuss what it meant. They went to bed arguing as to what should be done, and on the following morning they awoke to the announcement that three battle-ships had been torpedoed in the harbor at Port Arthur. Still they did not understand it. They said: "It is not fair. We were at least entitled to an ultimatum, and we think we were entitled to a declaration of war, if not from a legal point of view, at least from a moral one." Then when the blow was struck they began to make their preparations. They admitted that they were unprepared, and they were extremely frank in issuing an official communication to the world, saying that this thing had caught them without preparation. And in their leisurely way they have begun their preparations. They are providing for a long struggle, and everybody in Russia now thinks that the war will last at least two years.

There has been a great deal of misinformation in this country, which I think has largely come from the British press, about the Russian means of communication between St. Petersburg and the Far East. I had a long talk with Prince Khilkoff, the Minister of Railways, who learned his business in America at the Altoona shops of the Pennsylvania Railroad Company. He said this, which I think has a good deal of force in it:

"These stories which are appearing in the English and American press about the inefficiency of the Trans-Siberian Railway ought to be discounted for this reason: First, it is probably to the interests of the British press to make their facilities appear as badly as they may, but apart from any design on their part, it must be borne in mind there is a vast difference between English and American methods. The Englishman, in building a railroad, makes, at the beginning, a 'permanent way,' or roadbed, for all time. No road will be projected by him until he is ready to go ahead and build a finished railway, equipped in every detail. While in the United States the method of building a railroad is to lay the road in a manner suited to present needs and to improve it steadily as the years go on. It was in this manner that the Trans-Siberian Railway was begun, and it is probably as good a system to-day as the average railway, say, west of Omaha in your country." Prince Khilkoff said that at that time twenty trains were leaving every day laden with provisions and troops headed for the Far East.

In discussing the possibilities of Lake Baikal, Prince Khilkoff said that he was going out there the following week, and he proposed to lay a track across the ice. Lake Baikal is the deepest lake in the world. If Mount Blanc were set down in it, the top of the mountain would be one hundred feet below the surface of the lake. I think the deepest part is 16,000 feet, and it freezes to a depth of three or four feet in winter. The railroad is being projected around the south edge of the lake, but it will not be ready for six months, and meanwhile a temporary road will be constructed over the ice. This is not surprising, as every winter there are a number of temporary railways across the Neva in St. Petersburg. Prince Khilkoff said he would not attempt to transport troops across on the railroad, for if the ice should break and he should lose 1000 troops or so the responsibility would be wholly his. Therefore only provisions will be carried across on the railroad, and the troops will be transported on sledges. I do not know how many troops they have in Manchuria, but they are taking it leisurely, and they are getting the troops there slowly. I think they feel that the natural point for a base of operations is Harbin, but the retirement of Alexeieff to that place does not indicate by any means that their disposition is to give up either Vladivostok or Port Arthur or Dalny. It simply means that Harbin is the natural point for a base, being at the fork of the railroad.

When I left, though they felt very strongly that they had been surprised and humiliated in the first attack, they did not feel that any extraordinary loss had come to them. Two weeks before the war it was a common feeling in Russia and a most universal expression in official circles in St. Petersburg, in speculating upon the possibility of war, that Russia would lose her Far-Eastern squadron; and it was not impossible that the Japanese troops might land and force them back to Harbin, or even out of Manchuria into Siberia. But they felt that each step Japan takes would bring her farther away from her base of supplies, while Russia would be nearer her own base, and in the end that this must result in Japan's defeat. They called attention, however, to this situation. At the beginning of the war two of their boats were at Chemulpo, supposing they were in a friendly harbor. The Japanese demanded that they leave, because there was a state of war and Korea had reclared her neutrality. The Russian commanders could not stay longer than twenty-four hours in a neutral harbor, so they went out, on the theory that they must go out, and naturally they were destroyed. Within twenty-four hours the Japanese landed 6000 troops and took possession of this same harbor. When Secretary Hay issued his note for the protection of the neutrality of China, but said nothing about Korea, they asked why it was that the American government was not interested in the integrity of Korea, but seemed especially anxious to preserve the neutrality of China.

With regard to the men who will carry out the Russian policy during the war, it is hardly to be supposed that the Emperor, in spite of some misleading information from Alexeieff, is displeased with him to the point that he will remove him, although immediately after the opening engagements Admiral Makharoff was sent out to take charge of the navy, and Kuropatkin to take charge of the army. Of that other strong character, Bezabrazoff, who was associated with Alexeieff, it is known that he left St. Petersburg for the Riviera immediately after the opening engagements, and that he is understood to be in disgrace.

M. de Witte unquestionably is held in very high regard. One very significant fact which has not been noted in America is that the new minister, M. Kokovtseff, who succeeded de Pleske on the occasion of his retirement the other day on account of ill health, made a speech lauding Witte in highest terms. He called the attention of the entire department to the fact that the policy of the department was established by Witte, and it would be his purpose to carry out the policy as far as possible. This is most significant, since it is hardly likely that he would have made the statements he did without the approval of the Emperor.

What They Thought of Him

A MEMBER of Mr. Ben Greet's dramatic company tells this story about a fellow actor:

It seems that during a tour which the company made through the British provinces a performance was given one night in the native town of this actor. In a discussion of the fact, not long after, it was asked if the audience had given their fellow townsman a proper reception.

"Yes," was the answer; "he was greeted with round after round of silence."

Progress of the War

March 9.—It was announced to-day that Marquis Ito, the Japanese statesman, is going to Korea as a special ambassador from the Mikado to the Emperor of Korea. It is believed that this mission of the Marquis Ito's is politically significant, and that it probably indicates the intention of Japan to arrange what will be virtually a protectorate over Korea.

March 11.—A message from Viceroy Alexeieff from Mukden, dated March 10, and addressed to the Czar, announces a bombardment of Port Arthur by the Japanese squadron on the evening of the 10th. The report is as follows:

"The commandant of the fortress at Port Arthur reports that at about one o'clock this morning the outlines of vessels, apparently torpedo-boats, were seen at sea within the area swept by our search-lights. Our batteries opened fire upon these vessels.

"Our torpedo-boats put out to sea at 2.40 A.M., and at about four o'clock met the enemy west of the Liao-Tishin Lighthouse. After firing several shots the enemy retired to the south in the direction of Shandun. Our torpedo-boats returned to the harbor at six o'clock.

"Later, torpedo-boats were again sent to sea to reconnoitre. They returned in half an hour, having learned that an enemy's squadron was approaching.

"At eight o'clock the Japanese opened fire upon our cruisers and the fortress. The enemy had fourteen ships, and fired the entire time from behind Liao-Tishin."

March 12.—An important naval engagement at Port Arthur, which resulted in the loss of a torpedo-boat by each side, is thus described in a despatch from Admiral Makaroff, commanding the Russian fleet:

"Six torpedo-boats which went out to sea the night of March 10, four of them being under the general command of Captain Mattoussevitch, encountered the enemy's torpedo-boats, followed by cruisers.

"A hot action ensued, in which the torpedo-boat destroyer *Vlastini* discharged a Whitehead torpedo and sunk one of the enemy's torpedo-boats.

"On the way back the torpedo-boat destroyer *Stereguschtchi*, commanded by Lieutenant Sergueieff, sustained damages; her engine was disabled and she began to founder. By eight o'clock in the morning five of our torpedo-boat destroyers had returned.

"When the critical position of the *Stereguschtchi* became evident I hoisted my flag on the cruiser *Novik*, and went with the *Novik* and the cruiser *Boyarin* to the rescue.

"As five of the enemy's cruisers surrounded our destroyer, and as their battleship squadron was approaching, I did not succeed in saving the *Stereguschtchi*, which foundered. Part of the crew were made prisoners and part drowned.

"On the ships which took part in the night attack one officer was seriously and three others were slightly wounded, two soldiers were killed and eighteen were wounded.

"At nine o'clock fourteen of the enemy's ships assembled before Port Arthur, and a bombardment was begun with the heavy guns of their battle-ship squadron at long range.

"This lasted until one o'clock in the afternoon. . . . The damage to our vessels was insignificant, and they are again ready for battle. Our losses were one officer slightly wounded and one soldier killed and four soldiers wounded. . . .

March 13.—General Kuropatkin left St. Petersburg for the Far East on March 12 to take command of Russia's military forces in the field. His position will not involve any conflict of authority between him and Viceroy Alexeieff. Admiral Alexeieff will retain control of the Viceroyalty, while General Kuropatkin will be in control of the land operations, and Vice-Admiral Makaroff will command the fleet.

March 16.—A despatch received to-day reports that on Saturday, March 12, the Japanese again bombarded Port Arthur, for the purpose of provoking Admiral Makaroff to an engagement. The casualties on the Russian side are said to have amounted to 300 killed or wounded. The Japanese held a position of safety throughout the attack.

Progress of Science

The Cotton Boll Weevil

The ravages of the Mexican cotton boll weevil have had serious effect on the cotton crop in the United States for the past few years, and there has been a number of important investigations bearing on this subject carried on by the Division of Entomology of the United States Department of Agriculture. The result of these has recently been incorporated in a bulletin for farmers issued by the department. While it does not seem at present likely that the boll-weevil will ever be entirely exterminated, or that the large crops of cotton produced before its ravages will be repeated, yet it is quite possible to adopt methods of cultivation that should result in crops whose profits will compare with those of other staple agricultural products in the United States where precautions and care in cultivation must be observed. These modifications in modes of cultivation which are recommended to the farmer have resulted from a careful study of the life history and habits of the boll-weevil, and have been tested on a large scale in actual practice. Briefly summarized, the recommendations include early planting, thorough cultivation, rows as far apart as is possible, and a thorough thinning out of the plants, destruction by ploughing up and burning of those stalks where the weevils are so numerous that all the bolls are practically punctured, using fertilizers so as to produce an early crop. The chief points emphasized are the destruction of infected plants in the fall, so that the weevil cannot hibernate, and the making of every effort to secure an early crop in the ensuing season.

Illuminating Gas in London

The gas-supply of London is now being investigated by a committee of the Board of Trade, and one of the questions on which it will be called to pass is the lowering of the candle-power of the gas and the consequent cheapening of price. It is stated that in London about eight-tenths of the gas is used for heating and cooking, for gas-engines, and for illumination in connection with incandescent mantles. For such purposes only a blue or heating flame is required, and there is no need of the gas being enriched so as to furnish a luminous flame, upon whose brightness the amount of light emitted by an ordinary burner depends. It has accordingly been suggested that all the old burners should be discarded, and the use of incandescent mantles be made compulsory in all cases. In this way it would be possible to reduce materially the cost of gas to the consumer, and increase its use still more for power and domestic heating and lighting. In this connection there has been a demand in London for more durable mantles for lights of ordinary size, and for incandescent lamps of smaller candle-power and proportionately diminished consumption of gas.

Apparent Radiation from Magnets

A curious manifestation of magnetic energy has recently been detected with a luminescent screen, such as is employed in the study and examination of the new N-rays. M. C. Gutton has ascertained that effects similar to these rays are obtained if a phosphorescent screen is placed in a non-uniform magnetic field. Using a screen painted in small spots and exploring the vicinity of a bar magnet, he has found that the patches nearer the poles were brighter than those at the middle. That this effect was not due to N-rays was proved by enclosing the magnets in a lead box which would act to cut off this form of radiation. The same result was also obtained when the screen was enclosed in a vacuum. It was found that the magnetic field must be uniform in order to produce the effect, and with the strongest fields no increase in luminescence was obtained where they were of uniform intensity. When the lines of force are not parallel, the best results are secured. The phenomenon does not appear as yet to be understood satisfactorily, as there does not seem to be any way of accounting for the energy which acts on the screen that can explain the necessity for a lack of uniformity in the field.

BUFFALO LITHIA WATER

Has for Thirty Years Been Recognized By the Medical Profession as an Invaluable Remedy in Bright's Disease, Albuminuria of Pregnancy, Renal Calculi, Gout, Rheumatism and All Diseases Dependent upon a Uric Acid Diathesis. Time Adds to the Voluminous Testimony of Leading Clinical Observers.

Robert C. Kenner, A. M., M. D., *Ex-President Louisville Clinical Association, and Editor of Notes on "Garrod's Materia Medica and Therapeutics," Louisville, Ky.* (See "Garrod's Materia Medica and Therapeutics," fourth edition, revised by Kenner.):

"In the treatment of Gout and all the manifestations of Uric Acid Poisoning, **BUFFALO LITHIA WATER** is indicated and will be found very efficient. In Rheumatism, especially the chronic expression, we shall find the water very valuable. The waters of both springs have been found by extensive trial to possess remarkable solvent powers over Renal Calculi and Stone in the Bladder. We have the authority of that great clinician, Prof. Alfred L. Loomis, that **BUFFALO LITHIA WATER** is of great value in Bright's Disease, and Hammond and other great observers find it greatly beneficial in this condition. In dyspepsia and gastro-intestinal disorders the water has been found very efficacious. In vomiting and nausea of pregnancy there is no remedy more efficacious than **BUFFALO LITHIA WATER** frequently shows itself to be."

Medical testimony mailed to any address. For sale by druggists and grocers generally.

Hotel at Springs opens June 15th.

TOUR TO THE PACIFIC COAST AND GRAND CANYON.

Rate, $106.

Via Pennsylvania Railroad, Account General Conference, Methodist Episcopal Church.

On account of the General Conference of the Methodist Episcopal Church, to be held at Los Angeles, Cal., beginning May 3, the Pennsylvania Railroad Company will run a personally-conducted tour to Los Angeles, visiting the Grand Canyon of Arizona *en route*, at unusually low rates. A special train of the highest grade Pullman equipment will leave New York, Philadelphia, and Pittsburg on Wednesday, April 27, running via Chicago and the Santa Fe Route to the Grand Canyon. Sunday will be spent at this wonderful place, and Los Angeles will be reached on the evening of May 2. Round-trip tickets, including transportation, one double berth, and meals on special train going; and transportation only returning on regular trains via direct routes or via San Francisco, will be sold at rate of **$106** from New York, **$105** from Philadelphia, Baltimore, and Washington, and **$100** from Pittsburg. Tickets will be good to return at any time before June 30. Tourists returning via St. Louis may stop off for ten days to visit the World's Fair by depositing ticket and paying $1.00 fee. A descriptive itinerary will be sent on application to Geo. W. Boyd, General Passenger Agent, Broad Street Station, Philadelphia, Pa.

COMMENT

IT was at one time supposed that a rigorous investigation of the whole Post-office Department by a committee of the House of Representatives would be ordered by way of retaliation for the supplemental report received from the Post-office Department, in response to a request from Chairman Overstreet of the Post-office Committee. The supplemental report, it will be remembered, named 151 members of Congress who were alleged to be interested in premises rented by the Post-office Department, or to have requested improper additions to the pay of postmasters. In the end, the Republican majority was persuaded by its leaders to enter solely upon an investigation of the grounds on which their fellow members had been mentioned in the report. Mr. John Sharp Williams, however, the leader of the Democratic minority, misses no opportunity of charging that the Republicans are afraid to investigate the Post-office Department, lest they should uncover a mass of corruption, compared with which the malfeasance already exposed would appear insignificant.

On March 17, Mr. Williams described the Post-office Department as "rotten from turret to foundation-stone." Mr. Payne, the Republican floor leader, denounced the language as extravagant, and asserted that all the corruption which had existed in the Department had been laid bare. Thereupon Mr. Williams said, on the authority of Mr. Moon, a member of the Post-office Committee, that when Fourth Assistant Postmaster-General Bristow was before that committee he was asked whether, in his investigation of the First Assistant Postmaster-General's office, he had not incidentally discovered enough to convince him that the other three divisions ought to be investigated also. The reply was in the affirmative. Mr. Payne denying that any such incident occurred, Mr. Williams brought in Mr. Moon from the cloak-room, whereupon it appeared that, when Mr. Moon put to Mr. Bristow the question above quoted, the latter asked to be excused from answering it. It was recognized by Republicans and Democrats alike that Mr. Bristow's request to be excused from answering was equivalent to an affirmative reply. Mr. Overstreet, chairman of the Post-office Committee, made matters worse by suggesting that Mr. Moon's memory must be at fault, since no such question and answer as he alleged to have been uttered could be found in the committee's records. That, Mr. Moon said, was perfectly true, but he did have the colloquy with Mr. Bristow, and the reason it is not in the records is because the matter was discussed, and it was agreed by the committee that the colloquy should be stricken out. This statement, which was unchallenged, left Mr. Overstreet exposed to the imputation of having tried to deceive the House. The report is current among Representatives that many other things besides the significant colloquy above set forth were stricken out of the committee's records.

There seems to be, after all, some doubt about the willingness of Senator Fairbanks of Indiana to accept the Republican nomination for the Vice-Presidency. In a letter dated March 14, he told a fellow Indianian, who proposed to have his candidacy for the Vice-Presidency endorsed by a district convention held in that State for the purpose of nominating a representative in Congress, that he (Fairbanks) was not a candidate for the Vice-Presidential nomination. He had, he added, no desire whatever for it, and would be very much obliged if his correspondent would withhold any endorsement of him for the honor. The Indianapolis newspaper which is usually regarded as Senator Fairbanks's organ has, within a few days, spoken of Mr. Roosevelt with a frankness not evinced by those who covet the President's good-will. That many of the Senator's personal friends think that he ought not to accept the nomination for the Vice-Presidency is evident from a statement made for publication by Representative Charles V. Landis, of Indiana. Mr. Landis expressed the belief that the Senator would make a great mistake if he should consent to allow his name to be presented to the Chicago convention as a candidate for the Vice-Presidential office. His friends in Indiana do not want to see him close his public career in such a way. What they hope to witness is his nomination for the Presidency in 1908. According to Mr. Landis, there is no lack of available candidates for the Vice-Presidency in the Republican party. He suggests that Secretary Taft of Ohio, or Secretary Shaw of Iowa, or Senator Quarles of Wisconsin, would prove acceptable. No doubt Senator Fairbanks would strengthen the ticket more than any of the three mentioned, so far as Indiana is concerned, but Mr. Landis does not deem it necessary to put his name on the Republican ticket in order to carry the State.

Both of the United States Senators from Georgia are alive to the opportunity offered to the national Democracy this year, and they are agreed as to the way in which it should be turned to account. In a letter made public at Atlanta, Georgia, on March 17, Senator Clay tells his fellow Democrats that they must look to New York, New Jersey, Connecticut, Delaware, Maryland, Illinois, Indiana, and the solid South to elect a Democratic President. He goes on to say that Mr. Hearst is not regarded by members of Congress as an available candidate. He (Mr. Clay) had talked with many leading Democrats from doubtful States, but has never yet found one who thought that Mr. Hearst would make a strong nominee for the Presidency. Mr. Clay's personal conviction is that the nomination of Mr. Hearst would result in a defeat so overwhelming that the Democratic party might not recover from it in twenty years. Senator Bacon of Georgia thinks that Democrats in his State are disposed to favor the nomination of Judge Parker or Senator Gorman. He virtually admits that any nominee of the Democratic national convention would receive the vote of most of the Southern States, but with Senator Gorman or Judge Parker at the head of the ticket, the support would be most cordial. Southern Democrats comprehend, he says, that, in order to win this year, they must select a man who can carry the State of New York. New Jersey, Connecticut, Indiana, and certain other Northern States must also be kept in view, and Senator Bacon recognizes that they can be carried only by such a nominee and such a platform as will afford a guarantee that a Democratic administration will conduct the nation's affairs along moderate and conservative lines. There should be, he says, the most pronounced conservatism in every utterance and act of the St. Louis convention. There should be a thoroughly conservative man at the head of the ticket, and there should be a platform in thorough accord with the character and record of such a candidate. In truth, the candidate should be in himself a safe, conservative platform.

The time is past when it is possible to treat the Hearst boom as entirely unworthy of consideration. It now seems almost certain that he will have the delegation from Kansas as well as the delegations from Rhode Island, Kentucky, and Mississippi. He has carried so many districts in Illinois that his chance of carrying the State convention is admitted by his opponents to be good. Woodford County, Tazewell County, and Effingham County in that State were all swept by the Hearst managers on March 19. His friends are now making a vigorous attempt to capture Indiana and Michigan, and to recover Iowa, where, for a time, they seemed to have lost

ground. It is generally acknowledged that they would carry Missouri, but for the desire in that State to present the name of Senator Cockrell as that of a favorite son. On March 19 a meeting of the Democratic State convention of California held in San Francisco passed a resolution declaring it to be the opinion of the committee that the delegates from that State to the national convention should support W. R. Hearst for President. Even in some of the interior counties of the State of New York the Hearst men have made a strong fight for delegates. That some of the delegates to the Ohio State convention will advocate the nomination of Mr. Hearst is certain.

Nevertheless, we are still unconvinced that the Hearst-Bryan combination will be able to secure more than a third of the delegates to the St. Louis convention; but, just in proportion as it shows increased signs of strength ought the importance of abolishing the two-thirds rule to be recognized. If the conservative majority of that convention shall allow the rule to stand, and shall, in consequence, be deprived of the power to make a desired nomination, it will have sinned against the light. Of warnings it has had a superfluity. We have heard it asserted in some quarters that a repeal of the two-thirds rule is not needed in order to assure preponderance in the convention for the conservative majority. If conservatives, we are told, have a majority on the face of the returns, they will control the committee on credentials, and can shut out the Hearst-Bryan delegates wherever there is a contest. This seems to us a strangely cynical, not to say shameless, suggestion. If Hearst-Bryan delegates are justly entitled to seats in the convention, they should be admitted; but they would have no moral right to complain if the two-thirds rule were abolished, and the principle of majority supremacy were applied to Democratic, as it is to Republican, national conventions. In the latter case Bryanites would have no excuse for bolting; in the former case a bolt would be amply justified.

The death of the Duke of Cambridge, for many years commander-in-chief of the British army, comes close upon that of Count von Waldersee, who held a similar position at the head of the armies of the Fatherland. While Waldersee's name is connected with the militant Prussian period, from Sadowa to Sedan, the Duke of Cambridge gained laurels in the Crimean war, a struggle hardly less important to the destinies of Europe. The two warriors, therefore, summed up a half-century of history and political change; and with their passing the memories of that epoch seem almost visibly to fade and become more remote. It is interesting to remember that the Duke of Cambridge was born during the life of his grandfather, King George III.; we may almost look on him, therefore, as a link with certain events of our own past history. The father of the Duke of Cambridge was Adolph, sixth son of George III., and the duke himself was at one time heir-apparent to the throne of England. He was appointed General Commander of the Forces, a title later changed to Commander-in-Chief; and for many years he did extremely well in a methodical, painstaking, and uninspired way, according to the ideas of an elder age. He was no great friend of modernity, and viewed with frank dislike the transition of the British army from a social function of the aristocracy to a branch of the civil service.

Turning from Mr. Hearst to other candidates, Colonel Watterson expresses the opinion that Mr. Bryan is preparing to bolt. This we doubt. Mr. Bryan is too young and too shrewd to commit political suicide. When Martin Van Buren bolted in 1848 he had lost his last hope of personal triumph, and was instigated solely by revenge. At Mr. Bryan's age, he will do wisely to leave vindication to the whirligig of time. Besides, he must see as clearly as does Colonel Watterson that, with the Populist machinery virtually extinct, he could not expect to secure anything like the number of votes—over eight hundred thousand—cast for Mr. Weaver in 1892. The woods, according to the editor of the *Courier-Journal*, are full of good and available candidates. He mentions Gorman, Parker, Gray, Olney, Mayor McClellan of New York, and Mayor Harrison of Chicago. He is convinced that, on a sound platform, any one of these candidates ought to be able to beat Mr. Roosevelt. By a sound platform he means one from which the old silver issue should be excluded, and which shall be as short as possible, provided it states clearly the case of the people *versus* the absolutists. In his judgment, there will be but one primary and capital issue in the coming national campaign, and that is Theodore Roosevelt, with all that he implies. If Mr. Roosevelt can be thrust out of the way and the Democrats replaced in power, they can proceed to reconstruct our fractured constitutional system on sound traditional lines. If another defeat, however, be suffered, it may be too late for such a reconstruction. The weak point of Colonel Watterson's interview was his assertion that the suggestion of Mr. Cleveland as a possible candidate was not worth consideration. No one, he says, who will exercise any influence over the coming national convention is dreaming of Mr. Cleveland as a nominee. Does Colonel Watterson mean to aver that the Massachusetts delegation, or the New Jersey delegation, or the Tammany half of the New York delegation will exercise no influence over the Democratic national convention? It is he, not others, who is dreaming.

There seems to be no doubt that Lieutenant-General Nelson A. Miles of the United States army (retired) will be nominated by the Prohibitionists for the Presidency, and that he will accept the nomination. He is said to have written a letter to D. O. McCalmont, of Venango, Pennsylvania, in which he says: "It remains with my friends to say what services I shall render to my country." The ground on which his candidacy will be commended to the Prohibitionist national convention is his persistent and successful advocacy of the abolition of the canteen. The obvious purpose of the nomination would be to weaken Mr. Roosevelt in close Republican States, it being generally taken for granted that, so far as the North is concerned, the voters for a Prohibitionist are mainly drawn from the Republican ranks. In 1896 rather more than 132,000 votes were cast for the Prohibitionist ticket, or, in other words, about as many as were thrown for Palmer and Buckner, the gold Democratic candidates. In 1900, Mr. Wooley, the Prohibitionist nominee for the Presidency, got almost 209,000 votes, or more than four times as many as were cast for the Populist candidate. In the State of New York alone the number of Prohibitionist votes was upwards of 22,000; in New Jersey, upwards of 7,000; in Indiana, nearly 14,000; and in Illinois, above 17,600. Mr. Wooley got more than 10,000 votes in Wisconsin; nearly 12,000 in Michigan; and about 9500 in Iowa. If General Miles could get two or three times as many votes as were given to Mr. Wooley, he might do the Republican ticket serious damage in some pivotal States. In Iowa the anti-Hearst men have formed a plan of campaign, and intend, they say, to start a whirlwind for the general, which, it is hoped, will burst forth simultaneously in Michigan, Illinois, Texas, Massachusetts, New Jersey, and Maryland. What the framers of the project really have in mind is to secure the nomination of General Miles by the Prohibitionists at an early date, and then to persuade the Democratic national convention to endorse the nomination. The last time a Democratic national convention endorsed the nominee of another party was in 1872, when, meeting at Philadelphia, it accepted Horace Greeley, the candidate of the liberal Republicans. The issue of that experiment was hardly successful enough to encourage a similar one.

It is gratifying to learn that the census of the Philippine Archipelago is nearly completed, and that the digested outcome of the work done by the enumerators and classifiers is expected to be ready for publication this summer. This census will not only present the first accurate computation of the inhabitants of the islands, and the first trustworthy account of their economic, social, and educational needs, but will have an important bearing on their political future. For the law which authorized it provides that at any date not earlier than two years after the publication of the census—in case a general and complete peace, coupled with a recognition of the authority of the United States, shall have been declared by competent authority to have continued for the said biennial period throughout the territory outside of the Moro country—the President of the United States may direct a general election to be held in the Philippines for the choice of delegates to a popular assembly representing the inhabitants of the islands, which body shall be known as the Philippine Assembly. Thenceforth the government of the archipelago will—like that of those crown colonies of Great Britain which are in process

of transformation into self-governing colonies—be vested in two chambers, to wit: the Philippine Assembly, just mentioned, which will be chosen by the people, and the Philippine Commission, appointed by the President. The bicameral legislature thus constituted will have power to make laws for the islands, and also to choose two resident commissioners to the United States, who will be charged with the supervision and promotion of Philippine interests. According to a telegram from Washington, which is evidently based upon information secured from the War Department, the condition precedent to the election of a Philippine Assembly—the condition, namely, that the President of the United States shall be convinced that a general and stable peace prevails in the islands—will be fulfilled in the following way: In the summer of 1905, the Secretary of War, who, presumably, will be Judge Taft, will proceed to Manila, and thence will accompany the Philippine Commission on a tour of inspection throughout the archipelago. On their return to the insular capital, a report of their observations will be adopted and transmitted to the President. Should this be satisfactory, it is expected that the election of the first Philippine Assembly will take place in the autumn of 1907. Thus are the guns of the anti-Imperialists to be spiked.

It was an exceedingly interesting session that the House Committee on Interstate and Foreign Commerce held on March 19. Admiral Walker, the chairman of the Canal Commission, explained at length the principal engineering features of the vast constructive task which is shortly to be undertaken on the isthmus. Touching the question of a sea-level canal, the admiral did not hesitate to express the positive conviction that it never would be necessary to assume the tremendous cost of digging such a waterway. A lock canal fashioned on the plan adopted by the French company would, he feels assured, do all the work required, and it would certainly cost much less. Admiral Walker did not attempt to minimize the engineering difficulty presented by the Bohio dam. The French engineers made twenty-one borings to ascertain what foundation there would be for the structure. In the central part of the valley, however, they did not go down to rock, and the Isthmian Canal Commission, accordingly, determined to make an investigation more nearly exhaustive. It made eighty-six new borings, all of which reached rock except seven, which were abandoned before completion, on account of accidents to the apparatus, or of unusual difficulties of soil. The admiral has no doubt that the construction of the dam is practicable, although he conceded the necessity of going 120 feet below sea level to get the proper foundation. Had he not felt certain on this point, he would not have recommended a canal at Panama instead of at Nicaragua. There is no doubt that Senator Morgan made the most of the difficulty presented by the Bohio dam, and that the Senate ratified the canal treaty with full knowledge of the matter.

We pointed out some time ago the importance of providing an interior line of water communication for large war-vessels between New York and Norfolk. The only links needed to complete such a line are deep artificial waterways from the Chesapeake to the Delaware Bay, and from the Delaware to the Raritan River. By the first of these artificial waterways the distance from Baltimore to Philadelphia would be reduced about three hundred miles, to say nothing of the fact that all the war-ships normally stationed at the Norfolk Navy-yard at Fort Monroe, Washington, Baltimore, and the League Island Navy-yard could be concentrated at a given point without encountering the risk of attack *en route*. On March 11 the House Committee on Railroads and Canals gave a hearing to the advocates of the Chesapeake and Delaware ship-canal. Mr. Alfred O. Crozier pointed out that, according to an estimate made by government engineers, the Delaware ship-canal could be built for eight million dollars, or less than it costs to build and equip a single first-class battle-ship. The lack of such a canal compels the Federal government to provide double the number of defensive vessels that would otherwise be needed to give proper protection to Washington and the other great cities, navy-yards, dry docks, shipyards, powder-factories, and coal depots on the shores of Chesapeake Bay and of its estuaries. In the event of a foreign power undertaking to blockade both the Delaware and Virginia capes, the two blockading fleets could be quickly united and thrown against one wing of our divided fleet in either Delaware Bay or Chesapeake Bay. If, on the other hand, the proposed canal were built, the situation would be reversed, and our two fleets, respectively stationed in the bays mentioned, could be quickly concentrated through the canal against either of the blockading squadrons. It looks as if the construction of the waterway would be authorized at the next session of the Fifty-eighth Congress.

Canada is particularly gratified by that part of the new English understanding which refers to Newfoundland. The question is of almost mediæval antiquity, going back to the Treaty of Utrecht, which, in 1713 gave England Gibraltar, and, in the New World, Nova Scotia, Newfoundland, and the Hudson Bay region. To France were reserved certain rights, which enabled the Norman and Breton fishermen of the Banks to land and dry their fish on the northern and western shores of Newfoundland, and these reserved privileges have been quarreled over ever since. Now, nearly two hundred years after their establishment, they are yielded by France, in deference to England's plea that they abated the sovereignty of Newfoundland, and that the French claim to occupy certain regions, without coming under civil law or paying taxes, was a vexatious anomaly. The French reserve their fishing rights, and will presumably rent such spaces as may be necessary for the drying of their fish and mending their nets and lines. The Canadian view is, that this extension of English jurisdiction at the expense of France is a moral offset to the loss of the Alaskan arbitration case.

France is to be paid for her graceful acquiescence in Newfoundland by concessions made to her forward policy in Morocco. Morocco is about as big as Texas, and with an equal or perhaps greater population: say, anything from three to six or seven millions. Its Sultan, who now reigns in peace at Fez, after overthrowing a dangerous pretender, is almost the only ideal Mohammedan prince still left in the modern world, a sturdy polygamous ruler, whose word is law, who orders wholesale beheadings, and whose court is of the very stripe and texture of the Arabian Nights. France desires gradually to extend to Morocco the system which she has built up in Algeria, that of a French colonial bureaucracy, with an army of occupation; and, most interesting to the world at large, a system of winter resorts for tourists in search of a warm climate, not too far from southern Europe. She will in time succeed, doubtless, if Spain can be persuaded to acquiesce, and withdraw certain shadowy claims, very interesting historically, as dating from the days when Spain drove out the Moors, and thus put an end to African dominion on European soil.

In Germany's experiences in the regions west of the Transvaal, the worst forebodings have been realized in a gruesome way, and things are evidently drifting from bad to worse. The Herreros have swept to destruction a number of German settlements, and more than a hundred German colonists, men, women, and children, have been mutilated, tortured, and put to death, or left to die of thirst and their wounds. Their heads have been impaled, and set up along their ridgepoles, and nameless barbarities have been inflicted on their bodies. The Germans have retaliated with dismal ferocity. The cause of the uprising is being brought to light by the persistent efforts of Herr Bebel, the Social-Democrat leader in the Berlin Reichstag. It seems that the natives are encouraged to take on credit all kinds of European commodities, chiefly rum and rifles, doubtless, which they would be infinitely better without. They have only dim notions about payment, and the German traders get judgment against them, and levy on their herds. The natives, whose life is dependent on their cattle, look on these distraints as simply raids, and retaliate accordingly. Friction increases, until such an outbreak as the present takes place, and mutual slaughter adds lasting hatred to the relations of the two races.

On March 20, Dr. Charles William Eliot, President of Harvard University, was—to use the felicitous phrase coined by Dr. Oliver Wendell Holmes—seventy years young. He was a member of the Harvard University crew in 1858, and he has been at the head of the oldest of American universities for almost thirty-five years. He declined to permit his birthday to be commemorated by any public function, but a memorial

paper signed by a multitude of Harvard graduates, and attesting their sense of the profound obligations of their *alma mater* to her latest President, was presented to him by the Dean. If an augury may be drawn from his physical robustness and vitality, and from the alert, prehensile and expansive qualities of his intellect, Dr. Eliot is likely to witness the semi-centenary of his assumption of presidential duties. As regards mere lapse of time, his is already the longest presidency recorded, so far as we recall, in the university's annals. As regards the growth of the institution, it is no exaggeration to say that much more has been accomplished during the last thirty-five years than had been performed during the preceding two and a quarter centuries. From 1640 to 1870 there had been no very marked change in the curriculum. The method of instruction still followed, for the most part, mediæval lines. A more or less thorough acquaintance with Greek, Latin, and mathematics still constituted the main qualifications for the degree of Bachelor of Arts. Up to 1870, and, indeed, for a while longer, when people spoke of "Harvard," they had in mind exclusively the college proper, those who were merely graduates of the scientific school, law school, medical school or divinity school not being regarded as technically "Harvard men." How far-reaching has been the transformation effected during Dr. Eliot's presidency may be best indicated by the statement that Harvard is now an institution which, as regards breadth of scope, elevation and multiplicity of aim and educational facilities, deserves to be classed with the University of Berlin on the highest plane of academic usefulness. No one conversant with the facts would any longer hesitate to rank it above either Oxford or Cambridge. For this extraordinary development in respect of purpose, method, and resources the credit is, beyond a doubt, principally due to Dr. Eliot. When he dies, no column and no edifice will be needed to recall his services to the university. *Si monumentum quæris circumspice!*

Reference was made in the WEEKLY some months ago to the paper read by Mr. C. F. Adams before the Massachusetts Historical Society, in which he told of his efforts to verify a story told by the late Mr. Abram S. Hewitt. At the meeting of the Chamber of Commerce of New York, in February, 1901, resolutions were offered and speeches made in connection with the death of Queen Victoria. Mr. Hewitt related that in 1862 Mr. Adams, our minister to England, had appealed to the Queen in person to prevent the recognition of the Confederacy by Great Britain, which seemed at that time imminent, and that the Queen had said to him, "Give yourself no concern; my government will not recognize the Confederacy." This story greatly interested Mr. C. F. Adams, son of the late minister, and he tried to verify it, but was constrained to conclude that Mr. Hewitt was mistaken, and that no such interview between Mr. Adams and the Queen ever occurred. He thought, however, that the story might at least have some basis of fact, and he has ever since been searching for some authoritative evidence that the Queen, sometime and to some one, expressed such sentiments as Mr. Hewitt had attributed to her. There is, as he says, an accepted tradition that "the cause of the Union was, in its hour of trial, dear to Queen Victoria, and that we of the North were under deep and peculiar obligation to her." He wants to discover what that tradition rests on. The course of his quest is recorded in the latest issue of the printed Proceedings of the Massachusetts Historical Society.

The tradition is well seasoned. As long ago as 1874 Mr. Choate, in a speech in New York, spoke of there being the best of reasons for believing that the Queen "was from the first to the last an obstinately faithful ally of America." Mr. Adams remembered that President Eliot, in welcoming Queen Victoria's grandson, Prince Henry of Prussia, to Harvard in 1902, said: "It is credibly reported that at a very critical moment the Queen of England said to her Prime Minister, 'My lord, you must understand that I will sign no paper which means war with the United States.'" Here may be the basis to Mr. Hewitt's story, thought Mr. Adams, and he wrote to Dr. Eliot, asking his authority for what he had said. Dr. Eliot replied that at Oxford, in 1874, he met Prince Leopold at luncheon, and the Prince told the story of the Queen's interview with Lord Russell. Sir Henry Acland, who was present, spoke of the story as if he believed it. This corroborative evidence satisfied Mr. Adams that it was believed in the British royal family and about Windsor Castle that at some time during the civil war Queen Victoria did take a decided stand with the ministry in opposition to anything calculated to provoke hostilities with the United States. Nothing that comes nearer than this to being direct testimony has Mr. Adams been able to ferret out, but in a long and interesting paper he sets forth that the Queen was an exceeding pertinacious woman; that for some years after the death of Prince Albert in December, 1861, her mental and bodily health gave her ministers much concern, and constrained them to show special consideration for her wishes; that the feelings and opinions of Prince Albert, as she recalled them, had great weight with her, and that the Prince, while he lived, inclined towards the side of the North. Mr. Adams is able further to demonstrate that in the autumn of 1862 Lord Russell and Lord Palmerston had agreed that it was time to offer mediation to the United States government, with a view to the recognition of the independence of the Confederates. Such action was definitely planned and is known to have been imminent. But it was not taken. The effectual hindrance to it Mr. Adams believes to have been the inflexible opposition of the Queen, probably conveyed to the ministry through Lord Granville. The probabilities point strongly to this conclusion, but positive evidence is still lacking, and will, if it ever turns up, be of lively historical interest.

The committee on Franchises and Transportation of the Merchants' Association of New York has written to the State Railroad Commission asking whether it cannot make the Manhattan Company provide more adequate stairways to its Elevated stations. The stairways, says these complainants, were designed thirty years ago, when the traffic was much less than it is now, and are "narrow, crooked, inconvenient, and utterly inadequate to accommodate the reasonable needs of the public." So they are, many of them, and what is still more unseemly, their restricted and insufficient space is encroached upon by billboards. The narrowest stairway has space enough for rough boards that carry advertisements. The whole business of disfiguring the stairways and stations of the Elevated Railroad with advertisements ought to be swept away. It is a monstrous and ridiculous imposition on public patience. The company paints its structure and stations with some care, and seems to try to give both a decent appearance. No sooner is the paint dry than back go the billboards, shutting off light in many cases, hideous and obstructive in all cases. At its best the Elevated Railroad is a sore disfigurement to the town. It is preposterous that it should make itself still more outlandish and gruesome for the sake of a catch-penny advertising trade. Mr. Sage is out. The new owners ought to have self-respect enough to turn the bill-board advertising off, and try to give their property a decent appearance.

President Wilson of Princeton criticises the American school histories because of their failure to get the children who study them out of the twentieth century. The histories start, he says, with a map of the United States as it is, and the child never gets away from modern times; never really sails with Columbus to discover the Indies, nor imagines with Hudson that he has found the Northwest Passage. Dr. Wilson sighs at all this as an evil hardly to be mended. He does not think that a history of America that will give us a living picture of our past will be written in our generation. "We are doomed," he says, "to be creatures of our own day, and it's a dull day. It's all hurry, all bustle, and no refreshment; a day of cold steel and hard fact. We are in such a hurry that we no longer have time to sit down and dream dreams, and no people make any intellectual advance unless they do dream dreams." One would think Dr. Wilson had been out pursuing the strenuous life, like his young brethren, Drs. Hadley of Yale and Butler of Columbia, instead of enjoying the *otium cum dignitate* of a scholastic job in a peaceful Jersey village, where he can gossip over the back fence with the only living ex-President of the United States. We remark, by the way, that none of these three young doctors appears in that distinguished list of college presidents, bishops, and elders of the people which is appended to the Philippines independence petition. Eliot, Schurman, Jordan, Hyde, Faunce, and a score of other college worthies are signers, but not as yet Hadley or Butler or Wilson.

The Proceedings in the Northern Securities Case

MANY men — perhaps we should say almost all men except lawyers—fix their eyes on the decision rendered by a tribunal, and pay but little heed to the opinions on which the decision is based. Yet it should be obvious that the direct effect of a given decision on the case at bar may be one thing, while the indirect, ultimate effect produced by the opinion filed on the fate of similar but not identical cases may be widely different. There is no doubt that the judgment rendered on March 14 by five out of the nine justices constituting the United States Supreme Court affirmed the decree by which the four judges composing the United States Circuit Court for the district of Minnesota pronounced invalid the merger of the Great Northern and Northern Pacific railways in the Northern Securities Company. It is equally certain that hereafter every case identical with that presented by the Northern Securities Company will be decided in the same way, provided, of course, the five justices who concurred in the decision rendered on March 14 shall adhere to the opinions then filed by them. It should, at the same time, be recognized that the opinion which was read by Justice Harlan, and in which three of his colleagues concurred, differs materially from that signed by Justice Brewer, though he also concurred in the decision. It is, therefore, indispensable that those who would forecast the bearing of the proceedings of March 14 in the United States Supreme Court on other existing or future aggregations of capital should fasten their gaze on the principles asserted or deductions drawn by the fifth, or pivotal, Judge, for thus they may be enabled to divine the fate of corporations or combinations which differ in a given important particular from the Northern Securities Company. The outcome of such a scrutiny is that, while the decision is undoubtedly fatal to the Northern Securities merger in the present form thereof, the opinions, viewed collectively, are actually reassuring to the so-called "trusts"—by which we mean combinations of capital undertaken with a view to efficiency and economy—in the sense that they indicate a marked recession of opinion on the part of Justice Brewer and also on the part of Chief-Justice Fuller and Justices Peckham and White—with whom their new colleague, Justice Holmes, concurs—from the position previously taken by a majority of the court in the Trans-Missouri Freight Association and Joint Traffic Association cases. We may, indeed, take for granted that Justice Harlan and his three colleagues who concurred in the opinion read by him—Justices Brown, McKenna, and Day—will adhere to the position now taken by them, which is a sweeping one, and would be fatal to the trusts because it pronounces all combinations of capital that do or may exercise any restraint, whether reasonable or unreasonable, upon interstate trade to be violations of the Anti-Trust Act, which act is also declared to be a constitutional exercise of the powers delegated to Congress. It is clear, however, that this position is no longer that of a majority of the court, though it unquestionably coincides with that previously taken by a majority in the two leading cases to which we have referred.

Before indicating the main points of the opinion filed by Justice Brewer, the fifth, or pivotal, member of the court, let us mark the two principal grounds on which four justices—Fuller, Peckham, and White, Democrats, and Holmes, Republican—declined to assent to the decision rendered by the majority. These grounds were, first, that Congress was without power to regulate the acquisition and ownership of stock in the Great Northern and Northern Pacific railways by the Northern Securities Company; and, secondly, that, even if such power were vested in Congress by the Constitution, it had not been exercised in the Anti-Trust Act. The first ground is set forth with lucidity and cogency in the opinion which was read by Justice White, and in which Chief-Justice Fuller and Justices Peckham and Holmes concurred; while the second ground is considered at length in a separate opinion of Justice Holmes, which explains what the jurist believes to be the true interpretation of the Federal statute. Justice Holmes said that while the merger of the Great Northern and Northern Pacific lines had undoubtedly been entered upon with the intent of ending competition between the two railways, yet he did not think that the Anti-Trust Act was meant to be applicable to transactions of that sort, because the statute presupposed that a contract in restraint of trade would be made with an outsider. If, however, his interpretation of the statute be overruled, he should concur with his colleagues, Chief-Justice Fuller and Justices Peckham and White, in holding that the Constitution never authorized Congress to regulate the acquisition and ownership of the railway stocks in question by the Northern Securities Company. Nor did he refrain from expressing his profound gratification that at least four of the nine judges constituting the court had refused to adopt an interpretation of the Anti-Trust Act which, in his judgment, would tend to inaugurate an eternal social war, and to disintegrate society into its individual atoms. To call such a law, as the Anti-Trust Act is when interpreted by Justice Harlan, a regulation of commerce is, Justice Holmes thinks, a mere pretence. It is rather an attempt to reconstruct society. With the wisdom of such an attempt Justice Holmes does not deem himself to be now directly concerned, but he believes that Congress was not entrusted by the Constitution with the power to make it, and he is also deeply persuaded that Congress has not tried to make it. We add that Justice White, in the opinion which he read, and in which Justices Fuller, Peckham, and Holmes concurred, denounced the construction of the Anti-Trust Act embodied in the decision rendered by the majority of the court, as the assertion, by implication, of a power repugnant to all the fundamental rights of life, liberty, and property upon which all just government must rest.

Now Justice Brewer concurs with Justices Harlan, Brown, McKenna, and Day in upholding the decree issued by the United States Circuit Court against the Northern Securities Company. He shows, however, in his separate opinion that he concurs in the decision on grounds of his own. He agrees, indeed, with the rest of the majority in holding that Congress was constitutionally authorized to enact the Anti-Trust law, provided the statute is to bear the construction which he, Justice Brewer, would give it. His own interpretation differs materially from that which is now announced by the rest of the majority, and which, moreover, was embodied in the opinions filed by the justices concurring in the decisions rendered in the Trans-Missouri and Joint Traffic cases. Justice Brewer holds that the two last-named *decisions* were right, but that the *opinions* filed in defence thereof went too far. He now thinks that, instead of holding, as a majority of the justices did in the two cases last named, that the Anti-Trust Act prohibited all contracts, reasonable or unreasonable, in actual or possible restraint of interstate trade, the ruling should have been that the contracts presented in the Trans-Missouri and Joint Traffic cases were, in themselves, unreasonable restraints of interstate trade, and, therefore, within the scope of the act. Congress, he thinks, did not intend by that act to reach and destroy such contracts in partial restraint of trade as had been pronounced reasonable by a long series of decisions at common law. He thinks, moreover, that the *general* language of the Anti-Trust Act is necessarily limited by the power which an individual unquestionably has under our Federal and State constitutions to manage his own property, and to determine the place and manner of its investment. Justice Brewer does not hesitate to describe freedom of action in these respects as among the inalienable rights of every citizen. Applying this principle to the Northern Securities case, he goes on to say that, had it appeared that Mr. James J. Hill was the owner of a majority of the stock in the Great Northern Railway Company, he could not, by any act of Congress be deprived of the right of investing his surplus means in the purchase of stock of the Northern Pacific Railway Company, although such purchase might tend to vest in him, through that ownership, a control over both companies. In other words, the right which all other citizens had of *purchasing* Northern Pacific stock could not be denied to Mr. James J. Hill by Congress, because of his ownership of stock in the Great Northern Company.

Justice Brewer holds, however, that *no* such investment by a *single* individual in the stock of two competitive companies is presented in the Northern Securities case. What was here exhibited was a combination by several individuals, separately owning stock in two *competing* railroad companies, to place the control of both in a single corporation. That corporation—the Securities Company—was a mere instrumentality, by which separate railroad properties were to be combined under one control. Justice Brewer regards such a combination as a no less direct restraint of trade, by destroying competition, than would be the appointment of a committee to regulate rates. He adds that if the parties interested in the Great Northern and Northern Pacific railroads could, through the instrumentality of a holding corporation, place both lines under one control, then, in like manner, could the control of all the railroad companies in the country be eventually placed in a single corporation. That is why Justice Brewer upheld the adverse decree of the United States Circuit Court. He upheld it because he looked upon the Northern Securities Company as against public policy—*i. e.*, as an unreasonable combination in restraint of interstate commerce. He deemed it his duty, however, to explain in his separate opinion that he would *not* deny the validity of a combination exercising restraint upon interstate trade, provided that restraint can fairly be described as *reasonable;* much less would he deny the right of an individual to acquire controlling interests in two or more competitive companies. He felt it his duty to draw these sharp and deep distinctions, lest the broad and sweeping language of the opinion read by Justice Harlan should tend to unsettle legitimate business enterprises, stifle or retard wholesale business activities, encourage improper disregard of reasonable contracts, and invite unnecessary litigation.

In view of the opinions expressed by the four justices who dissented from the decision of the court, and of the separate opinion filed by the fifth, or pivotal, justice, it is easy to understand why Attorney-General Knox should declare that the Federal government has no intention of "running amuck" among the corporations accused of violating the Anti-Trust Act. He knows that, in the

case of many of those corporations, the government has much less reason to expect a favorable decision, now that the attitude of the court has been defined by the proceedings of March 14, than it had when that attitude was presumed to have been definitely indicated by the decisions rendered and by the opinions filed in the Trans-Missouri and Joint Traffic cases. Then the government felt sure, under the general principle propounded, of a favorable decision in every case. Now it knows that the general principle has been discarded by the majority of the court—by majority we here mean Justice Brewer added to Chief-Justice Fuller and Justices Peckham, White, and Holmes—that every case will have to be tried on its specific merits; and that the judgment of the tribunal can by no means be foreseen. It does not follow, of course, that absolutely nothing will be done in the way of prosecutions under the Anti-Trust Act. Other suits are already pending, and have been more or less advanced toward final adjudication. A report sent on February 11 by the Department of Justice to the House of Representatives showed that no fewer than twenty-three actions had been begun, all of which had been expedited under the authority of the recent act of Congress. Fourteen railroad injunction cases are before the United States Circuit Court at Chicago, and three cases—those against the Beef Trust, against the Nashville, Chattanooga, and St. Louis Railway, and against Baird and others, are already on appeal before the United States Supreme Court. We may, therefore, count upon a further elucidation of the Anti-Trust Act on the part of the highest Federal tribunal at no distant date.

The Life Beyond

PREACHING two years ago to his fellow clergymen at Plymouth, Massachusetts, in convention assembled, Rev. Dr. George A. Gordon, of Boston, said: "We ministers of the Lord Jesus Christ know as no other persons in the community can what a paralysis has come over the intelligent and thinking people in regard to the reality of the other life. So many doubt it; so few have any strong confidence in regard to it." And Rev. John Watson (Ian Maclaren), of Liverpool, in a recent sermon dwelt upon the altered mood of the dying whom the English clergy see pass out of the world—their comparative unconcern about the future life, their greater solicitude about the physical well-being and comfort of those whom they leave behind, their exemption from those raptures of anticipation of heaven or fears of hell which formerly made death-beds scenes of glory or despair.

Now such a mood is of the essence of secularism, as defined by George Holyoake, one of the greatest of English secularists, for a secularist, according to him, is "one who gives primary attention to those subjects the issues of which can be tested by the experience of this life," and secularism is "a philosophy of the things of time." If the mood becomes chronic or universal it would at once relegate to comparative insignificance all long-debated questions as to a universal or partial immortality of the race, the innate or conditional immortality of the soul, its immortability or immortality. Joseph Cook used to sigh for more preaching of a bottomless hell, and deplore the preaching of a topless heaven. But if men in general, like Henley, come to welcome annihilation, what boots it what be preached!

It therefore is of more than usual significance that Mr. Howells, in the March HARPER'S MAGAZINE, should turn to the consideration of the age-long question of immortality of the soul, and to testify that despite all that science has done in modifying old views of the universe, of man's origin and destiny, it has not taken the hope of immortality from man, but rather, by emphasizing the unity of the universe, it is coming to support lastingly the hope.

One does not need to go as far as he seems to go in accepting Dr. Alfred Russel Wallace's recently propounded theory that this world of all God's creations is the only one inhabited, all other portions of the cosmos being created for our well-being and enrichment. Dr. Wallace's fellow scientists have not taken as kindly to the theory as Mr. Howells seems to. The ground of the best argument for immortality which is being advanced by thinkers to-day is not dependent upon solution of the problem as to whether other worlds are inhabited or not—indeed, it is not dependent upon the outer world at all. It is psychical, not physical, has to do with souls not with their habitat; and it is rooted in personality not in place.

Moreover, it is significant that even the most rationalistic of thinkers are admitting now, what Horace Bushnell said long since, that "the faith of immortality depends on a sense of it begotten, not on an argument for it concluded." "For surely," said Rev. John W. Chadwick, commemorating the virtue of his friend, Lewis G. Janes, "nothing else is so convincing of the immortal life as lives enamored of all truth and good. We cannot make them dead. The tide of strong emotion overflows the barriers of the critical intellect and carries them upon its bosom into the haven where we would have them be." Channing had this thought in mind when he said: "My faith in immortality rests very little on mere affection, but very much on the fact of human excellence. The sight of eminent virtue carries me up to heaven at once. Indeed, virtue and heaven are very much one in my sight. It seems to me as natural for virtue to live as for the animal to breathe, and much more." "The nearer you approach the instinctive state, the more indubitable it is," said Robertson of Brighton.

It is this argument of the need of persistence in the process of soul culture if God is not to be considered a reckless waster of life by limiting man's career to threescore years and ten that appeals to Mr. Howells, always reverent, always sensitive to human sorrow and pain.

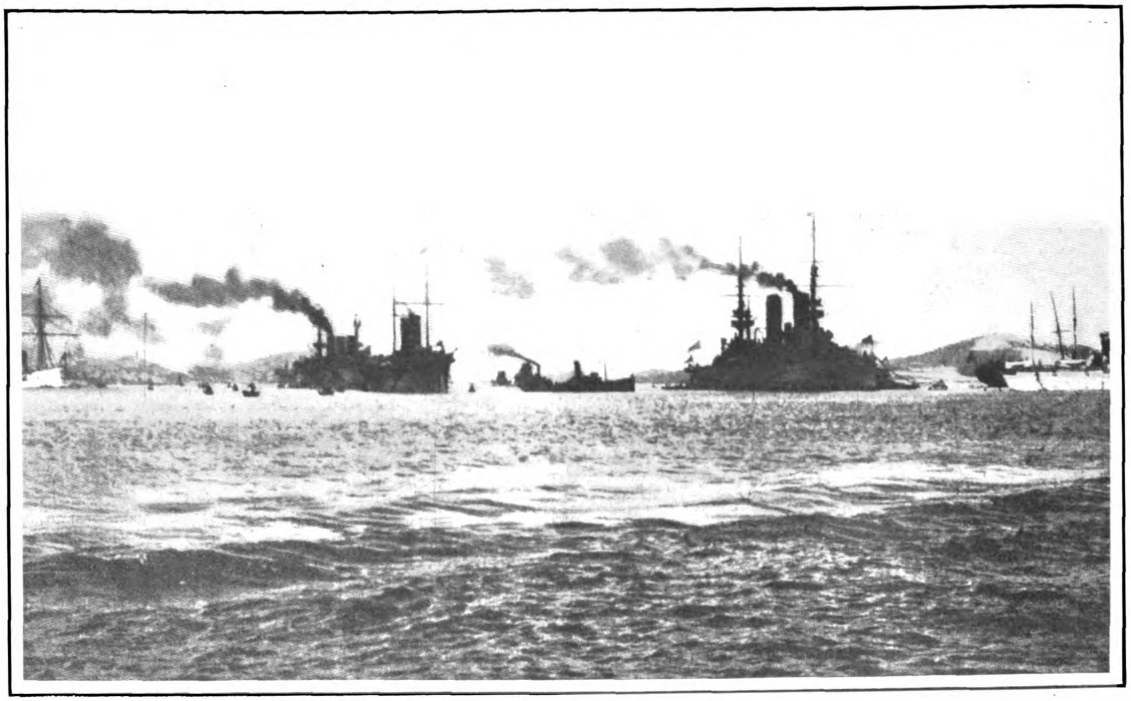
But while the average man, with his heartache, and philosophers like Fiske and Royce, with their reason, are thus arguing for immortality from the standpoint of instinct or of reason, it also happens significantly enough that psychologists like William James and physicists like Sir Oliver Lodge, not to mention other eminent members of the Society of Psychical Research, are approaching the problem from another side, and are gathering data respecting the existence of personality disembodied, using the scientific method, and probably no book issued since this century opened has so differentiated the century from all its predecessors as the late Mr. Myer's book on the survival of personality after death. In the light of it and what it foreshadows, the resurrection of Jesus has immense interest not only to the humble, faithful, Christian believer, but to the man of science, and many a man now can say with good conscience that he believes that Jesus rose again on the third day, who had hesitated to believe it before, in the light of nature and of science. To explain the record of the New Testament in terms of the subjective experience of those who visited the open tomb or walked on the way to Emmaus is a way that has satisfied some; but unless there be an objective fact for so great a corner-stone of Christian faith, it sooner or later must crumble.

Whether man is to believe or not believe in the future life is something more than a mere academic or metaphysical issue concerning only the sensitive few. It has immense import for the welfare of the race, as Renan clearly recognized in his agnosticism. "You will get much less from a humanity which does not believe in the human immortality of the soul than from one which does believe," he said. The elect few, when belief and hope give way to unbelief and stoical facing of annihilation, may go on their way living lofty lives of obedience to duty and service to fellow men, but the masses are far more likely to say, "Eat and drink, for to-morrow we die."

Levelling Down

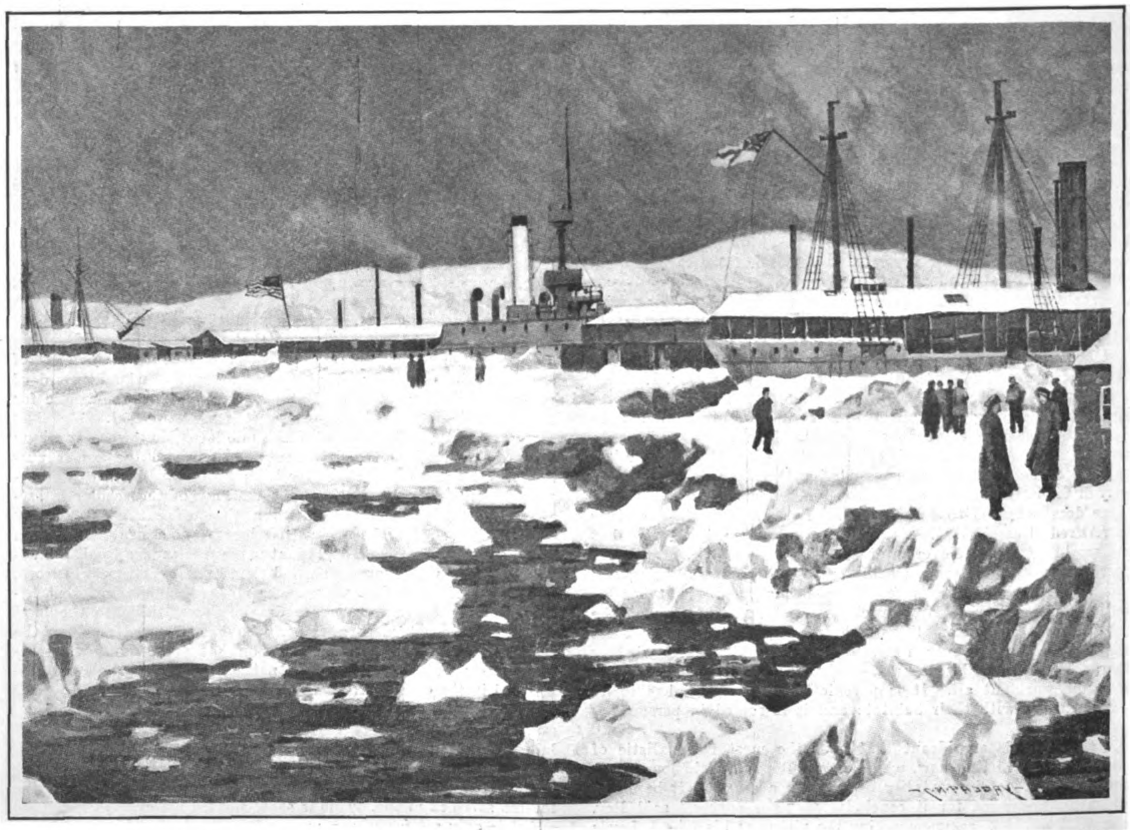
THE educational value of a visit from Richard Strauss is not exhausted in the musical world. His reported conversations are full of philosophical enlightenment for just such a people as we are, and the chief danger is that his comment should seem to us so novel as to be taken as unmeaning. He is reported as saying that he would rather produce an interesting work like Schilling's "Pfeffer Tag" than attract large houses, and upon hearing the fateful words, "The public will not like it," he responded, wearily, "I don't care what the public likes."

Genius pursues an ideal; it has no time to try to please. It lives, and it must live, oblivious of that huge machine for levelling down, the public. Dr. Strauss's protest is strikingly like that of a great railroad capitalist of a generation ago who disposed of the public in three words. But he anathematized the public for his personal interests; Strauss loses it in a great ideal.



In our country the claims of the public to have what it wants have been served to the detriment of nearly all the nobler pursuits. We are overrun with free libraries stocked with cheap current fiction, free schools where the training of the scholar is sacrificed to that of the tradesman, a theatre that systematically addresses itself to the widest circle of amusement-seekers, an enormous output of periodicals that makes the same appeal. Doubtless the masses are more cultivated than in any country in Europe, but our sacrifice is that we produce no great music, no great literature, no great art. We are dragging everything to the level of the masses. A modern writer who has observed us from the standpoint of a cultivated Frenchman has accused us of unpardonable short-sightedness. As a nation, he says, we are not interested in the graver problems of life. Just this tendency to cater to the crowd, instead of encouraging each art to offer its best, even if for the few, is the flaw which is allowing us to fall behind the rest of the world in every sphere except those of commercial prosperity and mechanical ingenuity. We are deserting the highest and rarest tracts of human consciousness to feed the far too satisfied public. This is short-sighted policy.

Art is only art when men pursue it as Blake did his work.



> In my golden house on high
> There they live eternally,

was his reply when a dutiful friend suggested that people would not like his works. And Strauss's reiteration of this immortal lesson is fit to take seriously to heart.

General Kuropatkin

GENERAL KUROPATKIN AND RUSSIAN ARTILLERY OFFICERS IN THE FIELD

General Kuropatkin, until recently Russia's Minister of War, left St. Petersburg for the Far East on March 12 to take command of the Czar's military forces in the field. His departure from the capital was marked by popular demonstrations of patriotism and enthusiastic regard for Russia's most distinguished soldier. General Kuropatkin's position at the front will not involve any conflict of authority between him and Viceroy Alexeieff. The latter will retain control of the viceroyalty, while General Kuropatkin will have charge of the land operations

Every-day Life in Japan

By Onoto Watanna

Author of "A Japanese Nightingale," "The Wooing of Wistaria," etc

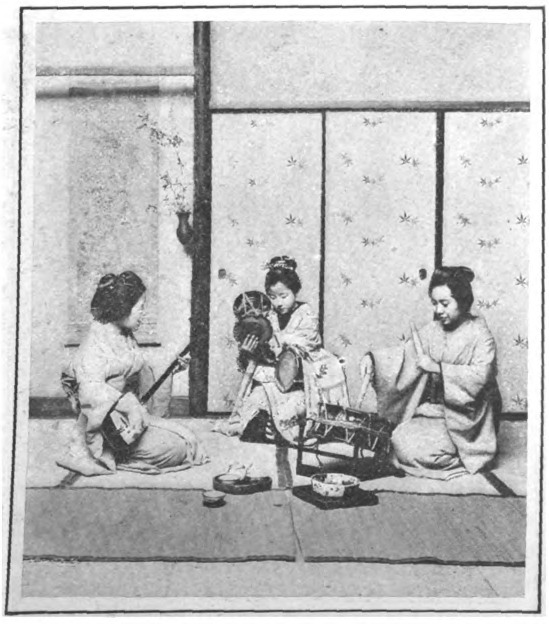
"ALL waters and women look the same under the light of the moon," but all nations do not appear the same in the light of civilization. The West speaks of the "heathen" East, and the East with equal contempt calls the Westerner a barbarian. Each complains that the other is uncivilized. It depends on what constitutes civilization. Progression and a certain religion does not necessarily spell it.

Convention walks hand in hand with any civilization. No nation is uncivilized which in the actual every-day living practices the little niceties and politenesses of convention. Do not deem a land uncivilized because the natives squat on their heels as they eat their dinners. Daintier and less barbarous the tiny bits of china and the long slim chopsticks of the Orient than the heavy carved gorgeous silver of the West.

The ancient practice of arising with the sun is still kept up by many of the Japanese outside the big cities. Tokyo, Yokohama, even Osaka, have become too commercial and cosmopolitan for the inhabitants to observe the mode of life practiced by their ancestors. The city people rush about with the eager breathlessness of the Yankee. At night they often dissipate, and sunrise finds them sleeping hard.

A man may not drink sake till past the last hour of the night and awaken to smile at the morning sun. The inhabitants outside of the big cities, however, make up the backbone of the nation, and these are the ones who arise with the sun.

At five in the morning shojis are pushed slightly apart and bright faces look toward the East. "Ohayo! Ohayo!" (Good morning—or more literarly, "It is morning!") says the polite Japanese, and bows with great friendliness and appreciation to the big yellow globe pushing its way upward in the sky. A murmuring of voices runs through the house. Down in the kitchen the noisy maid-servant makes herself heard. She is scolding her little army of assistants, for she, the chief servant and cook, has an assistant, a boy of seventeen, who in turn has a small boy assistant, who in turn likewise has an assistant, a still smaller boy. The chief servant scolds them all thoroughly. She would like to shake more energy into their lazy, sleepy bodies. "Hurry! for the Okusama (august lady of the house) will be down presently." She sends them hurrying this way and that, one to draw and carry water, one to prepare the dining-room, one to sweep the verandas, open the shojis and let in the morning sunlight and air, and she herself sets to work upon the cooking. Thus in the hours when the average Western servant is sleeping the Japanese servants do all the housework for the day. Before breakfast the housework is done. When the honorable lady of the house descends to the honorable down-stairs the rooms shine in cheerful morning welcome to her; breakfast is on the lacquered trays which stand on feet a few inches in height. Before she breakfasts, however, the Okusama looks into the various rooms with the searching eye of the experienced housekeeper. If all is well she sweetly enters the dining-room, and herself waits upon her husband and parents, and pours for them the morning tea.



The family may have been up as early as the servants, but they have engaged themselves in bathing, dressing, and, for a short spell, in simply enjoying the rising sun and the early morning. Breakfast is ready by seven. Of course where the family cannot afford servants the mistress of the house, or, if she is old, her daughter-in-law or her daughters must do the housework, but even quite poor people keep at least one scullery-maid.

Morning conversation must always be pleasant. How sad to begin the day with harsh words! The wife, if she is highly bred and fond of the politenesses of speech, will say to her husband,

"O shikkei itashmashita," which means, "I beg you to pardon me for my rudeness last time we met." She may not have been in the slightest rude, but she hastens thus to apologize for what might have been. The husband accepts her apology with graciousness, and observing that he too was augustly rude, he turns to the subject of the day. "The sun is honorably deigning to shine," or, "The honorable rain stills falls. The earth must indeed be thirsty." There is no complaint made against the weather. In addressing each other the Japanese usually preface a name with the term "honorable"—in Japanese "O," "Go," or "On." The term "san" is usually applied after the name. "Sama," a more respectful and less familiar term, is used to strangers. Both words mean about the same as "Mr., Mrs., or Miss," though "san" in the family is affectionate. "O-Haru-san" will say the husband, "please, another cup of tea for O-Bankurpsama," the latter being a friend or guest.

In many families the son of the house has brought home to his parents a young bride. At this time she is undergoing the severe strain of attempting to win the most desired approval of her parents-in-law. The son on attaining his majority becomes superior to his mother, but she is the absolute ruler of her daughter-in-law. Hence it often happens that the young wife waits upon the older woman. When breakfast is finished the son takes the morning paper, a social rather than a news sheet, and glances through it hurriedly before leaving for his work. When he has finished he passes it to his wife, and then it becomes her duty to read it aloud to her mother-in-law, a task very often tedious and trying. But she is very anxious to please the powerful lady, for she knows that her happiness is entirely in the hands of her mother-in-law. Such is the latter's power, indeed, that if she deems it desirable, she can even divorce her son's wife, whether the son desires it or not. Taught to think more of the parent than the wife, he bows to the often unhappy inevitable. Indeed, many a man has gone away from home on some mission and returned to find himself wifeless, his mother having sent home and divorced his wife in his absence. I believe, however, that the power of the mother-in-law is on the wane. The life of the bride even under the dominion of an exacting mother-in-law is always gilded with hope. She prays daily and fervently that she may become a mother, for then she may, as a rule, have an establishment of her own, and her position becomes immensely elevated. Indeed, she immediately begins to speculate upon her own chances of becoming a mother-in-law. Foreigners have expressed surprise and amusement at the ambition of Japanese girls to grow old. This is one of the reasons. Age brings freedom, power.

When the men have taken themselves off to their various occupa-

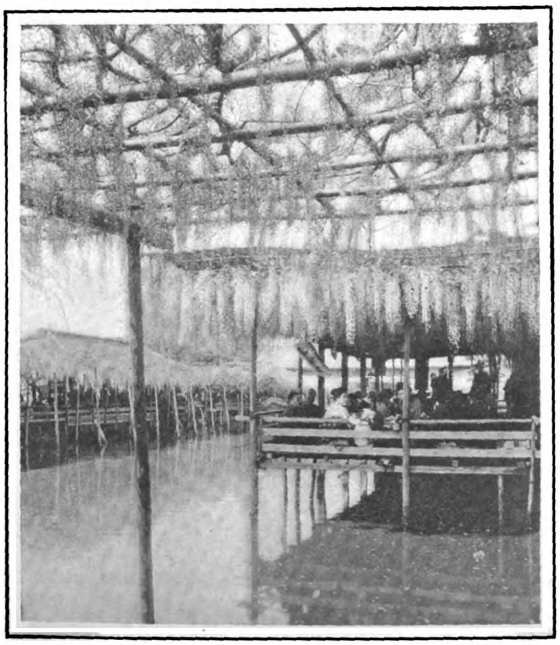
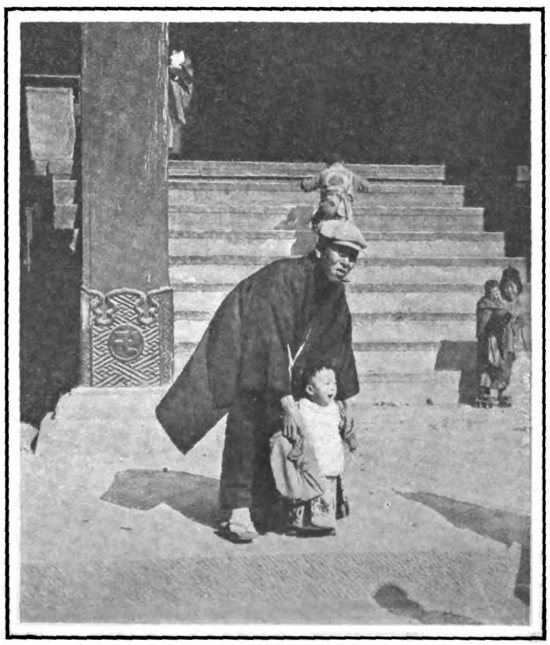
tions the women, in turn, begin their daily tasks. Even rich women find something to do. There are always children in the family. The children are bathed and dressed, often altogether in the family pond. Clean linen clothes are put upon them. The babies are sent away with their nurses, the older children to school, and the little tots that come between are usually taken in hand by the mother or an elder sister.



The Japanese women begin to teach their children manners when they are as young as three and four years. They will show them how to sit politely on the floor, how to bow gracefully, how to hold the chop-sticks, the proper and refined way to eat; they teach them words and greetings of politeness, and finally, but not least, they instruct them in the first principles of patriotism and loyalty. Everything they are told comes from Tenshi-sama (the Emperor), and when the final question, "If Tenshi-sama needs you, what will you do for him?" is put, the answer comes quickly, "I will die for Tenshi-sama." One hour at least is given to this first home instruction, then the little ones are sent out into the gardens, where they play joyfully together.

The morning is the busy time for the Okusama. When the children have been sent out into the gardens she finds a few moments to give to her young daughter. The young girl will assist her at the tokonona, and while thus pleasantly engaged the mother imparts some good advice. The girl finds a moment, perhaps, to make some shy confidence. Often she confesses to the mother what she would not breathe to her father or any one else—her love affairs. For watched and guarded as is the young girl of good family, still she is a girl, and hence romantic. She is not permitted any familiar association with young men, but she has a chance to see, and sometimes even speak to young men in her own circle of family friends. But even if she is not given the opportunity to meet and speak to a young man, there is nothing to prevent her casting shy glances toward a prepossessing youth whom she may encounter when driving or walking abroad. Her "love affairs" are not like those of the American girl. She cannot tell her mother of words of passion and love poured into her ears, of tender handclasps and embraces. Such things are unknown to her. But she will tell of one who passes and repasses their house, of a flower placed upon her window-ledge, and sometimes of a little love-letter found in her sleeve. How it got there she cannot imagine, but the lover could tell of an obliging maid or even a small brother. There are few mothers who can find it in them to scold the daughter for such confidences. She will urge upon the girl the virtue of becoming modesty, and warn her against making any display of her feeling, but she is fully in sympathy with the young girl, and secretly she plans to do her utmost to bring the young couple together, to use her influence with the father to approach the boy's father with a view to making a proposal—or obtaining a proposal — either way. Matches are made for the young people by the parents of the youth and maiden. Some people employ the services of a Nakoda (marriage agent) where they are not acquainted with the family with whom they desire an alliance. Such marriages are not necessarily unhappy. The girls and boys expect it to happen this way, and parents, if they are the right sort, endeavor to choose wisely. Even if a girl is married to a man she has never seen till the time of the betrothal it may be that she has looked forward to the time when her hero is to come and claim her. The first man she is thus thrown in close contact with she naturally becomes interested in, particularly so in view of the fact that both of them are conscious of the relation they will soon occupy to each other. I do not believe in such marriages—still they are not so unhappy.



A Japanese Mother carrying her Child on her Back

There are two tasks the lady of the house nearly always reserves for herself—the instruction and counselling of her children and the arrangement of the tokonona (place of honor in the guest-room). What servant could undertake properly either of these tasks? The Okusama does not fill the beautiful vases with flowers. She sets in it one branch, one flower, or a twig from a beautiful tree. It is placed just as it should be, so that all its graceful lines may show to the best effect. We have only two eyes with which to see. We cannot properly admire a great many beautiful things at once. Better admire to the full one little flower than surfeit oneself with a huge mass of them. And so it is with the other decoration in the tokonona. It is not a cabinet full of beautiful curios. The Japanese people of means and refinement keep their treasures in a storeroom. Each day they bring out one of them, and this is set in the tokonona. Every day there is a new scroll or ornament and flower to admire. It serves, too, as an excellent subject of

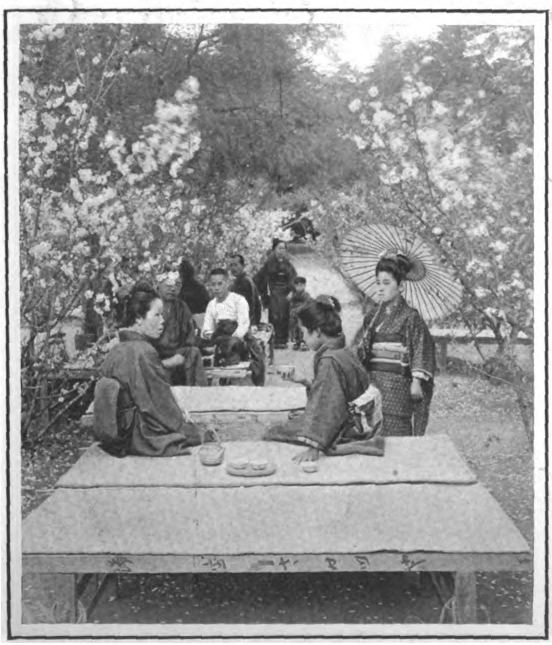
Japanese Boys at Sport—the Start of a Footrace

conversation for a chance visitor, for all these ornaments have a history of some kind, hence their value. The visitor will politely ask questions concerning it, and thus a subject of conversation more interesting than the weather is afforded.

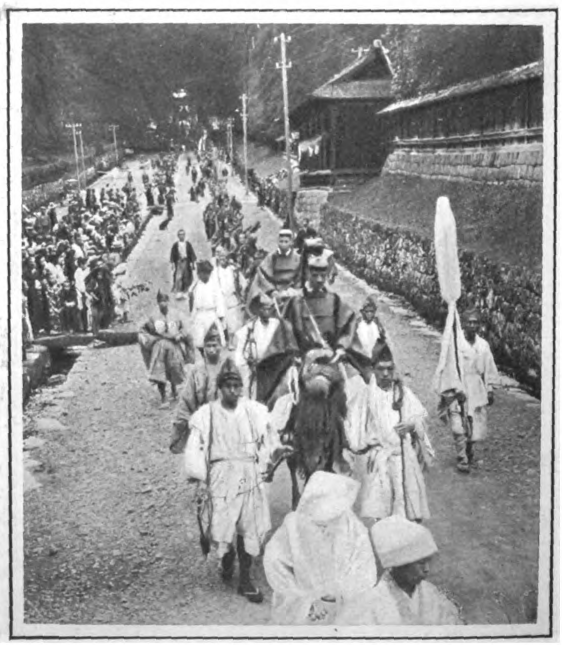
By the time the house has been thoroughly put in order the meat, fish, and vegetable men have come and gone; noon is at hand. All the members of the family are at dinner together. If there is one absent from home, still his place is set and served. His spirit, they say, still dines and abides with them.

The noon meal is a merry one—such good things to eat, such a buzz of joyful chatter! A little boy of twelve honorable years talks with his mother. His father is gone to the war. He is the head of the family, his mother's adviser, confidant, and protector. Or sometimes the soft-speaking young daughter-in-law moves gracefully about the room, waiting with solicitude upon the mother-in-law, preparing with her own hands the amber tea for the older woman, and when the latter condescends a word of commendation she appears very grateful. The mother-in-law tells her to be seated and eat her own meal, and finally, making sure that her mother-in-law is thoroughly served, she modestly takes her seat.



"A good, dutiful, modest, and gentle daughter, my son," the older woman will later assert, and the bride is rewarded, after all, since she has pleased her husband.

The afternoon is given up to social pleasures. Often the ladies of the house, attired in soft, silken omeshi, drive abroad in their jinrikishas and spend the afternoon in making calls upon friends. Sometimes they go to the city on a shopping trip and come back with their vehicle quite loaded down with the pretty things dear to the heart of a woman.



The Japanese wife and mother prefers to spend her afternoons at home with her children. They all go out together, if only into the tiny garden. Nothing in the house can compare with the outdoors. In spring and summer they are out nearly all day. The women sew and embroider under some pretty tree—a cherry, camphor, or plum-tree. Here, their hands employed sewing, their eyes and senses delighted by their surroundings, watching the children playing, is it any wonder that the Japanese woman is calm of soul? Nature is the greatest distraction from care, they believe. Live close to nature and you will forget the little bitternesses of life. How happy seem the little children—even the bare-legged ragged rascals of the poor. They twist like natural acrobats about the bamboo poles; they climb to inconceivable heights up the trees, and cling to swaying boughs with the agility of monkeys. The child in the garden, with the watching mother, flies his kite, while his sisters play battledore and shuttlecock. A favorite game for indoors is called sugoroku. On a large sheet of paper various little pictures are printed—portraits of eminent warriors or views of noted places. It is played with a dice. It is a simple game, and it teaches the little ones the names of historical characters and places.

Every month in Japan has its particular significance to the Japanese. January, the month of the New-year; February, the inari (fox festival); March, the doll festival; April, the birthday of Buddha, the month when people stroll out for hanami (flower picnic), and fields and hills are tinted with clouds of cherry blossoms; May, when the azaleas are ablaze and the picnickers flock to the beautiful gardens; June, the Temple festivals; July, the celebration of the "Milky Way"; August, moonlight banquets; September, the month of the kikuzuki (chrysanthemum) shows; October is a desolate month, for the gods are said to be absent. In November the parents celebrate the third, fifth, or seventh anniversary of their children, and entertain their friends; December, a month of work in preparation for the New-year.

SAN LUIS OBISPO COUNTY

SOUTHERN CALIFORNIA'S NORTHERN OUTPOST

BORDERING the Pacific for a distance of ninety miles from the point where its area is divided from that of Santa Barbara, lies the county of San Luis Obispo. Within its limits are 3238 square miles, extending from its sea-line over height and valley until its eastern border is found well up toward the summit of the Mount Diablo Range, which separates this county of San Luis from the great basin of the San Joaquin. From northwest to southeast the county is divided by the mountains of the Sierra Santa Lucia, which, with their elevation of 2500 feet, are the distinguishing line between two sections of San Luis Obispo, each of which present entirely different characteristics in both climate and production.

To the south and west, that portion of the county which opens upon the sea, presents attractions rivalling those of any section of the State. Here grow, in a climate which may truly be termed semitropical, and under skies which are even bluer than those of Italy, all of those products that have made southern California famous. The orange, lemon, lime, pomegranate and nectarine, the grape and the olive, the walnut and the prune, all may be found thriving on the broad mesas and in the sheltered valleys which break the southern slopes of the Sierra Santa Lucia.

San Luis Hot Springs

One great factor in the development of this prolific area lies in the amount and quality of the water which finds its way to the valleys from the heights of the Santa Lucia range. At extremely short distances along the entire southern slope of the mountains are to be found perennial streams, many of them large enough to be successfully used for irrigation, although up to the present time the development of irrigation possibilities is in its infancy. Allied to this is an average annual rainfall of twenty-one inches, as recorded at San Luis Obispo, the county-seat, which, combined with the precipitation from ocean fogs, as noted along the seacoast, effectually solves the water question for southwestern San Luis.

On the southern borders of the county lies the Arroyo Grande Valley, a spot noted for the perfection of its crops of all classes of vegetables. The soil here is wonderfully fertile and particularly adapted to the raising of seeds and bulbs for market—in fact, several large seed farms are already in operation, and their product finds its way to every corner of America. In the Arroyo Grande there is an abundant water-supply and a climate of agreeable mildness.

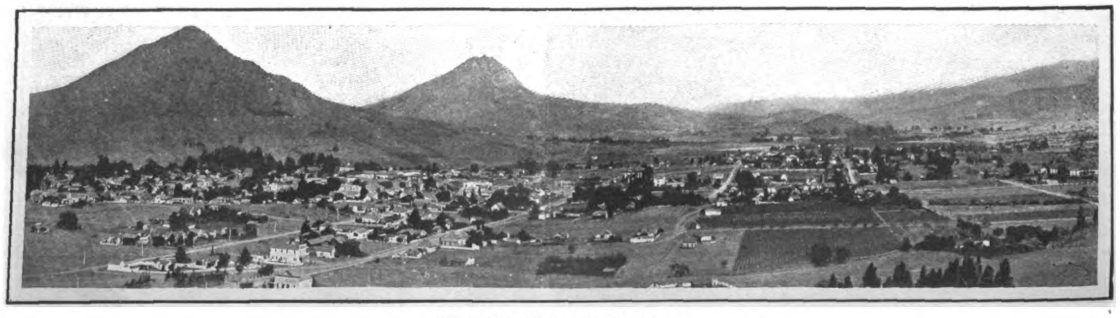
It is, however, to the district directly surrounding the city of San Luis Obispo that the county owes its climatic reputation. In a beautiful valley hemmed in on all sides by the rugged foothills lies this most attractive little city. Like all the principal centres of the southland, the site of San Luis Obispo was first chosen by the padres who founded the Mission of San Luis Obispo de Tolso one hundred and thirty-one years ago. For the greater part of a century this mission prospered, and was noted among all the religious outposts in California for the number and quality of its cattle, its beautiful gardens, and the hospitalities extended within its gates. Of the old mission there remains only the little church and one adjoining building occupied by the present priests.

The population of San Luis Obispo numbers five thousand, who live under an excellent municipal system which has done much to beautify and improve the city. There are four banking institutions carrying large deposits. Light is supplied by both electric and gas plants, and there is furnished to the city an unfailing supply of excellent water.

Commercially, San Luis Obispo occupies a position of the utmost importance. Nine miles to the westward lies the harbor of Port Harford, which the government is making, by means of an extensive breakwater, one of the safest and most commodious anchorages on the Pacific. This port is connected with San Luis by means of the Pacific Coast Railway, whose lines, extending on beyond into the Arroyo Grande Valley and the northern section of Santa Barbara County, render this whole section tributary to San Luis and her seaport at Port Harford. The main transportation artery is the coast line of the Southern Pacific system, of which San Luis is a division headquarters. This coast line cuts through the county north and south, giving daily communication with the great centres of California.

To the north and west of the county-seat, in the great angle formed between the Santa Lucia range and the coast, lies an area which is among the most productive in the county. Its principal industries are cattle and dairying, both of which are carried on with a full measure of success. Possessing several little ports where calling steamers give direct outlet to their products, this section is independent of transportation problems, which assertion applies to the whole southern section of the county as well; for the great waterway of the Pacific can never be closed to San Luis, and thereby the transportation question ceases to be a factor when considering possibilities of market.

Still further north than the dairying section, and well up in the mountains, lies one of San Luis Obispo's several mining districts noted for its quicksilver deposits. This is only one of the sections of San Luis where there is mineral in paying quantities. The mines of the county produce gold, both quartz and placer, copper, asphalt, manganese, salt, and iron, while of building materials there are found within the county's limits lime, alabaster, onyx, and building stone in great variety.



To the northeast of the Sierra Santa Lucia and between that range and the crests of the Diablo lies a section of San Luis Obispo County drained by the Salinas River and its tributary creeks. Possessing a much higher altitude than the section to the south of the mountains, its climate varys accordingly, the winters bringing more chill and the summers a greater degree of heat. The horticulture of this section, while limited to deciduous fruits, is none the less attractive, the lands to the west of the Salinas River showing many successful examples in this industry. The greater portion of this area is, however, given over to the production of cereals, in which it is particularly fruitful. To the east of the Salinas the land slopes gradually up to the foothills of the Diablo range, and is less valuable from an agricultural standpoint, but specially adapted to grazing, thousands of cattle being fed upon the native grasses of these plateaus.

The principal town of this northern section of the county is Paso Robles, with about two thousand inhabitants; it is noteworthy for its thermal springs and their accompanying baths.

Another noted mineral spring lies nine miles from San Luis and less than two miles from the beach at Port Harford. Those known as the San Luis Hot Springs are noted for their wonderful cures of rheumatic complaints; it is asserted that no instance is recorded of their failure to effect a cure where the treatment was maintained. In spite of their wonderful effects, these springs have, until recently, been operated without perfected accommodations for visitors and patients; but Eastern investors have now taken up the work of developing their features and attractions. Excellent accommodations in the way of a hotel and cottages have been erected, making the spot attractive to visitors.

San Miguel, another of the sites selected by the padres for the founding of a mission, lies north of Paso Robles, on the banks of the Salinas.

With its diversity of climate and variety of productions San Luis Obispo County presents an attractiveness excelled by no other county in the whole of California, and its future is certain to be one of prosperity and advancement.

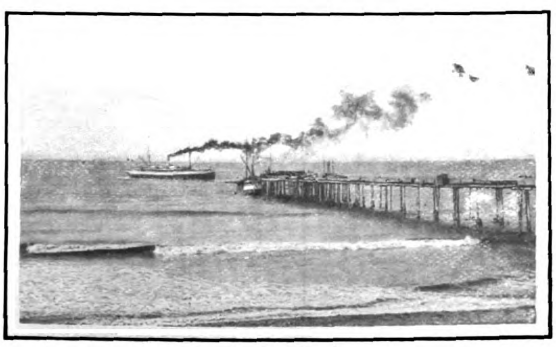
VENTURA COUNTY

BY EDWARD SHERIDAN

WHEN California was termed the Italy of America those who applied the name undoubtedly had in view that portion of the State known as southern California, and, in particular, that strip of land which borders the sea between Santa Barbara and San Pedro, the body of water known by the general name of the Santa Barbara Channel. The mainland, sheltered by the channel islands, is a land possessing the most wonderful climate of any spot on earth. In this compass lies what is known as Ventura County—one of the smallest counties in the State. Ventura County presents a south front to the sea for forty miles, the entire distance of one stretch of the triangle which it forms. It is along the sea-front that the greater portion of the arable land of the county lies, though the mountain chains in the eastern and northern portions are filled with well watered and productive valleys, where grow everything that can be grown out-of-doors, from the tenderest and most susceptible citrus fruits to the rugged fruits of the north temperate zones. The climate of this section is equable, its average highest temperature for the past five years, compiled from government records, being eighty-three degrees; the average lowest temperature in that time is forty, with a mean temperature of fifty-eight degrees, which is a remarkable record. The seasons are what are known as wet and dry. No rain falls from May to October, while between those months comes what is known as the rainy season — a misnomer, for while the land gets its rainfall during those intervening months, it cannot really be termed a rainy season, for the average rainfall is but sixteen inches, and the showers come so gently and with such stretches of sunshine between, that the winter in Ventura County is really the most acceptable part of the year, and the whole story is told when the statement is made that out of 365 days in the year there are fully 300 days on which men can work out-of-doors, and which may be enjoyed as thoroughly as are the balmiest spring days in the East. Of products, everything that can be raised in the temperate or semitropical zones grows in the county. For instance, the report from the books of the county assessor for the past year show that 40,000 acres were planted for lima beans, 18,000 acres for other beans, 18,500 acres for sugar-beets, 21,000 acres for wheat, 4300 acres for corn, 6500 acres for oats, 23,600 acres for hay, and 38,000 acres for barley. Of fruits the books of the assessor for the same season give these figures of bearing trees: 223,000 apricots, 92,000 oranges, 67,000 lemons, 63,000 English walnuts, 27,000 prunes, 6000 peaches, 43,000 olives, 8600 apples. The county boasts the largest lima-bean ranch in the world, the greatest lemon orchard, and the largest and finest walnut orchard.

Oxnard, the Sugar City



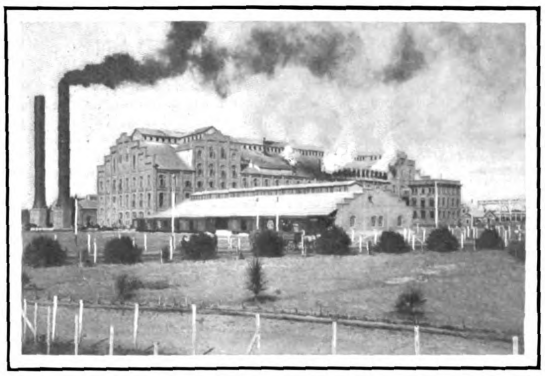
Ventura is joined on the east and southeast by Los Angeles County, on the north by Kern County, while Santa Barbara joins it to the westward. It is situated 300 miles south of San Francisco, and the southern boundary-line is about twenty-five miles northwest of Los Angeles. Its territory embraces some 1852 square miles, the larger portion of which consists of rugged mountains, but in which are many beautiful, well watered, and fertile valleys. Despite her enormous yield, less than one-fourth of the county's area is under cultivation. The mountains are well timbered with oak, sycamore, and cottonwood, and, further back to the northward, with pine, while many parts are rich in oil and various minerals.

The county is well watered, and this means much in southern California, where the rainfall is so light. There are many fine streams within its borders, and in the farming districts artesian wells are numerous and successful. Two fine streams flow through its two principal valleys—the Santa Clara River and the Ventura River. The former runs for forty miles through its chief valley —the Santa Clara. At the head the valley is narrow, but gradually widens until, where the valley skirts the ocean, its width is some twenty miles.

The Ventura River Valley is narrower; it includes what is known as the Ojai (Ohi), a beautiful section made famous by Charles Nordhoff, who first heralded it to the world as the ideal place for consumptives. The word Ojai is Indian for "Nest," and the name is certainly applicable. The valley is a veritable nest set down between high, rugged mountains, whose tops tower thousands of feet above. Within the valley are many beautiful homes and fruitful farms, and the climate is known far and wide for its mildness. The Ojai Valley is noted for its orange and olive orchards. Besides these, all kinds of fruit are grown within its borders. In the past year a large olive-mill has been erected in the valley, and Ojai olive-oil is in demand in the markets. Many Eastern people take advantage of the Ojai, either as a winter or a summer resort, and many have made homes there. Nordhoff, sixteen miles from the sea, is the one town of the valley. It contains several hundred people, has a good hotel, and Eastern men of means who have learned to love the region are now erecting a large and handsome hotel a mile from the town and which will overlook the entire valley. There is a good public school in the Ojai, together with the celebrated Casa de Piedra, a preparatory school for young men, conducted by Yale men and well-known Easterners. The valley is reached by rail from Ventura-by-the-Sea.

By far the greater part of the farming land of Ventura County lies in what is known as the Santa Clara Valley, a long stretch of land through which flows the river of the same name. The valley is some forty miles in length, with ranches along the entire length of the river. Twenty miles from the sea, at the town of Santa Paula, it widens out to many miles, and continues to grow wider until on the sea-front it is at least twenty miles from mountain range to mountain range. Within this valley the great crops of the county are turned out. Here, also, is the population centre of the county and its chief towns, comprising fine farms and homes. The soil is so rich and deep and the moisture so plentiful from artesian wells and full ditches that a failure of the yearly production is well-nigh impossible. It was this valley that made it possible last year for the farmers of the county to receive a million and a half dollars for their lima beans, $950,000 for sugar-beets, and $270,000 for the English-walnuts they raised, to say nothing of other products, fruits, and cereals. In the old Spanish days a few men owned this vast tract and grazed their herds over it. To-day most of the 20,000 people in the county find homes within its limits. The river divides the valley into about equal parts. While a few sugar-beets are raised on the west, or Ventura, side of the river, the greater number are raised on the east, or Oxnard, side. Beans, barley, corn, wheat, and fruits of all kinds are raised in all parts of the valley. Near Santa Paula is situated one of California's oldest orange orchards, planted thirty years ago, and still a prolific yielder. At Limoneira is the largest single lemon orchard in the world, while in the cañons of the adjacent mountains are some of the finest apiaries.

On the east side of the river and separated from the main valley by low ranges of hills are other extensive valleys containing large tracts of fine land. There are the great wheat-growing



Harbor of Ventura-by-the-Sea

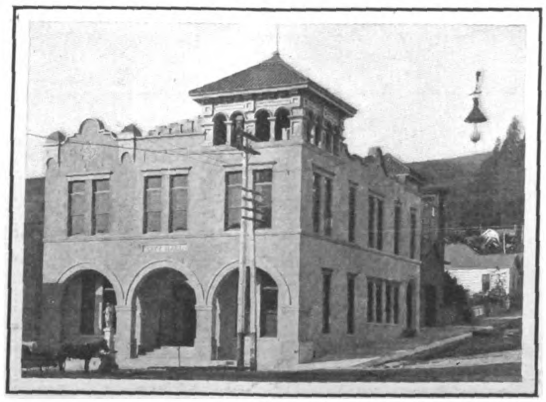
A Field of Ventura Callas

AN Digitized by Google Original from UNIVERSITY OF CALIFORNIA

sections of the Conejo and the Simi, Las Posas and Calleguas valleys. This section, being somewhat off the main lines of travel, is not so thickly settled, but a railroad has recently been built through the heart of the country, and the section promises to become as great a producer and as thickly settled as the other parts of the county. The soil of these various lands is of the same rich character as other favored sections of the county, while the climate is highly salubrious, and free from the sudden changes of extreme heat and cold which are felt in the East and Middle West.

The Centre of Oxnard's Beet-sugar Industry

There are a number of towns and villages throughout the county, the chief one being Ventura, the county-seat, founded as a mission town by the Catholic fathers in 1728 as San Buenaventura. The pretty Spanish name has long since been dropped as too cumbersome for twentieth-century usage, and the shorter name Ventura adopted. While the town still contains many of the quaint adobe buildings, including the mission itself, which the earlier settlers built, it is an up-to-date American town in every respect, and contains many modern stone and brick blocks. Its site is a beautiful one. It has been said of the mission fathers that they looked long before building their churches, always hunting out the most attractive spots. They followed this rule in founding the Mission of San Buenaventura, for the location of the town is as charming as any in California. At this point the foothills of the Coast Range creep down nearly to the ocean's edge. The breakers beat at the very foot of the hills, while between is a narrow strip of gently sloping land scarcely half a mile in width; on this strip is built the town. Ventura is situated in the southwestern corner of the county and on the edge of the Santa Clara Valley, with the Ventura River emptying into the sea immediately to the west of it. The town is well watered by a supply from the Ventura River, a reservoir being located some six miles up the Ventura River cañon. From thence to the town the water is carried by a gravity system. This water is of the best, and there is an unlimited quantity for the use of the town's population of 3000. Within a short time the supply will be greatly augmented by means of an extensive irrigation system which, besides rendering the city's supply a certainty, will bring under cultivation thousands of acres of foothill land that up to the present time has been valuable only for grazing. This system will take its supply from the mountains near Santa Paula, sixteen miles east of Ventura, and its ditches will follow the contour of the foothills from that point to the sea.



Ventura has an excellent electric-light plant. Some four miles up the river a company is now prospecting for natural gas, and has been so encouraged in its search that it has applied for and obtained a franchise to furnish natural gas to the town.

The schools of Ventura are of the best, there being two grammar-schools and a union high school. A certificate of graduation from the latter is all that is necessary to obtain admittance to the State University at Berkeley.

Adjoining Ventura on the east is the Dixie Thompson Ranch of 2500 acres, noted as being the largest lima-bean ranch in the world. It has been subdivided recently, and will be cut into six ranches.

On the east side of the Santa Clara River, occupying a position almost in the centre of the floor of the valley, lies the youngest city in southern California. It is but four years since the founding of Oxnard, now a bustling little community of over two thousand five hundred population. Surrounding the city's site spread thousands of acres of land as fertile as the richest fields along the Nile, and although they had for generations been known as among the most prolific of this rich southern country, science was to show how they might be made still more valuable.

The production of the sugar-beet was found to be a most advantageous departure from the grain and beans of early days, and the wonderful yield of these vegetables drew the attention of the Oxnard brothers. In the centre of the richest of Santa Clara's areas these two experts in the production of sugar decided to build an immense factory for the transformation of the roots into a household commodity. The result was the construction four years ago, at the present site of Oxnard, of a great beet-sugar plant, which, though exceeded in size, is by far the most perfectly equipped establishment of its kind in the world.

City Hall, Ventura

Oxnard is ten miles east from the county-seat, and is closely pressing that staid town in population and importance. She has already outstripped all of her older neighbors save the court-house city. A new line of the Southern Pacific system which, by means of the great tunnel under the Coast Range at Chatsworth Pass, will eliminate considerable time and distance between northern and southern California, passes directly through Oxnard, and will become the main trunk line of the north and south system before the year is finished. As a shipping-point Oxnard ranks sixth in the State.

Besides its great crop of sugar-beets, Oxnard's adjacent territory is the largest lima-bean producer in the world, having yielded in 1902 over 1000 carloads of beans, which brought in the world's markets over a round million. Other cereals brought over $100,000, and the use of the beet-tops and factory pulp for the feeding of stock has developed a most profitable industry in the fattening of beef for market.

The city is laid out on the level areas of the valley's floor. About her central plaza are gathered the principal business blocks, built substantially of brick and stone. There are two banks—the Bank of Oxnard and the bank of A. Levy, both carrying heavy deposits and transacting business with every principal city in the world. There is an excellent water and lighting system, operated by the original town-site company, good hotels, and a general air of wholesome prosperity. The educational features of Oxnard are well in front in this land of good schools. Her schools grade up to a union high school, now in its second year, and occupying a $20,000 home. An excellent hospital is among the public buildings, and there are four churches scattered within the town limits.

Santa Paula, known also as the "Oil City" of the coast, is another important point in the county. It is situated at the head of the Santa Clara Valley proper, and is surrounded by attractive small farms which are rich in all the products of the county. Santa Paula has a good back country, and is considered one of the steadiest and most reliable towns in southern California. Besides getting the benefit of the immense crops raised all about it, it is the centre of the oil industry of the county. Ventura County is rich in oil production. The annual output reaches 700,000 barrels, most of which comes from the region about Santa Paula. Much of it is transported to the outside world in tank-cars, but a pipe-line to Ventura carries much of it to that place, where it is run into tank steamers which carry it directly to Honolulu for use as fuel on the sugar plantations.

Ventura is connected with the outside world by rail and sea. The coast-line road of the Southern Pacific Railroad Company traverses the county through the Santa Clara Valley from north to south, connecting all the important points in the county with the sea at the county-seat. There is also a branch road to Nordhoff, in the Ojai Valley, and another to Oxnard. This latter will be changed into the main line between Los Angeles and San Francisco when the railroad has completed the great tunnel which it has recently cut through the Coast Range Mountains at the head of the Simi Valley. This new line will bring the city of Los Angeles one hour nearer the county-seat of Ventura, and will give the county three rail outlets. Steamers touch regularly at the ports of Ventura and Hueneme, and carry freight and passengers to and from San Francisco and Los Angeles.

It is thought that but a few years will see a gridironing of the county with electric roads. Lines have been surveyed from Ventura and Hueneme through the heart of the county and the mountains to the north into the town of Bakersfield, situated in the San Joaquin Valley. A surveying party is also in the field for the purpose of finding the best route for an electric line between Ventura and Los Angeles.

The future of Ventura County promises well. It has all the climatic advantages, the picturesqueness of sea and mountain scenery, with the restfulness which makes southern California so attractive to the Eastern tourist and wearied business man, while it presents strong inducements to the homeseeker. Game abounds in the hills and valleys, and anglers find sport in plenty on sea and mountain stream.

Progress of the War

THE important results of the war in the Far East, up to the time when this issue goes to press, may be briefly summarized as follows: The Russians have had ten war-vessels disabled—the *Czarevitch, Retvisan, Poltava, Pallada, Novik, Askold, Diana, Variag, Korietz*, and the torpedo-boat *Stereguschtchi*. Of these several have been or are being repaired and made ready for further use; among these are the *Retvisan*, the *Askold*, the *Novik*, and the *Variag*. The Russian cruiser *Boyarin* and the cruiser *Yenesei* were sunk by accidental contact with a mine; but the *Boyarin* is reported to be again in use. Five Russian commercial steamers were captured by the Japanese during the first week of the war.

Japan is known to have lost one torpedo-boat, and several other of her ships are believed to have been injured in the Port Arthur engagements; but definite knowledge of this is withheld. Port Arthur has been repeatedly bombarded, with damaging effect, by the Japanese, and Vladivostok was attacked by them on March 6, though without serious damage to the port. There have been no land engagements of consequence.

March 17.—The news of this day contains a report to the effect that Russia is moving an army corps from Vladivostok toward Korea, and also that the Russian forces have established themselves in strong positions in the Newchwang region, the town of Ashan-Shan being mentioned.

March 18.—On his arrival in Manchuria, it is decided that General Kuropatkin will make his headquarters at Liao-Yang, instead of at Mukden, as was at first announced. Liao-Yang is ten miles west of the railroad. A branch which will connect it with the main line is now being built, and will soon be completed.

Marquis Ito, the Japanese statesman sent by the Mikado to Korea as a special ambassador, arrived at Chemulpo on March 17.

March 20.—News was received from Mukden to-day of an important engagement said to have taken place between the Russian and Japanese forces, in which, it is said, the Japanese were defeated, and 1800 of their men taken prisoners.

March 23.—The most important event of the week, the renewed attack on Port Arthur by the Japanese fleet under Admiral Togo on March 21 and 22, is thus described in official despatches from Viceroy Alexeieff:

"Lieutenant-General Stoessel reports that at midnight of March 21 Japanese torpedo-boats were discovered by our search-lights. Our guardships and fort batteries opened fire upon them, the firing lasting for twenty minutes. At four o'clock in the morning the attack was renewed. At half past six o'clock in the morning four of the enemy's ships appeared from the south, followed by the whole squadron of eleven ships and eight torpedo-boats. Our squadron left the roadstead to meet the enemy. At nine o'clock the enemy's battle-ships opened fire on Liaotishin, after which they took up a position behind the rocky eminence of Liaotishin and bombarded Port Arthur."

A later telegram from the Viceroy gives Vice-Admiral Makaroff's report as follows:

"At midnight of March 21 two of the enemy's torpedo-boats approached the outer roadstead, but were discovered by the search-lights of the batteries and fired upon by the forts and by the gunboats *Bohr* and *Otrajny*. They were obliged to retire. A second attack was made at four o'clock in the morning by three torpedo-boats, which also were repulsed. At daybreak three detachments of the enemy's fleet, consisting of six battle-ships, six armored cruisers, six second and third class cruisers, and eight torpedo-boats approached from all sides. At seven o'clock our squadron commenced to leave the inner harbor, the cruisers leading, with the *Askold*, flying my flag, at their head, and the battle-ships following. The enemy's battle-ships approached Liaotishin and fired 100 shells from their twelve-inch guns at Port Arthur and 108 shells at the environs of the town. Our shells, fired at a range of eighty cables, were well placed. About ten o'clock a Japanese battle-ship was struck by a shell and retired. We lost no men during the bombardment, which ceased at eleven o'clock, when the enemy's ships reassembled, and, after passing along the outer roadstead, drew off without attacking our fleet."

Our Taste for Chocolate

THE taste of the people of the United States for cacao and chocolate appears to be developing with rapidity. Figures compiled by the Department of Commerce and Labor show that the importation of cacao has grown from 9 million pounds in 1883 to 24 million pounds in 1893, and 63 million pounds in 1903. Cacao, as is well understood, is the product of the cacao-tree, which grows wild in tropical America, and is also much cultivated there, and to some extent in Asia and Africa. The fruit of this tree, a pear-shaped pod from 5 to 10 inches in length, contains numerous large seeds from which the chocolate of commerce is produced, while the shells are also utilized for the decoction known as cacao, or cocoa, used as a substitute for tea or coffee. It is the crude cacao, leaves, and shells which form the large and rapidly growing importation above referred to, which has increased from 9 million pounds in 1883 to 63 million pounds in 1903. The value of importations of cacao in this crude form has grown from 1 million dollars in 1883 to 4 million dollars in 1893, and nearly 8 million dollars in 1903.

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

IF YOU WANT

a perfect cream, preserved without sugar, order BORDEN'S PEERLESS BRAND EVAPORATED CREAM. It has a delightful natural flavor, and is superior to the richest raw cream you can buy, with the added assurance of being sterilized. Prepared by Borden's Condensed Milk Co.—[*Adv.*]

TELEPHONE Service at your home will save many small annoyances. Low rates. Efficient service. New York Telephone Company, 15 Dey Street, 111 West 38th Street. —[*Adv.*]

DIGESTION'S greatest aid—Abbott's Angostura Bitters. A "nip" before and after every meal gives appetite and helps digestion.—Abbott's.—[*Adv.*]

USE BROWN'S Camphorated Saponaceous DENTI FRICE for the TEETH. 25 cents a jar.—[*Adv.*]

To cure a Cold on the Lungs, and to prevent pneumonia, take PISO'S CURE FOR CONSUMPTION.—[*Adv.*]

ADVERTISEMENTS.

Pears'

People have no idea how crude and cruel soap can be.

It takes off dirt. So far so good; but what else does it do?

It cuts the skin and frets the under-skin; makes redness and roughness and leads to worse. Not soap, but the alkali in it.

Pears' Soap has no free alkali in it. It neither reddens nor roughens the skin. It responds to water instantly; washes and rinses off in a twinkling; is as gentle as strong; and the after-effect is every way good.

Established over 100 years.

KODAK Progress.

Whatever is new and desirable in picture taking is found in the Kodak System—Non-Curling film, daylight development—absolute simplicity.

Ask your dealer, or write us for the 1904 Kodak Catalogue. It's an illustrated photographic news letter from Rochester, the Home of the Kodak.

THE TRUANTS

BY A·E·W·MASON

SYNOPSIS OF CHAPTERS

In the opening chapter Pamela Mardale is introduced to the reader as a young society woman of London, beautiful and of rare personal charm. Into her early life has come a mysterious influence which dominates and directs her whole career. What this strange influence is only two of her friends suspect—a young schoolmaster who knew her as a child at Roquebrune, and Alan Warrisden, who is in love with her, and who, though his proposal of marriage is refused, determines to win her. Late one night at a ball, Pamela and Warrisden, while seated on a balcony, observe a young couple leaving a house across the street. Warrisden remarks that there seems to be an air of mystery about them, and that no one appears to know who they are; whereupon Pamela says that she knows something about them, and she gives Warrisden what information she possesses. The young couple are husband and wife, Tony and Millicent Stretton, who live in a gloomy house presided over by the rich but unjust father of the young man. They are in reality kept prisoners by the whims of the tyrannical old man, and it is only by playing truant and going out by stealth late at night that they are able to enter at all into the life of the outside world. This practice they keep up for a year, but finally both of them grow extremely weary of their monotonous life, and in a moment of exasperation Tony determines to go to America to make his fortune, while Millie is to be left behind and sent for as soon as her husband is able to establish a home. Tony has some misgivings about leaving Millie, for he has been warned by Pamela Mardale that she should never be left alone; but at last he departs, after Pamela has promised to be a stanch friend to his wife. Some months later, while Pamela is calling on Millie, two letters arrive. One is from Tony and contains the news that he has lost all of his small fortune and will have to make a new start: the other is from a friend, Lady Millingham, inviting Millie to stay with her at the beginning of the New-year. Millie accepts; and when Pamela, who has also been invited, arrives there she finds that her warning to Tony is having a disagreeable justification. For on the very evening of her arrival she discovers that Millie has become infatuated with Lionel Callon, a gentlemanly adventurer, who is also a member of Lady Millingham's house-party. Late that evening Pamela visits Millie in her room, and inquires about Tony. Millie tells Pamela of her husband's determination to stay in America and attempt to retrieve his failure, and Pamela learns from her that she has sent him discouraging letters, advising him to give up the struggle. She cannot understand why Tony had replied shortly, saying that she must not expect to hear from him until he had reestablished himself in her eyes. Millie tells Pamela that she believes her husband's reticence to be due to the fact that he no longer cares for her. Millie assures her that she must be mistaken, but she returns to her room much troubled. She is impelled to do something to help untangle the situation, although the recollection of her own history warns her. But she has given her promise to Tony to befriend his wife, and there is one thing she could do. The next day Lionel Callon announces that he has been chosen to stand for Parliament, and thenceforth he and Millie are often together. Then Pamela hears two pieces of good news—one, that the condition of Sir John Stretton will demand Millie's return to town; and the other, that of Warrisden's present stopping-place. She wires him to come down by an early train.

CHAPTER IX

THE NEW ROAD

ON the crest of that hill which was visible from the upper windows of Whitewebs a village straggled for a mile; and all day in the cottages the looms were heard. The sound of looms, indeed, was always associated with that village in the minds of Pamela Mardale and Alan Warrisden, though they drove along its broad street but once and a few hours included all their visit. Those few hours, however, were rich with consequence. For Pamela asked for help that day, and, in the mere asking, gave, as women must. And she neither asked nor gave in ignorance of what she did. The request might be small, the gift small too, but it set her and her friend in a new relation each to each, it linked them in a common effort, it brought a new and a sweet intimacy into both their lives. So that the noise of a loom was never heard by them in the after times, but there rose before their eyes, visible as a picture, that gray chill day of February, the red brick houses crowding on the broad street in a picturesque irregularity, and the three tall poplars tossing in the wind. The recollection brought always a smile of tenderness to their faces; and in their thoughts they had for the village a strange and fanciful name. It was just a little Lancashire village perched upon a hill, the village of looms, the village of the Three Poplars. But they called it Quetta.

At the very end of the street and exactly opposite to the small house from whose garden the poplars rose, there stood an inn. It was on the edge of the hill, for just beyond the road dipped steeply down between high hedges of brambles and elder-trees, and turning at the bottom of the incline wound thence through woods and level meadows towards Leicester. It was the old coach road, and the great paved yard of the inn and the long line of disused stables had once been noisy with the shouts of ostlers and the crack of whips. Now only the carrier's cart drove twice a week down the steep road to Leicester, and a faint whistle from the low-lying land and a trail of smoke showed where now the traffic ran. On the platform of the little road-side station, three miles from the village, Pamela met Alan Warrisden on the morning after she had sent off her telegram. She had a trap waiting at the door, and as they mounted into it, she said:

"I rode over to the village this morning and hired this dog-cart at the inn. I am not expected to be back at Whitewebs until the afternoon. So I thought we might lunch at the inn, and then a man can drive you back to the station, while I ride home again."

"It was bad going for a horse, wasn't it?" said Warrisden.

The thaw had fairly set in; the roads, still hard as cement, ran with water and were most slippery; on each side patches of snow hung upon the banks half-melted; and the air was raw.

"Yes, it was bad going," Pamela admitted. "But I could not wait. It was necessary that I should see you to-day."

She said no more at the moment, and Warrisden was content to sit by her side as she drove and wait. The road ran in a broad straight line over the sloping ground. There was no vehicle, not even another person, moving along it. Warrisden could see the line of houses ahead, huddled against the sky, the spire of a church, and on his right the three sentinel poplars. He was to see them all that afternoon.

Pamela drove straight to the inn, where she had already ordered luncheon. And it was not until luncheon was over that she drew up her chair to the fire and spoke.

"Won't you smoke?" she said, first of all. "I want you to listen to me."

Warrisden lit a pipe and listened.

"It is right that I should be very frank with you," she went on, "for I am going to ask you to help me."

"You need me, then?" said Warrisden. There was a leap in his voice which brought the color to her cheeks.

"Very much," she said, and with a smile she asked, "Are you glad?"

"Yes," he answered, simply.

"Yet the help may be difficult for you to give. It may occupy a long time besides. I am not asking you for a mere hour or a day."

The warning only brought a smile to Warrisden's face.

"I don't think you understand," he said, "how much one wants to be needed by those one needs."

Indeed, even when that simple truth was spoken to her, it took Pamela a little while to weigh it in her thoughts and give it credence. She had travelled a long distance during these last years down her solitary road. She began to understand that now. To need—actually to need people, to feel a joy in being needed—here were emotions, familiar to most, and no doubt at one time familiar to her, which were, nevertheless, now very new and strange. At present she only needed. Would a time come when she would go further still? When she would feel a joy in being needed? The question flashed across her mind.

"Yes," she admitted, "no doubt that is true. But, none the less, there must be no misunderstanding between you and me. I speak of myself, although it is not for myself that I need your help. But I am not blind. I know it will be for my sake that you give it, and I do not want you to give it in any ignorance of me, or perhaps"—and she glanced at him almost shyly—"or perhaps expecting too much."

Warrisden made no other answer than to lean forward in his chair, with his eyes upon Pamela's face. She was going to explain that isolation of hers which had so baffled him. He would not for worlds have interrupted her lest he should check the utterance on her lips. He saw clearly enough that she was taking a great step for her, a step, too, which meant much to him. The

actual explanation was not the important thing. That she should confide it of her own accord—there was the real and valuable sign. And as she began to speak again, diffidence was even audible in her voice. She almost awaited his judgment.

"I must tell you something which I thought never to tell to any one," she said. "I meant to carry it as my secret out with me at the end of my life. I have been looking on all these last years. You noticed that; you thought perhaps I was just obeying my nature. But I wasn't. I did not begin life looking on. I began it as eager, as expectant of what life could give me as any girl that was ever born. And I had just my first season—that was all." She smiled rather wistfully, as her thoughts went back to it. "I enjoyed my first season. I had hardly ever been in London before. I was eighteen; and everybody was very nice to me. At the end of July I went to stay for a month with some friends of mine on the coast of Devonshire; and—some one else stayed there too. His name does not matter. I had met him during the season a good deal, but until he came down to Devonshire I had not thought of him more than as a friend. He was a little older than myself, not very much, and just as poor. He had no prospects, and his profession was diplomacy. . . . So that there was no possibility from the first. He meant never to say anything. But there came an hour and the truth was out between us."

She stopped and gazed into the fire. The waters of the Channel ran in sunlit ripples before her eyes; the red rocks of Bigbury Bay curved warmly out on her right and her left; farther away the towering headlands loomed misty in the hot still August air. A white yacht, her sails hardly drawing, moved slowly westwards, the black smoke of a steamer stained the sky far out; and on the beach there were just two figures visible—herself and the man who had not meant to speak.

"We parted at once," she went on, and it seemed there was the whole story told. But Pamela had not told it all, and never did. For her mother had played a part in its unfolding. It was Mrs. Mardale's ambition that her daughter should make a great marriage; it was her daughter's misfortune that she knew little of her daughter's character. Mrs. Mardale had remarked the growing friendship between Pamela and the man; she had realized that marriage was quite impossible, and she had thought, with her short-sighted ingenuity, that if Pamela fell in love and found love to be a thing of fruitless trouble, she would come the sooner to take a sensible view of the world and marry where marriage was to her worldly advantage. She thus had encouraged the couple to a greater friendliness, throwing them together when she could have hindered their companionship; she had even urged Pamela to accept that invitation to Devonshire, knowing who would be the other guests. She was disappointed afterwards when Pamela did not take the sensible view, but she did not blame herself at all. For she knew nothing of the suffering which her plan had brought about. Pamela had kept her secret. Even the months of ill health which followed upon that first season had not opened the mother's eyes, and certainly she never suspected the weary nights of sleeplessness and aching misery which Pamela endured. Some hint of the pain of that bad past time, however, Pamela now gave to Warrisden.

"I stayed as much at home in Leicestershire as possible," she said. "You see, there were my horses there. But even with them I was very lonely. The time was long in passing, and it wasn't pleasant to think that there would be so much of it yet before it passed altogether. I went up to London for the season each year, and I went out a great deal. It helped me to keep from thinking."

The very simplicity with which she spoke gave an intensity to her words. There was no affectation in Pamela Mardale. Warrisden was able to fill out her hints, to understand her distress.

"All this is a great surprise to me," he said. "I have thought of you always as one who had never known either great troubles or great joys. I have hoped that some day you would wake, that I should find you

looking out on the world with the eagerness of youth. But I believed eagerness would be a new thing to you."

He looked at her as she sat. The firelight was bright upon her face, and touched her hair with light; her dark eyes shone. And his thought was that which the schoolmaster at Roquebrune had once sadly pondered. It seemed needlessly cruel, needlessly wanton that a girl so equipped for happiness, should, in her very first season, when the world was opening like a fairyland, have been blindly struck down. There were so many others who would have felt the blow less poignantly. She might surely have been spared.

"You can guess now," said Pamela, "why I have so persistently looked on. I determined that I would never go through such distress again. I felt that I would not dare to face it again." She suddenly covered her face with her hands. "I don't think I could!" she cried, in a low, piteous voice. "I don't know what I would do," as though once more the misery of that time were closing upon her, so vivid were her recollections.

And once more Warrisden felt, as he watched her, the shock of a surprise. He had thought her too sedate, too womanly for her years, and here she sat shrinking in a positive terror like any child from the imagined recurrence of her years of trouble. Warrisden was moved as he had seldom been. But he sat quite still, saying no word, and in a little while she took her hands from her face and went on:

"My life was over, you see, at the very beginning, and I was resolved it should be over. For the future I would get interested only in trifling, unimportant things; no one should ever be more to me than a friend whom I could relinquish; I would merely look on. I should grow narrow, no doubt, and selfish,"—and as Warrisden started, a smile came on to her face. "Yes, you have been thinking that, too, and you were right. But I didn't mind. I meant to take no risks. Nothing serious should ever come near me. If I saw it coming, I would push it away. And I have pushed it away."

"Until to-day, when you need my help," Warrisden interrupted.

"Yes, until to-day," Pamela repeated, softly.

Warrisden walked over to the window and stood with his back towards her. The three tall poplars stood leafless up in front of him; the sky was heavy with gray clouds; the wind was roaring about the chimneys; and the roads ran with water. It was as cheerless a day as February can produce, but to Warrisden it had something of a summer brightness. The change for which he had hoped so long in vain had actually come to pass.

"What do you want me to do?" he asked, turning again to the room.

"I want you to find Millie Stretton's husband," she replied, "and at all costs to bring him home again."

"Millie Stretton's husband?" he repeated, in perplexity.

"Yes. Don't you remember the couple who stepped out of the dark house in Berkley Square and dared not whistle for a hansom—the truants?"

Warrisden was startled. "Those two!" he exclaimed. "Well, that's strange! On the very night when we saw them you were saying that there was no road for you, no new road from Quetta to Seistan. I was puzzling my brains, too, as to how in the world you were to be roused out of your detachment. And there were the means visible all the time, perhaps—who knows?—ordained." He sat down again in his chair.

"Where shall I look for Mr. Stretton?" he asked.

"I don't know. He went away to New York, six months ago, to make a home for Millie and himself. He did not succeed, and he has disappeared."

"Disappeared?" cried Warrisden.

"Oh, but of his own accord," said Pamela. "I can't tell you why. It wouldn't be fair. I have no right to tell you. But he must be found. And he must be brought back. Again I can't tell you why. But it is most urgent."

"Is there any clue to help us?" Warrisden asked. "Had he friends in New York?"

"No, but he has a friend in England," said Pamela, "and I think it's just possible that the friend may know where he is to be found. For it was upon his advice that Mr. Stretton went to New York."

"Tell me his name."

"Mr. Chase," Pamela replied. "He is head of a mission in Stepney Green. Tony Stretton told me of him one morning in Hyde Park just before he went away. He seemed to rely very much upon his judgment."

Warrisden wrote the name down in his pocketbook.

"Will he tell me, do you think, where Stretton is, even if he knows? You say Stretton has disappeared of his own accord."

"I have thought of that difficulty," Pamela answered. "There is an argument which you can use. Sir John Stretton, Tony's father, is ill, and in all probability dying."

"I see. I can use the same argument to Stretton himself, I suppose, when I find him."

"I can give you no other," said Pamela. But you can add to it. Mr. Stretton will tell you that his father does not care whether he comes back in time or not. He is sure to say that. But you can answer that every night since he went away the candles have been lit in his dressing-room and his clothes laid out by his father's orders, on the chance that some evening he might walk in at the door."

That Sir John Stretton's illness was merely the pretext for Tony's return both understood. The real reason why he must come home Pamela did not tell. To her thinking Millie was not yet so deeply entangled with Lionel Callon but that Tony's home-coming might set the tangle right. A few weeks of companionship and surely he would resume his due place in his wife's thoughts. Pamela, besides, was loyal to her sex. She had promised to safeguard Millicent; she was in no mind to betray her.

"But bring him back," she cried, with a real passion. "So much depends on his return, for Millie, for him, and for me too! Yes, for me! If you fail, it is I who fail. And I don't want failure! Save me from it!"

"I'll try," Warrisden answered simply, and Pamela was satisfied.

Much depended for Warrisden too upon the success of his adventure. If he failed, Pamela would retire again behind her barrier, she would again resume the passive indifferent attitude of the very old, she would merely look on as before, and wait for things to cease. If, however, he succeeded she would be encouraged to move forward still; the common sympathies would have her in their grasp again; she might even pass that turnpike-gate of friendship and go boldly down the appointed road of life. Thus success meant much for him. The fortunes of the four people—Millicent, Tony, Pamela, and Warrisden—were knotted together at this one point.

Drawn by William Hurd Lawrence

"The new road," he said, softly

"Indeed I'll try," he repeated.

Pamela's horse was brought round to the inn door. The dusk was coming on.

"Which way do you go?" asked Warrisden.

"Down the hill."

"I will walk to the bottom with you. The road will be dangerous."

They went slowly down between the high elder hedges, Pamela seated on her horse, Warrisden walking by her side. The wide level lowlands opened out beneath them fields of brown and green, black woods with swinging boughs, and the broad high road with its white wood rails. A thin mist swirled across the face of the country in the wind so that its every feature was softened and magnified. It loomed dim and strangely distant with a glamour upon it like a place of old romance. To Pamela and Warrisden, as the mists wove and unwove above it, it had a look of dreamland.

They reached the end of the incline and Pamela stopped her horse.

"This is my way," said she, pointing along the highway with her whip.

"Yes," answered Warrisden. The road ran straight for some distance, then crossed a wooden bridge, and curved out of sight round the edge of a clump of trees. "The new road," he said, softly. "The new road from Quetta to Seistan!"

Pamela smiled.

"This is Quetta," said she.

Warrisden laid his hand upon her horse's neck and looked suddenly up into her face.

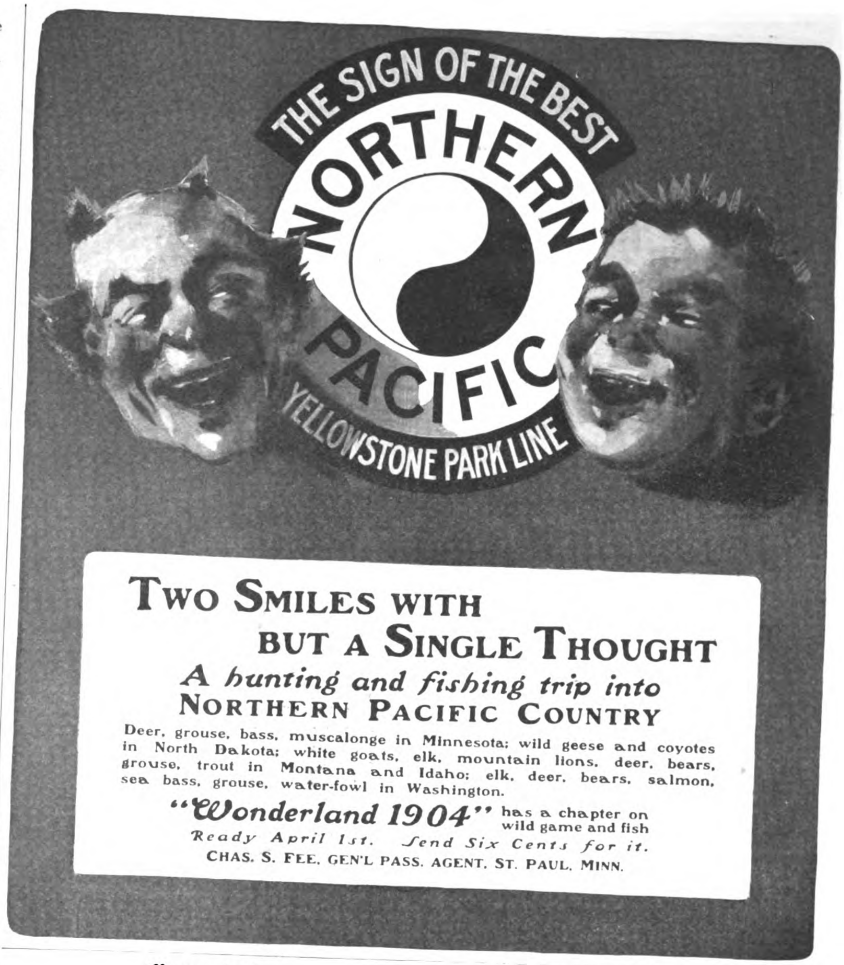
"Where will be Seistan?" he asked, in a low voice.

Pamela returned the look frankly. There came a softness into her dark eyes. For a moment she let her hand rest lightly upon his sleeve and did not speak. She herself was wondering how far she was to travel upon this new road.

"I cannot tell," she said, very gently. "Nor, my friend, can you. Only," and her voice took on a lighter and a whimsical tone, "only I start alone on my new road."

And she went forward into the level country. Warrisden climbed the hill again and turned when he had reached the top. But Pamela was out of sight. The dusk and the mists had enclosed her.

To be Continued.



Every-day Life in Japan

(Continued from page 502.)

Thus every month has its distractions to break the monotony of the every-day life.

It is said that the Japanese woman is a slave to her husband, an upper servant of his household. She is a very happy slave and her lot is an enviable one. The husband takes upon his shoulders the burden of business and leaves her with the children. She shares in their joys and is as innocent as they. But one does not confide one's deepest thoughts, one's dearest hopes and ambitions to one's slave. One does not earnestly listen to and heed the advice of one's slave; one does not unquestioningly give one's children into the hands of one's slave, nor does one cherish one's slave as a pearl. So the Japanese woman is a very happy "slave."

Before the Restoration the better-class Japanese esteemed it a degradation to work. A tradesman was despised. To-day there is hardly a man of Japan who does not follow some calling. The older men, the grandfathers, may stay at home, but the sons—the restless, modern, progressive sons of the New Japan—are not happy unless employed. The spirit of modern Japan is in them. They are as devoted to their business as to their homes. But they keep them well separated and apart. The Japanese who can afford it has his office in the big city, but his home in the suburbs. During the day he is in the midst of the busy stir and whirl of the city, but about four in the afternoon he is hurrying toward the grateful peace and beauty of his country home. The first thing he does on reaching home is to bathe and remove all the clothes he has worn at his office or store. With the changing of his business clothes he lays aside all thought of business. In his home he finds desired rest and recreation. He is by nature a lover

World's Easiest Running Bicycle

Even a third-rate mechanic knows that more can be accomplished with a straight, even pull between the bearings, as in the RACYCLE, than an uneven pull on the outside of the bearings, as in all other bicycles.

Actual road tests demonstrate that the propelling mechanism of the RACYCLE, when geared to 84, is so perfect as to enable it to climb hills that are absolutely impossible for any other style of bicycle, no matter how they are geared.

RACYCLE sales have steadily increased, while other bicycles have fallen by the way.

The history of the RACYCLE confirms the truth of the late Herbert Spencer's doctrine of "The Survival of the Fittest."

All attempts to revive Bicycle "Has Beens" must prove futile as long as they are built with an uneven pull on the outside of the bearings.

The RACYCLE can not be made cheaply, for its Crank Hanger alone costs as much as the selling price of an ordinary bicycle.

of leisure. Few business men in America would leave their offices so early or would take so many holidays. The Japanese business man takes all the holidays he can afford. He is at home most of the fête-days. He goes with the family to see the carnivals, the temple, and flower festivals.

In the evening when the little ones are snugly sleeping the wife and husband enjoy each other's company. Each tells the other of the various happenings of the day. He gives her advice concerning the children, and she in turn advises him in matters she understands. Often they take little moonlight strolls together, or seek some pleasure-booth on a charming river, where they sip their sake or tea and listen to the music of the geishas. Often they entertain friends at a tea ceremony, and often are in turn entertained. Clad in her most charming dress the wife goes with her husband to visit their friends or relatives. Always they carry little lacquer boxes, for to show proper appreciation of the host and hostess the guests must either eat all placed before them or carry home with them what they cannot eat.

I have written chiefly of the daily life of the average Japanese of average means and education. There are the poorer people, whose lives are melancholy indeed. Yet if an American wrote on the home life of the Americans he would not describe the life of the slums. So I refrain from describing the pitiful ones. In the big cities of Japan people work rather than live. Many there be who from force of circumstances cannot afford a home in the suburbs. They are chiefly of the laboring class—pleasure women, such as geishas and tea-house establishments, shopkeepers, the families of factory hands, jinriki-men, and so forth. There are, too, many fairly well-off people who have city houses. The city has its attractions to many. It is not as healthful or as moral as the country, but it is exciting. Children play about in the open street; people use a common public bath; young men and women find their pleasures in tea houses and theatres and the story-teller's halls, and an occasional picnic in the country.

But a word regarding the farming people. They are the happy ones, rough and uncultivated as they seem. Ragged the farmer looks, and you will hear he is poor. But it is not truly so. The farmer has money in his ragged clothes; he is prosperous in comparison with the working-men in the big cities. He is proud too. His sons go out from home to make the brave army of the Emperor. Their homes are warm and comfortable. Look into one on a cold winter day. You will see the family gathered about an irori, a fireplace encircled by a wooden frame from which hangs a steaming kettle. The red-hot charcoal gleams warmly. The group seem to be enjoying themselves immensely. The features of these rurals are flat and coarse, but honest. It is hard to realize that the round-faced, snub-nosed woman with the baby on her back is of the same nationality as the lady of the Yamato type, pure and perfect of features, with white thin skin, small lips, dreamy eyes, straight nose, and exquisite hands. Yet the noisy rollicking laugh of the countrywoman seems almost as good to hear as the gentle, melodious voice of the lady, and within the countrywoman's heart as good and generous emotions stir.

Where some Famous Novels were Written

An English inquirer has gathered together some interesting facts about the birthplaces of certain famous novels. Mrs. Humphry Ward's *Robert Elsmere*, for example, was written in two different places. The larger portion, it appears, was written at Borough Farm, in Surrey, while the latter part was completed in Russell Square, London.

Adam Bede was written at Richmond, Surrey, where George Eliot was staying, about 1859. Here, also, Marian Evans wrote her first book, *Scenes from Clerical Life*.

John Halifax, Gentleman, Dinah Mulock Craik's famous novel, was composed at Rose Cottage, Amberley, in Sussex.

Music

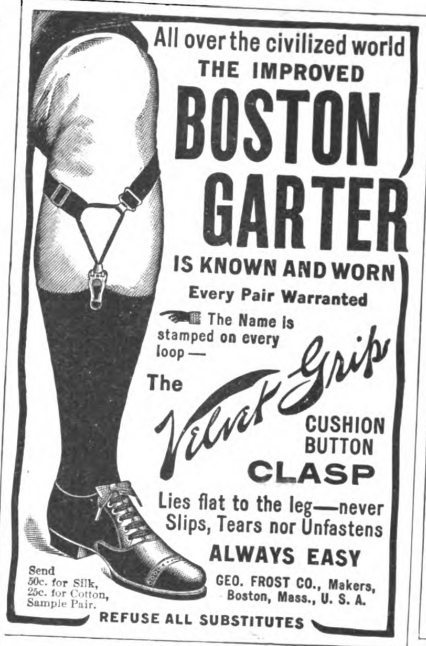
Strauss's New Tone-Poem

RICHARD STRAUSS'S latest and eagerly awaited tone-poem, the "Symphonia Domestica," as he styles it, had its first performance anywhere at the last of the Strauss festival concerts at Carnegie Hall, March 21. The work—his opus 53—is dedicated "To my dear Wife and our Boy," and is described, in a sub-title, as being "in one movement and three subdivisions: A, Introduction and Scherzo; B, Adagio; C, Double Fugue and Finale." Strauss's purpose has been, as he has confessed, to "illustrate a day in my family life. It will be partly lyrical, partly humorous—a triple fugue, the three subjects representing papa, mamma, and the baby!"—surely a sufficiently programmatic theme; and yet Strauss has expressly declared that, this time, he wishes his music to be listened to purely as music, and he refrained in advance from providing the commentators with material for an explanatory analysis.

Well, we have heard the work, and have endeavored to lend ourselves to the composer's purposes, so far as a prescribed attitude is concerned; and with what result? Frankly, that the effort, the intention, is absurd and anomalous. Admittedly, Strauss built his work upon a detailed and definite programme. But what is our master music-maker thinking of? Is he, as certain irreverent dissenters have brutally insinuated, simply trifling, in his herculean way, with his traditional enemies, the critics, as he put them to shame and confusion in his "Heldenleben"? The contention has an inviting plausibility; and yet one must accept the thing in the spirit in which it is offered, and conclude, at least from the judicial view-point, that Strauss is honestly abiding by the rules of the game. But if one must assume this attitude, what is one to think of the process of æsthetic reasoning by which Strauss seems to have justified his fantastic prank of offering us flagrantly programmatic music minus the programme? To present as absolute music a tone-poem which has palpably been modelled upon a dramatic or psychological framework, is as cryingly fatuous as it would be for a singer to sing without words, or in an incomprehensible tongue, a vividly expressive modern song.

But, granting the composer's premises, what are the initial impressions of this "Symphonia Domestica" as independent music? It is ridiculous and unjust to view it so, but one has, in the circumstances, no alternative. It may be said, then, that this opus 53 of Strauss is, as sheer music, fascinating, amusing, preposterous, delightful, egregiously dexterous, continually engrossing. There are pages of ravishing beauty; there are passages of obstreperous and whole-hearted cacophony—regarded, let it be remembered, simply as unexplained tone. As to those remoter, though inescapable, considerations to which the work invites, it can only be said at this time that the warmest adherents of the Straussian gospel (among whom we are happy to count ourselves) must demur at the attempt to give persuasive musical utterance to the quotidian activities of the family circle—to the inspiriting episode of a tiff between the master of the house and his lady; to the equally inspiriting episodes of the washing and putting to bed of the idolized infant and heir. If there is here a subject-matter to kindle the imagination, to enlarge and quicken the sense of life, as they are kindled and quickened in "Zarathustra," in "Heldenleben," in "Don Quixote," then indeed must we remodel our conception of poetic fitness—but again comes the disquieting reminder of that intimated jest!

Concerning Two Singers



THE impression was unintentionally conveyed some weeks ago in this column that Mme. Norelli and Mr. Rivière were members of Mr. Savage's opera company when engaged by Mr. Conried. These singers were experimentally engaged by Mr. Savage at the opening of his season, but were dispensed with when they proved unsatisfactory.

DR. LAVENDAR'S PEOPLE

Mrs. Margaret Deland's new book of stories concerning Dr. Lavendar and the other dwellers of Old Chester seems to have awakened the interest in these characters created by the publication of "Old Chester Tales." Speaking of the leading character, the Chicago *Interior* says that "Dr. Lavendar takes precedence over all country parsons with the possible (only possible) exceptions of the Vicar of Wakefield and Balzac's Village Priest. Let no one who loves the fine things of the soul pass this book by." **$1.50**

Booth Tarkington's CHERRY

Says the *Interior*, speaking of Booth Tarkington's dainty new comedy: "Anything more utterly delicious than the comedy of this narrative can scarcely be conceived. It is simply beyond price or praise. The humor of it all is so exquisite it moves one far beyond laughter, to the point of tears." The book is attractively made and is illustrated in color. **$1.25**

One of the Six Best-Selling Books of the Month

THE SEAT OF WAR IN THE FAR EAST

The RUSSIAN ADVANCE

By Senator Albert J. Beveridge

Pre-eminently the book of the hour upon the Russian-Japanese conflict
An unparalleled account of the Far-Eastern crisis and its inevitable climax

The Review of Reviews says:

"The best statements to be found of the origin and nature of the rivalry between Russia and Japan. Nothing has yet been written that is at once so brilliant and vivid in its descriptions and so cogent and convincing in its interpretations of the Russian movement."

Congressman E. J. Hill says:

"The best portrayal of Russia as it is and as it is to be that is to-day extant. It is not only intensely readable, but, best of all, it states conditions as they are, and without either prejudice or exaggeration."

The New York Herald says:

"Senator Beveridge's book is the best summary ever given to the world of the reasons for the antagonism between Russia and Japan, its beginnings and its inevitable end, the respective conditions of preparedness for war in the two countries, and their feelings towards each other."

COMMENT

WE take for granted that some means will be found of securing promptly from the United States Supreme Court a decision on the constitutionality of Pension-Commissioner Ware's recent ruling creating, without any act of Congress, new classes of pensioners and pensions. Commissioner Ware professes inability to compute the amount of the additional appropriations that will be needed to meet the cost of his arbitrary ruling. He admits, however, that there is a "great unknown army" that has never applied for pensions, because the qualifying disability required by acts of Congress did not exist or could not be proved; and he does not deny that every individual in that "great unknown army" who has reached the age of sixty-two may now be expected to apply, inasmuch as, under Mr. Ware's rulings, the attainment of that age is of itself conclusive proof of disability. Other persons whose opportunities for forming a trustworthy estimate are not inferior to the commissioner's calculate that the cost of his ruling, when it shall have become widely known, will range from $50,000,000 to $60,000,000 annually for a number of years. That is to say, when this extra outlay for pensions shall have been added to the sum (nearly $140,000,000) which pensions cost us last year, our annual disbursement for this purpose will range from about $190,000,000 to $200,000,000.

Now the total expenditure of the German Empire in 1903 for its colossal standing army and its portentously increasing navy —including the pensions allotted to both services—was only about $170,000,000. In other words, if Commissioner Ware's extraordinary ruling is permitted to stand, we shall have to pay for pensions to soldiers alone more money yearly than Germany allots for her whole stupendous system of military and naval defence. No country, however prosperous, should be called upon to bear such a burden; and no country, in view of the exigencies of the future, can afford to establish such a monstrous precedent. To our mind it is incredible that, with the sanction of the United States Supreme Court, from $50,000,000 to $60,000,000 can be drawn every year from the Federal Treasury by virtue of a mere ruling of a Federal official. There is no end to the dangers with which we might be confronted if so loose and arbitrary a construction of a statute should be upheld by the highest Federal tribunal. Mr. Roosevelt's friends have undertaken to defend the act of Commissioner Ware upon the ground that, under Mr. Cleveland's administration the Pension Office ruled that the age of seventy-five must be regarded as constituting disability within the meaning of the statute, and that under the McKinley administration the age held to imply disability was reduced to sixty-five. We believe that, as a matter of constitutional law, even the Cleveland ruling was improper; but it is obvious that the burden imposed by it on the Federal Treasury was comparatively trivial. The McKinley precedent was a bad one, and ought not to have been followed.

There are signs that conservative Southern Democrats, who have made up their minds that at St. Louis they will neither renominate Mr. Bryan nor nominate any man of the Bryan stamp, are beginning to consider the advisability of selecting a candidate from their own section. Some of their spokesmen in Congress say that such a course might be forced upon them if Chief-Judge Alton B. Parker should fail to secure the unanimous support of the New York delegation in the Democratic national convention; or if, while ostensibly securing such support through the enforcement of the unit rule, he should be known to be opposed by the Democratic organization in New York city, which would have to be relied upon to give the electoral votes of the State to the Democratic nominee for the Presidency. In either of those events, it is suggested that an old-fashioned Democrat from a Southern State might run better than Judge Parker, even in the Empire commonwealth. This is the position taken by Representative Burleson of Texas. Representative Kitchin of North Carolina is also disposed to eliminate the question of location in the selection of a candidate. Representative Swanson of Virginia has expressed the opinion that the time had come when the South could safely nominate one of her sons for the Presidency. It seems to him that throughout the country there is a disposition to disregard sectional prejudices, and that any person or party that should appeal to them would fail to strike a responsive chord in the hearts of the American people. Representative Sims of Tennessee can see no reason why the South, if she has a suitable man for President, should not present his name in the Democratic national convention. Representative Cowherd of Missouri is convinced that this year the Democratic party will not pay so much attention to location as to qualification.

There is much force in the declaration made by Representative Lever of South Carolina that, forty years having passed since the civil war, the South should now take the place to which her political services entitle her in the councils of the Democracy. Penitence, he says, has ceased to be a virtue, just as patience sometimes ceases to be. For nearly four decades the South, although she has cast the only solid Democratic vote, has not been permitted to exercise much influence on the formulation of the party's policy. In Mr. Lever's judgment, this state of things ought no longer to exist. For Southerners constitute not only the conservative element in the Democratic party, but the principal conservative element in the country, and the commonwealth needs conservatism in the management of its affairs. That there is no lack of Presidential timber at the South will be generally conceded. Senator Cockrell of Missouri, Senator Gorman of Maryland, and Senator Daniel of Virginia are all of Presidential stature. So are Senator Bailey of Texas and Representative John Sharp Williams of Mississippi. Not only are the two men last named recognized as statesmen of the first rank, but on their behalf it might be urged in doubtful Northern States that at the outbreak of the civil war they were altogether too young to take any part in that contest.

As only a majority vote is required for the purpose, we take for granted that the House of Representatives will adopt the report of the Committee on the Judiciary which recommends the impeachment of Charles Swayne, judge of the United States District Court for the Northern District of Florida. The report declares that by his own admission he was not for eight years a resident of the district, and therefore violated a Federal statute. It is further shown that he purchased for his wife property which was in litigation before his court, and that, because certain attorneys brought suit to recover he sentenced them to disbarment, to fines, and to imprisonment. Summing up these and other accusations which are pronounced well founded, the report submits that Judge Swayne has been not only tyrannical and oppressive, but a law-break-

er, and the House of Representatives is called upon to impeach him for high misdemeanors. The development of the Swayne case will be watched with interest, not only because it is of obvious moment that the high reputation of the Federal judiciary shall be maintained intact, but also because the impeachment machinery provided by our Constitution has been so seldom set in motion during the one hundred and fifteen years that have elapsed since our Federal organic law became operative. Setting aside the impeachments of President Andrew Johnson and of Secretary-of-War William W. Belknap, neither of whom was convicted, we find that only four times in our national history has this method of trial and punishment been applied.

The first member of a Federal tribunal who had to defend himself in the Senate sitting as a court of impeachment, against charges brought by the House of Representatives, was Judge Pickering of the United States District Court for the District of New Hampshire. The requisite two-thirds vote having been cast against him, he was convicted in March, 1803, of drunkenness and profanity, which delinquencies, although not alleged to be high crimes and misdemeanors, were held to unfit him for judicial services. Having freed the bench from one Federalist, the Jeffersonian party tried to get rid of another, and John Randolph of Roanoke, who had been conspicuous in the successful demonstration against Pickering, was deputed by the House of Representatives to conduct, in conjunction with colleagues, the impeachment of Judge Samuel Chase of the United States Supreme Court. This second impeachment was provoked by the extraordinary energy with which Judge Chase had advocated Federalist principles and denounced those of the Jeffersonian party in a charge delivered to a grand jury at Baltimore. A two-thirds vote could not be secured against Judge Chase, and, accordingly, he was acquitted in 1805. The third attempt to use the impeaching machinery against a member of the Federal judiciary also resulted in a failure. We refer to the impeachment in 1830 of James H. Peck, judge of the United States District Court for the District of Missouri. In his case, the charge of arbitrary conduct on the bench was not sustained. In 1862, however, W. H. Humphreys, judge of the United States District Court for the District of Tennessee, was impeached by the House of Representatives, and, by a two-thirds vote in the Senate, was convicted for advocating secession and giving aid and comfort to the Southern Confederacy. There is, we presume, no doubt that the charges brought against Judge Swayne by the House of Representatives will be sustained by a two-thirds vote in the Senate. Whether the House of Representatives will have to remain in session pending the trial is uncertain. It is even possible that, in pursuance of a resolution introduced the other day by Senator Hoar, the evidence in support of the impeachment may be given before a committee of the Senate, instead of before the whole of that body.

What is meant by the constitutional provision that the President, *by and with the advice and consent* of the Senate, shall appoint all officers of the United States not otherwise provided for? Do the words mean that the President is at liberty to fill Federal offices in the several States without any reference to the advice and consent of the spokesmen of those States in the Senate provided a majority of the Senators, a majority exclusively made up of Senators from other States, not directly concerned in the filling of those offices, shall signify approval of such acts? That is the question which was raised in the Senate on March 24 by Mr. Bacon of Georgia. Mr. Bacon submitted that the framers of our organic law never intended that any one of our constituent States should be deprived of the right to be consulted, through its Senators, as to the selection of Federal officers who were to discharge their functions within such State. He went on to say that, as a matter of fact, in his own State of Georgia, which has 2,500,000 inhabitants, there is not a single Federal office-holder, with the exception of an occasional postmaster, who would have been selected by the people of that commonwealth. He added that Georgia is without a single representative in the consular service, and that what is true of Georgia is approximately true of every other Southern State—with the exception of Delaware, Maryland, West Virginia, Kentucky, and Missouri. Instead of consulting Southern Senators about appointments to Federal offices within their several States, the Federal Executive passes them by and consults men who represent nobody, and are appointed by no one, in such States, and who would not have been selected as spokesmen by such States.

In reply to a query put by Mr. Hoar, the Senator from Georgia subsequently admitted that, since the retirement of Mr. Cleveland from the Presidency, the nominations to judicial positions at the South had usually had the endorsement of Democratic Senators from Southern States, but he pointed out that such judicial positions were comparatively few. Mr. Hoar then put the searching question whether, if Mr. Bacon had been President during Mr. Cleveland's terms, he would have appointed all Federal office-holders in Massachusetts on the advice of the Republican Senators from that State. Mr. Bacon answered that, in a State where the men of intelligence, character, and property are distributed with a reasonable approach to equality between the two principal political parties, the party in power at the White House is justified in appointing men of its own political faith. Where, on the other hand, the conditions are abnormal, and almost all the men of intelligence, character, and property are concentrated in one of the political parties, the spokesmen of that party in the United States Senate ought, he thought, to be consulted by the Federal Executive. Such he believed to have been the intention of the framers of the Constitution. We are inclined to think that, as a matter of historical fact and of equity, Mr. Bacon is right. But to formulate a rule by which the principle that he advocates could be applied in concrete cases might prove difficult. There is no doubt, however, that the question deserves reflection and discussion, and Senator Bacon should be thanked for meeting it.

We have no reason to discredit the testimony of Mr. Samuel Gompers, the president of the American Federation of Labor, with regard to the condition of the mass of the wage-earners in Porto Rico. His evidence is the outcome of first-hand observation, made during a tour of the island. He, manifestly, cannot have gone thither with a determination to bring back anti-imperialist conclusions, because he denounces as untruthful some recent reports to the effect that the people of Porto Rico are dissatisfied with their relations to the United States. It must, however, be admitted, in view of what Mr. Gompers learned, that if the Porto-Ricans are not already discontented, they soon will be, and will have cause to be. Mr. Gompers refrains from saying a word about the coffee question, though it is manifest that if we levied a duty on foreign coffee, as we do on foreign sugar, the Porto-Rican output of the former commodity would soon secure in the United States the adequate market which it formerly possessed in Spain. As a matter of fact, the coffee industry, which used to be the principal employer of labor on the island, is in a state of prostration, the Spanish market having been lost, and only a very limited demand for the Porto-Rican product having as yet arisen in the United States. It is largely on this account, no doubt, that the wages paid in Porto Rico in many industries are now, on an average, fifty per cent. less than they were under the Spanish *régime*. This although the cost of living has been to some extent increased, both meat and rice, for instance, being higher.

Mr. Gompers testifies that everywhere he saw women and children in rags, while many of them wore only the atmosphere and the sunshine for garments. He adds that from starvation alone there is in the island a death-rate of from 450 to 500 a month. That such a state of things should be found existing anywhere under the American flag is certainly a shocking outcome of our so-called "colonial" policy. Do we, then, owe nothing to this people, whom we have forced to become, not citizens, but subjects, of the great American Republic? Is it creditable to us that the time is at hand when they will bitterly regret their forcible withdrawal from allegiance to the Spanish monarchy? We admit the sugar of Hawaii duty free, and to the sugar of Cuba, which is an independent republic, we grant a preference over the imports of the same commodity from other foreign countries. What have the Porto-Ricans done that a like protection, or even a like preference, should be withheld from their coffee industry? Passing from the economical to the political question, we note with interest Mr. Gompers's reference to the indubitable

fact that Porto Rico was more equitably treated by the Spanish monarchy than she is by the American Republic. Under the Spanish *régime* the island had in both Chambers of the Madrid Cortes a representation proportionate to her population. It has not a vote in either House of the American Congress. Unless we wish the islanders to deplore their connection with the United States, we should accord to them two Senators and as many Representatives as the population calls for. In other words, we should admit Porto Rico as a State into the Union. There can be no pretext on the score of race for postponing such an act of justice, for in Porto Rico the whites outnumber the colored people two to one.

It was for several reasons a notable address on the prospects of the colored race in the United States which Booker T. Washington delivered on March 27 at Carnegie Hall in New York city. In directing attention to some of his remarks, we shall follow the logical order, rather than that in which they were made. Are negroes, considered as a race, capable of material improvement in respect of enlightenment and thrift? That is the fundamental question. If it be answered in the negative, those Southern whites are right who hold that money spent on the education of the blacks is thrown away. In view of the facts brought forward by Booker Washington, no fair-minded person will say that the negro does not profit mentally and morally by educational opportunities. It was pointed out that in Spain sixty-eight per cent. of the population are illiterate; in South America, eighty per cent. In the case of negroes in the United States, on the other hand, though they have possessed freedom for only forty years, only forty-four per cent. are illiterate. With but twoscore years of opportunity, they have blotted out more than half of their ignorance and degradation. Is the progress of the blacks in enlightenment due solely to educational opportunities provided by their white neighbors? Replying to this question, Booker Washington pointed out that while, in a recent year, the amount of public money expended for the education of negroes in eight counties of Florida was $19,000, the negroes of those counties contributed themselves for school purposes in the same year $22,000. He added that while in Mississippi $250,000, or twenty per cent. of the entire school fund, is set apart for negro pupils, the negroes of that State themselves contribute through taxation $280,000.

So much for the advance of the American negro in enlightenment, and for his desire to secure it. Does it follow that he has improved socially and morally by the acquisition of thrifty habits? Meeting this inquiry, Mr. Washington showed by statistics that in forty years the negroes who started with nothing have become the owners of one twenty-sixth of all the land in Virginia; and that in 1901 in the State of Georgia the negroes added $1,526,000 to the taxable value of their real estate, thus making the total appraisement of their holdings in that single commonwealth $16,700,000. Admitting that the American negroes have proved themselves capable of mental and moral improvement, must we infer that their presence in the Southern States is, on the whole, helpful or detrimental to the whites? We believe that it would be generally conceded that the Southern whites would prevent a wholesale deportation of negroes if such a thing were attempted. In that section of our country negro labor is indispensable. Are there more than three ways of making that labor effective, namely, slavery, peonage, and education? Slavery and peonage are out of the question. What is there left but education? Mr. Washington reminded his audience in Carnegie Hall that in South Africa there are some five million native blacks, yet in that country the mining industry languishes from lack of labor. The five million blacks refuse to work. Why? Because they have had no civilizing education; consequently, their wants are few and simple. To satisfy those wants they need work only one day in the week. They cannot be made to work any longer, for the incentive is lacking. In the Southern States, on the other hand, the negroes, as they become educated, find their wants increased, and to satisfy them are willing to work six days in the week. The Southern black wants to own his own cottage; he wants furniture and clothes and books. There is an incentive; and, so long as it exists, the negro cannot help being a useful, if not an indispensable, factor in the industrial progress of the South. Does it not follow, asks Booker Washington, that, from a purely economic view-point, the education of the negro should be promoted rather than discouraged by Southern whites? Another fact to which attention was directed was the absence among the Southern whites of that antipathy to the colored race which contact with negroes seems to excite at the North. That is why the business opportunity of the negroes lies in the South. In that section, if a black man has a grocery-store and keeps it clean, he will have as many white customers as black; and if a black mechanic is a good workman, he is as likely to be called upon to build a white man's house as would be a white carpenter. That is not the case at the North.

From time to time it has been rumored that Port Arthur has been abandoned by the Russians, and it is most probable that the cables from Chefoo, Tientsin, and Shanghai will reiterate the same piece of news at intervals during the weeks to come. The railroad has been open from Port Arthur to Mukden, and therefore to European Russia, continuously since the war broke out. Even if the fortress had been totally without supplies when the first torpedo-boat attack crippled the *Retvisan* and *Czarevitch*, which is somewhat unlikely, there has been ample time to fill its store-houses. Considerable color has been given to the theory that Port Arthur was ill supplied, by the extremely limited extent to which the Russian forts on Golden Hill, the Tiger's Tail, and other points around the city have responded to the storm of shells from the Japanese fleet, and this view has been strengthened by the known fact that an immense supply of Russian shells for the heavier guns fell into the hands of the Japanese with the captured transport *Manchuria*. But it must be remembered that the Russians are justified in saving their powder, the more so that the Japanese fleet rarely approaches near enough to make hits more than remotely possible. If Russia was short of ammunition at the opening of the campaign, she has had six or eight weeks to supply all deficiencies, and it is quite incredible that she should have failed to do so.

Russia is not likely to be forced to abandon Port Arthur at this stage of the war through fear of starvation or lack of ammunition. If she contemplates evacuation, it will be for other reasons. For Russia, Port Arthur is primarily an outlet to the sea; the point where her six million square miles of Asian empire can reach and be reached by her ships. So long as Russia has a single ship in commission in Far-Eastern waters, she must have a port. So long, therefore, as Russia has any fleet at all in the Yellow Sea, her abandonment of Port Arthur is wholly out of the question. If she abandons the port, she must also abandon the fleet, and she will not do that except under circumstances which would practically give her no choice. These circumstances would include the total loss of the Port Arthur fleet, or its transfer to other waters, and an isolation of Port Arthur by land, combined with an irresistible land attack.

As to that it must be remembered that Russia has now a large body of troops at Mukden, whence the railroad is open to Port Arthur, so that reinforcing the garrison there to any desired amount is only a question of a few hours. It would be still easier to rush troops from Mukden to any point on the Kwantung peninsula, at whose southern extremity Port Arthur and Dalny lie; so that for the Japanese to cut the railroad between Mukden and Port Arthur would not be an easy achievement, even supposing that they eluded Russian vigilance so far as to make a first landing somewhere on the Kwantung peninsula or near it. This contingency is improbable, since Russia, taken off her guard at the outbreak of hostilities, is the more likely to remain exceedingly vigilant in the face of evident and pressing peril. She can, in all probability, bring fifty or sixty thousand troops to any point between Mukden and Port Arthur at very short notice; and in the face of such a force a landing by Japan would be difficult. With a less force, Osman Pasha held the whole Russian army at bay from August till November at Plevna, a much weaker position strategically, and one ill supplied with provisions and ammunition. Japan could hardly hope to land more than twenty-five thousand men at once, even if all her transports were brought into service; and to attempt this would be an extreme hazard, so long as Russia had a single warship in the neighborhood. Add that the landing force would immediately find itself between two fires; the garrison of Port Arthur on the

south, and the reinforcements from Mukden on the north; and it is evident that there are immense difficulties to be overcome before a land attack on Port Arthur could be undertaken. Even were such an attack begun, the example of Plevna just quoted shows that Russia could, in all likelihood, hold out for three or four months, against the greatest force that Japan could bring to bear. Until all these possibilities are exhausted, any abandonment of Port Arthur is likely to be no more than a sensational fiction.

Turner, the anarchist, who languished several months at Ellis Island, while his appeal against deportation was pending, was lately released on bail, and is filling his lecture engagements. At a recent meeting of anarchists in Cooper Union he was asked: "Is the assassination of rulers an advantage to the cause of anarchism?" It was a "funny" question, he said, and owned that he did not care to answer it. As far as he cared to go was to declare that for his part he was not in favor of "the advocacy of assassination." He thought it cowardly for a man to sit back and urge another to do something which he thought ought to be done. "Each one of you," he said, "must consider the subject for himself and act for himself." Turner seems a broad-minded person with no prejudice either for or against murder. The WEEKLY was glad to see his case go before a court, so that the law excluding anarchists might be interpreted, and a decision reached as to whether it warranted the exclusion of an incomer because of his reputed opinions. It is good to have him disclose the working of his mind as he is doing. There is such a thing as being too broad-minded, and if it turns out that a man with no prejudice against assassination is too liberal, under our laws, to be a welcome guest here, we shall have the satisfaction, when Turner is sent home, of knowing why. There never was much doubt that the man came here to make mischief. The important question has been whether more mischief would result from excluding him summarily, or letting him talk.

A man came to New York to spend a few days. He had pecuniary experiences as follows: A railroad cabman wanted 85 cents for bringing him to his hotel;—proper charge, 35 cents. The hotel news-stand wanted 10 cents for a newspaper;—proper charge, 3 cents. Fee to waiter for dinner, 15 cents; waiter grumbled and was reported. Cab to the theatre, charge, $2;—proper charge, $1. For one hundred violets, charge, $8; paid $4. Theatre, all seats sold; referred to speculators; summoned manager and got two excellent seats forthwith. Cab back to hotel, charge, $2 50; paid $1. Crackers and milk for lunch, charge, 60 cents;—appeal to manager; paid 20 cents. An antique shop wanted $75 for a bogus Delft plate; protest; plate reduced to $3. Five-dollar andirons offered to visitor for $40. Worked-over print offered him as original drawing. For hair-cut and shampoo, charge, $1; —paid 60 cents. For moving trunks, charge, $1 50;—paid 50 cents. Hack to ferry, charge, $2 50;—paid $1 25. Relating these experiences in greater detail than we have given, he winds up—"And I don't think I look 'from the country,' either." He was not from the country. His name is Edward Bok, and he divulged these experiences in his own periodical. What is there about Philadelphia that a man from there should make so curious an impression on industrial New York? Never mind. If Mr. Bok had gratified the demands of all the hackmen, barbers, waiters, and others who overcharged him, it would have cost him five or six dollars more than he paid. He didn't gratify them, but he went home and wrote a piece about them. The piece was worth at least $50. We see, therefore, that in a short time in New York he acquired fifty dollars' worth of experience for six dollars, which he did not have to pay. Where on earth are such bargains to be found as in New York?

It will not be necessary or even expedient, for the Americans who go to Oxford as Rhodes scholars, to employ press agents. Dr. Parkin, the representative of the Rhodes Scholarships Commission, came to this country from Oxford last month to arrange for the preliminary examinations for the scholarships, which are to be held at various places on April 13. He says the commissioners want the Rhodes scholars to dawn upon the consciousness of Oxford as quietly and unostentatiously as possible, as other students do. The more like violets on a mossy bank the Rhodes men can open, the better the commissioners will be pleased. They favor "a conspiracy of silence" about the Rhodes scholars, and Dr. Parkin thinks the less said about them until they have established a position at Oxford the better for themselves.

The reasonableness of these suggestions is apparent, and we hope the American scholars will appreciate it. What Freshmen do in a college depends very much on what is done to them. It is not the fashion at Oxford to play horse with newcomers, and no doubt the Rhodes scholars will shape their behavior according to the prevailing standards. That the American newspapers will not print wonder stories about them is hardly to be hoped for, but the American newspapers do not circulate extensively in England, and what they print will hardly disturb the peace of Oxford. The Oxford system of small colleges will tend to break up the mass of the Rhodes scholars and distribute them about in small groups; and that is favorable to their assimilation. For the benefit of the Rhodes scholars, the Oxford authorities determined last February that students who had done two years' work satisfactorily in a foreign university might be admitted to the status and privileges of a Junior Foreign student at Oxford, and those who had done three years' work might be rated as Seniors. This means that qualified students are to be allowed to get their Oxford degree in two years, or one, instead of three years as was formerly the rule. Taking advantage of this innovation, the Rhodes commissioners, through their representative here, seem to be stipulating that candidates here shall have passed two years in an American college. The stipulation brings dismay to many intending candidates who were not prepared for that requirement. The newspapers report President Remsen of Johns Hopkins as saying that of twenty-six young men who expected to take the Rhodes examinations in Baltimore, all but two or three are barred by unlooked-for requirements. That is hard on these young men, but the requirements themselves seem well advised, and will work advantageously in the end.

Dr. Edward Meyer, a distinguished professor of the University of Berlin, has been visiting the University of Chicago. Being invited to address the students, he confided to them among other things that beer is used in abundance by German students, and that their beer-drinking is a good custom. It induces the young men, he said, to grow up in happy spirits, and is beneficial in counteracting the effects of too much study. Dr. Meyer could not imagine a German student who neither sang nor drank. Such a man, he said, would not be a real German student.

American students have been known to drink beer, but they are rarely encouraged in it except by the brewers, and nowhere have they attained the proficiency in it that the German students enjoy. Dr. Meyer's talk made scandal in Chicago. The president of the W. C. T. U. grieved sorrowfully to hear a learned man advise "drinking, brawling, and good-fellowship." A representative of Northwestern University said: "If he had said such things at Northwestern I think we would have mobbed him." Perhaps more beer would make Northwestern more tolerant. We have heard Americans who have studied in German universities remark how hard they worked, how much they learned, and how much beer they drank. Beer and study really seem to go well together in Germany. But in this country the affinity between them is much less noticeable. We don't think our beer does our college boys any particular good. Harvard College rubs along in no-license Cambridge where beer is not publicly sold, and seems not to suffer scholastically from the deprivation. At Yale, we are told, students drink less beer than formerly, and more "high balls." Our habits are not the habits of Germany. Neither our climate, our viscera, nor our beer is made in that country. Dr. Meyer may not hope to introduce the German methods of scholarship here. Our doctors may go so far as to admit that beer is best drunk in America by persons whose livers are comparatively new, but that is about as much as they will concede. We drink beer here, but we dare not glory in it. Perhaps if we took as much pains as the Germans do to have our beer well made out of fit materials, we would have more confidence in its effects.

The Republican Nominee for the Vice-Presidency?

It appears that Wisconsin has a candidate for the nomination for the Vice-Presidency on the Republican ticket in the person of a former Governor, and it is probable enough that other States will put forward "favorite sons" as competitors for the honor. At the hour when we write, however, the prevailing opinion in Washington is that the nomination will go to Mr. Charles Warren Fairbanks, one of the Senators from Indiana, although he declared only recently in a letter to the prospective controllers of a Congressional convention at Springfield, Ohio, that he was not a candidate for the office of Vice-President, and hoped that the convention would not instruct its delegates to vote for his nomination. Somewhat earlier, Republican managers in Congressional districts of Indiana had acquainted Senator Fairbanks with their purpose to send delegates instructed for him to Chicago, but in every instance he requested that such a step should not be taken. We infer that, in pursuance of the wish thus expressed, the delegates from Indiana will not be instructed for the Senator; but that, nevertheless, their votes will be given to him may be taken for granted. That Indiana's lead will be followed by States enough to assure to Mr. Fairbanks the nomination for the Vice-Presidency is believed by all well-informed observers of the situation.

Why should Mr. Fairbanks be selected for an office which will require him to preside over the United States Senate, and will place him first in the line of succession to the Presidency in the event of Mr. Roosevelt's death or disability? Are there not many other Republicans who may claim to be older, if not abler, statesmen? What of Senator Frye and Senator Hale of Maine; of Senator Proctor of Vermont; of Senator Hoar and Senator Lodge of Massachusetts; of Senator Aldrich of Rhode Island; of Senator Platt of Connecticut? Passing over the Republican Senators from the Middle States, what might not be said of the claims of Joseph B. Foraker, who has been Governor of Ohio, and has long represented his State in the Upper Chamber of the Federal Legislature?

What of Shelby M. Cullom, of Illinois, and John C. Spooner, of Wisconsin, who for decades have held places of eminence in the Upper House of Congress? There, too, are Senator Burrows of Michigan and Senator Mitchell of Oregon, who have had a far longer career in public life than has Mr. Fairbanks, and have been far more conspicuously identified with the Republican party. Relatively, indeed, Mr. Fairbanks is a novice on the political stage. He was a delegate to the Republican national convention in 1896, but he had never held a State or Federal office when, in January, 1897, he was elected to the United States Senate to succeed the late Daniel W. Voorhees. Yet he had occupied his seat only a short time when President McKinley appointed him one of the members of the Joint High Commission—in fact, he was made president of the United States Commissioners, the late Lord Herschell presiding over the representatives of Great Britain and Canada. The respectable position which, without possessing any claim to eloquence, he soon attained in debate, caused him to be reelected to the Senate for a second term, which will continue until March 4, 1909, unless he should resign his seat in order to become Vice-President.

Charles Warren Fairbanks is an example of the comparative ease with which in this country a poor boy can obtain, first, a college education; secondly, professional success; and, lastly, high political honors. Born on a small farm in Union County, Ohio, he secured such instruction as the local schools could afford, but it was only by practising the carpenter's trade that he was able to maintain himself at the Ohio Wesleyan College. After graduating in 1872, it was as an *attaché* of the Associated Press that he earned sufficient money to enable him to pursue the study of the law. Having been admitted to the bar, he removed to Indianapolis, where, having attracted the attention of Judge Gresham, at that time on the Federal bench, he soon procured opportunities of exhibiting his qualifications for his profession. He ultimately came to be regarded as one of the highest authorities on railroad law in the Middle West, and is understood to have accumulated a fortune considerably exceeding a million dollars. We are now approaching one of the reasons why many far-sighted Republicans believe that Mr. Fairbanks should be nominated for the Presidency in order to reassure those persons who look upon Mr. Roosevelt as "unsafe." Not only has he earned by his professional career the confidence of railway corporations, but he has strongly commended himself to sound-money men by the position which he took with reference to the monetary question at a critical conjuncture. As the head of the Indiana delegation in 1896 to the St. Louis convention, and as the temporary chairman of that body, he is thought to have contributed powerfully to fixing the status of the party with regard to bimetallism. There is no doubt that for some years previous, many distinguished Republicans of the Central and Further West, including Mr. McKinley himself, had wavered in their attitude towards silver, and it is undoubtedly true that the action of the Indiana State convention in 1896 helped materially to induce the Republican national convention of the same year to declare for the gold standard.

That is one obvious reason why Senator Fairbanks should be chosen for the second place on the Republican ticket this year. The second reason is the importance of securing the electoral votes of Indiana, a State which very seldom has failed to recognize the claims of its own citizens. It did fail to give its electoral votes to Benjamin Harrison in 1892; but that was an extraordinary exception, due, unquestionably, to the repudiation of the Republican candidate by Judge Gresham and his friends. It would, no doubt, take a tidal-wave, such as that which swept over the country twelve years ago, to give Indiana to the Democracy, should Mr. Fairbanks be nominated for Vice-President on the Republican ticket.

Run Amuck—Or go Slow?

There are already indications that some Democratic tacticians think it would be good policy to try to force President Roosevelt and his Attorney-General to use forthwith against other combinations of capital the weapon which, as some people imagine, has been forged by the decision of the United States Supreme Court in the Northern Securities case. It might be well for these tacticians, if they are sincere opponents of "the trusts," to pause and consider whether—if the President should take their advice, or if, dispensing with his assistance, they should practise what they preach in States under their control—they might not find themselves hoist with their own petard? Can they not read between the lines of Mr. Justice Brewer's opinion the warning that the instrument, presumed to have been fashioned by the court's decision, may snap in the fingers if too furiously or promiscuously wielded?

We are doubtless justified in assuming that Attorney-General Knox has read and pondered every word of the four opinions read on March 14 by members of the United States Supreme Court in the Northern Securities case. It cannot have escaped him that the grounds on which Mr. Justice Harlan and three of his colleagues upheld the decision of the tribunal differ fundamentally from those on which Mr. Justice Brewer concurred in that decision. It must be as clear to the Attorney-General as it is to every other careful reader of the document, that when Mr. Justice Brewer says that he concurs in upholding the decree of the United States Circuit Court for the District of Minnesota against the Northern Securities Company because he believes that corporation to be exercising an "unreasonable" restraint on interstate trade, he virtually gives notice that he abjures the principle propounded by *himself* and others in the Trans-Missouri and Joint Traffic cases; that every future case of alleged violation of the Anti-Trust Act will have *to be* tried on its merits; and that, unless "unreasonable" restraint of trade can be shown, he, Justice Brewer, will concur with Justice Holmes, Chief-Justice Fuller, and Justices Peckham and White in refusing to dissolve the accused corporation. The grounds on which the five justices just named would take such a position might differ, but their decision would be univocal.

In view of this logical and, indeed, inevitable deduction from the opinions read by Justice Brewer, Justice White, and Justice Holmes, the Federal Attorney-General would be unfit for the function with which he is charged did he not recognize that the weapon which he imagined himself to possess in the Anti-Trust Act turns out to be far less efficient and less formidable than it seemed to be when the meaning of that act could only be deduced from the decisions of the United States Supreme Court in the Trans-Missouri and Joint Traffic cases. That definition has been set aside. It will no longer suffice to show that a given combination of capital might conceivably exercise restraint, whether reasonable or unreasonable, on interstate trade. It will hereafter be indispensable, in order to secure the concurrence of five out of the nine justices, to prove, first, that restraint is actually exercised, and, secondly, that it is unreasonable.

It is manifest that, under the circumstances, Attorney-General Knox would be guilty not only of folly, but of deliberately betraying the interests of those who desire to hold the decision rendered by the United States Supreme Court in the Northern Securities case, such as it is, *in terrorem* over trusts, organized or contemplated, should he undertake to "run amuck" among corporations with what is left of the Anti-Trust Act.

Mr. John Sharp Williams professes to be an enemy of the "trusts," yet he is trying to goad Attorney-General Knox into a course that might result in a decision rendered by the five justices last named, a decision that, fairly or unfairly, would be acclaimed all over the country as a victory for huge aggregations of capital. He wants the House of Representatives to compel the Department of Justice to explain why it has not expended more than $25,000 out of the $500,000 appropriated by the last Congress for the prosecution of "trusts." The expenditure of $25,000 has resulted in whittling down almost to nothing the principle which had seemed to be established in the Trans-Missouri and Joint Traffic cases.

Is Mr. Williams pleased with the investment? Does he want to throw good money after bad?

We would also suggest the expediency of mature reflection and a wary calculation of possibilities to the Attorney-General of Virginia, if it be true, as a telegram from Richmond asserts, that he is considering the advisability of bringing a suit against the Pennsylvania Railroad on the ground that, as owner of controlling interests in the Chesapeake and Ohio, and in the Norfolk and Western lines, it is acting in restraint of trade. Suppose such a suit should be brought, and five of the nine justices of the United States should hold either that no restraint was exercised or that the restraint was not unreasonable, and that, consequently, the accused road had not violated the Anti-Trust Act. Does the Attorney-General of Virginia think that the outcome of such a proceeding would leave the so-called trusts in a weaker or in a stronger position than that which they now occupy? A sober second thought will probably cause the trust-busters to deem it safer to "go slow" than to "run amuck."

The Latest of Latin-American Commonwealths

INASMUCH as we have bound ourselves by treaty to protect against foreign aggression and against internal disorder the new Republic of Panama, it behooves us to examine what sort of a government it is to which we have assumed this tutelary relation. All the light we need upon the subject is obtainable from the Constitution which was lately adopted by the new commonwealth, and of which a copy has been sent to us. We may say at once that Panama is a unified rather than a federal republic, and that its polity should be classified as belonging to the "Parliamentary" rather than the "Presidential" type. In other words, the organic law of the infant commonwealth is modelled rather on that of the present French Republic than on that of the United States. The seven provinces among which the independent isthmian territory is divided, far from being comparable to the States within our Union, have no more local autonomy than is possessed by French departments. The governor of a province, like the prefect of a French department, will be appointed by the President of the republic. An isthmian province will not even have a local council of its own corresponding to the *Conseil Général* of a French department. Inside of a province, however, the inhabitants of a municipality are empowered to elect a municipal council which is charged with local administration. The Constitution leaves it for the national legislature to say how the mayors of municipalities shall be designated. But it is probable that they will be appointed either by the President of the republic, or by his appointees, the provincial governors. The excuse given for the extreme centralization carried out in the isthmian Constitution is that almost all the educated white citizens in the republic reside either in the city of Panama or in the town of Colon; and there is no prospect of any early change in this particular.

Although, as regards his control of local officials, the Panama Executive has relatively much more power than the President of the United States, he is decidedly less powerful as regards his relation to the national Legislature. Like our President, he is elected by the people for four years, but he is not eligible for the term succeeding his own. He can veto bills, but his veto can be overruled by two-thirds of the national Legislature, except when the question of constitutionality is raised, when the matter is referred for prompt and definite decision to the national Supreme Court. No act of the Executive, however, is valid unless endorsed with the signature of that member of the cabinet to whom cognizance of the matter would naturally belong. Nominally, the Panama Executive can appoint and remove his secretaries, but as they are required to render reports to the Legislature at the beginning of every session, and as they may introduce bills and defend them on the floor of the House, their tenure of office will, in practice, come to depend on the good-will of a majority of the legislators. That is exactly what has come to pass in France. Nominally, under the Constitution of 1875, the President of the French Republic can appoint and remove the ministers, but, practically, it is by a majority of the Chamber of Deputies that they are designated or ousted. That is why we say that, essentially, the polity of the Republic of Panama belongs to the Parliamentary rather than to the Presidential type.

The Legislature of the Panama Republic is not bicameral, like that of Great Britain, the United States, France, and most other countries that have Parliamentary institutions. It is unicameral, like the legislature of Greece, of Servia, of Bulgaria, or of Norway. That is to say, it consists of a single chamber, which will be known as the National Assembly, and which will be chosen by adult male suffrage in the ratio of one Deputy to ten thousand inhabitants, and of one additional Deputy to a surplus of five thousand or more. The National Assembly has great power, not only because, as we have said, it can override the veto of the Executive by a two-thirds vote, and can, practically, hold the members of the cabinet to a strict and perpetual accountability, but also because it is clothed with the power of amending the national Constitution. The process of constitutional amendation is the following: The National Assembly embodies the proposed change in a bill and passes it. If the bill is approved by the Executive it is submitted to the Assembly at the next ordinary session, and, if then approved by two-thirds of the Deputies, is held to have become a part of the organic law. We should further mention that the National Assembly has the power which, under our Constitution, is vested in the Senate, of approving or disapproving treaties, and of sitting as a court of impeachment to try the President himself, the members of his cabinet, and the members of the Supreme Court of Justice. We add that the National Assembly has the power of electing at an ordinary session, and for the term of two years, three Presidents-Designato, who, in the event of the death or disability of the President of the republic, shall, in the order of their designation, assume charge of the Executive power.

A feature of the Panama Constitution which, obviously, is modelled on our own Federal organic law, rather than on that of the present French Republic, is the establishment of a national judiciary as a cognate department of the national government. The Supreme Court of Justice, which is composed of five magistrates named by the Executive for the term of four years, is made the ultimate expounder of the national Constitution. Its expository function is, normally, invoked in the following way: If a bill passed by the National Assembly is vetoed by the Executive on the score of unconstitutionality, the bill is forthwith submitted to the Supreme Court of Justice, and this tribunal within six days must pass upon its constitutionality. An affirmative decision by the court makes it obligatory for the Executive to sanction and promulgate the law. In the event of a negative decision the proposal is dead.

We note, finally, that, although Liberals or Anti-Clericals preponderated in the convention by which the Panama Constitution was framed, the references to the Roman Catholic religion in the document are, evidently, the outcome of a compromise. The profession of any religion whatsoever is proclaimed free, as is also any form of outward worship, without any limitation, except the exaction of respect for Christian morals and public order. At the same time it is recognized that Roman Catholicism is the religion of the majority of the inhabitants of the republic, and the Constitution directs the National Assembly to set aside in the interests of that religion an auxiliary fund for the foundation of a "Conciliatory Seminary," and for missionaries to the native tribes.

Japan's Financial Position

JAPAN'S striking naval successes in the first three or four days of the war led to expectations that hostilities would soon come to an end. Russia had already lost ten or twelve ships, we were told, amounting to two-thirds of the fighting force of her Far-Eastern fleet; and the army was said to be no better prepared than the navy. But subsequent events have not borne out the expectations thus raised. Russia has suffered no more important losses; on the contrary, many of the ships at first reported destroyed are again in commission, and, with the exception of the *Variag*, the *Korietz*, and one or two destroyers and torpedo-boats, the Russian navy may be said to be intact. Even the *Czareritch* will soon be completely repaired.

The hopes that the war would soon be over were, therefore, based on insecure foundations. This is emphasized by General Kuropatkin's declaration that he expected hostilities to continue for two years, and by the statement just made, in the Tokyo Diet, that the Japanese must be patient, and not look for sudden and brilliant successes. Another element of delay is now recognized to lie in the fact that Russia is bringing from the Baltic certain important naval reserves, which cannot arrive at Port Arthur before September. The question naturally arises: How long can Japan keep it up? What are the financial resources of Japan?

We must recognize, at the outset, that Japan is a poor country, like nearly all Oriental lands, though not quite so poor as British India. With a population equal to that of Germany, Japan has less than a fourth of Germany's revenue; or, to take her ally England as the basis of comparison, Japan, with a population half as great again as England, has less than a fifth of the revenue of England. We may make the view even clearer in this way: the revenue of France is about twenty dollars per head; that of Japan is about three dollars per head. The imports of England are about sixty dollars per head; those of the Netherlands, drawn from an immense East-Indian Empire, about a hundred and fifty dollars per head; while those of Japan are only three dollars per head, about one-fiftieth the imports of Holland.

Japan is very densely populated. Nearly forty millions of her population are settled at from 400 to 475 to the square mile, nearly thirty millions approaching the latter figure in density. This population is largely agricultural, the average farm being about

two acres in extent, and having rather the character of a garden tilled wholly by hand labor than of a farm in our sense. This prevalence of hand labor accounts for the extreme difficulty in finding horses for the Japanese cavalry; the country people have no horses, because they are too poor to own them and have no room on their diminutive farms to use them. Another comparison: Japan has only eight towns of a hundred thousand inhabitants and over, as against thirty-three for Germany, with about the same total population. Only two of these towns, Tokyo and Osaka, have over four hundred thousand inhabitants.

Let us now see in detail how much revenue Japan is able to raise from this immense population of small gardeners. Owing to a dissolution of the Diet, the estimates for the year ending March 31, 1904, were not passed; the estimates for the preceding year were, therefore, repeated. Taking the nearest round numbers, the chief items and totals of Japan's revenue were as follows:

Excise (alcohol and sugar)	$35,000,000
Land tax	23,000,000
Total of direct taxes	$84,000,000
Government undertakings:	
Posts, telegraphs, and railroads	$17,000,000
Tobacco monopoly	6,000,000
Total ordinary revenue	$112,000,000
Sale of Chinese bonds	$16,000,000
Chinese indemnity	4,000,000
Total extraordinary revenue	$24,000,000
Total revenue	$136,000,000

The Japanese government, therefore, is a business earning about thirty million dollars a year, raising about eighty-five millions more, chiefly by liquor and sugar excise and land tax, and supplementing these two sources of income by indemnities from China, from the Chinese war of 1894-5, and the Boxer outbreak. As we saw, this is less than a fourth of Germany's revenue, and less than a fifth of England's.

This moderate income is spent in the following way:

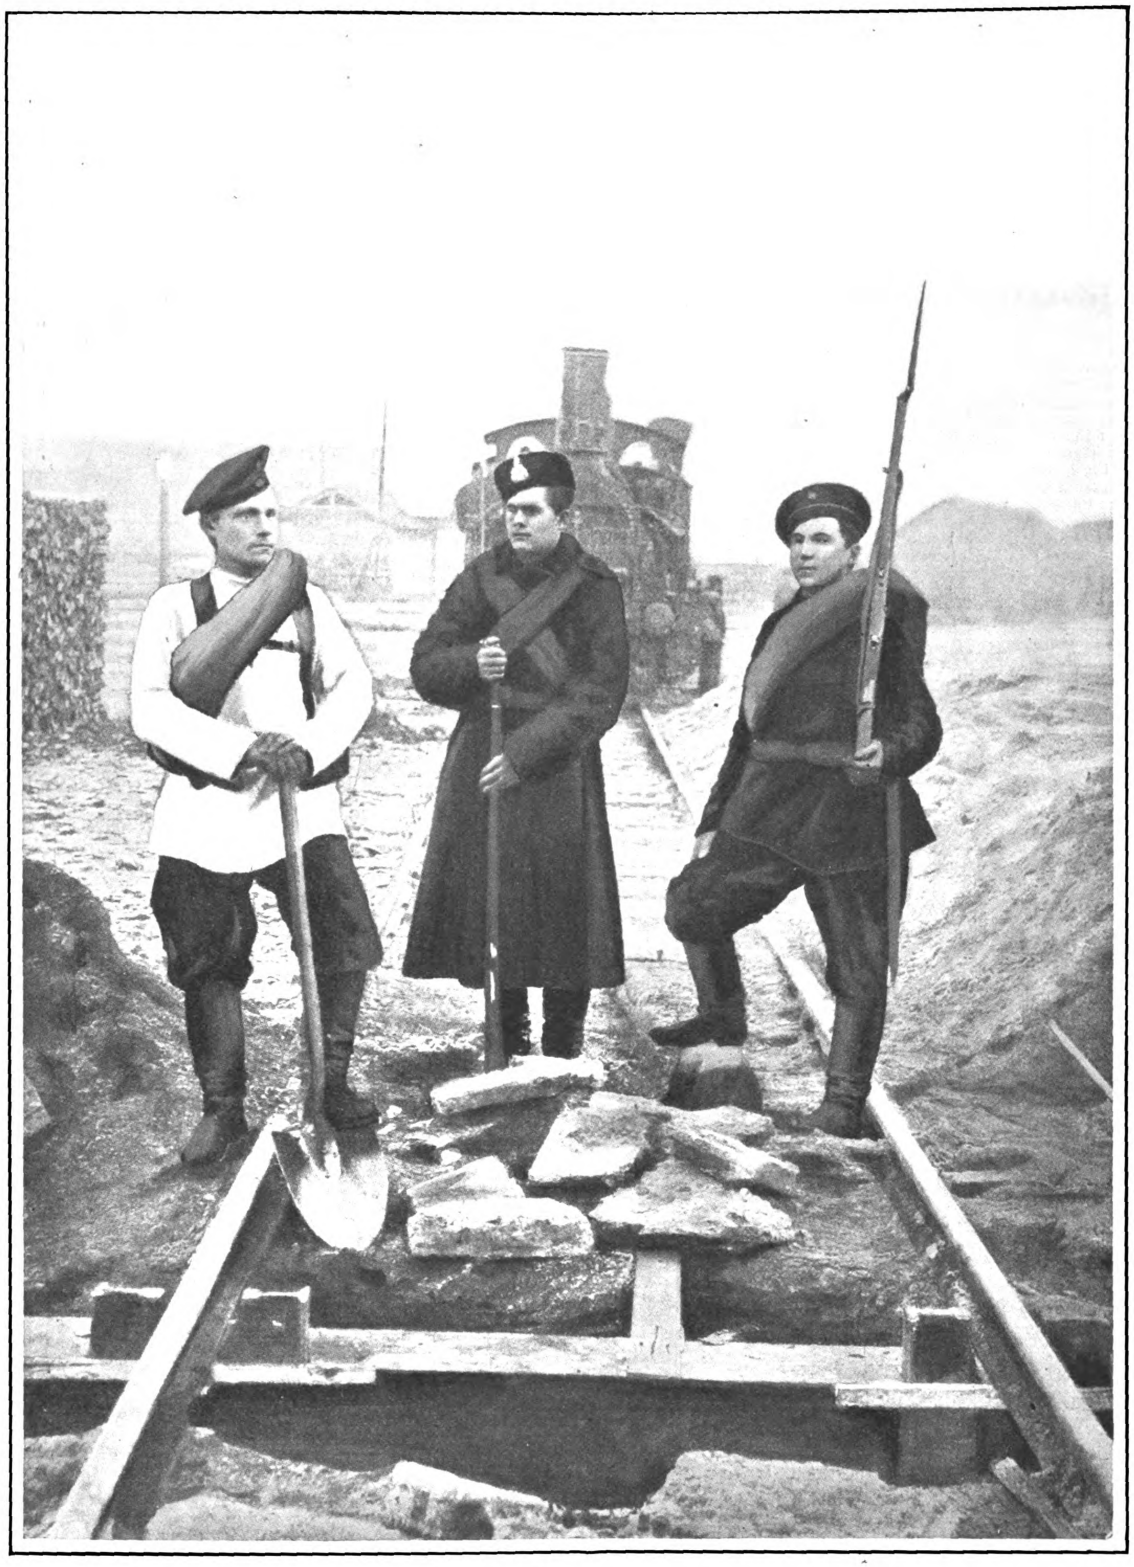
Debt charges and finance	$30,000,000
Army and navy	30,000,000
Interior Department	5,000,000
Foreign Office	1,000,000
Justice	5,000,000
Schools	2,000,000
Total ordinary expenditure	$90,000,000
To reserve fund	$16,000,000
Army and navy	7,000,000
Total extraordinary expenditure	$46,000,000
Total expenditure	$135,000,000

Thus we see that half the total expenditure, or two-thirds of the ordinary expenditure, is spent either on the army and navy directly or to pay the interest on money borrowed to buy battleships and war materials. This policy of militarism, which is costing Japan so high a price, was inaugurated by her statesmen after the Chinese war ten years ago. A few years earlier, say for the five years preceding the war, Japan's total expenditure amounted to only $40,000,000, hardly more than one-fourth of the present expenditure. To meet this immense outlay the taxes have been greatly increased, so that, to quote a recent writer in the *Fortnightly*, we have "in six years the ordinary revenue doubled and the extraordinary quadrupled; in the same period, the ordinary expenditure doubled and the extraordinary increased about sevenfold." Only a small part of this greatly increased expenditure is covered by the Chinese indemnity. The ten years' programme of militarism was estimated to cost $300,000,000; of this one-third has been paid by the indemnity of 1895, and the remaining two-thirds, or $200,000,000, has been raised by additional taxation or by borrowing.

For this immense outlay Japan got her modern navy of six heavy battle-ships and six large armored cruisers, purchased for the most part from England, as well as a few smaller ships. She also got her arsenals and her war-supplies, as she now makes her own rifles and field-artillery. Add to this the training, feeding, and uniforming of a standing army of about a quarter of a million, with considerable reserves, and its becomes evident that for the last ten years Japan has made extraordinary efforts and extraordinary sacrifices to build up the naval and military forces at present in the field against Russia. She has devoted most of her income to this end, besides borrowing heavily, and has evidently staked her entire resources on the chance of complete success. To accomplish this end, the taxes paid by a poor population have been largely increased, not only in the years before the war, but since war broke out, and the withdrawal of the best part of Japan's merchant marine to serve as transports also makes a great call on her normal resources. Japan has evidently taxed herself to the utmost, and is, therefore, literally fighting against national bankruptcy, if not national collapse. Only the fullest success could justify this tremendous risk.

The Latin Peoples

THAT the so-called Latin peoples—the French, Italians, and Spanish—are in a state of decline has been so generally held by Anglo-Saxons, and admitted by so many thinkers and writers among the Latins themselves, that it comes as an agreeable surprise to have such an authority as Dr. Emil Reich find reasons for declaring a firm belief in the vitality of each of the three supposedly infirm nations. This belief he states in the current *Contemporary Review*. There is no justification, he says, for carrying the methods of the naturalist into the study of history. He admits that Spain has declined from her high estate of the sixteenth century; but her might had been fostered into greatness by peculiarly artificial means, and when those means were cut off, she was bound to relapse into her former line of progress. She is and must be a backward nation, because she has not the superabundant fertility of a country like France, and her land is very much underpopulated. Her geographical position, too, is a great drawback. Situated behind the barrier of the Pyrenees, at the extreme end of the Continent, she is cut off from close intercourse with other nations. Few travellers pass through her territory; and she lacks the stimulus of the importation by foreigners of novel ideas and excess of energy which is such a powerful incentive to progress. Irrigation is some day going to do great things for Spain, and there is no reason to despair of her future. She is likely to lag behind her neighbors, for the reasons mentioned. But, mentally and bodily, the Spanish are sane and sound.



Dr. Reich thinks that the Italians are the most gifted nation in Europe. What characterizes them above all is their initiative. The Italians have always been ready to take the first step in action and able to take the first step in science. Their mental activity and the diversity of their attainments are extraordinary. The history of Italy teems, for the last eight centuries, with the most intense personalities. And this wonderful display of individuality among Italy's great men is repeated in the country itself. Each province, each city, has its distinctive character; and while political union should give the land political strength, its intellectual disunion should be no less a source of intellectual strength.

But Italy's best hope for the future is probably her fine geographical position. As of old, she is the centre of the Mediterranean world, but of a regenerated Mediterranean world, in which the going to and fro of commerce is increasing every day. She has now reassumed her former position midway between the Orient and the Western world. She has had great evils at home which have prevented her from utilizing to the full the advantages of her newly acquired position. But her geographical situation will inevitably, and almost automatically, confer prosperity on her. Her union has not had as a sequence that leap forward in prosperity which was confidently expected of it, because her independence was not her own achievement and because the union is by no means so thorough as externals would seem to indicate. The one great shadow which Dr. Reich sees on the brilliant future of Italy is the immense power of latent hostility to the government which the Roman Church controls.

The greater part of this illuminating article is devoted to an investigation of the conditions underlying the situation of France. It is common to hear France classed among the decadent nations: but, says Dr. Reich, even when apparently unmistakable symptoms of decay can be observed in a people, it is very rash to predict an approaching downfall and dissolution. Such predictions have nearly always fallen wide of the mark, as in the case of England after her fruitless effort to crush the revolt of her American colonists (1783), when it was predicted that she would no longer be able to interfere in European affairs. France's position to-day is very much what England's was a hundred years ago, one of political isolation, and her resources are such as to enable her to reap great advantages from it, just as England did. Dr. Reich gives a very interesting account and estimate of the advantages and drawbacks of the French manner of training youths and maidens, and he pays a handsome tribute to the character and personality of French women, avowing that they constitute an element of great strength and stability in the nation. But what is least realized by outsiders concerning France is her immense wealth. Statisticians know she is the richest country in Europe: but to the general public her wealth seems incredible, for it leads to very little outward display. Peasant dowries ranging between ten and fifty thousand francs are common enough, and the figures rise in the social scale. The statistical returns of moneys devolving by inheritance show a total for France nearly thirty times as great as those for England, Austria, or Germany. Germany thought that France would be crippled for years by the payment of her indemnity of $1,000,000,000; but this was paid with astounding rapidity, though the French losses during the period of actual warfare must have been some $5,000,000,000. A few years later France was already hoarding again, and municipal corporations requiring loans were able to get them at moderate rates of interest.

Another of France's safeguards against decline is her wonderful homogeneity. She is more united and consolidated than any other European country.

SNAP-SHOT OF RUSSIAN SOLDIERS ON THE UNCOMPLETED RAILROAD AROUND THE SOUTHERN PART OF LAKE BAIKAL

The Siberian Railway extends 6990 miles from the Russian capital to Vladivostok and Port Arthur, with a division at Harbin. There is only one track, and it is estimated that a force of 25,000 reinforcements could not be moved to Mukden in less than thirty-six days after leaving St. Petersburg. An interesting article about the Trans-Siberian Railway, based on the personal experiences of an engineer who was engaged in its construction, will be found on another page of this issue

Russia's Work in Manchuria

By Sergei Iulitch Witte

Former Russian Minister of Finance, now President of the Committee of Ministers

THE Chinese Eastern Railroad was constructed through Manchuria under quite peculiar conditions. To meet these conditions a plan was devised by Engineer Kerbedz and approved by me, altogether *different from* that usually followed in the construction of railroads in Russia. This plan consisted in laying the rails as fast as possible, so far as the profile of the ground permitted, dispensing even with grading, overcoming obstacles by gradients as steep as the traction power of the locomotives permitted, building temporary bridges, and other like expedients. This makeshift line was then used for the transport of building material, which was very unevenly distributed along the line of the railroad; for example, on the western half of the road, towards Mongolia, the line goes for more than a thousand versts (660 miles) through wholly treeless regions, while in the eastern half, approaching the province of Ussuria and Vladivostok, wood is abundant; and there are places where *not* a stone is to be found for hundreds of versts. By this plan the carriage of laborers was also assured, a matter of vast importance in building the railroad, and especially the main line; as the latter was carried for a great distance through an almost or even wholly uninhabited region, so that most of the laborers were Chinamen from Chefoo, Tientsin, and other points even further south. As the work of grading was carried forward, and the construction of bridges and the like was completed, the temporary road was changed into a permanent way, and assumed its destined appearance.

In parts of the country where the adoption of steep gradients was necessary, as well as curves of short radius, the surveyors were able to concentrate them within comparatively short mountain sections. At each mountain crossing a station platform was built at the beginning of the ascent, at the top of the crossing, and at the end of the descent; at the first and last of these stations an engine-house for auxiliary engines was built. Thanks to this, a train of normal size can traverse the whole line without uncoupling, an auxiliary engine being attached to it over the mountain crossings. In this way the Manchurian line admits of much heavier trains throughout its whole length than the Siberian Railroad, in spite of local obstacles, which were very considerable. In the western division the line cuts through the Hingan Range, and in its eastern division, up to the frontier of the maritime province, near Vladivostok, it traverses broken and hilly country, cutting through four watersheds with steep slopes; while the south Manchurian branch cuts several ridges on the Kwang-tung peninsula, precipitous, though of moderate height. The rest of the line, with the exception of parts of the Mongolian plateau, the plains between Tsitsihar and Harbin, and certain sections on the southern line, consist chiefly of undulating foothills.

Fourteen bridges were constructed on the Manchurian line, with a span of more than seven hundred feet each; of these bridges, those at the two crossings over the Sungari River and at the Hunhai River have a span of from 2100 to 3100 feet, so that amongst bridges of Russian construction the bridge over the Sungari near Harbin holds one of the first places in regard to length, being surpassed only by the bridges over the Amur and the Volga. All the larger bridges have metal frames, resting on stone piers, founded on caissons. Amongst the bridges, those of stone are worth notice, as they last forever, and need no repairs. All the bridges and similar works are well built, and special attention has been given to assuring the bridges a sufficiently wide span, and to carrying the foundations deep enough to secure them against floods. The works which I examined were most intelligently carried out, with all modern technical improvements. In connection with the construction of the railroad it was necessary to provide also for the moral and spiritual needs of the employees, to build churches, schools, libraries, and the like.

Nearly all the works, with very slight exceptions, were not carried out through contractors, as is generally the case with Russian railroads, but by the government directly; and, at the same time, it was necessary to teach the local Chinese workmen processes and kinds of work till then wholly unknown to them, and to organize a very extensive system, both for the works and the collection of material. The course of the work was several times completely interrupted, especially by the Boxer outbreak of 1900, which broke off all work for nearly a year; there were rarely periods of work without threats of cholera epidemics or the plague, and the cholera epidemic of 1902 covered nearly two months of the best season for work. From 1901 onwards, along the whole of the main line to Vladivostok, and over the south Manchurian branch to Port Arthur, passengers and freight have been carried at intervals, while since June, 1902, mail-trains have been run from the frontier at the Manchuria station to Port Arthur on a schedule of 125 hours. When I went over the line the special train which carried me went from the Manchuria station to Harbin station in fifty hours, from Harbin to Vladivostok in forty hours, and from Harbin to Dalny in fifty hours, although I made stoppages for inspection at every station and also at several of the more important works; while the speed of the train on the circuitous temporary sections was very cautious, and, generally speaking, the train went slower than the condition of the line demanded. Consequently, the trip from St. Petersburg to Dalny will take about sixteen days, with a half-day less to Vladivostok.

Two great works proceeded simultaneously with the construction of the Chinese Eastern Railroad: the new cities of Harbin and Dalny, the latter with a port on the sea. Harbin, which, almost from the beginning of the Russian railroad construction in Manchuria, was manifestly destined to be the chief centre of railroad administration, sprang up on the right bank of the Sungari River, at the point on the main line from which the branch line goes south to Port Arthur and Dalny. The position of this city is especially convenient and advantageous: it is in the centre of Manchuria, and branches of the railroad diverging from it penetrate almost the entire country, and touch its vital artery, the Sungari River, which waters the greater part of Manchurian territory. Foreseeing the creation of a great commercial centre here, the railroad administration took measures, from the outset, to secure the greatest possible quantity of land, and at present the area of Harbin with its future suburbs covers 3500 desatins (10,000 acres). On this area, which, only five years ago, was a perfect wilderness, a row of buildings was first set up by the railroad administration, for railroad purposes, the housing of its employees and workmen, and so on. Crowds of merchants, manufacturers, and people of various occupations hurried thither, eager to find a permanent home in this new city with its great future. Under these conditions Harbin soon developed three considerable settlements—Old Harbin, New Harbin, and Pristan.

Old Harbin consists almost entirely of temporary mud houses grouped round the large hanshin (vodka distillery). This settlement was the first shelter of the railroad constructors; even now a part of the staff of the chief engineer constructing the Chinese Eastern Railroad and his officials live there. Here also are the dwelling-houses of some of the local firms. In this part of Harbin there is a temporary church for a hundred and fifty people, which it is proposed to replace by a permanent one, for which the necessary ground will be given free.

M. Witte, former Russian Minister of Finance

The second settlement, which, in view of its later construction, has received the name of New Harbin, is destined to serve as the centre of the city's entire population. It is on high ground, which is not reached by the river when in flood.

Here three hundred stone houses have already been built, and the construction of various kinds of official buildings goes on rapidly; there are also a boys' and girls' school, a club, a hotel, quarters for the railroad officials, and other buildings. To supply the spiritual needs of the population a permanent church was built there to hold five hundred, in the Old Vologda style. Besides these buildings, it is proposed to build a commercial college for men and women, after the model of an eight-class *gymnasium*.

The third settlement, which

bears the name of Pristan, grouped itself around the railroad workshops and the warehouses along the bank of the Sungari, on a low stretch of ground, which is sometimes flooded when the river is high. In consequence of this, this site was not chosen for the centre of the future city, but, by the force of circumstances, as the landing-place of ships and steamers, it is at present the liveliest part of Harbin; here the trade is concentrated, and a row of stores has sprung up, and also many private enterprises. The police headquarters and the fire brigade are at present located in Pristan. The railroad has erected many buildings here, including a school to hold ninety pupils. Here also are the railroad machine-shops, and the permanent shops will be erected in the same place. Thanks to this fact, the chief contingent of the population of Pristan will consist of working people occupied in the machine-shops.

At present the population of Harbin is about twenty thousand. The rapid growth of the town is the more remarkable because, owing to the fact that the amount of ground likely to be required by the Chinese Eastern Railroad was at first not accurately known, private persons were not permitted to buy land, and were only allowed to build there on lease on the condition that they would remove the buildings on the demand of the administration. But, as this regulation greatly hindered the regular construction of Harbin, and therefore the settlement of substantial merchants and productive enterprises there, parcels of land are now sold to private individuals outright.

Among the detours of the railroad, the line near the city of Mukden, about sixty-one versts (forty miles) in length deserves special attention. In the original agreement with the Chinese government it was at first decided that the line should pass the imperial tombs near the city of Mukden at a distance of fifteen versts (ten miles), and work was begun on the detour.

After the Boxer outbreaks of 1900, at the time when the parts of the line destroyed by the insurgents were being repaired, new negotiations were begun with the local representatives of the Chinese government, with reference to bringing the railroad towards Mukden and to its passing outside the imperial tombs, but not at such a great distance as before; in this way it would come closer to the suburbs of the town, a thing which the local population also desired. When the consent of the authorities was obtained, the direct line was begun, coming straight to the city of Mukden and saving fifteen versts (ten miles) of the previous distance. A large bridge has been built for this direct line over the Hunhai River, which is 2300 feet wide at this point.

Dalny is the terminus of the Chinese Eastern Railroad, or, to be more correct, of its southern branch. The fertile idea of building, at the terminal of the greatest railroad in the world, and on the ice-free Yellow Sea, a first-class commercial port arose at the time when the treaty was concluded with the Chinese government providing for leasing to us the right of occupation of the Kwan-tung district.

This idea even found a place in the text of the treaty, where it was specifically indicated that, while Port Arthur should be open only to the war-ships of China and Russia, the Gulf of Talien-Wan, with the exception of one of its inner bays destined equally with Port Arthur for the exclusive use of the Russian and Chinese fleets, should be considered open for foreign commerce, and free access to it would be permitted to the ships of all nations. At the same time the Russian government announced in the *Gazette* its intention to make Talien-Wan an extensive port for the commercial and manufacturing undertakings of foreign nations in the Far East. On my visit to this city, holding in mind the purpose of its foundation, I turned my chief attention to making clear its position and needs, from the point of view of the best possible fulfilment of these purposes.

The site of the town of Dalny and its port is admirably chosen, on the shore of the Talien-Wan Gulf, which is wide, but sheltered from wind and sea. The hills which surround the gulf serve as an admirable shelter from the wind, and make the city very picturesque. The area included by the town, though it has a somewhat uneven and rocky surface, offers no special difficulties in the laying out of the streets with easy grades, and at the same time on a large enough scale for the probable future growth of the population.

The territory of Dalny is divided into three parts—the administrative and two commercial, the European and the Chinese quarters. The administrative city is already completely built; in it are the houses of the constructors of the city and port, the offices of the steamships of the Chinese Eastern Railroad, the municipal offices, the dwellings of the officials of the port, the railroad, the steamships, as well as of the Russian and Chinese workmen employed on these works. Here are also the church, the school, the hospital, the hotel, the club, and the temporary building of the Russo-Chinese Bank. The streets are paved; there are gardens around the houses; the drainage is good, and there are electric lighting and a water-supply.

The Czar riding at the Head of a Cavalry Troop

In the commercial sections of the town, European and Chinese alike, the railroad administration only intended to put up public buildings and lay out streets. When I was there all the streets were already graded and the building ground was levelled and filled in.

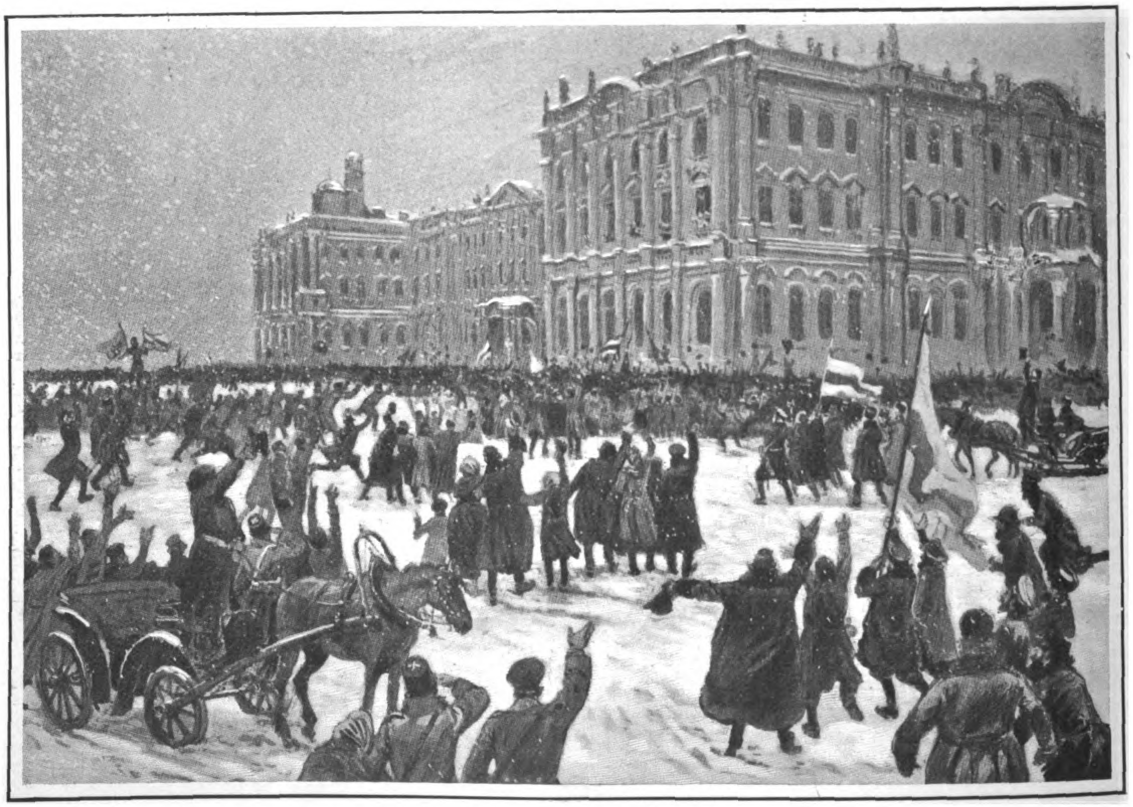
The European quarter of the city ends in a large park, partly consisting of shrubberies, surrounding a Chinese village which was there; the park has hothouses and a greenhouse. Beyond the park is the area of the Chinese town, where a large Chinese theatre has already been built.

But probably the most important undertaking in Dalny, in view of its future commercial growth, is the construction of the port, to the proper completion of which I turned my best attention from the outset.

History measures not by years, but by centuries; and, from this point of view, by the building of the Chinese Eastern Railroad to Port Arthur and Dalny, a mighty work is completed, a historical problem is solved, and one of the last steps is taken in the advance of Russia to the Far East, in her effort to find an outlet to the open sea, to the ice-free shores of the Pacific Ocean.

An Appeal

By Ernest Neal Lyon



YOU offer eulogy or song
To ears that cannot hear.
The living soldier listens long
For one loud "Onward!" cheer.

Upon the graves of heroes fall
Uncounted roses fair.
Have you no bud among them all
A fighting man may wear?

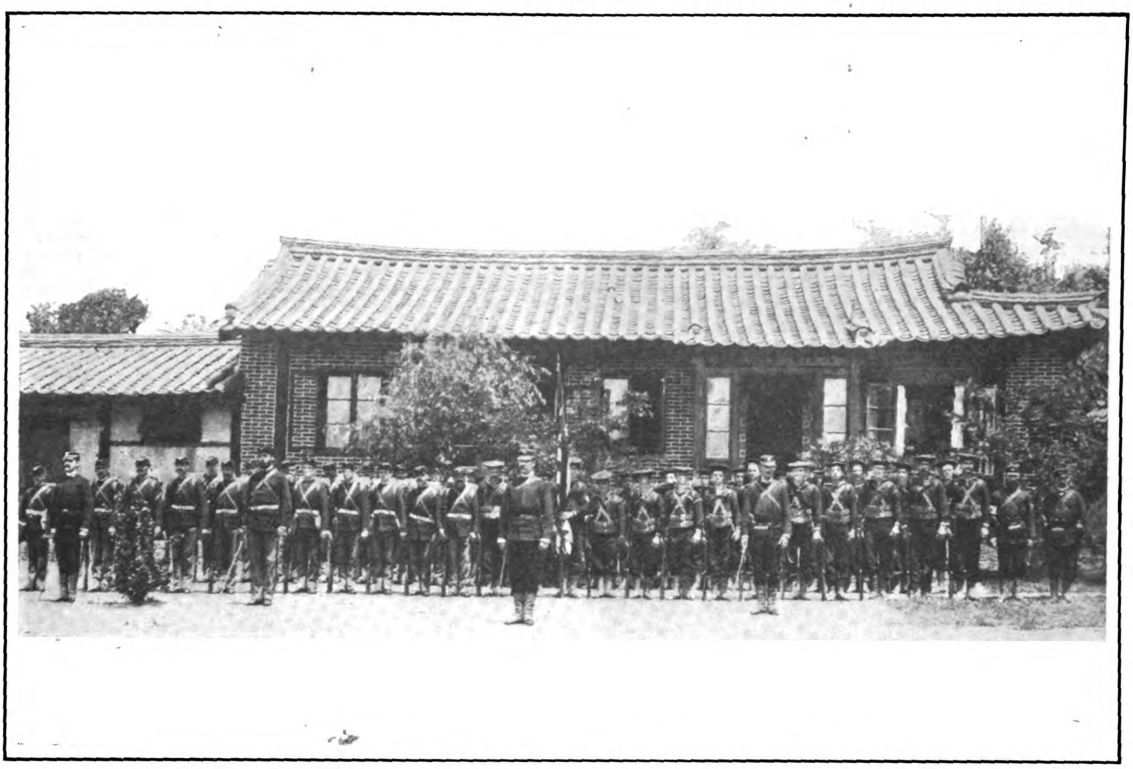
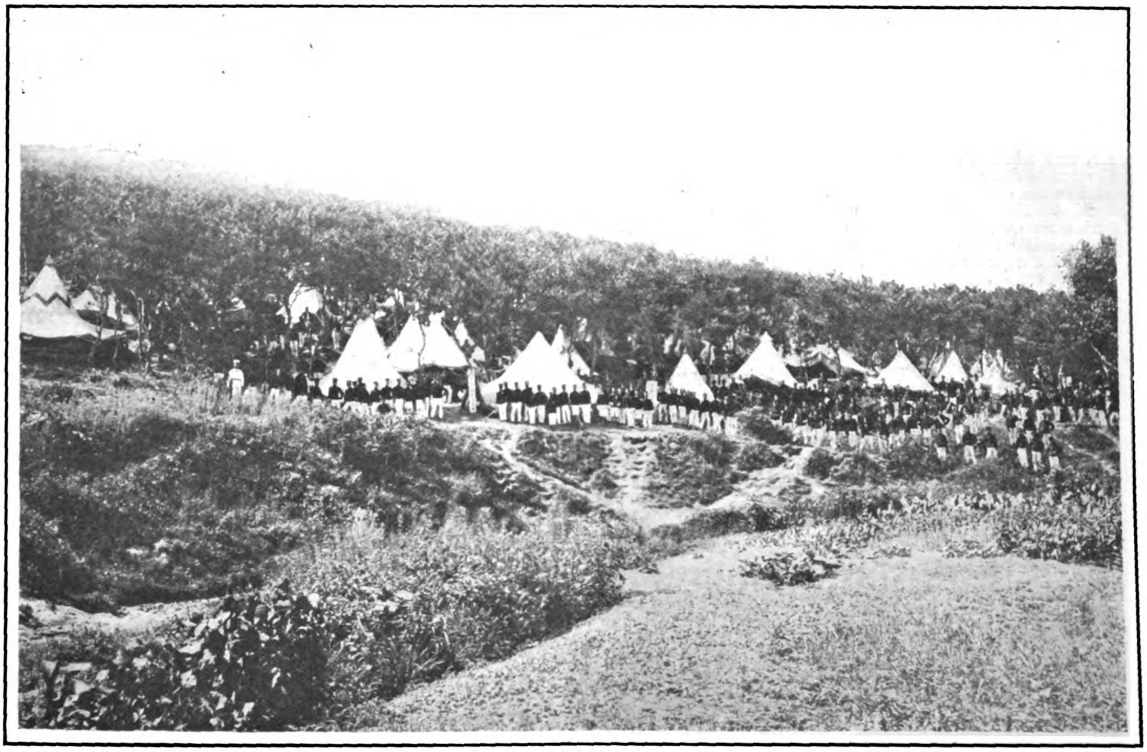
The Russian General Tcherkoff, Governor of Warsaw, reviewing Troops for the Far East



A Scene in Front of the Winter Palace at St. Petersburg—Cheering Troops on their Departure for the War



MILITARY SCENES IN ST. PETERSBURG AND WARSAW

It is reported that the Czar's forces at the front will be divided as soon as General Kuropatkin arrives at Mukden. One division will be assigned to the Liao-Tung peninsula, including the Port Arthur garrison, in charge of General Stoessel; a second, or central, army will be commanded by General Linevitch; and a third, or northern, army will be in charge of Baron Stackelburg

American Marines before the United States Legation at Seoul, the Korean Capital

A Japanese Encampment in Korea

PHOTOGRAPHS FROM THE SCENE OF WAR IN KOREA

The most recent war news from Korea, where the military situation is likely to come to an early focus, is that the Japanese outposts are approaching nearer to the Yalu River, and have reached Un-San. The Russians are said to have fortified both sides of the river at Wiju, and the approach from Un-San is very strongly guarded. Minor skirmishes between the outposts are reported almost daily. An army of about 40,000 Japanese is said to have landed at Wonsan, on the east coast of the peninsula

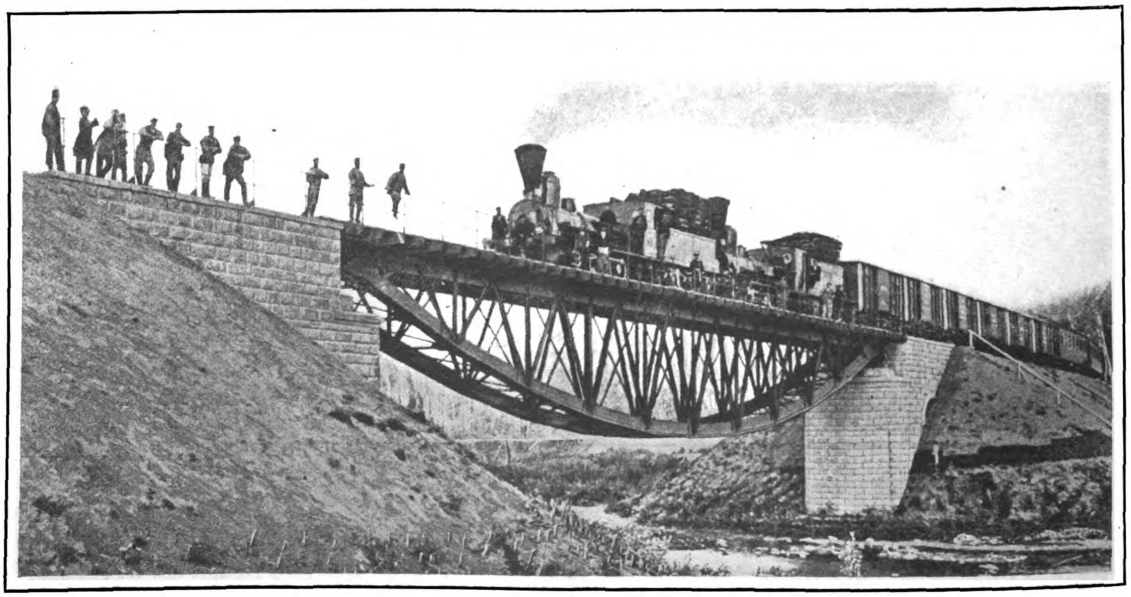
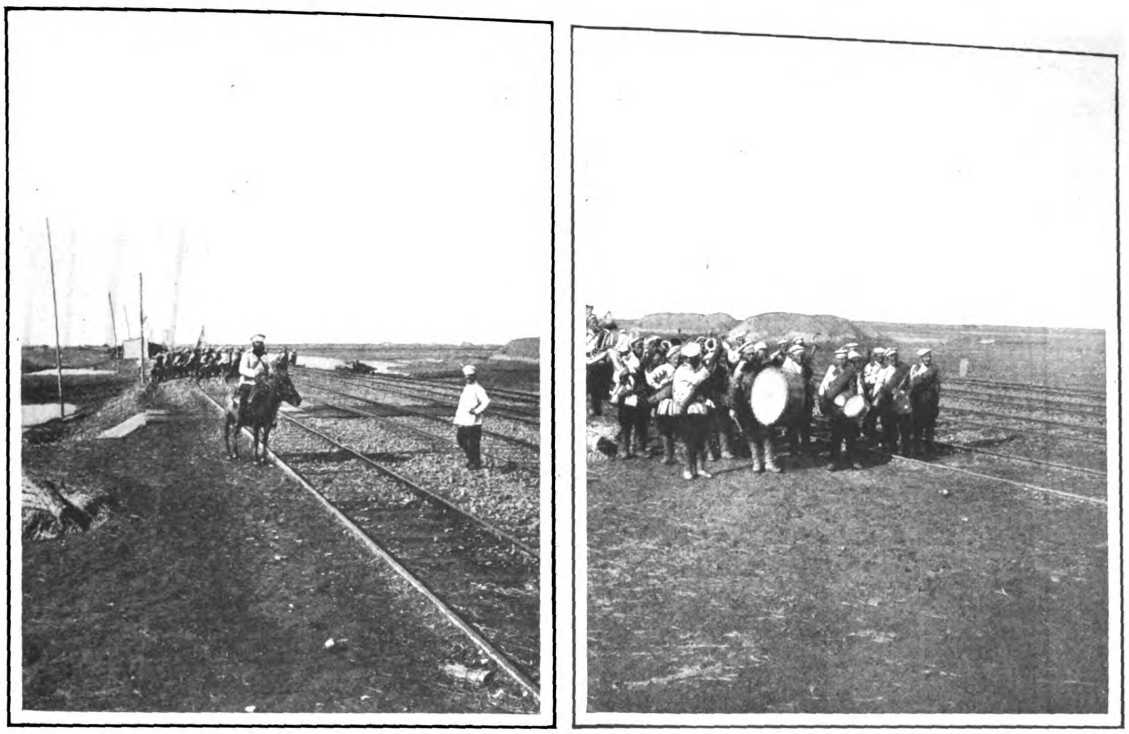
An Engineer's Views of the Trans-Siberian

By L. Lodian, C.E.



IT is more than a dozen years since Russia began at Vladivostok the construction of her thousand-million-ruble (roundly, $500,000,000) trans-Asiatic railroad, and it is still unfinished; for Russian engineers have not yet solved the problem of getting around Lake Baikal except by a provisional ice-railway over the surface of the lake. The ice-laid railroad over Lake Baikal is the largest over-ice line ever attempted in the history of railroading. It is more than forty verstas (a versta is two-thirds of a statute mile) in length, and has been completed more rapidly than any section of the Trans-Siberian. Russia's railroad engineers have always been expert in rapid work of this kind, for in all railroad construction work in Russia and Siberia, trans-glacial makeshifts have always been resorted to for the transportation of material, stores, etc., though rarely for passengers.

From shore to shore the opposite coasts are plainly visible on clear days. Unfortunately, this railway, built at a cost of a quarter of a million rubles, will be put out of operation within a few weeks by the thawing of the ice, although none but the ice-breakers will be able to navigate the lake for six weeks later. The track will probably be able to float intact during the short open-water summer season, and, with care from the ice-breakers, might be made ready to do service during the next winter. Here the double utility of the tree-length sleepers of the track becomes patent: for, being made of light pine and naturally impregnated with water-repelling resin, they will not only support the rails well out of water, but will serve to carry small parties of from five to six persons, transported on the *dpizinas* (hand-operated trolleys), with scarcely any deflection. This method has been experimentally tried on the Siberian rivers, but had to be discontinued because it interfered with navigation. So far as Lake Baikal is concerned, the only sources of danger in the summer use of the floating track would be an exceptionally severe gale, which might break it up, or the corroding action of the wetting which the waves would give the rails in rough weather. But the track would probably last through one season, at least. This forty-mile floating railroad will be watched with interest as a factor in Russia's transportation problem; although it will not, of course, serve for the passage of anything but small parties on the hand-worked *dpizinas*.



An Engine-house on Russia's Trans-Siberian Railroad—How the Road looks in Winter

The method of building the over-ice railroad across Baikal may be described briefly as follows: The rails and tree-sleepers were carried out on the sledges and ice-breaking ferries, and were dropped at designated intervals along the route. The ice is of such thickness that the ferry channel can safely occupy a position within sixty or eighty yards of the railroad track, for constructing or operating; even the daily ice-breaking upheavals of the ferry do not affect the stability of the line, although they crack and fissue the ice all about. Ordinary sleepers are not used, for they do not offer a surface sufficiently self-supporting in case of a rupture of the always uncertain ice under the influence of tidal action and the winds. Instead, whole tree-lengths are used, forty, fifty, and sixty feet wide; for, being provisional, no attempt is made to unify widths. The railroad presents, in consequence, a singularly awkward and uneven appearance, but it answers its purpose adequately. The rails are not heavy — about twenty-five pounds per foot; although there are heavier rails used on parts of the trans-Siberian land lines. The rails are in thirty-foot lengths, made in Russia. Eight or nine of the tree-length sleepers are apportioned to every thirty feet of the rails, which are spiked to them as to ordinary sleepers. As the road is of a purely provisionary nature, not much labor is expended on details. It is left to do its own ballasting, for which a hard snowstorm will more than suffice, the tree-lengths and rails soon catching the drift of the gale-swept and snow-covered waste. In an hour the snow will be banked high; but as too much

of it of course interferes with traffic, gangs of workmen, supplied with big timber shovels, assist the snow-drifts in the work of ballasting by ramming and compacting the rail-covered snow down between the sleepers. In a few days this turns to snow-ice, so that the railroad becomes not alone laid *on* ice, but actually *in* ice; and, through this assistance of nature, speed is increased on the road from eight to fifteen miles an hour.

The construction of the circum-Baikal line may be compared, in the matter of difficulty, with the problems presented to the builders of the Colorado Midland Railroad. The circum-Baikal line winds in and out and through and over the spurs of the Altai Range. From the Ural Range to Ipkytck (Irkutsk)—the capital in the heart of Siberia—a distance of 3000 miles, there is not a single tunnel; but, after leaving Ipkytck, one enters almost at once a region of tunnels. Immediately after leaving Ipkytck the line runs into a mountain; and it will continue to tunnel the circum-Baikal scenery for two years to come, or until it pulls out on the level at the village of Micobaia. My tour of the circum-Baikal route convinced me that the borders of the lake should have been followed more closely, which would have made it possible to transport material both by water and land, instead of entirely by land. There will be numerous tunnels on the line—some of them from three to four miles in length. The country through which the road traverses is very scantily inhabited, and all supplies have to be brought from a distance.

The laborers employed in the surface grading of the line endure many discomforts. The mosquitoes ("komapi" to the Russians) are such a severe trial for six months of the year that the cart horses used for the removal of excavated material become unmanageable, and it is necessary to keep peat fires going constantly wherever the work is in progress. This mitigates the discomfort somewhat, but presents the alternative annoyance of inhaling the stifling smoke from the burning heaps. In the tunnels, on the

Books and Bookmen

By James MacArthur

THE clever cartoon, forecasting Mr. Balfour's resignation, which appears on this page, was the first to be printed in the new series of the London *Daily Chronicle*, recently reduced from one penny to one halfpenny. The distinguishing feature of the *Chronicle*, and its chief attraction for men and women of letters, is its literary page, and I note with satisfaction that there is to be no diminution of interest shown in this department. It was conceded long ago that the increased prominence given in recent years to literature in British journalism was due to the vigorous experiment of Mr. Fletcher when he resolved to devote every day a page, or the larger part of a page, to reviews, literary notes, and special articles in the *Chronicle*. Under the energetic direction of Mr. H. W. Massingham, one of the most brilliant and venturesome of London journalists, the *Chronicle* subsequently became the favorite vehicle of publishers' advertisements and a weighty authority in the book world. Later, when the attraction of politics proved too much for Mr. Massingham, the literary page came into Mr. Henry Norman's charge who, besides being a frequent contributor himself, gathered about him some of the best English writers. He was particularly successful in the collection of literary news. When *The World's Work* was started in London, Mr. Heinemann proved anew his sagacity by choosing Mr. Norman—of all men the best for the task—to edit it. Since Mr. Norman's day, Mr. Henry W. Nevinson, as I stated last week, has conducted the *Chronicle's* literary page, and until last autumn he was ably supported in maintaining the freshness and variety of its literary paragraphs by Mr. James Milne, who left the *Chronicle* to start a literary journal of his own called *The Book Monthly*, which bears the marks of Mr. Milne's wide literary knowledge and sympathy, and his editorial resourcefulness. The literary page of the *Chronicle* has never been so well done as it is now under the care of Mr. Nevinson. Among its stanchest and ablest contributors are the vivacious Mr. Archer, the witty L. F. Austin, Arthur Waugh, Sydney Brooks, Justin McCarthy, Dr. Robertson Nicoll, Max Pemberton, George Bernard Shaw, Clement Shorter, Frederic Harrison, Richard Le Gallienne, Austin Dobson, Edmund Gosse, Israel Zangwill, and many others distinguished in the world of letters in England.

Mr. Balfour in "The Only Way"
'It is a far, far better thing that I do, than I have ever done; it is a far, far better rest that I go to, than I have ever known"

I have frequently urged a well-known American actress, during the last three or four years, to write out her reminiscences, but her plea is always—not lack of material, dear me, no!—but want of time. By and by—at some more convenient season—she hopes to settle down to the task. *The Book Monthly* for March tells how Madame Sarah Bernhardt got over this difficulty when she began the autobiography upon which she is now engaged. It appears that every evening when she drives from her house in Paris to the theatre a literary friend accompanies her in her carriage, and that he acts as scribe while she reels off her recollections. When he has arranged the matter and put it in shape for her to read, the actress goes over it carefully, and then it is sent to the printer. I wonder if my friend, the American actress, could be induced to follow this plan—an excellent one, let me add, for good talk and a story well told, thrown off with the grace and verve of the raconteur, are the best elements of autobiography.

The editor of *The Book Monthly* has been interviewing a West End librarian on what books are read by the cultured, fashionable, and wealthy people of London. Mr. Thomas Verrinder has been for twenty years the librarian of the Grosvenor Gallery Library. He gives some personal recollections of Gladstone, Lord Goschen, and Lord Randolph Churchill, but there is little else that is new in what Mr. Verrinder has to say about the books read by London society. Commenting on the fact, with some regret, that readers do not want advice nowadays as they used to from librarians as to what they should read, but make a rush for the book in vogue, Mr. Verrinder recalls two amusing incidents showing how a librarian's advice was resented by a fashionable lady and a well-known clergyman in London. One day two charming young girls called at a popular library and asked for Zola's *La Terre*, then in its first English translation. It was handed to them by an assistant, but happening to notice this, the librarian stepped up and said courteously to the elder of the two that he was sure there must be some mistake, and would she allow him to assist her to choose another book. Being a persuasive librarian, he was allowed to have his way, and the young girls departed, not, however, altogether pleased, as, indeed, was shown next day, when their mother, a lady of title, walked in upon the librarian, and demanded to know by what right he presumed to dictate to her daughters what they should read. After crushing the offender for his presumption she wound up by carrying away the book which had been the cause of the trouble.

"You see," said Mr. Verrinder, "that was a case where good—or, at all events, well intended—advice was resented." The other experience of the same librarian lay in giving advice which was also resented, but adopted. An elderly divine, whose name and works are generally known, was a constant visitor with whom the librarian had almost daily intercourse. "Well, Mr. Librarian," said the divine, dropping in one forenoon, when Zola, some years ago, was on a visit to England—"well, there is a great fuss over M. Zola's visit to London. For myself, I have doubts whether he is a proper subject of so much adulation." "Zola," answered the librarian, "is one of the chief representatives of French literature, and although his realistic literary methods may be questionable, he is undoubtedly a master writer, and sincere to a fault." "That may be," quoth the divine, "but still the subjects of his books are unnecessary and unpardonable. I judge from what I am told, because I would not look at one of them for the world." "I can only say," urged the librarian, "that they seem to be written with a good object, and that they may have good results." "No right-thinking man or woman," concluded the divine, "would think of reading Zola's books, and, as I have said, I would not open one of them." Thereupon the scandalized divine went away. That very afternoon the librarian noticed him again at one of the counters. Curious to learn whether this second visit had anything to do with the talk of the morning, he inquired of the clerk what book Dr. So-and-So had taken out. The answer was "*Nana*, sir!"

This reminds me of a good story which the author of *The Refugees* tells on himself. In a little Irish town there is a convent ruled by a Mother Superior whose eyes have seen their best days. Going into the local bookseller's shop, she picked up a volume which she took for a work by Canon Doyle, a dignitary of renown in those parts. She bought it, and had it read aloud for edification at the midday meal. The edification in the opening chapters seemed far to seek. Never had love-making been so freely alluded to within those secluded walls. The novices were thrilled. "Well, well," said the Mother Superior, "the dear Canon is preparing us for a miracle of grace. The frivolous flirt, by the mercy of heaven, no doubt ends by taking the veil." Then came the awakening. Some one perceived that the title-page bore the word "Conan" and not "Canon." The discovery reached the ears of the Mother Superior. "Well, well," said she, "the bookseller of whom we bought the book is a pious man, and now that we have paid for it, we should be wasteful not to read it to the end."

How Li Hung-Chang Foretold the War

By Carl Frederick Ackerman

ONE man at least knew that trouble must come in the Far East. That man was Li Hung-Chang. He knew that the day would come when the Japanese would be strong enough to pit their pigmy strength against their now giant foe, Russia, whose aim for many long years has been to seek by every means a channel to the seaboard. During the days the allied troops occupied Peking, and pending the return of the Emperor and the Empress Dowager and the Chinese court, the Viceroy was almost a daily visitor to the Russian legation, and, indeed, his palacan, with its highly uniformed, swift-footed carriers, was hours at a time in Legation Street while the Russian diplomats were discussing Manchuria. Li Hung-Chang spoke no English. If he spoke the Russian language, and of this I am in doubt, he gave no evidence of this knowledge to the members of the Russian legation. Manchuria, then as now, was a plum for which Russia reached, and the hand of the Viceroy was loaned for the moment to aid in plucking it. That is one reason Li Hung-Chang understood the purpose of Japan in increasing her army, and creating a naval force the power of which recently was so potent off Port Arthur.

The Viceroy told me that the trouble in the Pi-chi-li province was merely a riotous movement which should have occasioned little alarm. Yet he said the European race might well feel concern in years to come when a greater and more violent movement would be undertaken to drive into the sea all foreign residents of the Empire. He meant that all China would rise. He frankly stated that a great tidal wave of Chinese hatred and viciousness, engendered by years of bitter animosity, would swoop up the Yangtse-Kiang Valley and engulf those hapless foreign residents along its banks, rush with irresistless force into the interior to annihilate white people wherever they may be found. Li Hung-Chang intimated that it was to Japan to whom China might eventually look for the brains with which to train her millions into an overwhelming machine of war.

As I stated, Li Hung-Chang spoke no English. If he did he was crafty enough to conceal the fact. During the two days I spent in his presence there were moments when he dreaded to talk. At other times he was anxious to say something which might place him upon record as prophecying the future. We spoke of the Boxer uprising. Every word was translated by his secretary.

"Now that the war is over will the Emperor and the court return to Peking?" I asked. He was seated in an armchair upon his veranda, his head far back and his breathing labored.

"Do you think the war is at an end? Will the Chinese court return? How can I tell? You want to know if the Pi-chi-li province will begin to thrive again? When something that must exist has been destroyed it must be reconstructed. Villages have been levelled to the ground, women and children driven to sleep under the stars. The fields are barren. There is no rice nor fish in the corner where once stood the mud abode. The people must eat. Soldiers have trampled upon one of China's greatest provinces, set foot in her capital, and penetrated the confines of the oldest and most sacred city in the world. Temples have been defiled, their ornaments stolen, their decorations ruined, and traditions of temple and palace destroyed."

Li Hung-Chang did not refer to Russia at that time. It was with difficulty that he was prevailed upon to refer to that country at all.

"Russia will settle in Manchuria; she has come to stay?" I ventured.

"What makes you think Russia will stay in Manchuria?"

"It is generally understood that Russia would like to acquire Manchuria. It would give her an outlet to the seaboard. Then there is the railroad which she must protect against any uprising by the Chinese in that province."

He laughed, or, rather, he cackled, and it was not pleasant to look at him. His body shook slightly and the mirth ended in a spasm of pain. He was serious in an instant. That laugh reminded me of the state of mind in which Li Hung-Chang must have found himself after the massacre of the soldiers at Port Arthur by the Japanese. That event in China's history cost Li his yellow jacket. The money invested in him by the government with which to purchase arms was used in collecting a dangerous complement of rapid-fire rifles which the Austrian government had discarded. Many Chinese at Port Arthur were killed by the explosion of their own arms. Li bought them cheap. He pocketed the few million dollars as a result of his perfidy. Yes, he surely must have laughed when he heard of the slaughter at Port Arthur. His humor ofttimes took a peculiar vein. He continued:

"Russia may want Manchuria. It is no news. But how can I tell you?"

"You go to the Russian legation every day. You favor Russia, and you are the chief adviser of the Chinese court," I suggested. He did not like the question, and he said something in Chinese that sounded like a swear-word.

"Can I not visit my friends? There is no intrigue. I know these men a long time. Just a friendly visit."

All the same these friendly visits were the means of bringing Russia and Japan to each other's throats.

"The powers will not permit Russia to acquire this territory," I ventured. "Then, there is Japan. What will Japan say?"

Now he snarled. One could not blame him. It was touching a delicate subject with the old man.

"What can Japan say? And are not the Mikado's soldiers the best equipped in the world? Why did they perform so well on the march to Peking? They had been trained, they are being disciplined to-day for some great trouble that is to come. No one knows the resources of the Japanese Empire. Her navy is in-

The last Interview with Li Hung-Chang, in which he gave his Views of the "Yellow Peril," and foretold the War between Russia and Japan

creasing, her regular army is immense, and her regiments in reserve are without number. She is preparing."

"Do you mean that Japan will some day fight Russia?"

"Russia took Port Arthur after Japan had taken it from the Chinese. That is all I will say. There is a term in your country, 'Get even.' I heard General Grant, the greatest soldier in the world, use it. Perhaps Russia—"

He paused. Complaining of fatigue he called to his henchmen and asked that the curtain which separated him from his apartments be removed. He would retire. He further asked to be excused for the day. At that time I paid little attention to the remarks. They are as vivid to-day as when they were rolled from the mouth of his scowling, overworked secretary and translator.

There was no doubt about Li Hung-Chang's attitude at that time. He had something to say that in later years he wished the world to remember. He did not wish to be misquoted nor did he care to have his remarks repeated while he lived. He was emphatic as to this point.

At eleven o'clock the next morning he posed for what were the last photographs taken of him. He was in much better humor over the report of his physician, and appeared to walk with less effort. He talked about the Japanese and the excellent work done by these soldiers in the march to the relief of the legations. At times I could not understand him. He spoke in parables, but enough of his thought reached me to make me believe that he really saw that Russia and Japan might meet in conflict in Chinese territory. I caught one remark to the effect that Japan would become the friend of China; that their interests were mutual.

I asked him, "Do you think the secret societies of China will again revolt?"

"Not now; not so soon; they have been punished, these naughty children. The allied troops left many dead and wounded behind them, and many of the innocent suffered; suffered not only bodily, but saw their fields trampled upon and the means of obtaining a livelihood swept away. But the day will come," and the eyes of the octogenarian flashed fire, if those beady, fishy eyes could gleam, "when no foreign resident will be safe. There will be trouble in Manchuria long before the Chinese hordes will move against the missionaries and the people with white skins."

"Russia and Japan will war?" I asked, in surprise.

"What is Japan arming for, for what great epoch in her history is she preparing?"

He saw that he spoke too quickly and upon a subject that might cause him trouble before his soul left the earth. Life, even then, was very sweet to him.

"It is only my idea, my prophecy," he hastened to explain. "How can I tell? Of the Chinese I will talk, because concerning my own race I am familiar with their traits, their character. The world has been led to believe that the Chinese are cowards and will not fight. I know better. My 5000 men have fought, and fought well under me. The Chinese troops under General Gordon swept everything before them. It only requires an efficient officer to enthuse the men of my race and teach them to shoot straight and stand while they are shooting. They can be trained. Their foes will learn to know them better some day, some day, I say, and you, young man, may live to see the day when millions of Chinese will fight under their standards as their brothers of the same skin, the Japanese, are now able to battle for the honor of their Emperor and their empire."

"Who will train them?" I was impolite enough to yell into the face of his yellow-skinned interpreter. His sinister words had a bad effect. It opened a channel of thought to the awfulness of a situation with Chinese troops overrunning Europe and Asia. He had talked too much and he knew it. His face was benign now and innocent as that of a child. All the fire and animation had departed.

"The Japanese may need help some day. Should they need power they may look across the Yellow Sea. What would Japanese officers do with the apparently indolent and peace-loving Chinese of to-day? What did the English do with the Chinese at Wei-hai-wei? The English made hard-fighting men of them, and I myself have made them fight as no Chinese ever fought before. We smothered rebellions as easily as your thumb and finger can snuff the life from a candle-flame. We reached the offenders and we punished them."

And, indeed, Li Hung-Chang knew how well he had punished them—knew better than their own kin who were allowed to bury the maimed and mutilated bodies of the men who had been tortured for leading intrepid spirits like their own against the word of the Emperor and for jeopardizing the peace of the empire.

"You think the Chinese will rise again? Have they not been taught a lesson?"

"Yes, yes, they have been taught—not to forget. You touch the Chinaman's stomach, you render conditions such that his family must suffer for want of food, and you have got a bad man to deal with."

"Do you know that fifty million people in China are dependent upon the waterways for a livelihood? Even now syndicates have asked for concessions in the southern provinces and those along the Yangtse-Kiang River. For what purpose? Why, for the construction of railroads connecting Hongkong with Hankow, on the upper waters of the great river. What do you suppose this means to millions of my people? It means that those who made their living by handling freight on the river will find the transportation absorbed by the railroad corporation. This river traffic is a serious asset in the wealth of the river. It is no uncommon thing for a boy to be born upon one of these Chinese junks, live to become a great-grandfather without leaving it. They sleep and eat upon the junks; all moving within a little world of your own."

"You mean to infer that should the railroad displace this river traffic it would cause the people to rise?"

"Was not the Taku-Peking Railroad largely responsible for the outbreak in Pe-chi-li? I tell you yes."

"It would be a terrible menace to all foreign residents in China?"

"Menace, indeed! The rioting in Pe-chi-li would be small compared to it. Think of the thousands and thousands of incensed Chinese who would hasten to the arsenals to arm themselves. Much white blood would be shed, and it would take the allies a much greater time to subdue these southern Chinese."

Li Hung-Chang spoke at some length along this line of thought, but when the subject touched the Japanese he became reticent. He was thinking at that time of the hour when Japan might be called upon to preach to her natural ally the hope that some day the yellow race might dominate the globe.

The beginning of this war in the East is not the end by any means. Should Japan be driven to declare peace and recoup her losses as best she may, she has only one ally towards whom she may look. Russia will never be able to subdue the Chinese. An affiliation with a white race is distasteful to those of the yellow skins.

Japan to-day is an object of admiration to the men of affairs of the Chinese Empire. If the latter would emulate the example in progress and development displayed by Japan, China will become a powerful factor in the future of the world. If the Japanese officers swarm to China with the purpose of instructing the millions of Chinese, who would willingly become soldiers, it would mark an epoch in the history of military life of the nations of incalculable import.

Never can the powers permit China to arm herself; never can she be permitted to float a formidable navy. Suppose China bids defiance to the world, as she can do allied with Japan, as victorious as Japan has been upon the water. China can build ships; she can make powder and lead, and she can make her own guns. She can march into Europe with her legions. She needs the services of five thousand Japanese officers, and with five years from this date the foundations of republic and monarchy would be shaken by the awful truth that an overpowering army lay in the Orient, capable in numbers of sweeping around the world.

Li Hung-Chang looked into the future, though he said little. He spoke enough, however, and heaven forbid that his dreams shall ever be realized.

Japan

By Archibald Hopkins

ROUSED from the slumber of an age-long night,
She dropped the lacquered armor She had borne,
Nor thought Herself a recreant, forsworn,
Fronting with steadfast eyes the growing light,
Her nightmare dreams all put to instant flight.
Hers not the part, unfruitful years to mourn,
Hers not to cling to what She saw outworn.
She planned anew, based on Her ancient right,
A fabric, strong Time's wasting to defy,
Then turned Her thought to choose from out the West,
Whate'er Her wisdom taught would serve Her best;
And now She stands Queen of the rising East,
To lead its Peoples higher paths to try,
Till Nations clash no more, and wars have ceased.

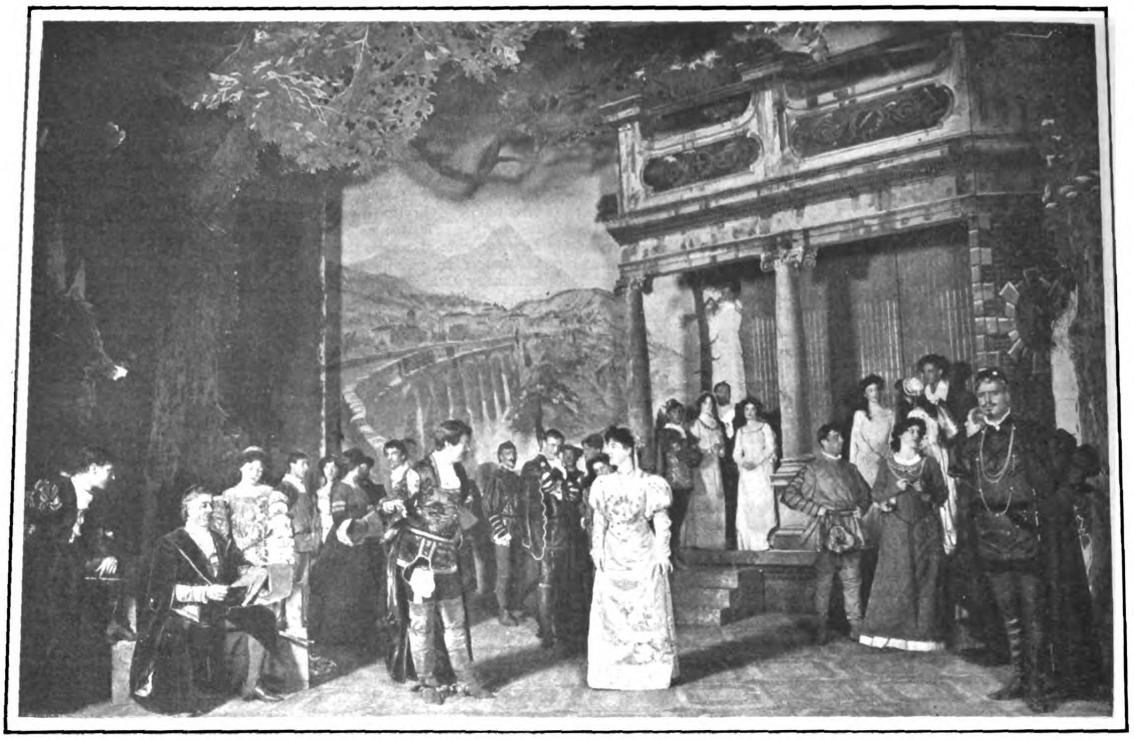
The Situation in Russia

By Sydney Brooks

LONDON, *March 23, 1904.*

EXILED Russians are like emigrant Irishmen. Their enmity towards the country that has driven them forth is unbending and half ferocious. The English have never realized, and even now do not understand, how much they might have saved themselves had the exodus after the Irish famine been assisted and guided by a sympathetic government. The Russian bureaucracy is perhaps just as little aware how enormously Czardom is prejudiced abroad by the bitter activities of Russian exiles. The public side of those activities is well illustrated by the case of the London *Times*. About a year ago the Russian authorities expelled the St. Petersburg correspondent of the *Times*. It was a fantastically foolish step. So far from stopping the flow of Russian news to Printing-House Square it immensely increased it. The *Times* lost its regular correspondent and gained a score of irregular ones; and the irregulars were naturally members of the disaffected classes. The result is that for the past twelve months every weak spot in the Russian polity has been exposed in the columns of the most powerful paper in the world, every grievance of the "intellectuals" aired, and a searching light thrown on the details of Russian administration. The *Times* at this moment is vehemently pro-Japanese and even more vehemently anti-Russian; and the influence of the *Times* not only in England but throughout Europe is immense. That it should have been converted through the stupidity of the bureaucracy into the organ of the revolutionaries who feed it with abundant and singularly accurate information of the kind that the Russian government most objects to seeing in print, shows the quickness of the Russian "opposition" to seize upon every chance of injuring the autocracy. But even more pronounced is the attitude of individual Russians whose "liberalism," unacceptable to the pure gospel of absolutism and orthodoxy, has obliged them to seek a home outside the empire. Brilliant Russian women, ardent and implacable men, are to be met with by the score in London, and to listen to them holding forth on the war is a strange and almost uncanny experience. They are literally praying for a Russian defeat, not for the gratification of their private grievances against the autocracy, but from the conviction that Russia to be reformed must first be humiliated, and that the triumph of Japan would so weaken the bureaucracy and so enrage the people as to make the demand for a wider and more representative system irresistible.

This is a view well worth examining. I have already given some reasons for doubting the widely spread opinion that Russia's effectiveness in the field may be hampered by an internal explosion at home. It is not a conclusion which any one who has really studied Russian history and character is likely to accept. Those who adopt it fall, as it seems to me, into the common fallacy of thinking that no system can be representative which does not conform to Western models. They argue that the war is not a really national war, because the people have not sanctioned it, because the bureaucracy is alone responsible for it, because the Far East, anyway, is not a question that really touches the *muzhik*. But to this it may be answered that Russian patriotism—and no patriotism is more intense because none is so impregnated with religious sentiment—centres not in the bureaucracy, but in the Czar, and that an appeal to arms emanating from the Czar closes all gaps and makes the Russian millions more truly one than was England during the Boer war. War always consolidates, and to suppose that while it lasts all Russia will not be passionately united, because a certain number of elected delegates have not debated and voted on the war and taken a hand in the negotiations that preceded it is utterly to misconceive the spirit and scope of the autocratic system. Again, this is a war waged by a Christian against a non-Christian power. For that reason alone it thrills the Russian consciousness with a fervor that to us may seem mediæval in its intensity. Nor is it true that the *muzhik* has no interest in the Far-Eastern question. Running all through the tale of Russian history you find this ceaseless ideal, instinct, ambition, aspiration, policy—call it what you will—that drags Russia towards the domination of the East. It is the *muzhik's* imperialism, vague, inchoate, formless no doubt by the side of Roman or German or British imperialism, but stirring, nevertheless, in the depths of his being, and needing only the shock of war to make it vital. When to all this you add that the enormous majority of Russians have no political longings in the Western sense whatever, that autocracy and orthodoxy perfectly satisfy them, and that the disaffected elements are scattered, fragmentary, and unorganized, it will be seen that the chances of anything like a formidable *émeute* are of the slightest, and that in this war, as in all others, Russia may rely without misgiving on the self-sacrifice, loyalty, and determination of her peoples.



Nevertheless, the conflict synchronizes with a critical phase in Russia's internal development, and its after-effects may be of real moment. We are all overapt to think that stability and continuity of policy must be one of the attributes of an autocracy. As a matter of fact, at any rate in domestic affairs, the Russian autocracy has always shown itself singularly undecided and inconsistent. Take, for instance, its attitude towards education, now liberal and helpful, now restive and alarmed, now capricious and even repressive. A Czar of spirit and determination like Alexander II. can in a few years reorganize the state almost from top to bottom, leaving it to his successors to complete or stifle his work at will. As a rule, they prefer to stifle it. Conservatism takes alarm, and a reforming Czar is automatically followed by a reactionary Czar, who spends the best part of his life quietly nullifying his predecessor's innovations. That is why progress in Russia advances, when it advances at all, by fits and starts and sudden hurried jumps. That is why hardly one of the many great reforms that ushered in the second half of the last century has escaped mutilation. That also is why one need never despair of Russia, because even if a reactionary Czar succeeds a liberal Czar, there is always an even chance that a liberal Czar may succeed a reactionary Czar; and the frontiers of progress, once pushed forward, are never pushed back quite to their original position—each time there is a gain. The opening of the Russo-Japanese war roughly coincided with an upward movement towards liberalism. For the past five or six years there have been signs that the policy of repression, after a sway of thirty years, was beginning to ebb, and that Nicholas II. might, after all, leave behind him a name as a reformer. He has the reformer's temperament, but not the reformer's decision, and too much should not, therefore, be expected from him. It is not so much insight as strength of will that is required of a Czar who means his liberalism to be effective.

The most striking sign of the reaction from the obscurantism of the past generation was, of course, the manifesto issued by the Czar in March, 1903. It was, in effect, a programme of reform on which "our ministers and the chief officials concerned in the matter" were commanded to submit "their views as to the execution of our intentions." The manifesto pledged the Czar to a policy of religious tolerance, to the improvement of the position of the rural clergy, to a relaxation of the passport system, an abridgment of the authority of the commune over the individual, and an extension of local self-government. These reforms have not yet been carried out. Some of them perhaps never will be carried out. The Orthodox Church, for instance, is not going to take any practical steps yet awhile towards securing freedom of worship for all sects. It is not going to amend that fruitful law which prescribes that every child, whose father or mother is or has been a member of the Church, shall be brought up in that communion, even against the wishes of both parents. The really vital promises in the manifesto were those which held out a prospect of restricting the power of the commune over the individual and those which foreshadowed a revision of the agrarian laws, to be discussed in the zemstvos (provincial councils) "with the closest collaboration of the worthiest public men invested with the confidence of the public." Their essence, of course, is not revolution, but readjustment—readjustment, however, that enlarges liberty and makes for at least local self-government; and whether they are carried out to the last letter or not, their significance remains. They are a recognition from the highest quarter that conditions are changing in Russia as everywhere else. Wherein does the change consist? Education, for one thing, has rapidly advanced of late years, especially primary education among the poor. With a falling percentage of illiteracy has arisen a growing taste for reading, and reading leads to discussion, healthy curiosity, and mental alertness. Religion, too, especially the teaching and example of such evangelical sects as the Stundists and Pashkovites, has been within the last decade an exceptionally powerful impulse in the direction of self-help, cleaner living, and social improvement. But the most decisive change that has taken place in Russia of late years is the rise of an industrial class.

How M. Witte, when he became Minister of Finance, set deliberately to work to stimulate manufactures, to call on the towns to make good the deficits of the country, is a thricetold tale. Whether he had altogether worked out the effects of his policy on the Russian character and the Russian system of government is another question. But it is worth noting that under his inspiration Russia has gone further than any other nation in the direction of state monopolies, and that railways, vodka, tea, and sugar already are, or soon will be, the exclusive property of the government. It is quite conceivable that M. Witte intended that the state should eventually own everything ownable, and that the bureaucracy should be extended till it practically embraced all the able-bodied artisans of the empire. However that may be, it is undeniable that the Russian *muzhik*, drafted into the towns and turned into an industrial working-man, has proved a formidable problem. Even under a factory system which is nothing if not paternal he has learned to strike, to develop grievances, to organize demonstrations; and those demonstrations, far too large to be dispersed by the police, have been taking on a more and more political tone. At the same time the peasants left in the communes have been hard hit by the rigidly protective tariff necessary for M. Witte's industrial policy, and have been driven into intimidation, arson, and all those terrible methods of coercion employed by the Irish Land League. Students' riots, again, have multiplied within the last five years at an excessive rate, and are beginning to assume a more decisively political character than ever. Finally, the landowners and country gentlemen, who control the provincial councils, took advantage of an official inquiry into the state of agriculture in 1902 to formulate a list of political measures that, if carried out, would amount to a peaceful revolution.

For these and many other symptoms it had become apparent that Russia was on the eve of a considerable change, and the Czar's manifesto had therefore the additional importance of being the product of forces long at work. Will those forces be more or less operative when the war is over? I think one may fairly reason that their effectiveness will be increased rather than diminished by the struggle with Japan, and that they will profit by the intellectual stimulus, the stir in the national life, which every war produces.

The Century Players in "Much Ado About Nothing"

The Century Players, under the direction of Mr. Sydney Rosenfeld, produced Shakespeare's comedy, "Much Ado About Nothing," at the Princess Theatre, New York, on March 14. Miss Jessie Millward was "Beatrice," Miss Florence Rockwell "Hero," Miss Cora Williams "Margaret," Eugenia Flagg "Ursula," William Morris "Benedick," J. W. Albaugh, Jr., "Claudio," Theodore Roberts "Leonato," Boyd Putnam "Don Pedro," Martin L. Alsop "Don John," and Frank Hetch "Dogberry." Mr. Rosenfeld's aim in this enterprise is to return to the stock-company system of the days of Lester Wallack, producing the best modern plays by native and foreign dramatists, and reviving the classic comedies. Among the productions in contemplation are Shakespeare's "Othello" and Robertson's "Ours"

A Scene from "The Ruling Power"

"The Ruling Power," a new play by Elwyn Barron, an American living abroad, was produced March 14 at the Garrick Theatre, New York, introducing Miss Katherine Kennedy as a star. The play has for its theme the evil power of hypnotism in contrast with the love of a woman, both exerted on the character of a weak man. "Dr. Edward Maxwell," a hypnotist and friend of "Hawley Harwood," loves "Harwood's" wife "Eleanor." He succeeds in getting "Harwood" completely under his power, and gradually demoralizes him through gambling and dissipation, while he makes himself obnoxious to "Eleanor." Finally "Maxwell" exacts a promise of suicide from the hypnotized man; but at the crucial moment "Eleanor" confronts them. "Harwood" falls in a faint, apparently dead. "Maxwell" refuses to revive him, but "Eleanor," by the power of her love and will, succeeds in bringing him to life, his strength and self-respect restored, while "Maxwell's" purposes are defeated. "Maxwell" is played by Vincent Serrano, "Harwood" by Orrin Johnson

NEW PRODUCTIONS ON THE NEW YORK STAGE

MISS JULIA MARLOWE

Miss Julia Marlowe, who has not been seen in New York this season, is playing on tour. She appeared recently at Pittsburg as "Mary Tudor" in "When Knighthood Was in Flower," and as "Parthenia" in "Ingomar." Next season, it is announced, Miss Marlowe will be seen in Shakespearean rôles, appearing with Mr. E. H. Sothern in leading parts

Correspondence

SOME INTERESTING VIEWS FROM A NEGRO CORRESPONDENT

LAFAYETTE ALA *Mar 17th 1904.*

To the Editor of Harper Weekly

sir. I see from Week to Week in your paper Wher some Southern White people is Charging the Negros of South as Wanting social Equality With White People that I denicy as untrue and without foundation All the Negro Wants ore has Ever Wanted is Equal rights Before the law of his Country and I ask any Man North ore South if that is wrong for him to aske. that much if so Why so fare as setting down to the same table and eating With White People ore setting their Palar talking with Them I think my self as far above that as they do I live on my own labor sleep in my own bed and I think I have about as good a one as any body ore suit Me as Well at lest they say let us alone Well. We dont so What we Want is help from North and South to help us in Educating and training our people to attain to Highest type of Civilization When that standard reach then Well Will feel our responsibility as a nation All this talk of Southern Representative about Negro Equality is untrue and reliable as any Statement ever fell from human lips let them show one Case Where Negroes have Ever attempted Social Equality in the South so fare as Booker T. Washington is concerned he Belongs to the White race as much so as he dose to the Black for I am told that his father Was White Man and I have never seen where he has aske for social Equality

I take it as compliment confered upon me When a White Man Says that he dont Want to associate with me all Negroes should so Consider it I Want No White Man in My house unless it is on business and I am sure I am not going to his house unless he send for me ore I go to see him on some business And We all have that to do some times but So fare as going there to associate With him We dont do it and there is no excuse for it as I see Now We have a mix race Among us Who some times May Want to associate with them that is perfectly Naual for them to follow the lust of their fathers but I am talking of fullblooded Negros

the South has tried every thing to Justify themselves About their treatment of the Negro and all of them has failed there is but one Way to solve the Negro problum And that is do unto him As You Would that he do unto you that is the Way the Way the Divine Master said for us to do if Education unfite him for good service then the Missionaries business ought to Be stoped in other countries. Because they are governed by some other powers probly at Peace With them and if you go there instructing them your Way they Will soon revolt against their ruler as did panama But I am glad to say that that statement is untrue the better a people is Educated the better it will be for the World No Good thinking man will deny this to say that Education Breed crimes cannot possibly be true Because if it did the White people Would be heathan for they Been Educating over thousand years look at the record and see the Crimes committed by them then Why should they Expect the Negro to quit it when it is every day occurence among them there notherthing saved the religion of the lord Jesus Christ Will Keep us from Crime the Negro I mean the Black Race is no more responsible for what the Yellow race dose than the White Man is Responsible Because he Belong to the one as much as the other I Wish that When Crimes are committed against the White race they would state his color so We Will Know where to Please him to Charge all the crimes against the Afean race is unjust

So fare as White Women is Concerned I dont never give that a thought I Believe in Lafayette a White Woman can go Where she Pleases at any time of night in perfect safty A White Man can go from Home and Be gone for month and leave a hundred Negro men on the Pleace with his Wife and Children and Every thing gose on all right Youse Respectfuly,

JOSEPH LILES

[Our correspondent's orthography is imperfect, but his sentiments are worth consideration. What he says of the divided responsibility for the behavior of mulattoes is not less indisputable than it is important.—EDITOR.]

NEGRO BURNING *VS.* JEW-BAITING

DETROIT, *March 7, 1904.*

To the Editor of Harper's Weekly:

SIR,—On page 346 of the March 5 issue of HARPER'S WEEKLY you state that the people of the United States "do not like Russian Jew-baiting"; but what about the beam in our own eye?

Is it becoming in us to criticise the treatment of Russian Jews in Russia when such conditions prevail in our Southern States? There they burn people—tie them to a stake while alive and burn them! In the last case Mr. Washington tells us the man was not a proven murderer, but was accused of having murdered a man—white, of course. One is reminded of the times of Charles X. and Philip II.—and this is the twentieth century! What must the nations of Europe think of us and our boastings of progress and respect for the rights of others? Then you further say that "Russian bureaucracy does not strike us favorably." Are our own departments free from scandals? Certainly not at present, and would you offer as exemplars to Russia the conditions prevailing in the majority of our municipal governments?

That of New York city for the last quarter of a century was a subject of comment in the English Parliament a few days ago. Sometimes one must doubt whether this is a nation of high ideals when one considers that it is only eight years since our country came near to being turned into a nation of thieves. It was a very humbling experience that campaign of 1896. Is it not well for us to see ourselves as others see us? I am, sir,

HARRIET STRONG WITBECK.

[For our part, negro burning in the United States does not make us favorable to Jew-baiting in Russia. We like neither.—EDITOR.]

A KENTUCKIAN CALLED TO ORDER

YPSILANTI, MICHIGAN, *March 8, 1904.*

To the Editor of Harper's Weekly:

SIR.—In the House of Representatives, on the 29th of February, George C. Gilbert, of Kentucky, in a set address, without immediate provocation calling for charitable extenuation, referred to an honorable fellow citizen, as "A black odoriferous geranium by the name of Dr. Crum." Does the State of Kentucky acknowledge that she is well represented by such exhibition of refined sensibilities? Next in order he mentions a man whose pluck, self-denial, splendid talents, administrative success and soundness of judgment are the comment of all enlightened nations, a "a certain other darky by the name of Booker Washington." And still the South is saying: "Let us alone. We understand the negro. We are his best friends."

The negro problem will never be settled until it is settled right. And it will never be settled right until the negro's manhood is respected as much as the white man's manhood and both according to its actual individual worth. Grover Cleveland never disappointed me more than when he hastened to nail as a lie the implication that he had ever suffered a negro to dine at his table, without so much as a single word of noble recognition that he would be honored by the presence at his table of any educator so justly eminent as the President of Tuskegee.

A short time ago an Ohio college president invited me to dine with him at the Hollenden House, Cleveland. Among his guests at the table were two deep-black black men—one a professor in a Southern university and the other a notable orator and financier. The conversation took a wide range of intellectual subjects, and I can scarcely recall a time when there was better play of words or deeper wisdom in serious comment. In gentlemanly decorum, in sensitive courtesy, in self-respecting dignity, these two were the equals of any and examples to more. Sometimes I wonder if the real men of the South have not been silenced by fear of personal harm, and so allow a Vardaman, a Tillman, a Gilbert, and such coarse-tongued vociferators to talk on unrebuked and uncorrected. If these men be fairly representative of Southern sentiment, then men who are trying to be Christian men in a Christ sense can never consent to leave the question of negro franchise, negro education, or negro recognition to be determined by such a perverted public opinion. I am, sir, O. W. WILLITS.

"NATIVE SONS OF THE GOLDEN WEST" FOR HEARST?

SAN FRANCISCO, *March 15, 1904.*

To the Editor of Harper's Weekly:

SIR.—So far as California is concerned, it is hazarding nothing to say that its delegation to the St. Louis convention will be unanimously for Mr. Hearst. It is fair to say, however, that all Democratic papers in this State are not advocating his candidacy.

Mr. Hearst, while a citizen of New York State, and Representative in the Lower House of Congress for a Congressional district of that State, is a native of California, and is a member of the fraternal organization, "Native Sons of the Golden West." This organization is politically non-partisan in a party sense. But when it is a question of extending honor by political preferment to one of its members, then, to a man, the organization is partisan in support of the "Native Son" candidate. It includes several thousand voters. State pride would carry California for Mr. Hearst, by a handsome plurality. Furthermore, Mr. Hearst has effected, or is effecting, in many if not all the States, such an organization as constitutes a good working machine to turn out delegates in his support. I am, sir, JNO. AUBREY JONES.

ROOSEVELT IN CALIFORNIA

SAN FRANCISCO, *March 11, 1904.*

To the Editor of Harper's Weekly:

SIR,—In the last number of the WEEKLY I see a letter published by you from J. Aubrey Jones, intimating that our President is not strong in this State.

This is a mistaken view. California will send a solid delegation to Chicago instructed for the President. I estimate a majority of at least 20,000 as against a conservative Democratic candidate, and from 30,000 to 50,000 if the Democrats make the issue *class hatred.*

I have lived in this State for over forty years, and I think I know something as to the political feeling here. I am, sir,

F. P. STONE.

President Bancroft-Whitney Co., Law-Book Publishers.

LOS GATOS, CAL., *March 15, 1904.*

To the Editor of Harper's Weekly:

SIR.—Your correspondent J. Aubrey Jones speaks of himself as "a Republican (as was Lincoln) albeit he has not always voted that ticket during the past ten years." It is hard on Republicans in California to have this kind of a Republican (a committeeman in a rabid Democratic club) mislead the readers of HARPER'S WEEKLY. He had an off year in 1896, also in 1900, and now apparently again in 1904. I am, sir, F. H. MCCULLOCH.

Progress of the War

THE important results of the war in the Far East prior to March 25 may be briefly summarized as follows: The Russians have had ten war-vessels disabled—the *Czarevitch, Retvisan, Poltava, Pallada, Novik, Askold, Diana, Variag, Korietz*, and the torpedo-boat *Stereguschtchi*. Of these several have been or are being repaired and made ready for further use. The Russian cruiser *Boyarin* and the cruiser *Yenesei* were sunk by accidental contact with a mine; but the *Boyarin* is reported to be again in use. Five Russian commercial steamers were captured by the Japanese during the first week of the war. Japan is known to have lost one torpedo-boat, and several other of her ships are believed to have been injured in the Port Arthur engagements; but definite knowledge of this is withheld. Port Arthur has been repeatedly bombarded, with damaging effect, by the Japanese, and Vladivostok was attacked by them on March 6, though without serious damage to the port. According to the most reliable reports, there have been no land engagements of consequence.

March 25.—On March 22 the Japanese fleet, under Vice-Admiral Togo, made another attack on the Russians at Port Arthur, which is described as follows in an official report from the Vice-Admiral made public on this date:

"The combined fleet acted according to the plan arranged. Two flotillas of destroyers were outside Port Arthur, as instructed, from the night of the 21st until the morning of the 22d. Although during this time our destroyers were under the fire of the enemy, they sustained no damage. The main fleet arrived off Port Arthur at eight o'clock on the morning of the 22d. I despatched a part of the fleet in the direction of Pigeon Bay, and ordered the battle-ships *Fuji* and *Yashima* to make an indirect bombardment against the inner side of the port. During the bombardment the enemy's ships gradually came out of the harbor, and at the time when the indirect bombardment stopped, which was about two o'clock, the number of Russian ships was five battle-ships, four cruisers, and several destroyers. . . . The enemy's ships shelled us indirectly, and many of their shots fell near the battle-ship *Fuji*, but our ships sustained no damage. About three o'clock our vessels withdrew off the port."

March 26.—News was received to-day of the appointment, on March 24, of Adjutant-General Sakharoff, Chief of the General Staff, to succeed General Kuropatkin as Minister of War.

March 27.—A telegram from Vice-Admiral Makaroff, dated March 26, tells of an important move of the Russian squadron:

"I have the honor to report to your Majesty that I left Port Arthur to-day with battle-ships, cruisers, and torpedo-boats in order to make a reconnaissance of some adjacent islands."

Admiral Makaroff's daring exploit is believed to have been undertaken with the aim of locating a possible Japanese base in the neighborhood of the Russian stronghold.

March 28.—The most important event of the week occurred on March 27, when an attempt made by the Japanese to block the harbor entrance at Port Arthur was again defeated by the Russians. The Russian torpedo-boat *Silni*, commanded by Lieutenant Krinizki, attacked and repulsed the six Japanese destroyers escorting the four merchant steamers which were intended to be sunk.

Vice-Admiral Makaroff's official despatch to the Emperor describing the engagement is as follows:

"I beg most humbly to report that at two o'clock this morning the enemy made a second attempt to block the entrance to the inner roadstead. For this purpose they despatched four large merchant steamers, convoyed by six torpedo-boats, to the entrance. The enemy's ships were promptly discovered by the search-lights and were bombarded by the batteries and by the guard-ships *Bohr* and *Otvajny*. Fearing the enemy's ships might break through, Lieutenant Krinizki, commanding the guard torpedo-boat *Silni*, attacked the enemy and destroyed the bow of the foremost Japanese steamer with a torpedo. This steamer turned to the right and was followed by two others, with the result that the three were stranded to the right of the entrance. A fourth steamer went to the right of the enemy's ships, and likewise sank to the side of the fairway. The *Silni* then battled with the enemy's six torpedo-boats. Engineer Artificer Swyereff and six seamen were killed, and the commander and twelve seamen were wounded. At daybreak the enemy's battle-ship and cruiser squadrons appeared, and I proceeded with the fleet under my charge to meet the enemy. The second attempt of the Japanese to block the entrance to Port Arthur has failed, thanks to the energetic defence by the sea and land forces."

March 29.—It was reported to-day that Russia has seized the treaty port of Newchwang, declaring it to be in a state of war.

March 30.—It was reported to-day that on Monday, March 28, an engagement occurred between the Russians (commanded by General Mishtchenko) and Japanese at Chongju, Korea, forty miles south of the Yalu River. The Russians lost three killed and sixteen wounded, and the Japanese lost heavily, though to what extent is not known at the time of writing.

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

WHY MODIFY MILK
for infant feeding in the uncertain ways of the novice when you can have always with you a supply of BORDEN'S EAGLE BRAND CONDENSED MILK, a perfect cow's milk from herds of native breeds, the perfection of infant food? Use it for tea and coffee.—[*Adv.*]

A WELL-APPOINTED home is scarcely complete without telephone service. Low rates. Efficient service. New York Telephone Company, 15 Dey Street, 111 West 38th Street. —[*Adv.*]

DRIVES away care, lends buoyancy to the spirits and strength to the body—Abbott's Angostura Bitters.—[*Adv.*]

PISO'S CURE FOR CONSUMPTION always gives relief in cases of Coughs and Colds. 25c.—[*Adv.*]

ADVERTISEMENTS.

EMPTY NOW
How One Woman Quit Medicine.

"While a coffee user my stomach troubled me for years," says a lady of Columbus, O., "and I had to take medicine all the time. I had what I thought was the best stomach medicine I could get, had to keep getting it filled all the time at 40 cents a bottle. I did not know what the cause of my trouble was, but just dragged along from day to day, suffering and taking medicine all the time.

"About six months ago I quit tea and coffee and began drinking Postum, and I have not had my prescription filled since, which is a great surprise to me, for it proves that coffee was the cause of all my trouble, although I never suspected it.

"When my friends ask me how I feel since I have been taking Postum, I say, 'To tell the truth, I don't feel at all, only that I get hungry and eat everything I want and lots of it, and it never hurts me, and I am happy and well and contented all the time.'

"I could not get my family to drink Postum for a while, until I mixed it in a little coffee and kept on reducing the amount of coffee until I got it all Postum. Now they all like it, and they never belch it up like coffee.

"We all know that Postum is a sunshine maker. I find it helps one greatly, for we do not have to think of aches and pains all the time, and can use our minds for other things." Name given by Postum Co., Battle Creek, Mich.

The one who has to bother with coffee aches and pains is badly handicapped in the race for fame and fortune. Postum is a wonderful rebuilder. There's a reason.

THE TRUANTS

BY A·E·W·MASON

SYNOPSIS OF CHAPTERS

In the opening chapter Pamela Mardale is introduced to the reader as a young society woman of London, beautiful and of rare personal charm. Into her early life has come a mysterious influence which dominates and directs her whole career. What this strange influence is only two of her friends suspect—a young schoolmaster who knew her as a child at Roquebrune, and Alan Warrisden, who is in love with her, and who, though his proposal of marriage is refused, determines to win her. Late one night at a ball, Pamela and Warrisden, while seated on a balcony, observe a young couple leaving a house across the street. Warrisden remarks that there seems to be an air of mystery about them, and that no one appears to know who they are; whereupon Pamela says that she knows something about them, and she gives Warrisden what information she possesses. The young couple are husband and wife, Tony and Millicent Stretton, who live in a gloomy house presided over by the rich but unjust father of the young man. They are in reality kept prisoners by the whims of the tyrannical old man, and it is only by playing truant and going out by stealth late at night that they are able to enter at all into the life of the outside world. This practice they keep up for a year, but finally both of them grow extremely weary of their monotonous life, and in a moment of exasperation Tony determines to go to America to make his fortune, while Millie is to be left behind and sent for as soon as her husband is able to establish a home. Tony has some misgivings about leaving Millie, for he has been warned by Pamela Mardale that she should never be left alone; but at last he departs, after Pamela has promised to be a stanch friend to his wife. Some months later, while Pamela is calling on Millie, two letters arrive. One is from Tony and contains the news that he has lost all of his small fortune and will have to make a new start: the other is from a friend, Lady Millingham, inviting Millie to stay with her at the beginning of the New-year. Millie accepts; and when Pamela, who has also been invited, arrives there she finds that her warning to Tony is having a disagreeable justification. For on the very evening of her arrival she discovers that Millie has become infatuated with Lionel Callon, a gentlemanly adventurer, who is also a member of Lady Millingham's house-party. Late that evening Pamela visits Millie in her room, and inquires about Tony. Millie tells Pamela of her husband's determination to stay in America and attempt to retrieve his failure, and Pamela learns from her that she has sent him discouraging letters, advising him to give up the struggle. She cannot understand why Tony had replied shortly, saying that she must not expect to hear from him until he had reestablished himself in her eyes. Millie tells Pamela that she believes her husband's reticence to be due to the fact that he no longer cares for her. Pamela assures her that she must be mistaken, but she returns to her room much troubled. She is impelled to do something to help untangle the situation, although the recollection of her own history warns her. But she has given her promise to Tony to befriend his wife, and that is one thing she could do. She wires Warrisden to come down by an early train. When he arrives, Pamela tells him that she needs him, and that she is going to ask him to help her. She has been, she says, a looker-on in life ever since an unfortunate affair of her youth. She was eighteen then, and loved a man who, like herself, was poor. It was her mother's ambition that her daughter should make a great marriage; and thinking that if Pamela fell in love and found love to be a thing of fruitless trouble, she would come the sooner to take a sensible view of the world and marry where marriage was to her worldly advantage. So she had short-sightedly encouraged the affair, which had ended as she knew that it must—the man had no prospects, and he and Pamela had had to part. After that, Pamela had put all thought of serious things out of her life—"Until to-day," Warrisden interrupts, "when you need my help." Then Pamela tells him that what she wants of him is that he shall find Tony and bring him home again. Warrisden accepts the commission, and starts on his return to town. Pamela has advised him to call on a Mr. Chase, head of a London mission, at whose suggestion Tony had chosen New York as a field of adventure.

CHAPTER X

MR. CHASE

THE night had come when Warrisden stepped from the platform of the station into the train. Pamela was by this time back at Whitewebs; he himself was travelling to London; their day was over. He looked out of the window. Somewhere, three miles away, the village of the Three Poplars crowned the hill, but a thick wall of darkness and fog hid it from his eyes. It seemed almost as if Pamela and he had met that day only in thought at some village which existed only in a dream. The train, however, rattled upon its way. Gradually he became conscious of a familiar exhilaration. The day had been real. Not merely had it signalled the change in Pamela, for which for so long he had wished, not merely had it borne a blossom of promise for himself, but something was to be done immediately, and the thing to be done was of all things that which most chimed with his own desires. He was to take the road again, and the craving for the road was seldom stilled for long within his heart. He heard its call sung like a song to the rhythm of the wheels. The very uncertainty of its direction tantalized his thoughts.

Warrisden lodged upon the Embankment, and his rooms overlooked the Thames. The mist lay heavy upon London, and all that night the steamboats hooted as they passed from bridge to bridge. Warrisden lay long awake listening to them; each blast had its message for him, each was like the greeting of a friend; each one summoned him, and to each he answered with a rising joy, "I shall follow, I shall follow." The boats passed down to the sea through the night mist. Many a time he had heard them before, picturing the dark deck and the side-lights, red and green, and the yellow light upon the mast, and the man silent at the wheel, with the light from the binnacle striking up upon the lines of his face. They were little river or coasting-boats for the most part, but he had never failed to be stirred by the long-drawn melancholy of their whistles. They talked of distant lands and an alien foliage.

He spent the following morning and the afternoon in the arrangement of his affairs, and in the evening drove down to the mission-house. It stood in a dull by-street close to Stepney Green, a rambling building with five rooms upon the ground-floor panelled with varnished deal and furnished with forms and rough tables, and, on the floor above, a big billiard-room, a bagatelle-room, and a carpenter's workshop. Mr. Chase was superintending a boxing-class in one of the lower rooms, and Warrisden, when he was led up to him, received a shock of surprise. He had never seen a man to the outward eye so unfitted for his work. He had expected a strong burly person, cheery of manner and confident of voice; he saw, however, a tall young man with a long pale face and a fragile body. Mr. Chase was clothed in a clerical frock-coat of unusual length, he wore bands of an irreproachable whiteness, and his hands were fine and delicate as a woman's. He seemed, indeed, the typical High Church curate fresh that very instant from the tea-cups of a drawing-room.

"A gentleman to see you, sir," said the ex-army sergeant who had brought forward Warrisden. He handed Warrisden's card to Chase, who turned about and showed Warrisden his full face. Surprise had been Warrisden's first sentiment, but it gave place in an instant to distaste. The face which he saw was not ugly, but he disliked it. It almost repelled him. There was no light in the eyes at all; they were veiled and sunken; and the features repelled by reason of a queer antagonism. Mr. Chase had the high narrow forehead of an ascetic, the loose mouth of a sensualist, and a thin crop of pale and almost colorless hair. Warrisden wondered why any should come to this man for advice, most of all a Tony Stretton. What could they have in common, the simple, good-humored, unintellectual subaltern of the Coldstream and this clerical exquisite? The problem was perplexing.

"You wish to see me?" asked Chase.

"If you please."

"Now? As you see, I am busy."

"I can wait."

"Thank you. The mission closes at eleven. If you can wait till then, you might come home with me and we could talk in comfort."

It was nine o'clock. For two hours Warrisden followed Chase about the mission, and with each half-hour his interest increased. However irreconcilable with his surroundings Chase might appear to be, neither he nor any of the members of the mission were aware of it. He was at ease alike with the boys and the men; and the boys and the men were at ease with him. Moreover, he was absolute master, although there were rough men enough among his subjects. The fiercest boxing-contest was stopped in a second by a motion of that delicate hand.

"I used to have a little trouble," he said to Warrisden, "before I had those wire frames fixed over the gas-jets. You see they cover the gas-taps. Before that was done, if there was any trouble, the first thing which happened was that the room was in darkness. It took some time to restore order," and he passed on to the swimming-bath.

Mr. Chase was certainly indefatigable. Now he was giving a lesson in wood-carving to a boy, now he was arranging for an apprenticeship with another in the carpenter's shop. Finally he

(Continued on page 562.)

Progress of Science

Further Experiments with N-Rays

THE claim made by many scientists that the N-rays discovered by M. Blondlot have no real existence, but are merely subjective phenomena occurring in the brain of the observer, are strenuously denied by that physicist, who recently has carried on further experiments to disprove this assertion. He has exposed a photographic plate beneath a small electric spark, and noted the effect when the N-rays were allowed to fall on the spark and when they were intercepted. The spark was enclosed in a light-tight cover through whose top the N-rays could pass. Between the cover and the source of N-rays was a screen of lead and moistened paper, which was opaque to the rays and which could be withdrawn when it was desired that they should fall on the spark. The same photographic plate was exposed successively to the spark with the screen in position to cut off the rays and with it withdrawn. It was found in the latter case that the plate was more blackened, showing that the rays had made the spark brighter. In these experiments N-rays from several sources, including a Nernst lamp, compressed steel, and Rupert's drops where the glass was under strain, were employed, but the same effect was observed. It has recently been reported to the Paris Academy of Sciences that there are other sources of N-rays besides those already found. M. P. B. Jegou has discovered that any wire carrying an electric current emits N-rays, and states that the effect can be observed with a simple Leclanché cell whose circuit has been closed for some time. His explanation is that the N-rays emitted were stored in the liquid of the cell which becomes a powerful source. There are also further physiological experiments and discoveries in this interesting field. According to G. Ballet, the N-rays may be used to diagnose diseases of the nervous system. In myopathic (muscular) and other diseases where diseased muscles are involved, if the latter are paralyzed or atrophied there is a diminution of the N-rays. Again, A. Charpentier and E. Meyer report that the radiation of N-rays from certain muscles is influenced by the intoxication and curarization (paralysis from administration of curare) of the nerves which control them. Thus fewer rays are emitted when the heart is placed in diastole, or expanded, by its inhibitory nerves, and still more when these are not excited. To observe the N-rays requires the most delicate manipulation, and this reason is assigned by M. Blondlot to explain the fact that they were not discovered before, and that the majority of experimenters have been unable to observe them. The French investigators, however, convinced of the importance of the subject, are accumulating considerable material, much of which seems destined to play a useful part in scientific work.

Effects of Phototherapy

An interesting report has recently been published dealing with the Finsen Medical Light Institute at Copenhagen, where diseased skin and tissue is bathed with rays of light from a specially constructed arc lamp, so arranged as to supply light rich in violet and ultra-violet rays. The treatment, which was established in 1886 by Professor Niels R. Finsen, is particularly useful in cases of tuberculosis of the skin, or *lupus vulgaris*, and the institute is now operated under state control, though the same methods are now used elsewhere, both in Europe and America. Naturally the Copenhagen Institute has led in the number of cases treated, which, up to May, 1903, aggregated 1367. In the report referred to, which deals with the first 800 cases of *lupus vulgaris*, it is stated that in fifty-one per cent. of the cases the treatment has resulted in apparent cures, in thirty-five per cent. there has been satisfactory improvement, in five per cent. the results have been unsatisfactory, while the remaining nine per cent. have disappeared from observation. It is success of this kind that leads physicians to expect great results from radium, and they are paying careful attention to the various cases which are undergoing this form of treatment.

CRYSTAL Domino SUGAR

A Triumph in Sugar Making!

Sold only in 5 lb. sealed boxes!

Convenient in form, perfect in quality, brilliant in appearance, no sugar made can equal it in excellence. Every piece sparkles like a cluster of diamonds, the result of its perfect crystallization. You will be pleased the moment you open a box. YOU WILL BE BETTER PLEASED WHEN YOU HAVE TRIED IT IN YOUR TEA, COFFEE, ETC.

SOLD BY GROCERS EVERYWHERE.

Remember that each package bears the design of a "DOMINO" MASK, "DOMINO" STONES and the names of the manufacturers (HAVEMEYERS & ELDER, New York). INSIST UPON HAVING THE GENUINE.

For Salads

McILHENNY'S Tabasco Sauce

Just add a few drops to your Salads, Soups, Roasts, etc., and note the fine, spicy, piquant flavor that results. It creates an appetite and is a potent aid to digestion. Purer and more healthful than ground pepper. Ask for McIlhenny's—the original Tabasco Sauce. Used by leading families nearly half a century.

FREE—write for interesting book of recipes.

McILHENNY'S TABASCO

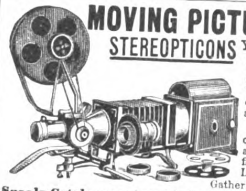
CHERRY

by

BOOTH TARKINGTON



Author of "Monsieur Beaucaire," etc.

That the author of "Monsieur Beaucaire" could write "Cherry" argues well for his versatility, and that any one at all could write "Cherry" proves a sense of humor as subtle and restrained as it is delightful. The story is related by one Sudgeberry, a young man of a century ago, who is completing a course of study at "Nassau Hall," in Princeton, and the romance that he tells is that of an unusually pretty girl with a more than nimble wit. She is by far Mr. Tarkington's most attractive heroine. The story of her courtship is clever comedy of a high order.

(Continued from page 560.)

led the way into the great billiard-room where only the older men were allowed.

"It is here that Stretton used to keep order?" said Warrisden, and Chase at once turned quickly towards him.

"Oh," he said, slowly, in a voice of comprehension, "I was wondering what brought you here. Yes, this was the room."

Chase moved carelessly away and spoke to some of the men about the tables. But for the rest of the evening he was on his guard. More than once his eyes turned curiously and furtively towards Warrisden. His face grew stubborn and wore a look of weariness. Warrisden began to fear lest he should get no answer to the question he had to put. No appeal would be of any use—of that he felt sure. His argument must serve—and would it serve?

Chase, at all events, made no attempt to avoid the interview. As the hands of the clock marked eleven and the rooms emptied, he came at once to Warrisden.

"We can go now," he said, and unlocking a drawer, to Warrisden's perplexity, he filled his pockets with racket-balls. The motive for that proceeding became apparent as they walked to the house where Chase lodged. Their way led through alleys, and as they walked the children clustered about them, and Chase's pockets were emptied.

"We keep this house because men from the universities come down and put in a week now and then at the mission. My rooms are up-stairs."

Chase's sitting-room was in the strangest contrast to the bareness of the mission and the squalor of the streets. It was furnished with luxury, but the luxury was that of a man of taste and knowledge. There was hardly a piece of furniture which had not an interesting history; the engravings and the brass ornaments upon the walls had been picked up here and there in Italy. A bright fire blazed upon the hearth.

"What will you drink?" Chase asked, and brought from a cupboard bottle after bottle of liqueurs. It seemed to Warrisden that the procession of bottles would never end; some held liqueurs of which he had never even heard the name; but concerning all of them Mr. Chase discoursed with great knowledge and infinite appreciation.

"I can recommend this," he said, tentatively, as he took up one fat round bottle and held it up to the light. "It is difficult, perhaps, to say definitely which is the best, but—yes, I can recommend this."

"Can't I have a whiskey and soda?" asked Warrisden, plaintively.

Mr. Chase looked at his companion with a stare.

"Of course you can," he replied. But his voice was one of disappointment, and with an almost imperceptible shrug of the shoulders he fetched a Tantalus and a siphon of seltzer.

"Help yourself," he said, and lighting a gold-tipped cigarette he drew up a chair and began to talk. And so Warrisden came at last to understand how Tony Stretton had gained his great faith in Mr. Chase. Chase was a talker of a rare quality. He sat stooping over the fire with his thin hands outspread to the blaze, and for half an hour Warrisden was enchained. All that had repelled him in the man, all that had aroused his curiosity, was soon lost to sight. He yielded himself up as if to some magician. Chase talked not at all of his work or of the many strange incidents which he must needs have witnessed in its discharge. He spoke of other climates and bright towns with a scholarship which had nothing of pedantry, and an observation human as it was keen. Chase with the help of his Livy had traced Hannibal's road across the Alps, and had followed it on foot; he spoke of another march across snow-mountains of which Warrisden had never till this moment heard—the hundred days of a dead Sultan of Morocco on the Passes of the Atlas, during which he led his forces back from Tafilet to Rabat. Chase knew nothing of this retreat but what he had read. Yet he made it real to Warrisden, so vividly did his imagination fill up the outlines of the written history. He knew his Paris, his Constantinople. He had bathed from the Lido and dreamed on the Grand Canal. He spoke of the peeling frescoes in the villa of the Countess Guiccioli above Leghorn, of the outlook from the terrace over the vines and the olive-trees to the sea where Shelley was drowned; and where Byron's brig used to round into the wind, and with its sails flapping drop anchor under the hill. For half an hour Warrisden wandered through Europe in the pleasantest companionship, and then Chase stopped abruptly and leaned back in his chair.

Drawn by Willlam Hurd Lawrence

He sat in his armchair listening

"I was forgetting," he said, "that you had come upon a particular errand. It sometimes happens that I see no one outside the mission people for a good while, and during those periods when I get an occasion I am apt to talk too much. What can I do for you?"

The spirit had gone from his voice, his face. He leaned back in his chair, a man tired out. Warrisden looked at the liqueur bottles crowded on the table, with Chase's conversation still fresh in his mind. Was Chase a man at war with himself, he wondered, who was living a life for which he had no taste that he might the more completely escape a life which his conscience disapproved? Or was he deliberately both hedonist and Puritan, giving to each side of his strange nature in turn, its outlet and gratification?

"You have something to say to me," Chase continued. "I know quite well what it is about."

"Stretton," said Warrisden.

"Yes, you mentioned him in the billiard-room. Well?"

Chase was not looking at Warrisden. He sat with his eyes half-closed, his elbows on the arms of his chair, his finger-tips joined under his chin, and his head thrown back. There was no expression upon his face but one of weariness. Would he answer? Could he answer? Warrisden was in doubt, indeed, in fear. He led up to his question, warily.

"It was you who recommended Stretton to try horse-breeding in Kentucky."

"Yes," said Chase, and he added: "After he had decided of his own accord to go away."

"He failed."

"Yes."

"And he has disappeared."

Chase opened his eyes but did not turn them to his companion.

"I did not advise his disappearance," he said. "That, like his departure, was his own doing."

"No doubt," Warrisden agreed. "But it is thought that you might have heard from him since his disappearance."

Chase nodded his head.

"I have."

"It is thought that you might know where he is now."

"I do," said Mr. Chase. Warrisden was sensibly relieved. One-half of his fear was taken from him. Chase knew at all events where Stretton was to be found. Now he must disclose his knowledge. But before he could put a question, Chase said, languidly:

"You say 'it is thought,' Mr. Warrisden. By whom is it thought? By his wife?"

"No. But by a friend of hers and his."

"Oh," said Chase, "by Miss Pamela Mardale then."

Warrisden started forward.

"You know her?" he asked.

"No. But Stretton mentioned her to me in a letter. She has sent you to me in fulfilment of a promise. I understand."

The words were not very intelligible to Warrisden. He knew nothing of Pamela's promise to Tony Stretton. But, on the other hand, he saw that Mr. Chase was giving a more attentive ear to what he said. He betrayed no ignorance of the promise.

"I am sent to fetch Stretton home," he said. "I want you to tell me where he is."

Chase shook his head.

"No," he said, gently.

"It is absolutely necessary that Stretton should come back," Warrisden declared with great deliberation, and with no less deliberation Chase replied,

"In Stretton's view it is absolutely necessary that he should stay away."

"His father's dying."

Chase started forward in his chair, and stared at Warrisden for a long time.

"Is that an excuse?" he said at length.

It was as Warrisden was aware. He did not answer the question.

"It is the truth," he replied; and he replied truthfully.

Chase rose from his chair and walked once or twice across the room. He came back to the fire and leaning an elbow on the mantelpiece stared into the coals. Warrisden sat very still. He had used his one argument; he could add nothing to it; he could only wait for the answer in a great anxiety. So much hung upon that answer for Stretton and his wife, for Pamela, for himself! The fortunes of all four were knotted together. At last the answer came.

"I promised Tony that I would keep his secret," said Chase. "But when he asked for the promise and when I gave it, the possibility of his father dying was not either in his mind or mine. We considered—in letters, of course—other possibilities, but not this one. I don't think I have the right to remain silent. Even in the face of this possibility I should have kept my promise. I think, if you had come from his wife—for I know why he disappeared. But as things are, I will tell you. Tony Stretton is in the North Sea on a trawler."

"In the North Sea!" exclaimed Warrisden. And he smiled. After all, the steamboats on the river had last night called to him with a particular summons.

"Yes," continued Chase, and he fetched from his writing-resk a letter in Tony's hand. "He came back to England two months ago. He drifted across the country. He found himself at Yarmouth with a few shillings in his pocket. He knew something of the sea. He had sailed his own yacht in happier times. He was in great trouble. He needed time to think out a new course of life. He hung about on Gorleston pier for a day or two and then was taken on by a skipper who was starting out short of hands. He signed for eight weeks, and he wrote to me the day before he started. That's four weeks ago."

"Can I reach him?" Warrisden asked.

"Yes. The boat's the *Perseverance* and belongs to the Blue Fleet. A steam-cutter goes out every day from Billingsgate to fetch the fish. I know one of the owners. His son comes down to the mission. I can get you a passage. When can you start?"

"At any time," replied Warrisden. "The sooner the better."

"To-morrow, then," said Chase. "Meet me at the entrance to Billingsgate Market at half past eleven. It will take you forty-eight hours with ordinary luck to reach the Dogger Bank. Of course if there's a fog in the Thames the time will be longer. And I warn you the living's rough on a fish-carrier."

"I don't mind that," said Warrisden, with a smile. He went away with a light heart and that night wrote a letter to Pamela, telling her of his interview with Mr. Chase. The new road seemed, after all, likely to prove a smooth one. As he wrote, every now and then, a steamboat hooted from the river, and the rain pattered upon his window. He flung it up and looked out. There was no fog to-night, only the rain fell, and fell gently. He prayed that there might be no fog upon the Thames to-morrow.

Mr. Chase, too, heard the rain that night. He sat in his armchair listening to it with a decanter at his elbow half-filled with a liquid like brown sherry. At times he poured a little into his glass and drank it slowly, crouching over his fire. Somewhere in the darkness of the North Sea Tony Stretton was hidden. Very likely at this moment he was standing upon the deck of his trawler with his hands upon the spokes of the wheel, and his eyes peering forward through the rain, keeping his long night-watch while the light from the binnacle struck upwards upon the lines of his face. Mr. Chase sat late in a muse. But before he went to bed he locked the decanter and the glass away in a private cupboard and took the key with him into his bedroom.

To be Continued.

An Engineer's Views of the Trans-Siberian

(Continued from page 549.)

contrary, the men work in an arctic temperature. The borings must be made through masses of rock and ice, or ice and other strata of a formidable character. In the tunnel these conditions are the same, winter and summer; but the outside work is discontinued during the cold weather, and the men are employed indoors in the shops, working on bridge spans that will be placed in position when spring brings more temperative weather conditions.

It is not generally known that there is a fairly good military road around the lake, with posting stations from twenty-five to thirty verstas apart. Its grades are steep and fatiguing, but probably the Russians are now making use of it. The circum-Baikal détour increases the length of the trans-Asiatic journey, as compared with the direct route across the length, by 150 verstas (approximately, 100 miles).

Concerning the important question of the capacity of the Trans-Siberian in Russia's present emergency, I should say, from my knowledge of the road, that it is doubtful if it can be successfully operated during the time of the spring freshets, which may be looked for during the next two months. The probability is that the system will break down temporarily here and there along the line. But this may not present an insurmountable difficulty, for if the through trains are stopped the troops could be transferred to sections of the trains in waiting on the other side of the gap in the line. The greatest danger lies in the possible dynamiting of the long and costly bridges over the larger rivers; this would mean a very serious delay in the transportation of troops, for even the cable ferries could not attempt without peril the passage of the rivers, filled as they are with enormous ice-floes until, in some seasons, as late as the middle of May.

The average speed of the troop-trains cannot be more than eight or ten miles an hour when all possible delays are taken into account. Much loss of time will be entailed by the returning of empty cars over the single-track road.

It is the question of a food-supply for her Manchurian forces that presents the most difficult problem for Russia's War Department to solve. It is my opinion that the Japanese have counted all along on this disadvantage to their enemies, realizing the difficulty of feeding the Czar's troops in the Far East. In parts of Siberia the villages are several hundred verstas apart, and even if the troops should draw on them for sustenance they would soon bring the villagers to absolute famine; for the Russian *muzhiks* are not thrifty, and have no stores beyond a season's wants.

NEWS FROM THE WAR

THE PROGRESS Of The SPECIAL CORRESPONDENT At The FRONT

SKETCHES FROM TELEGRAPHIC DESCRIPTION BY ALBERT LEVERING

February 17 (special).—Arrived at the scene of difficulties to-day; received by the Czar and the Mikado; they were much relieved by my presence here; at a conference we decided to continue the war.

February 18 (special).—I began hostilities to-day; the Japanese torpedoed fifteen Russian battle-ships, about. (The engagement was witnessed by your correspondent from a special torpedo hired for the occasion.)

February 20 (special). (This despatch was carried on horseback eight hundred miles through northern Manchuria.)—Lake Baikal is full of water, but frozen over.

February 21 (special).—General Pflug desired the number of vessels bombarding Port Arthur; I informed him; he sends special thanks through me.

February 23 (special).—Great battle on the Yalu River; immense loss; Russians victorious. (Your correspondent was at this battle, and can safely say it did not occur.)

February 24 (special).—In an interview with the Chinese Empress, she emphatically denies engagement to a Russian Grand Duke, as telegraphed yesterday.

Feb. 26 (special).—The war council met to-day. I was present. It was decided to continue the war.

I am now on my way to the scene of the next important battle.

Music

A Woman Song-writer

For the woman composer whose artistic purposes are dignified and sincere there is little encouragement in the traditional estimate of the value of feminine inspiration in creative music. That women have done nothing of first-rate importance as constructive musicians is a commonplace of critical history. As to why they have not, there are many theories: but the fact itself is undisputed. It is, therefore, surprising to the masculine observer to realize the genuineness of the resolution with which the woman composer in our day pursues her career. That so little of what she produces is of consequence, while it increases one's wonder at the persistence of the producers, makes correspondingly welcome any manifestation of inspired ability. Such a manifestation is at hand in the work of a young American, Miss Gertrude Normand-Smith, more than a dozen of whose songs have been published of late years; her last printed work, a group of three Gypsy Songs, is of recent publication.

Miss Normand-Smith is that artistic anomaly, a woman composer whose writing has not alone dexterity and sensibility, but an authentic and personal gift of inspiration. We know nothing of hers in which the musical thought is trivial, conventional, stereotyped; what she puts upon paper is of uncommon distinction, of unfailing individuality; and her feeling for beautiful expression—more marked than her feeling for characterization—is memorably fine and true. With a full comprehension of all that the estimate implies, we do not hesitate to say that we believe Miss Normand-Smith to be among the most subtle and finely-tempered of living song-writers. She has little capacity for the weightier accents of dramatic effect—her talent is lyric, intimately declarative, rather than emphatically virile and commanding. Her music is of a near approach to the sort that one likes to imagine the ideal woman composer as writing: for it is feminine in the best, in the unique, sense.

Miss Normand-Smith embodies in her work the familiar traditions of the German *Lied:* her musical style, no less than her musical feeling, is a product of the artistic soil which nourished Schumann, Franz, and Brahms. How Brahms-like in nobility of sentiment is her song, "Verschwiegene Liebe"! She is as admirable, as poetic—perhaps, here, she is at her finest—in "Auf der Heide," and in two songs, of rare loveliness and distinction, as yet in manuscript: "Liebessorgen" and "Schlafen, Schlafen." This is music that needs no apologies on the score of sex—music that belongs securely among the best.

Concerning Brahms

The music of Brahms seems still to be a bone of contention in England, although in this country those who have considered most dispassionately the work of the German master have arrived at a fairly definite conclusion regarding it. Mr. Vernon Blackburn, an appreciator whose criticism is as keen and charming as it is, at times, curiously wrong-headed, has recently been showing marked irritation over the matter. Brahms, he affirms, no longer appeals to the general public or to the critic of the time—a dictum which provoked the music critic of the London *Academy* to the sarcastic rejoinder that "the fact being as stated, it is clearly idle for misguided concert-givers, such as Richter, Nikisch, Richard Strauss, H. J. Wood, and the rest, to continue their vain attempts to popularize that music which 'does no longer appeal either to the general public or to the critic of the time.'" All this is, of course, highly diverting, but not particularly informing. The truth of the matter seems to be that Brahms, one of the greatest of musical architects, has given us some of the most engrossing and noble, and some of the most insurpassably stupid, music that we possess. To attempt, as Mr. Blackburn attempts, to make him out wholly dull, or, as Brahms's apostles do, wholly inspired, merely retards the day when we shall all know, precisely and incontestably, where Brahms—among others—is excellent and delightful, and where he is not.

Hamlin Garland's HESPER

A New Novel of the West

BY THE AUTHOR OF "THE CAPTAIN OF THE GRAY-HORSE TROOP"

A novelist, speaking of Hamlin Garland's Western love story, recently said: "When I read 'Hesper' I can feel the wind come down the cañon and see the mountains rise before me." One of the charms of Mr. Garland's novel is that the reader is irresistibly made to feel the exhilaration and the beauty of outdoor life depicted. Another charm is Ann Rupert, the New York society girl "out West."

A New Book by the Author of "Wee Macgreegor"

"ETHEL"

By J. J. BELL

THERE is no dialect in this new book by J. J Bell, author of "Wee Macgreegor." It is the story of a courtship, told throughout in lively and natural dialogue between Ethel and her fiancé. The young man is the reporter in the case, and he lets us know incidentally that Ethel has a dimple, a delightful little chin, and hair that tries to be untidy. Ethel's own remarks show her to possess a nature of serene amiability. She is continually amusing. There are entertaining glimpses of other characters, but it is Ethel of whom the reader grows very fond. The dialogue has the same delightful freshness of spirit which charms us in "Wee Macgreegor."

SIR MORTIMER

By MARY JOHNSTON

Author of "To Have and To Hold"

THE love of Sir Mortimer for the fair Damaris Sedley, a lady-in-waiting, holds unswerving course through a narrative alive with stirring incidents of the days of Sir Walter Raleigh, when all England loved, sang, adventured, and fought, in the flush of youthful power. Herein is a love story of uncommon charm cast among stirring scenes—love in the lap of adventure, set forth with rare imaginative power.

Readers of "To Have and To Hold" will welcome in this tale of love and gallantry the distinct advance Miss Johnston has made upon her former success. The romance is instinct with new life and color, like the golden days with which it deals.

With frontispiece, reproducing the colors of the original painting, and eight other illustrations by F. C. Yohn, printed upon specially made India-tinted paper and mounted like photographs upon blank pages.

Post 8vo, Ornamented Cloth, $1.50

Lux Crucis

A Tale of the Great Apostle

By SAMUEL M. GARDENHIRE

NO figure in religious history stands out so vividly, no historic personality is so magnetic, as that of Paul the Apostle. In the palace at Cæsarea this story opens, when Paul took the stand which called out that famous comment: "This man might have been set free if he had not appealed unto Cæsar."

In and out of the great drama of Rome in her throes of change moves Paul, quietly wielding his titanic power. In "Lux Crucis" we learn to know him as a tender, loving man. We see Nero and the rottenness of his court; we see the Christians going triumphantly to their doom; we see Rome burn and evil flourish; and we see at last the tumbling of the old gods. And all the time we are following the story of a Roman officer's love for a Christian maid—a tale that even without this wonderful setting would stand out as a love story of strangely vital power and charm.

The

RUSSIAN ADVANCE

By Senator ALBERT J. BEVERIDGE

THIS book gives an accurate and interesting description of Russia's policy of expansion, which has become a possible cause for war. Senator Beveridge investigated the conditions, the peoples, the industries, the markets, the religions of Russia, Japan, China, Manchuria, and Korea. The volume is of importance and value to the men and women of this country who are interested in the development of the new political, diplomatic, and commercial relations of the United States with the East.

COMMENT

THE reaction which the Hearst boom was certain to provoke has come. The knowledge that the friends of Chief-Judge Alton B. Parker will control the Democratic State convention of New York—they seem likely to have at least three hundred out of four hundred and fifty delegates—has impelled many leading Democrats in Congress to array themselves on the same side. This is true, for instance, of Senator Carmack of Tennessee, of Senator Bacon of Georgia, and of Senator Foster of Louisiana. Whether Senator Gorman has privately expressed a preference for the New-Yorker is disputed. Senator Bailey of Texas has no faith, it is alleged, in the success of the Democracy this year, no matter who may be its nominee. That is not the conclusion reached by well-informed persons in those Northern States that are generally admitted to be doubtful. On the contrary, there is a widespread and deepening conviction that any Democrat of unchallenged ability and high character, who in principles and temperament should be recognized as the opposite of Mr. Roosevelt, would have a fair chance of carrying New York, Connecticut, New Jersey, and Indiana. The conviction is based on the belief that the campaign is destined to turn on the question whether it would be safe to entrust Mr. Roosevelt with the vast and elastic powers of the Presidency for four years more. If Mr. Roosevelt's fitness for the office of Chief Magistrate is really to be the pivotal issue it would obviously be expedient to select for his opponent a man preeminently distinguished for the qualities in which the present President seems lacking.

This is as clear to Republican politicians as it ought to be to Democratic. There is no doubt that Mr. Roosevelt's friends have evinced signs of panic whenever Democratic sentiment has seemed to be drifting toward ex-President Cleveland. Neither have they looked with equanimity on the suggestion of Judge Gray, whose popularity among labor-unionists is known to be equal, if not superior, to the President's. That Judge Gray would be the second choice of Mr. Olney's friends may doubtless be taken for granted, provided, of course, ex-President Cleveland should persist in his refusal to permit his name to be considered. That he does so persist is generally inferred from the declarations recently made by some of his oldest and firmest friends in favor of Judge Parker. We are told, for instance, by Representative Bartlett of Georgia that Mr. Hoke Smith, once a member of a Cleveland cabinet, is not in favor of his former chief's nomination, but is actively promoting Judge Parker's candidacy in the State named. Mr. Hoke Smith thinks, so it is alleged, that Mr. Cleveland would not give strength to the ticket at the present time, but, on the contrary, would cause dissension in the Democratic party. Senator Daniel of Virginia says that if it be true that New York is going to instruct for Parker, he will undoubtedly be nominated. Senator Daniel adds that, in his opinion, Judge Parker suits the times, and the true Democracy that would lead to better things. Judge Parker would represent to the popular eye the calm, thoughtful attitude of men of experience and observation who know that all genuine reforms must be gradual, not sudden and destructive. Senator Overman of North Carolina declares that his State will give Parker loyal support if the judge comes to the convention with the New York delegation behind him. Senator Money of Mississippi has no doubt that conservatives will control the next Democratic national convention, and that they will nominate Judge Parker, if the latter is supported by his native State. Senator Teller of Colorado concurs in the forecast. He is confident that if New York shall instruct for Parker the conservative Democracy of the South and West will do the rest.

We have said that Mr. Cleveland's nearest friends seem to have renounced the hope that the ex-President under any circumstances would accept a nomination for the Presidency. We have in mind published interviews with Mr. Everett P. Wheeler, Mr. William B. Hornblower, Mr. Wheeler H. Peckham, and Mr. Francis Lynde Stetson. The last-named gentleman, who was once Mr. Cleveland's law partner, declares his belief that Judge Parker possesses peculiar strength which makes it certain that New York will give its electoral votes to him should he be his party's nominee. Mr. Stetson added that he had no reason to doubt the finality of Mr. Cleveland's published declination to be considered a candidate. Mr. Peckham, while disappointed that Mr. Cleveland should show himself so inflexibly opposed to being considered as a candidate, can see no other figure on the Democratic horizon that looms so large as that of Chief-Judge Parker. He declares unhesitatingly that, if Mr. Cleveland is determined not to run, he, Peckham, knows no better man than Alton B. Parker. As to the suggestion that Judge Parker's election might assure political eminence and influence to Mr. David B. Hill, the opinion is expressed that Judge Parker is not a man to be unduly influenced by any one. It was only after mature deliberation and consultation with his friends that Mr. William B. Hornblower consented to be interviewed. Premising that he understood Mr. Cleveland's position to be that he absolutely refused to allow himself to be mooted as a candidate, Mr. Hornblower avowed his conviction that Chief-Judge Parker was not only the most available, but, in all respects, the best candidate for the Democratic nomination for the Presidency. He believes, not only that Judge Parker can carry the State of New York next autumn, but would have a better chance than any other candidate of carrying enough of the doubtful States to secure a majority of the nation's electoral vote. He added that, from what he knew of Judge Parker's strength of character, he did not believe that he would be under the control of Mr. David B. Hill, or of the leader of any other faction in the Democratic party. By temperament and training eminently conservative, Judge Parker would, in Mr. Hornblower's opinion, give the country a safe and a wise administration.

Mr. E. P. Wheeler predicted that it would prove impossible for Eastern Democrats to conciliate their brethren of the South and West unless they should put forward a candidate entirely free from the suspicions and animosities engendered by the controversies of the past. Such a man, he said, was Judge Alton B. Parker. About him all Democrats could be rallied, and past differences would be forgotten. Although a warm friend of Grover Cleveland, Mr. Wheeler is disposed to take the ex-President at his word, and believes that any attempt to put him forward as a candidate for a third term would be a mistake. I do not think, Mr. Wheeler says with emphasis, that Mr. Cleveland should in any sense be considered as a candidate. "I know him so well that I feel confident that he meant what he said" in his published statement. Mr. Wheeler concurs with Mr. Hornblower and Mr. Peckham in declaring that there is not the slightest ground for suspecting that Mr. David B. Hill would have more influence with Judge Parker than would any other man in the party. He believes that Judge Parker as President would be as independent of dictation as any man who could be named. Mr. Wheeler, by the way, after expressing admiration for Mr. Charles F. Murphy's ability as an organizer, indicated a be-

lief that, at the proper time, Tammany Hall would be found working for the nomination of Judge Parker for the Presidency.

Senator W. J. Stone, of Missouri, while on his way to St. Louis, accompanied by Colonel J. M. Guffey, leader of the Pennsylvania Democracy, was interviewed at Pittsburg, and is reported to have expressed a doubt whether either Parker or Hearst would have a majority of the delegates to the St. Louis convention when that body should convene. As to what might happen later he ventured no prediction. That Mr. Hearst will not have a majority, either at the opening of the convention or later, may be taken for granted. On the other hand, Senator Stone's forecast with regard to Chief-Judge Parker does not seem to be borne out by the figures compiled for the New York *Herald*—figures based on the results of primaries already held, or on the most trustworthy information obtainable with regard to States that, at the present time, are believed to be doubtful. The *Herald's* computation assigns to Judge Parker three Eastern States—Connecticut, New Hampshire, and Vermont—which will have collectively 30 delegates; three Middle States—New York, New Jersey, and Pennsylvania—the aggregate strength of which in the St. Louis convention will be 170; such former slave States as Delaware, Maryland, Virginia, West Virginia, Tennessee, North Carolina, South Carolina, Florida, Georgia, Alabama, Arkansas, Louisiana, and Texas, which will have among them 256 delegates; and such Western States as Indiana, Michigan, one-half of Minnesota, Colorado, Idaho, and Montana, which, in the aggregate, will be represented by 91 delegates. The total, obviously, is 547. As there will be one thousand delegates in the Democratic national convention, it is plain that, if the estimate just given is correct, Judge Parker will have 47 more than half. Unless, however, the two-thirds rule will be abolished, he would have to have 666 2-3. Whether he could secure so many depends upon the view taken of his prospects in States not yet named.

To Hearst the *Herald* awards Rhode Island, Maine, and the District of Columbia; and west of the Mississippi, Kansas, Nebraska, one-half of Minnesota, South Dakota, North Dakota, Wyoming, Nevada, Utah, Oklahoma, Indian Territory, New Mexico, Arizona, California, Hawaii, Alaska, and Porto Rico. These States and Territories have, collectively, 169 delegates. It is manifest that 165 more must be secured by Mr. Hearst if he is to attain the 334 which would enable him to veto a nomination provided the two-thirds rule should be upheld. Where can he get those delegates? It has been hitherto supposed that 72 of them could be secured from Mississippi, Kentucky, and Iowa, but now we are told that every one of those States is doubtful. Mr. Hearst's boomers claim Oregon and Washington, which have, both together, 18 delegates, but it remains to be seen whether their claim is well founded. There is no doubt that Mayor Tom Johnson, of Cleveland, will try to give Mr. Hearst the 46 delegates of Ohio, but he will have to reckon with John R. McLean. Even if Mr. Hearst should get all six of the States just named, they would give him but 136 delegates, or 29 short of a third of the convention. The missing votes would be forthcoming if he could carry Illinois, but there now seems to be no doubt that the delegation from that State will be instructed for Representative James R. Williams. The instructions are understood to mean that when the 54 votes of Illinois are needed for Judge Parker, they will go to him. The same thing may doubtless be said for the 32 votes of Massachusetts, the 36 votes of Missouri, and the 26 votes of Wisconsin, which on the first ballot will be cast respectively for Richard Olney, for F. M. Cockrell, and for F. E. Wall. On the face of these figures, it certainly looks, at the hour when we write, as if the conservative Democrats would be able at St. Louis not only to frame the platform, but to designate by a two-thirds vote the nominee.

On March 28, Joseph R. Burton, a Republican United States Senator from Kansas, was convicted by a jury, in a United States District Court held in St. Louis, of having accepted compensation while a United States Senator for protecting the interests of a "get-rich-quick" concern, the Rialto Grain and Securities Company, before the Post-office Department. A Federal statute enacted in 1864 prohibits members of Congress from accepting compensation in any case that involves the interests of the Federal government. The maximum penalty prescribed for the offence is ten thousand dollars fine and two years' imprisonment, and the convict is forever barred from holding any public office in the United States. Mr. Burton has appealed to the United States Circuit Court, and we presume that, pending the action of the appellate tribunal, no formal action will be taken by the United States Senate for the purpose of declaring his seat vacant. Although the law declares that a person found guilty is rendered incapable for holding office under the government of the United States, it is held that this provision does not apply to a Senator, because, under the Federal Constitution, the Senate itself must judge of the qualifications of its members. That it can expel a member by a two-thirds vote is unquestionable. So much time may be occupied in appeals, first to the United States Circuit Court, and then to the United States Supreme Court, that, possibly, the question of Mr. Burton's expulsion may not be mooted in the Senate before the expiration of his term, which will end on March 3, 1907.

Curiously enough, this is not only the first conviction of a member of Congress under the statute of 1864, but it is the first conviction of a United States Senator for crime in the history of the government. Senator Dietrich of Nebraska, it will be remembered, was indicted for selling his influence in the matter of an Executive appointment, but he escaped conviction on the plea that the offence charged was committed after his election to the Senate, but before he took the oath of office. There is no doubt that Mr. Burton would have been as guilty under the statute if, instead of accepting money for the use of his influence, he had accepted stock in a corporation. The importance of the precedent established in his case is obvious, for there is a widespread impression that a good many Senators and Representatives have, in times past, accepted stock, if not money, for the exercise of their influence in matters wherein the Federal government was undoubtedly interested. We have said that no other United States Senator has ever undergone conviction for a crime committed after he took the oath of office. That is true, but several Senators have either been expelled, or forced to resign in order to avoid expulsion. For example, William Blount, who was a Senator from Tennessee between 1796 and 1799, wrote a letter which, by an investigating committee of the Senate, was pronounced inconsistent with the interests of the United States. By a two-thirds vote he was found guilty of a high misdemeanor and was expelled. Jesse D. Bright, a Senator from Indiana, was expelled in February, 1862, on the charge of disloyalty to the United States, he having been found guilty of writing a letter to Jefferson Davis, President of the Confederacy, for the purpose of introducing a person who desired to dispose of an improvement in firearms. In the same year Edwin M. Stanton, Secretary of War, laid before the Senate the charge that Senator Simmons of Rhode Island had contracted, in consideration of the sum of fifty thousand dollars, to secure the adoption of a certain kind of firearms by the Federal government. The committee of the Senate by which the matter was investigated reported that the accusation was well founded, and recommended the expulsion of the Rhode Island Senator, but before the Senate could act Simmons resigned.

On March 28 there was an interesting discussion of the negro question in the House of Representatives. Mr. Gillette of Massachusetts, a Republican, declared that nobody wanted the South to submit to negro domination, but he deemed it neither fair nor wise for Southern Democrats to say that they intend to prevent forever the negro from participating in government. That is to say, he would disapprove, we presume, of the franchise measure which has lately been carried through the Maryland Legislature, because the apparent aim of that measure is permanently to deprive negroes of the suffrage. According to Mr. Gillette, the colored people ought not to be told that never under any circumstances should they be permitted to exercise the privilege of voting. As a matter of fact, the Maryland measure makes no such assertion. It prescribes an educational qualification for the franchise, from which white men are practically exempted.

but which is binding upon colored men, who, if they wish to vote in a given precinct, must explain a clause of the Federal Constitution to the satisfaction of the election officers in that precinct. It remains to be seen whether an unfair advantage would be taken of the condition. If an unfair advantage should be taken, we presume that a Federal court would interpose. Mr. Warfield, the Democratic Governor of Maryland, is opposed to the measure, on the ground that, under it, negroes would be exposed to unfair treatment at the hands of local officials.

We note Mr. Gillette's admission that the feeling of instinctive repugnance toward the negro is stronger among white people at the North than at the South. In reply to a question, he said that, personally, he had never invited a negro to his table, though he would not dispute Mr. Roosevelt's right to invite Booker Washington to the White House. He went on to express surprise that no one on the Democratic side of the House had denounced the lynching of negroes. Mr. Richardson of Alabama interposed to say that whenever the negroes should cease committing assaults upon white women, lynchings and burnings would no longer occur. Mr. Champ Clark of Missouri concurred in the averment that only when men of all races should stop perpetrating assaults upon women would lynchings come to an end. He had known, he said, white men to be lynched for such assaults, and in his opinion they ought to have been lynched. Mr. Burgess of Texas denied that it is the purpose of the South to use the negro question for political purposes. He declared that the Republican party, on the contrary, regarded the negro as an asset. On the whole, he opined that the less said about the negro question among those who do not live among colored people, and do not know of what they speak, the better. That is, practically, the position taken by Mr. Thomas Nelson Page, to whose discussion of the matter in *McClure's Magazine* we refer elsewhere.

We are glad to learn that the Panama Canal Commission is alive to the tremendous responsibilities which it has assumed, and that it has no intention of beginning work on the waterway until adequate precautions have been taken to safeguard human life throughout the canal zone, and in the terminal towns, Panama and Colon. There is only too much ground for the tradition that every sleeper laid on the roadbed of the Panama Railway represents a victim. Awful, too, is the record of mortality which has attended the work of the Lesseps Company and of its successor. From the statement attributed to a member of our Canal Commission, the statement that at least a year will be required for the sanitation of the isthmus, we infer that he does not underrate the magnitude of the task. The purification of Havana, of Santiago, and of other towns in Cuba was, by comparison, easily accomplished. There is reason to fear that the drainage of Colon is impracticable, for the reason that the town is built on a swamp, and is surrounded by marshy land. Then, again, it will prove difficult to enforce sanitary regulations upon a multitude of laborers scattered over the canal zone, which covers an area of some five hundred square miles, or about half that of Rhode Island. Moreover, it must be remembered that centres of infection on the borders of the belt might neutralize the work done within the canal zone proper. Fortunately, our treaty with the new republic gives us the right to supervise the sanitation of the terminal towns, and there is no doubt that the Panama Legislature would extend the privilege to any collateral district along the line of the canal. It is indispensable that at the start we should recognize the immense proportions of the prophylactic problem which confronts us. Then, although we may prove unable to command success, owing to the almost insuperable difficulties presented by a tropical locality, we shall at least deserve it.

There is no doubt that in October, 1862, a material change took place in the attitude of the Palmerston-Russell ministry with reference to the recognition of the independence of the Southern Confederacy by Great Britain. On October 7, Mr. Gladstone, Chancellor of the Exchequer, had declared at Newcastle that Jefferson Davis had created a nation, a declaration which was believed by Minister Charles Francis Adams to foreshadow a recognition of the Confederacy. Yet, on October 23, Minister Adams was informed by Earl Russell, Secretary for Foreign Affairs, that the British government had decided to adhere to a strict neutrality, and to leave the struggle to settle itself. What had happened in the interim? As we have previously pointed out, Mr. Charles Francis Adams, in a paper lately read before the Massachusetts Historical Society, evinces an inclination to believe that at some time during October, 1862, Queen Victoria, being then at Gotha, made known to the Palmerston-Russell cabinet her unwillingness to sanction the step which they contemplated. An amusing attempt has been made by an Anglophobist to show that the change of front on the part of the Palmerston-Russell cabinet in October, 1862, was due not to any interposition on Queen Victoria's part, but to the refusal of Alexander II. to unite with France and England in a recognition of the Confederacy, a refusal accompanied by the despatch of Russian war-vessels to New York and San Francisco. The objection to this explanation is that the Russian war-vessels were not sent to American harbors until 1863, or about a year after the Palmerston-Russell cabinet had given up the idea of intervention. For the part played by Alexander II. in 1863 we have the evidence of Mr. Wharton Barker, who, as he has lately pointed out in a published article, derived his information from the lips of the Czar himself. There is no doubt that the government of Napoleon III. was as eager to interfere on the part of the Southern Confederacy in 1863 as it had been in 1862; but never again did the British ministry come so near cooperating with the French Emperor in such a mood as it had come in the first fortnight of October in the year last named. We opine that the explanation of its change of heart which Mr. C. F. Adams is disposed to accept is the correct one, although we may never have conclusive proofs, unless such shall be found in the papers of Lord Granville.

It is expected in Canada that the settlement of the old dispute between Newfoundland and France will pave the way for the confederation of the former with the Dominion. This will mean a change of political status, affecting the island of Newfoundland and the vast dependent territory of Labrador. The obstacle to the coalescence of Newfoundland with Canada is a financial one, relating to the amount of debt which the Dominion is to assume for the island colony. In 1864 Newfoundland was invited to join the Canadas, and proposals believed to be liberal were made. But the island colony declined. In 1869 it was the turn of the Newfoundland government to make proposals. They held that Newfoundland should have a debt allowance equal to $25 per head of the population, $35,000 a year for legislative expenses, a subsidy of 80 cents per head, and $150,000 in lieu of crown lands. Canada was quite willing to accept these terms, but the island colony withdrew them at the last moment. In 1888 Sir Charles Tupper renewed the negotiation. To his proposals the government of Newfoundland replied that the question was then under discussion, and that a deputation would presently be sent to offer terms. Then arose the dispute over the Bond-Blaine treaty, in which Canada objected to Newfoundland making a fisheries arrangement with Washington without consulting the Dominion. Newfoundland retorted by refusing to supply the Canadians with bait. Finally a compromise was reached, but the dispute prevented the solution of the larger question of confederation at that time.

In 1895 the island colony was on the verge of bankruptcy, and the negotiations were resumed. Sir Mackenzie Bowell offered to assume a Newfoundland debt of $8,350,000, and to pay interest on $2,000,000. This amounted to fifty dollars per head of the population, double the proposal of 1869. The colony was offered an annual subsidy of $465,000, including allowance for legislation, a per capita subsidy, an allowance for crown lands, timber, and mines, and a payment of five per cent. of the excess debt. Newfoundland asked for about $354,000 a year more than this offer. She wished Canada to assume an additional $6,000,000 of debt, incurred on account of the island railway, which Canada was asked to complete to Port aux Basques. This railroad has since been completed. This difference was not bridged over, and the island colony

remained independent of the Dominion. The great obstacle on Canada's side is that if she allowed Newfoundland's public-debt claims, the other members of the confederation would be entitled to demand like privileges, and this would cost the Dominion an additional $65,000,000. While very willing to come to terms with her island neighbor, the Dominion hesitates at the thought of this large consequent liability.

To add to Mr. Balfour's sorrows, his government is confronted with a deficit budget. The revenue for the financial year just closed shows a net decrease of nearly fifty million dollars. The chief items which have fallen off are the income tax, which accounts for forty millions of the decline, and which is due, of course, to a reduction in the rate of the tax; the customs, which have fallen three million dollars; stamps, estate duties, excise, and certain small miscellaneous items. The Post-office, which is one of the most uniformly prosperous departments of the British government, and quite the most enterprising and best managed, has this year added three and a half million dollars to its earnings, while other items have advanced about a million. The total revenue for the year was $756,062,495. It is calculated that this will cause a full budget deficit of $35,000,000, of which $15,000,000, lent to the Transvaal, will be repaid, leaving twenty millions to be raised by some form of new taxation. It is over this last item that Mr. Austen Chamberlain is most in danger of losing votes for his government; for he cannot very well reimpose any part of the income tax, fourpence on the pound, removed by his predecessor, Mr. C. T. Ritchie. Nor can he restore the corn duties, which brought ten millions last year, and the removal of which was so strenuously opposed by Mr. Joseph Chamberlain, in a series of speeches, from which the whole fiscal campaign may be said to have sprung. Even more likely to diminish the government's supporters at the coming general election is the movement, which is steadily gaining force with Mr. Balfour's adherents, to diminish the number of liquor licenses in the United Kingdom. The liquor interest, after the landlord class, is the most conservative force in English politics, not merely because the peerage is recruited from the "beerage," but because the licensed houses represent a vast amount of capital, estimated at $300,000,000.

Senator Burton of Kansas, the statesman lately found guilty of conduct unbecoming a Senator, says in a letter to a friend: "If it could all be told just as it is—the absolute truth—it would appall the world. Some time it will all be known." Mr. Thomas W. Lawson, of Boston, who testified the other day in the Bay State Gas case that he and a small group of other men, made a profit of forty-six millions in a single deal, declared later that he had understated those profits by twenty millions. He recalled his own prediction that the Gas hearing would furnish "a series of flash-light pictures to which the United States Ship-building fandango will look like a midnight silhouette." The appalling facts of which Senator Burton claims to have knowledge and the Gas pictures which Mr. Lawson anticipates with such confident expectation will all be hospitably received by an interested public. We are all concerned to know how a Senator justifies to his own conscience the sale of his influence with the Washington departments, and what sort of transactions those were which in a short time showed a profit of sixty-six millions to a very small group of men. The public is always glad to learn what is, or has been, going on. It is getting a good deal of profitable information nowadays about politics and about business from one source or another, but most of it is still incomplete, and any brother, erring or otherwise, who has a whole story to tell will not lack attentive hearers. An occasional view of the under side of things is extremely instructive. Especially after a period of great business and speculative activity, the great army of losers are curious to know how the winners won.

Among other observing gentlemen who went to last winter's famous portrait show in the American Art Galleries in New York was Mr. H. D. Sedgwick. A piece in the *Atlantic Monthly*, called "The New American Type," embodies some results of his observations there. He saw some old pictures and some new ones, and was profoundly impressed by the contrast between the subjects of portraiture in the eighteenth century and those in the twentieth. The change in American men and women between the time of President Washington and President McKinley left him saturated with astonishment. He calls Stuart and Trumbull to witness that a hundred years ago a British type of body, face, and mind prevailed from Massachusetts to Virginia. In Washington, Adams, Hamilton, Madison, Jay, Van Rensselaer he sees eighteenth-century Englishmen. Reynolds, Gainsborough, Romney, and Hoppner were at hand to tell what eighteenth-century English people were. Mr. Sedgwick finds the men calm, hardy, untroubled by doubts, sustained by definite principles. And the women were simple, natural, serene, lovely, and, above all, calm. The eighteenth-century portraits, whether English, French, or American, seemed to Mr. Sedgwick to make a most happy and attractive picture of life. They chant a chorus of praise, he says, for national character, for class distinctions, for dogma and belief, for character, for good manners, for honor, for contemplation. They portray a pure national breed wherein like bred with like in happy homogeneity, deep affinities herded together, the disquiet and distress of cross-breeding were avoided, and peace of body begot peace of mind.

Turning from the eighteenth century to Mr. Sargent, the *Atlantic's* commentator is conscious of sensations such as result from a blow in the solar plexus. Sargent, he says, was born to depict a hybrid people, vagabonds of the mind; to portray the strain of psychological and physiological transformation in the evolution of a new species. The obvious qualities in his portraits are disquiet, lack of equilibrium, absence of principle. His women, physically delicate, reveal the strain of physical and psychical maladjustment. The testimony he bears is sustained by his contemporaries, who show American womanhood restless, physically frail, in eager pursuit of an unknown good. The men, as the painters show them, have lost the old English calm and poise, and show adaptive characters. In Zorn's portrait of Mr. Daniel Lamont, Mr. Sedgwick finds no trace of imagination, logic, intellect, or faith. Craft, promptitude, and vigor are there, but not reason; amiability and domestic kindliness are present, but the logical faculty is omitted. The chief trait in this typical portrait Mr. Sedgwick finds to be ability to react quickly and effectively to stimuli of the immediate present. In Senator W. A. Clark's portrait by Besnard he finds a nervous spirit that "ramps wildly in the strait compass of the present, knowing no past, unhampered by reverence or respect, foreseeing no future, unhindered by faith or upliftedness." He thinks, though, that it is an exaggerated example of certain American traits, and that Zorn's portrait represents the normal type of the present generation.

Recognizing the possibility that Messrs. Clark and Lamont may wait on Mr. Sedgwick and constrain him to some amendment of his reflections on their looks, we may still admit that he has caught and caged an impression of much interest, and probably of considerable truth. It is possible that in a hundred years the American people has gone off its looks. It is certain that our head men don't look so much like eighteenth-century Englishmen as they did in the days of the Revolution. It may be fairly doubted, however, whether any collection of modern portraits of Americans affords a safe basis for generalizations about the contemporaneous American type. The persons who have their portraits painted by the best painters in these times are, as a rule, persons who are exposed to the wear and tear of expending exceptionally large annual incomes, and trying to get the worth of their money. It is the rich Americans for the most part that Sargent and the other eminent painters depict, and it is the rich Americans who are the most restless. They plunge from end to end of the country, pass and repass the seas, live in a dozen places in the course of the years, and seem to feel the crust growing always hot under their dancing feet. The common run of us take life somewhat easier, and though we may not rival the calmness of the eighteenth-century British squires and the placidity of their dames, yet our wheels certainly do not revolve as fast as Senator Clark's, and it is probable that competent portraits of a scratch lot of us would show a somewhat higher average of peace of mind than Mr. Sedgwick noticed at the portrait show. Moreover, there is not in actual life quite so much mixing of breeds as he suggests, though there is a good deal.

A Native Virginian on the Negro Question

Some interesting and valuable testimony concerning the relations of the blacks to the whites in the Southern States at the date of the emancipation and for some time afterwards is furnished in *McClure's Magazine* by Mr. Thomas Nelson Page, who is a Virginian by descent, birth, and long residence, and who is familiar with the experience of many Virginian families. He reminds us that Mr. Lincoln's emancipation proclamation of January 1, 1863, which, on its face, purported to be issued, not as a matter of principle, but as a concession to "military necessity," was applicable only to "States and parts of States," then "in rebellion." Negroes within territory controlled by the Federal government were expressly excepted from the operation of the edict. A natural outcome of the exception was that some slave-owners dwelling near the Federal lines sent their bond servants into territory occupied by the Federal troops in order to evade the proclamation. A fact mentioned by Mr. Page, but to us hitherto unknown, is the emancipation by General R. E. Lee of all slaves owned by him within eight days after the issuance of the proclamation. The writer of these papers adds that General Henry A. Wise, one of most ultra-Democratic leaders in the South, testified before the Joint Commission on Reconstruction of the Thirty-ninth Congress that, had the Confederacy succeeded, he had intended to set his own slaves free and canvass Virginia for the abolition of slavery. From his own experience, and that of his kinfolk and acquaintances, Mr. Page bears witness that no race ever behaved better than the negroes behaved during the war. Not only were there no massacres on the defenceless plantations, but the number of deserters was not large. The writer avers that, personally, he never knew of one case of desertion on the part of a slave. Viewed collectively, the blacks acted rather like clansmen than like bondmen. Not only did they remain loyal, but they were nearly always faithful to any trust that had been committed to them. Many a master going off to the war confided his wife and children to the care of his black servants with as much confidence as if they had been of his own blood. Mr. Page himself believes that, had negroes been allowed to fight for the South, more of them would have followed their masters than ever volunteered to serve the Union. As Henry Grady once said, "A thousand torches lighted amid the helpless plantations would have disbanded the Confederate army; but there was not one." This exhibition of fidelity is often construed as reflecting credit exclusively on the colored race, but, as Mr. Page perceives, it is really a tribute to both races. Had slavery at the South been the frightful institution that it has frequently been alleged to be, it is inconceivable that the blacks would have so generally refrained from seizing the opportunities for gaining their freedom that were offered them. It is true, however, as Mr. Page recognizes, that the slaves may have been restrained by fear as much as by love. The slave in whom respect for his white masters was inherited, and, so to speak, congenital, could not bring himself to believe that they would not be victors in the end. Nor was it, as Mr. Page reminds us, a new thing for a servile population to shrink from rising against their owners in time of war. Plutarch relates how the besiegers of a certain city not only offered freedom to the slaves, but promised to give them their master's property and wives if they would rebel. Nevertheless, the offer was rejected. The fact is also recalled that during the American Revolution freedom was tendered on the same terms to slaves in Virginia and the Carolinas by British authorities, but with little effect.

Did these friendly relations between white masters and black servants come to an end with the issuance of the emancipation proclamation, or even with the close of the war? Mr. Page testifies that never was the friendship between the races stronger than it was when the war came to an end. The return of a master, we are told, was hailed with as much joy in the negro quarters as it was in the mansion. The first sounds that caught the veteran's ears, as, coming from Appomatox, he neared his plantation gate, were shouts of welcome from the blacks. So, too, the rejoicing with which the slaves hailed emancipation did not relax the ties of affection between them and their former masters and mistresses. The transition from servitude to freedom was accomplished without an outbreak or an outrage; and, so far as Mr. Page's experience and information go, there was not an instance of insolence or rudeness incident to the breakup of the old relation. For years after the civil war, the older negroes remained the faithful guardians of the white women and children belonging to their master's family. Mr. Page gives an adequate reason for the good-will that existed between the races during the civil war, and that contributed to maintain kindly relations for some time afterward—the fact, namely, that, in the slave-owning class, there was scarcely a child who had not been rocked in a colored mammy's arms; whose first ride had not been taken with a negro at his horse's head; and whose playmates in youth had not been the young blacks on the plantation. The whole generation of whites which grew up during and just after the war grew up with the young negroes, and preserved for them the sympathy and consideration which their fathers had exhibited before them. Mr. Page suggests that the feeling may have partaken of a feudal or clan instinct; at all events, the feeling is not easily comprehended by those who have not experienced it.

In the April number of the magazine Mr. Page contends that the conduct of the North towards the negroes was founded on three principles, every one of which is considered by the South fundamentally erroneous. These principles are, first, that all men are equal, and, inferentially, that the negro is the equal of the white; secondly, that the negro needed to be sustained by the Federal government; and, thirdly, that the interests of the negro and those of the white were necessarily opposed. With the practical renunciation of those principles on the part of the Federal authorities, with the overthrow of the carpet-bag State governments, and the extinction of negro domination in the Southern States, the South began to shoot up into the light of a new prosperity. Burdened as she was by debt; staggering under disasters that had well-nigh destroyed her; scarred by the struggle through which she had gone, and scorched by the passions of that fearful time, she set herself with all her energies to recovering through the arts of peace her old place in the path of progress.

It would not be easy to exaggerate the usefulness of Mr. Page's exposition of the conditions of the negro problem. The only criticism that we have to make upon his papers is that he insists upon describing the negro question as the "Southerner's problem." So long as our Federal Constitution and its amendments exist it will be indispensable to commend to the good sense and fair-mindedness of Northerners as well as Southerners a given solution of the negro problem as the right one. This Mr. Page virtually concedes when he publishes his own admirable contribution to such a solution in a Northern magazine.

The English in Tibet

Colonel Younghusband's mission to Tibet had been almost forgotten by the outside world when the news came, the other day, of a sanguinary engagement, in which seven hundred Tibetan soldiers were killed in an hour by the Sikhs fighting under the British flag, the loss to the English party being so slight that the whole thing was more of a slaughter than a battle. Colonel Younghusband seems to have done all in his power to avoid fighting. He was visited at his camp at Guru by a general from Lhassa with a quaint retinue in mediæval garb, and armed with swords and matchlocks, and requested to retire down the valley to Yatung, where negotiations might be carried on without disturbing the interior of the country. Colonel Younghusband replied that he could not consider this proposal, as he had been negotiating fruitlessly for fifteen years—in fact, ever since the Gnatong agreement of 1890, the breach of which by the Tibetans is the cause of the present expedition. The Tibetan general then withdrew, and Colonel Younghusband ordered his troops to try to disperse the Tibetans, who blocked the road, without firing on them. It seemed at first that this could be done, but Captain MacDonald, second in command of the British force, decided that it would be necessary to disarm the Tibetans before they could be dispersed. At this point the Tibetans seem to have advanced against the British force, armed with their matchlocks and swords, and, as they numbered fifteen hundred men, they were evidently in a position to deliver a serious attack, and at this time Colonel Younghusband believed his opponents had five or six hundred rifles. As he was outnumbered three to one, his position was evidently precarious, and it was, as he said, impossible for him to retreat or to avoid an engagement without retreating.

The slaughter which followed has been described by the cables. Amongst the dead, who numbered seven hundred, were the Lhassa general, the military commandant of Phari and Lata, and the representative of the Golden Monastery, to whose influence and rooted hostility to foreign intercourse the present strain between India and Tibet are attributed. The British lost only a dozen in killed and wounded, and returned to their camp at Tuna, whence they will presently begin an advance which is likely to end only at Lhassa, the sacred and mysterious city which has so long attracted our curiosity by its seclusion and by the religious and mystical atmosphere which surrounds it. Tuna, which was the temporary halting-point of Colonel Younghusband's force, is in the Chumbi Valley, a fertile tract which stretches down towards India from the Tibetan highlands, and which lies between Nepal on the west and Bhutan on the east—two states which are in relations of semi-independence with the British-Indian government. Nepal is especially interesting, as being the home of the Gurkas, the plucky race of little hillmen, whose features and fighting have been made familiar to us by Rudyard Kipling.

A timely article in the *Fortnightly Review*, by the celebrated traveller Demetrius Boulger, gives a vigorous statement of the British policy and views which led to this expedition, and helps us to understand its probable progress and ultimate outcome. Tibet is a lofty wilderness, with an area of half a million square miles and a population of only six or seven millions. Large tracts are wholly unproductive, being bare rock or sandy wastes, and

winter, throughout the whole country, is extremely rigorous, owing to its great altitude, as the loftiest table-land in the world. So small is the cultivable area, and so close does the population press on the means of subsistence, that this shadow of starvation is believed to be the origin of Tibet's peculiar institution—polyandry—under which a woman becomes the wife of all the brothers of a family at once, thus diminishing the likelihood of children. It is, further, the custom for one son of every family to enter a monastery, thus still more reducing the parentage of the race, and these monasteries are the real centre of interest of the remote mountain region to the north of the Himalayas. In part, this interest is due to the known presence in their libraries of numbers of Buddhist scriptures which are still unknown to our scholars, and which are believed to contain the secrets and esoteric teachings of Buddhism, and in part to the reputation which some of the Lamas have enjoyed, ever since the days of Marco Polo, of possessing certain mystical and magical powers, as a result of their philosophic studies. The Indian government has for years sought to penetrate the mystery of the hidden Tibetan books, by sending natives of India, like the learned Sarat Chandra Das, deeply versed in the language and lore of Tibet, to study in the Lamaist monasteries and to make copies and translations of the religious works found there. It is certain, therefore, that the present expedition will be well able to appreciate and utilize whatever opportunities it may have to master the secrets of Buddhism as they are hidden in the Lamaist libraries.

It was not, however, any desire to study Buddhistic literature, or to test the mystical powers of the priests and monks, that led to the present attempt to penetrate Tibet's seclusion. Nor can it very reasonably be said that trade is an important object, since a land so unproductive has little to offer, unless it be hitherto unrecognized mineral riches or unknown gold-mines capable of turning it into another Transvaal. M. Boulger attributes the advance of Colonel Younghusband to the ever-present jealousy of Russia, which is, and has been for a half-century, the mainspring of England's foreign policy, from the Mediterranean to the Pacific. England and Russia tend to divide Asia between them, and England has felt herself impelled to expand in every direction from her formerly isolated Indian realm, in order to forestall the advances of her rival. Within recent years the British-Indian government has in this way expanded its frontiers to embrace parts of Baluchistan, the frontiers of Afghanistan, a series of states like Hunza and Nagyr, in the Hindu-kush, to say nothing of Burma, which is, of course, more remote from Russian influence. The new territory thus added to the British Empire, or brought under its preponderant influence, considerably exceeds Manchuria in extent. Tibet itself, which is the present objective of British expansion, is twice as large as Manchuria, and, like Manchuria, a part of the Chinese Empire.

Another motive suggested for the British policy is to gain such an ascendency over the Buddhist Lama hierarchy as will enable England to touch the imaginations of the entire Buddhist population of Asia, and thus consolidate her political influence by a religious sanction. To do this effectually will require a permanent occupation of Tibet, or, at any rate, the establishment of a residency there, such as England already maintains in the tributary states of British India. The British resident in these states, while nominally an adviser, becomes the virtual ruler of the state, and his advice is invariably followed, because it is understood that it will in the last resort be supported by physical force.

It is, of course, true that Russia's war with Japan is England's opportunity to advance her frontiers through the regions of Asia which lie beyond her borders. But if the final truth be told, the cause of the present expedition lies deeper than these logical excuses; it springs from a necessity of adventure in the British character, from an excess of the administrative talent, which is ever seeking new lands to conquer.

The Centenary of Humboldt's Journey

In the year 1804 Alexander von Humboldt completed the epoch-making journey in Latin America which not only gave him his commanding position among scientists, but, by inspiring Charles Darwin with a passionate desire to study nature in the same regions, led to the discovery of the laws of evolution.

Few events in the history of the Western Hemisphere deserve to be more gratefully remembered by Americans on both sides of that line across the Isthmus of Panama which it is to divide, yet bring nearer together, the northern and southern continents; and no event of the past suggests more clearly a method of *rapprochement* which (if our government can take a hint from the great traveller) may prove as valuable in the future as the ship-canal itself. Humboldt writes in the *Personal Narrative:* "We succeeded in conciliating the friendship of the natives, and that of the Europeans entrusted with the administration of these vast countries. During the five years that we travelled throughout the new continent, we did not perceive the slightest mark of mistrust; and we remember with pleasure that, amidst the most painful privations, and whilst we were struggling against the obstacles which arose from the savage state of those regions, we never had to complain of the injustice of men." This splendid result was attained through simple means which are mentioned in the following terms: "During my abode in America, I presented the governors of provinces with a duplicate of the materials which I had collected, and which might interest the mother country by throwing some light on the geography and the statistics of the colonies." Both the Latin-Americans and their European associates were permitted to realize their full and equal participation in whatever gains were to be made. Moreover, all were convinced that the purpose of the journey was not commercial or political; and it was found to be true, as Humboldt has written in another place, that "partial enmities disappear before the advancement of general knowledge, which is the general cause of all nations."

When Darwin was studying at Cambridge he read Humboldt's *Personal Narrative,* and, as he has himself said, all his preconceived ideas of the intertropical regions were taken from the vivid descriptions in that book, "which far exceed in merit anything I have read on the subject." One of his biographers has told us how the Cambridge student tried to communicate to his college friends, "by vehement preachings on the splendors of Brazilian forests," the burning enthusiasm for the travels of naturalists that the book had raised in him; but his opportunity, as is well known, came in 1831, when the British admiralty sent the *Beagle,* under Robert Fitz-Roy, to extend the survey of South-American coasts which had been begun under Captain King in 1826.

While our manufacturers and merchants, and the statisticians of the Treasury Department and other branches of the government at Washington, have been pretty constantly engaged in deploring the control of South-American trade by Germany and Great Britain, and have brought forward ingenious explanations of that unsatisfactory state of affairs, not one of them has suggested that the German Humboldt and the English Darwin opened paths for the commerce of their respective nations. The principle which appeals so strongly to good taste and common sense in Humboldt's method has guided many Germans of later generations, including colonists and plain business men.

"When a government," said Humboldt, "undertakes one of those maritime expeditions which contribute to the knowledge of the globe and the progress of natural philosophy, there is no obstacle to the accomplishment of its purpose." The government of the United States has undertaken a few expeditions to Latin America during the century 1804-1904. Omitting those which related principally to the isthmian canal problem or to political conditions in the extreme south or the West-Indian islands, we may mention the Wilkes exploring expedition (1838-1842) to the Southern Ocean. Again, in 1849-52, a small appropriation was used in carrying on the work of the "United States Naval Astronomical Expeditions to the Southern Hemisphere"—or, more exactly, to parts of Chile and Argentina; and, a little later, certain parts of the valley of the Amazon were explored, not very deliberately, by two officers under the direction of the Navy Department, their orders stating that "the geographical situation and the commercial position of the Amazon indicate the future importance, to this country, of the free navigation of that river." In recent years a number of specialists have been sent out by our learned societies to study archæology, ethnology, etc., within limited areas; since 1900 the most important contributions to the world's knowledge of South-American geography have been made by English and Peruvian expeditions in the western Sierra, and by the Austrian expedition in eastern Brazil. American achievements in this field show as yet like very small plants in the shadow of Köelus and Schomburgk—not to mention again the two greater figures. But the international work of discovery is still far, very far, from being finished there; of the southern continent little more than its rim, and certain tracks leading into or across the vast central region (that fertile desert), have ever been fairly studied by competent persons. The best and latest maps of one-half of the New World are one-half guesswork. The greatest rewards are perhaps still kept in reserve for future scientific travellers.

Assorted Pennsylvanians

It seems that the members of the Pennsylvania Commission charged with the supervision of the State exhibit at St. Louis have decided to place in the Pennsylvania Building some forty portraits of eminent citizens of the Keystone Commonwealth, from the time of Penn down to the present day. Among the forty we find the names of Senator Quay and Senator Penrose, of Governor Pennypacker, United States Attorney-General Knox, and Lieutenant-Governor William M. Brown. General Meade, General Hancock, and General Reynolds are properly enough admitted, but why was General George B. McClellan excluded? Was it because Mr. Roosevelt did not mention that eminent commander in the address delivered by him on the field of Antietam?

Another curious feature of the list is the portrait of Simon Cam-

eron, Secretary of War. When one recalls the brevity of the period during which Mr. Cameron held that office, and the circumstances under which he left it, one marvels at the selection of his name instead of that of Edwin M. Stanton, the great war minister of modern times. Is Mr. P. C. Knox the most distinguished son of Pennsylvania who has held the office of United States Attorney-General? What of Mr. Wayne MacVeagh; of Jeremiah S. Black, who was also Secretary of State in the Buchanan administration, and Chief-Justice of Pennsylvania? What of Richard Rush, who was not only Attorney-General, but Secretary of the Treasury, and minister to the Court of St. James's? We note some other extraordinary omissions in the list of distinguished Pennsylvanians. Why does not the gallery of portraits include William M. Meredith, who was Secretary of the Treasury in the Taylor administration; Joseph R. Ingersoll, whom President Fillmore made minister to the Court of St. James's; George M. Dallas, who was successively minister to the Court of St. Petersburg, Vice-President of the United States, and minister to the Court of St. James's; Judge William Wilkins, who was minister to the Court of St. Petersburg, Secretary of War, and United States Senator; and Alexander James Dallas, who was simultaneously Secretary of the Treasury and Secretary of War in the Madison administration?

Most astonishing of all is the omission from the list of Albert Gallatin, who for thirteen years was Secretary of the Treasury and, with the sole exception of Alexander Hamilton, the most illustrious tenant of that office. Mr. Albert Gallatin, it is well known, was subsequently minister to France and minister to the Court of St. James's. It cannot be that the portraits of Albert Gallatin and Alexander James Dallas have been excluded from this gallery on the ground that they were born in Europe. The same objection would apply to Robert Morris, who was born in Liverpool; to James Wilson, who was born in Scotland; to Commodore John Barry, who was born in Ireland; and to General Meade, who was born in Cadiz. We should also be glad to learn why the tory Benjamin Chew is admitted to the list, while the patriot John Dickinson, the great opponent of the Stamp Act, is excluded. On the whole, we imagine that the gallery of portraits which is intended to adorn the Pennsylvania Building at St. Louis will chiefly impress the visitor by its omissions:

> As Cæsar's pageant, shorn of Brutus's bust,
> Did but of Rome's great son remind her more.

The Delights of the Unexpected

Unless one return to Wordsworth's "trailing clouds of glory," it would be difficult to say just why the most delightful conversationalists in the world are those who have not yet attained to a concrete vision of more than five years' standing. But it is true that we never hang with quite such wide-eyed and breathless expectancy upon the lips of the great sage or fluent orator as we do upon the oracular utterances of a child just viewing the world. Perhaps it is a faint adumbration of that rarest of God-given faculties, originality, pure and unobstructed, that holds us. At any rate, we are rarely disappointed of a little thrill of surprise when we turn to childhood for comment on life.

No two first visions of the universe are alike. "I assert for myself that I do not behold the outward creation, and that to me it is hindrance," said that eternal child, William Blake. "What, when the sun rises, do you not see a round disk of fire larger than a guinea? it will be questioned. Oh no, no, no! I see an innumerable company of the heavenly host, crying, 'Holy, Holy, Holy is the Lord God Almighty!'"

Even so is the perception of the child created from the inner thought and untainted by the traditions and presuppositions of man.

"Let me see," said a tiny fellow, under two, upon being shown the moon for the first time—"let me see; I'll look around and find some more moons," and he scanned the sky hopefully. But the same experiment brought forth a widely varying result from a more literary little maid, who, on being shown the moon for the first time, commented, dejectedly, "Not any cow."

Even the dangers of literature are lessened for the very young by their free powers of rearrangement and application. A little girl of four who had been taken to church reproduced the whole scene with much ingenuity, taking for a text, as she stood in her high-chair, "Lead me in the paths of righteousness in the presence of mine enemies"; and then descending and donning her father's old college cap, she sang with vim and endless reiterations, "Let your light so shine, little brother, let your light so shine that God will not put you in a bushel."

Religious instruction as sifted through the childish intelligence often results oddly, and one little girl of strong theological predilections was heard instructing a younger child thus: "Now, I'll tell you exactly how I am made. First, there is little round me that is busy and does things; over that I wear a skeleton of bones and then all the sinful lusts of the flesh." Upon the superficiality of sin she might have been interpreted as having definite convictions, but when it came to the nature of Deity, patriotism obstructed her vision, for she wavered and finally confessed, "I don't know much about God, anyway; only one thing for sure, He is a Virginian."

A little boy, gazing with real joy at a full moon, said, confidently, "It is very beautiful, and I made it myself." He was taken aside and reprimanded for laxity in integrity, but prolonged argument only resulted in the sobbing protestation, "Perhaps I did not make the realness of it, but I know I made its shape and its shining." Such was the appearance of good faith that the disconfited representative of stern morality retired with a confused sense of dealing with a full-fledged Fichtian philosopher of five.

At that early age not only life, but art, is full of suggestion, and much theory of life is built up upon pictorial representations. A small chubby baby, upon being reprimanded for escaping while he was being undressed, and running about his room in a state of nature, turned at once to a Raphael Madonna over the fireplace, and pointing to the infant Jesus, said, triumphantly, "He used to done it."

"When they bury the body," he asked a sister a year or two older, "how do they start the soul up to God?"

"Why, don't you know?" she said, surprised. "They chop the head off and tie little wings to the neck, and it wings straight up."

On being told of a friend's death, a little girl of six stood wondering, round-eyed and rosy, at the foot of her bed, and swiftly propounded these questions:

"Did her body get to heaven?

"Will her soul take up her skeleton?

"Does a soul have any kind of feet?

"When she gets there will God put an angel head upon her?

"Will she wear a shirt-waist and skirt?

"Will Jesus walk down to the gate and hand her out a judgment?

"When will she get her judgment?

"Will she climb up the steps to heaven or will angels carry her? My hymn says *steps* up to heaven.

"Will she see Jesus at last, *in the real?*

"And will she see God, *in the real?*

"I don't want to die, because of the valley of the shadow of death; that must be very dark."

Then, without a pause, came, as a conclusion, a quick laying aside of the whole sad matter, as she sang out, cheerily, "I am going to hop to my bath on one foot," and she did, chanting as she went, "D-e-a-d—dead, dead, dead."

It is worthy of note that in earliest life the intimacy with great mysteries is closest, and the same child who at six set the questions above, at three, when she was asked by a little brother, "What was the names of those angels that brang me down from heaven?" she responded, without an instant's hesitation, "One was Star-Bright and the other was Pleine-de-grâce." When she was cross-examined as to how she knew, she looked inscrutable and only said, "I always knowed."

To the gentleness and delicacy of childish methods too high a praise cannot be given. No childish comment bears a sting, and when it is unfavorable it is apt to be conveyed in a negative and reluctant way. "Is that lady's back broken?" asked the little girl of the caller that had just left. "No? I thought it might be; she's so *un*tall." And the nurse was referred to, in a hushed aside, as "pretty unpatient and discomsatisfied to-day."

Little boys seem to be born with a greater feeling of independence and less desire to deal tenderly with the universe. "How can you be naughty when you're just off your knees after asking God to make you good?" But the little boy answered, sturdily, "I told Him to do it, but if He can't do it by Hisself I won't help Him."

As a remedy for the disease of world-weariness, as a refuge from all that is "flat, stale, and unprofitable," there is nothing more delightful than a daily hour in the nursery when conversation flows freely.

Prison Reform Needed

The Prison Association of New York, of which Mr. Charlton T. Lewis is chairman, sets forth in its annual report the very serious defects in the prison system of the State. One great trouble is that no State authority exercises any control over county jails or county penitentiaries, and the jails, and even the State prisons, differ so much in unpleasantness that the penalties of courts do not represent any uniformity in punishment or discipline. Moreover, the constitutional amendment which provides that prison-made goods shall not be sold in the open market has destroyed the industries of the county penitentiaries, so that thousands of county prisoners are practically condemned to absolute idleness, and are maintained in that condition by the taxpayers. It is a very bad state of things, due to the fact that prisoners have no votes and little influence. Our jails need more influential inmates. A little precautionary interest in prison reform by able citizens who find their present profit in breaking laws and buying legislation might be very seasonably bestowed.

PHOTOGRAPH OF RUSSIAN OUTPOSTS IN THE MOUNTAINS OF NORTHERN KOREA

Recent reports from the Far East indicate that the Russians and Japanese continue to increase their forces in northern Korea. With the arrival of General Kuropatkin at the front it is expected that the Russians will begin a more aggressive campaign, and within the last three weeks skirmishes between the outposts have become more frequent. The photograph shows a detachment of Russian sharpshooters in the mountains of northern Korea on March 1 preparing to meet a company of Japanese scouts

PHOTOGRAPH OF RUSSIAN TROOPS INSIDE THE WALLS AT NEWCHWANG

It is reported from reliable sources that Russia now has in Manchuria an armed force of nearly 200,000 men. In a despatch from St. Petersburg, giving a list of the troops in the Far East, the following figures are given: At the end of March there were in Manchuria 170,000 infantry, 17,000 cavalry, and 256 cannon. Of this force, the larger part is concentrated in southern Manchuria, although the strategical front extends from Vladivostok to Newchwang. It is estimated that by the end of June 130,000 more infantry, 30,000 cavalry, and 250 cannon will have been sent to the front. The photograph shows an infantry drill of Russian troops inside the walls at Newchwang, which Russia has recently declared a war-port

SCENES FROM NEWCHWANG, RUSSIAN WAR-PORT IN MANCHURIA

On March 27 Viceroy Alexeieff issued orders declaring Newchwang under martial law. All foreign consuls and residents were notified, and American and British flags were removed from the property of citizens by the Russian admiralty. The rumor that the foreign governments would protest against the action of Russia has been denied, and it is now officially announced that no opposition to the Russian declaration will be made by the United States or by the other powers

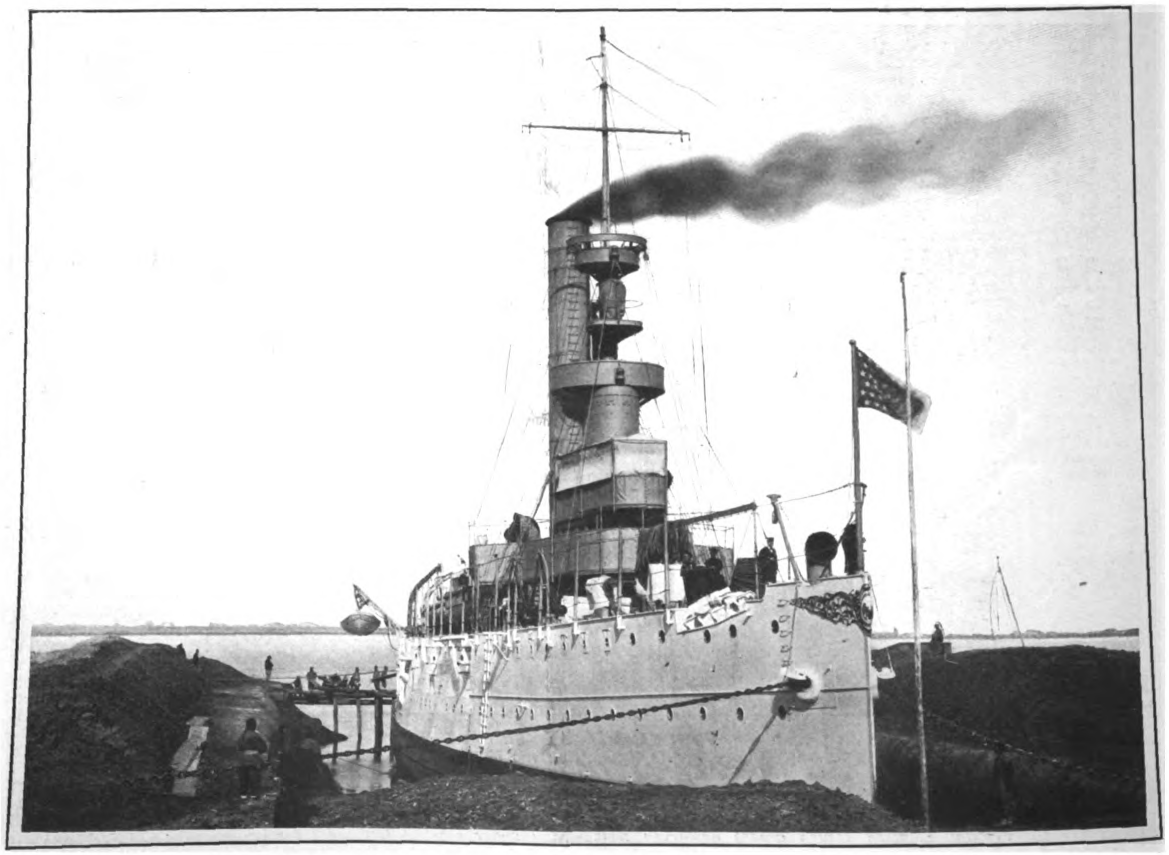
The Russians in Manchuria

By Frank Madison

NEWCHWANG, CHINA, *March 5, 1904.*

FROM the moment I arrived here I found that the Chinese loathed the Russians, who have treated them harshly and enforced upon them many despotic laws. They have prevented the Chinese from having firearms, and thus rendered the farmers and those living in small villages helpless against the bands of brigands that infest Manchuria. However, this order has not prevented many from secretly obtaining rifles—generally modern Mauser infantry rifles—which they keep hidden.

The Russians have forced the Chinese to make many improvements of undoubted advantage; but the forceful methods used have been very distasteful and irritating to the Chinese. The fines imposed have been unreasonably large. Chinamen are arrested for trivial offences, which in most cases are practically not offences at all, and heavily fined for them. The Russians have charge of the Chinese native taxes, the revenues from which they spend for the improvements in Manchuria, which are costing *the Russian government* so dearly! These revenues are paying for many of the improvements which the home government is supposed to be making. The Chinese resent this treatment and bitterly hate the Russians, and they have no hesitancy in telling you their opinion of them—"No likee Lussian man, tleat Chinaman velly bad, makee steal, makee 'squeeze,' no pay money. Lussian man no belong ploper."



The Japanese have spies throughout Manchuria, dressed like Chinese and wearing pigtails, so that it is next to impossible for the Russians to detect them. There is nothing going on in Manchuria that the Japanese authorities do not learn of very shortly afterwards. Their system of intelligence is comprehensive and efficient, and the Russians know it, but can do nothing to prevent them getting this information. It is the general opinion that the Japanese spies and the Chinese, with whom they are on friendly terms, will cause much damage by blowing up bridges on the Russian railway and cutting telegraph lines.

The Russian army in Manchuria is far from being ready for war, according to the statements of Russian officers. A Russian officer told me a few days before the Japanese attacked the Russian fleet at Port Arthur that, if the Japs should declare war and make an invasion of Manchuria, the Russian army would be defeated and driven back, but that they had no fear of the Japs declaring war for some time, and by that time Russia would be ready, and would defeat the Japanese army in Manchuria, then take Japan, and the war would be finished!

The news of the Japanese attack on the fleet at Port Arthur struck the Russians like a thunderbolt. They expected Japan to wait until Russia's procrastinating diplomats had killed time pending Russia's preparations! On the night of the torpedo-boat attack on the fleet at Port Arthur most of the Russian officers were ashore attending a ball given by Admiral Alexeieff, or enjoying themselves otherwise. When they heard that the Japanese had attacked their fleet they refused to believe it, as war had not been declared, and continued their merrymaking until officially summoned to join their ships. They evidently expected the Japs to send them notice that war had been declared, and, with true Oriental courtesy, to wait until they were ready; then, after notifying them what time the Russians might expect them, make their attack when the enemy was ready and waiting! They were very indignant and irate at the underhanded manner in which the Japs had taken them by surprise.

The following incident is told of the captain of the Russian battle-ship *Retvisan*, which was torpedoed in the night attack of February 9: The officer of the watch on the *Retvisan* discovered the Japanese torpedo-boats steaming in towards the harbor and close aboard. He hurriedly went below and reported to the captain that Japanese torpedo-boats were entering the harbor. The captain told him that this could not be so, and that it must be some Russian torpedo-boats that were expected that night. Just then a tremendous explosion which shook the huge battle-ship from stem to stern, convincing the captain that the torpedo-boats were Japanese, after all. When the Japanese government issued the order recalling their subjects from Manchuria, the Japanese consul at Tientsin chartered a steamer to take all of the Japanese away from Port Arthur, taking with him on the steamer his personal servant. This Japanese coolie who was waiting on the consul was Captain Moorè of the Japanese navy. He went in disguise to obtain information in Port Arthur, and found out just how the Russian fleet was anchored and all of the other information he wanted. A few days later three of the best Russian ships at Port Arthur were torpedoed.

The Chinese in the interior of Manchuria are rising, and are forming bands to harass the Russians. These bands are called *Hung Hoodzas* (Red Beards) by the Chinese, and are composed mostly of robbers and bandits who know the country so well that the Russians will have little chance of capturing them. With the Japanese army advancing from the south and the *Hung Hoodzas* harassing them on the north, the railroad blown up so that

THE WORK OF CONSTRUCTION ON THE TRANS-SIBERIAN LINE AROUND THE SOUTHERN SHORE OF LAKE BAIKAL

The construction of the railroad around the south shore of Lake Baikal is the most difficult problem which has confronted the Russian government in the building of the Trans-Siberian Railway. The mountainous country makes it necessary to tunnel frequently, and the laborers suffer great hardships on account of the intense cold. The Russian government has abandoned the idea of transporting troops across the lake on the ice railway, which is now being used to carry supplies only. Work on the circum-Baikal route is being hurried forward, but it is not thought the line will be finished before fall. Meanwhile the troops arriving from St. Petersburg for the East are carried across Lake Baikal on sledges

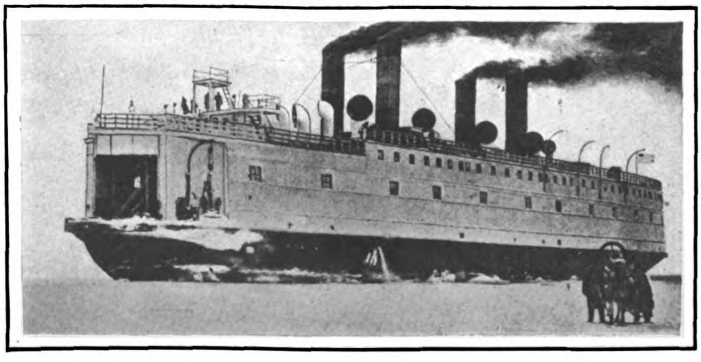
reinforcements will be long delayed, and the telegraph lines cut, the situation of the Russian army is becoming insecure.

The United States steamer *Helena*, which represents our navy here, arrived in Newchwang on the 5th of last November, and immediately went into mud dock for the winter. As the winters here are very severe, the river having ice three or four feet thick upon it, it is necessary for a ship remaining here during the winter to have a hole dug in the river bank to fit her, and remain in this mud dock, as it is called, until the river opens in the spring. There are three gunboats wintering in Newchwang this winter—the British gunboat *Espiègle*, the Russian gunboat *Sivoutch*, and the *Helena*.

To protect the upper deck from the cold, the ship is housed over with matting, so that drills may be held during the cold weather. The dock is sealed at the end by a mud dam, and contains water, the level of which is just below the draft of the ship, so that the ship rests lightly upon the bottom. The auxiliary machinery of the ship is used as in ordinary service, the dock water being used for condensing. The hot condensing water that is discharged into the dock keeps the water warm in spite of the cold weather. The mercury has several times been down as low as twelve below zero, but the lowest temperature that the dock water has reached is fifty-seven degrees, and the mean is about sixty-seven degrees.

The *Helena's* men have a gymnasium, recreation hall, and reading-room ashore, which they enjoy immensely, as the first two cannot be had on board ship. During November, before the weather became too cold, every Wednesday and Saturday would see two bluejacket teams lined up for football. Basketball is also popular, teams from the different divisions playing every day until it became too cold. The bowling alley in the recreation hall is the source of the greatest enjoyment, as it is not interfered with by the weather. The men are bowling with great interest for a silver loving-cup which is to be given to the one who makes the highest score during their stay here.



The officers have Manchurian ponies, and form a polo-team which plays the Newchwang team. Although the polo is not of the most scientific quality, it is quite a novelty for seafaring officers, and is the only *all-navy* polo-team on record.

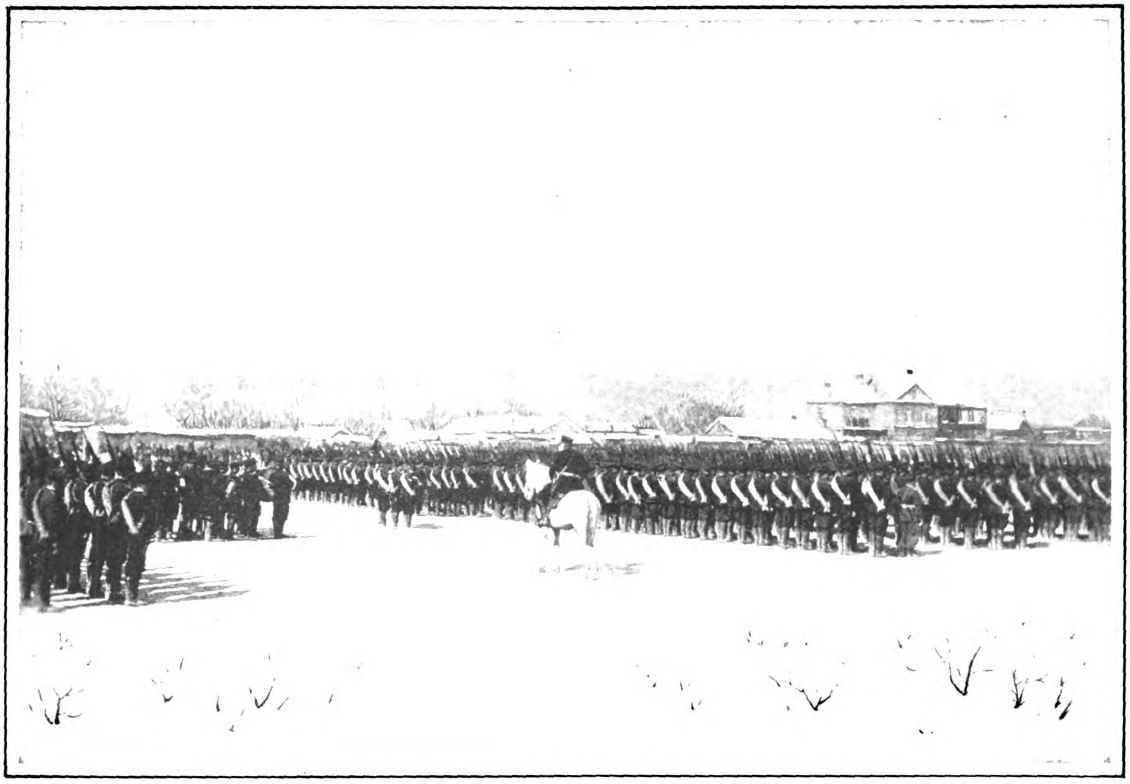
The Strength of Russia on Land and Sea

By Charles Johnston

FIRST among Russia's still untouched resources must be reckoned the Vladivostok flying squadron, of which we have heard so much and seen so little. It was at first under the command of Baron Stachelberg, a veteran of the Russo-Turkish war; but Baron Stachelberg suffers from an old wound in the head, which brings relapses of epilepsy, and his command has been transferred to Captain Reitzenstein, one of the innumerable officers of German extraction in the service of Russia. The biggest ship in the Vladivostok squadron is the *Gromoboi*, of 12,336 tons displacement, and therefore heavier by two thousand five hundred tons than the heaviest cruiser in the Japanese fleet, and outstripping our own heaviest cruiser by an even greater amount. She has a primary battery of four 8-inch quick-firing guns in armor casemates, supported by sixteen 6-inch quick-firing guns, and no less than forty-eight of lesser calibre, with five torpedo-tubes. This big ship can do twenty knots, and is exceeded in weight by only four cruisers in the British navy, there being nothing else of her class to equal her elsewhere in the navies of the world. Second in the Vladivostok squadron comes the *Rossia*, launched three years earlier, and within two hundred tons of the same displacement. She has also four 8-inch and sixteen 6-inch quick-firing guns, and forty-eight of lesser calibre. She has a belt of armor five to eight inches thick, but her batteries are not so well guarded as those of her bigger sister. She can also do about twenty knots, which would take her across the Atlantic in about six days. This ship has six torpedo-tubes. Of less speed is the *Rurik*, displacing 11,000 tons, or about twelve hundred more than Japan's best cruiser; she has a similar armament, though not quite so extensive, and only four torpedo-tubes. Add the *Bogatyr*, built in Germany, a much lighter, but also much faster ship, doing twenty-three knots, and thus able to keep up with the fastest ocean-greyhound. She displaces 6500 tons, and has twelve 6-inch quick-firing guns and eighteen of less weight. This new and rapid ship will doubtless scout for the squadron, and there are only four Japanese ships, all cruisers of less tonnage, that could keep up with her. The work of this Vladivostok squadron will be to attempt to prevent Japan landing troops anywhere on the outer coast of Korea, whether at Wonson, at Possyet Bay, or anywhere between. At the beginning of the war the only ships fit to cope with this squadron were the six Japanese battle-ships, two of which are at present disabled, according to the best information, while the other four are at Port Arthur. It would seem, therefore, that the Vladivostok squadron will be equal to its task, and that Japanese troops will be able to land only on the inner coast of Korea, at Chemulpo, and other harbors of the Yellow Sea.

Let us now take stock of the Port Arthur squadron, so far as it is known to be still effective. Leaving out the two battle-ships at present and for some time likely to be under repairs, Russia has still no less than five large battle-ships at Port Arthur, to meet the four battle-ships of Japan. These are the twin ships *Perisvet* and *Pobieda*, each displacing 12,674 tons, with a primary battery of four 10-inch guns, supported by eleven 6-inch quick-firers, and no less than fifty smaller guns, once more exemplifying the fact that the Russian ships are the most heavily armed in the world. These are eighteen-knot ships. They have Belleville boilers, and a very large coal-supply; their big guns are in turrets, and their armor is Harvey steel. Admiral Makaroff has three more battle-ships still intact: the *Petropavlovsk*, the *Poltava*, and the *Sevastopol*, each of 11,000 tons displacement, and with a primary battery of four 12-inch guns; each of these three ships has also twelve 6-inch quick-firing guns, and thirty-four guns of smaller calibre, as well as six torpedo-tubes. They can do from seventeen to eighteen knots, and have the peculiarity that eight of their 6-inch guns, like the 12-inch guns, are carried in pairs in turrets on the upper deck.

A Photograph of the Russian Ice-Breaker in Vladivostok Harbor



This gives Admiral Makaroff a battle-ship tonnage at Port Arthur of 58,230 tons. Let us compare this with the present force of Japan. The latter, we are reliably informed, has two of her six battle-ships, the *Mikasa* and *Yashima*, under repairs at Sasebo or Nagasaki; we may count them out against the *Retvisan* and *Czarevitch*, repairing in the Port Arthur docks. Their absence leaves Japan a battle-ship tonnage of 58,420 tons, within two hundred tons of that at the disposal of Admiral Makaroff. The willingness of the latter to take the offensive becomes the more intelligible; and that this was not done before is almost certainly due to the fact that the Port Arthur channel was blocked by the *Retvisan*, which has only recently been floated, thus allowing the ships in the harbor to get out. It is less easy to take accurate stock of Admiral Makaroff's strength in cruisers. The *Pallada*, a 6500-ton protected cruiser, is under repairs, and will shortly be ready for service; at present, however, she is not effective. The *Boyarin*, a twenty-five-knot ship, displacing 3000 tons, was reported to have been blown up, by striking a Russian mine, and her name has not recently appeared in accounts of naval skirmishes, so that we may omit her provisionally. This leaves Admiral Makaroff four cruisers—the *Bayan*, an armored cruiser launched in 1900, and displacing about 8000 tons, thus coming close to the best ship of her class in our own navy; she carries two 8-inch quick-firing guns, eight 6-inch quick-firing guns, and twenty-seven guns of smaller calibre; the *Askold*, a protected cruiser, a twin ship to the *Bogatyr*, already described; the *Diana*, also displacing 6500 tons, with eight 6-inch quick-firing guns, and thirty-two of lesser weight; and, finally, the *Novik*, used by Admiral Makaroff as his flag-ship recently, and having a speed of twenty-five knots, about equal to that of an ordinary fast train; this rapid boat displaces 3000 tons, with six 4.7-inch quick-firing guns, and is a sister ship to the *Boyarin*, about whose loss there is some doubt. Add to these five battle-ships and four cruisers some four or five destroyers and six or eight torpedo-boats, and it is evident that the Port Arthur squadron is still quite formidable, being of almost identical tonnage with the Japanese fleet opposed to it.

These two squadrons will in due time be reinforced. I believe it quite certain that the Black Sea fleet will remain where it is, and that no attempt, diplomatic or otherwise, will be made to bring it through the Dardanelles. But there is still the Baltic fleet to fall back on, and here Russia has her great naval reserve. Plans have been perfected for sending the Baltic fleet, with an army of colliers, rigged with special apparatus enabling them to coal at sea; so that there is at present nothing to prevent the reinforcement of the Vladivostok and Port

Arthur squadrons in three or four months' time. These reinforcements will consist, first of all, of three ships which were on their way East when the war broke out, but which returned, it will be remembered, to the Mediterranean. First comes the *Oslabya*, a sister ship to the *Perisvet* and *Pobieda*, displacing 12,674 tons, and carrying sixty-five guns from 10-inch down. Besides this battle-ship, there are the armored cruiser *Dmitri Donskoi*, of about 6000 tons displacement; and the *Aurora*, displacing 6500 tons, and sister to the *Diana* and *Pallada*. These three ships were in the Red Sea when the war broke out; but Russia had far more important reserves at Cronstadt and in the Baltic. They are likely to start East in June or July, though some of them may go earlier. This second reserve includes, as its most important element, three recently launched battle-ships, the *Borodino*, the *Alexander III.*, and the *Orel* (*Eagle*), each displacing 13,400 tons, with eleven inches of armor, and very heavily armed. Each of these ships is heavier than any battle-ship Russia had in the East at the beginning of the war, and our own navy has as yet launched nothing to equal them. Next we have the two battle-ships *Kniaz* (*Prince*) *Suvoroff* and *Slava* (*Glory*), each displacing 13,100 tons, and with the same armor and armament. All these five battle-ships are bigger and heavier than anything in our navy, and the oldest of them was launched only three years ago. There are four more battle-ships still to be added, the *Emperor Alexander III.*, the *Emperor Nicholas I.*, and the *Navarin*, each displacing 10,000 tons, and the *Sissoi Veliki*, displacing about 9000. Russia has, therefore, still about a hundred thousand tons displacement of battle-ships as an untouched reserve, while Japan has all her ships in commission or under repair. As we saw, the Port Arthur and Vladivostok squadrons are about equal in both battle-ship and cruiser tonnage to the presently effective ships of Japan, while the battle-ship reserve available for Russia is about double that of the present battle-ship strength of the Japanese navy. Excluding the Black Sea fleet, therefore, Russia will, in three or four months, have about three times the weight of battle-ships in the East that Japan has; or, supposing that the present equally balanced fleets destroy each other, Russia has still a battle-ship fleet half as large again as that of Japan at the beginning of the war with which to renew hostilities. One cannot avoid the reflection that this is the factor likely to involve the British navy, as England would almost certainly come to the aid of her ally Japan should the latter lose heavily in new naval engagements.

To turn now to Russia's land forces. Let us consider first the total available from all sources, and then that part of this total at present in the Far East, or on the way thither. Every year nearly a million young Russians reach the age of twenty-one, and are thus liable to conscription. Of these something over 200,000 are annually recruited and drilled. It will be remembered that this is slightly more than four times as many as the new recruits annually added to the Japanese army. The term of service is also longer, being five years in the European Russian army. Thus, multiplying by five, we have something over a million men at any time in the Russian garrisons, in time of peace, with four or five times as many young men between twenty-one and twenty-six, who might be recruited to fill their places. The First Reserve of the Russian army consists of men who have completed their five years' service in the active army, as described, and they form part of this reserve for the next thirteen years—that is, until the age of thirty-nine. Allowing for the average number of deaths there are about two and a half million of these first reservists at any moment ready for service with the colors; the oldest of them is about thirty-nine, and they have all had five years' drill and training. The Second Reserve consists of men who have served in both the active army and the First Reserve, and they keep this status until they are forty-four—that is, for five years longer. Of these second reservists there are about three-quarters of a million available at any time.

The Mobilization of Russian Forces in the Far East—A Regiment in Heavy Marching Order drawn up for Review inside the Wall of Newchwang

We must add the Cossack regiments, of which there are a large number, both cavalry and infantry. Of the Cossack horsemen there are some fifty thousand in the Russian army, in part distributed among the Russian cavalry as seasoning, in part formed in exclusively Cossack regiments. There are also about ten thousand Cossacks formed in infantry regiments; and a large proportion of these are in the outposts of the Far East.

We may gain a general idea of the vastness of the Russian army if we remember that it has at present, in war-time, seventy-five thousand commissioned officers—that is to say, Russia could substitute a commissioned officer for every enlisted man in our own army and still have some fifteen or twenty thousand officers left over: far more than sufficient to officer the entire British army. It must be remembered, of course, that Russia has an immense frontier to guard, beginning with Finland, passing by Poland to the Austrian and Turkish frontier; continuing along Asiatic Turkey and Persia, to Afghanistan, Turkestan, and China, and ending with the north of Korea, near Vladivostok. The forts cannot be denuded, especially along the European frontier, no matter how excellent may be the relations of Russia with the Triple Alliance, no matter how fair may be the speeches of Abdul Hamid in the Balkan peninsula. Therefore only a part of the vast army described can possibly go to the Far East to fight Japan. Let us try to estimate the numbers of troops there or on the way.

Ordinarily speaking, the forces of Russia in the Far East in-

Books and Bookmen

By James MacArthur

"HERE is a book," said a well-known New York editor the other day, tapping the open pages of Gertrude Atherton's new novel, *Rulers of Kings*, lying on his desk, "which everybody is going to be reading and talking about. Why? Because it is a book of the moment. Because it deals with people and interests and movements that are big and real in everybody's mind this very minute. Furthermore, because it is as romantic as any historical romance I have ever read." And I believe he is right. With the passing of the vogue of the historical novel we have been asking: What will take its place? The reading public still loves romance—it will love it as long as there is a lover and his lass—but it has grown tired of the paraphernalia of historical fiction, and craves something vital and immediate, something that stirs in the blood of its own generation, and calls clamorously to be heard. It reads as it lives in the present tense. I think it is Professor Brander Matthews who has said that the best of all historical novels is that which deals with contemporary history. The description fits *Rulers of Kings* exactly. Nowhere has the attempt to write an historical novel of the present day, with portraits of actual royalties, emperors, princes and princesses, written as one writes of the past, been so daringly yet successfully achieved. Again, we must record, as we were moved to do two years ago, on the appearance of *The Conqueror*, that Mrs. Atherton is a woman of surprises and unbounded resources. She has given us a new thing.

With the publication of *The Aristocrats* some three years ago Gertrude Atherton may be said to have entered upon a literary career which has gained her the admiration and respect of the literary world. However we may differ about the character of her work previous to this event, it is undeniable that a line of cleavage separates the books she has written before and since that time. Yet one point must be granted. Mrs. Atherton's literary power and aggressive personality were forceful enough even to surmount the test of anonymity. When she elected to publish *The Aristocrats* anonymously she took a step that bore the best results for her subsequent career, it was the wisest thing she could have done, and was characteristic of her wonderful sagacity. It had become the custom in this country to greet each successive work of hers with a certain amount of abuse, and it seemed impossible for her to expect fairness and justice from her reviewers. Curiously enough, the papers which had been most consistent and constant in denunciation were the loudest in applauding *The Aristocrats*. When *The Conqueror* followed this book a year later, the tide of favor was at flood, and no author could count on a warmer welcome for a new work than the author of *Ruler of Kings*.

Mrs. Atherton plunges into the heart of the matter without parleying. "When Fessenden Abbott heard that he was to inherit four hundred million of dollars," so runs the opening paragraph, "he experienced the profoundest discouragement he was ever to know, except on that midnight ten years later when he stood on a moonlit balcony in Hungary, alone with the daughter of an emperor, and opened his contemptuous American mind to the deeper problems of Europe." But before he was to learn of his inheritance, he had to undergo a long and hardy apprenticeship, first as child and boy in the bracing atmosphere of the Adirondacks, and later as a youth of mounting dreams and levelling aims in a Western university. Not until he was fitted in body and mind and ready to acquit himself as a leader of men and movements, not until he had undergone the most arduous training in self-help and self-reliance and had planted himself broadly and firmly on his own feet, did his multi-millionaire father disclose to him the fact of which he had kept him designedly in ignorance that he was the heir of millions of dollars. When he was ten years old his father furnished him with a companion and a tutor who was in his confidence. On that occasion, Abbott senior taught Abbott junior the following words, and enjoined him, should he forget them, to rise in the coldest and darkest night, stand in the middle of the room, and repeat them twice: "Life is a fight. Millions fail. Only the strong win. Failure is worse than death. Man's internal strength is created by watching circumstance like a hawk, meeting her every spring stiff and straight, laughing at her pitfalls—which in the beginning of life are excess, excess, and always excess, and all manner of dishonor. Strength is created by adversity, by trying to win first the small battles of life, then the great, by casting out fear, by training the mind to rule in all things—the heart, the passions, the impulses, which if indulged make the brain the slave instead of the master. Success, for which alone a man lives, if he be honest with himself, comes to those who are strong, strong, strong." Then he added: "When you have finished that I want you to repeat 'No' aloud for ten minutes. The time will come when you will rejoice that 'No' flies instead of moving reluctantly to your tongue. As for that prayer I have given you, you may not understand it all now, but you will as you grow older, better and better; you will analyze and ponder upon it. Life is choked and gasping with young men trying to get a decent living, with thousands besides struggling for a career, a reputation. I shall do my best to educate you, but I want you to grow up with the distinct understanding that you must support yourself when that preparatory period is over."

Such was the start and of such the stuff with which young Abbott had to carve his way out into the world of men. The first part of the book is devoted to the making and building of his character in the bracing solitude of the Adirondacks and the isolation of university life in the West. No one knows the West and the Adirondacks and their silent resistless influences better than Mrs. Atherton. The second part follows young Abbott's career, briefly upon certain vast enterprises and triumphs among the republics of South America, and for the most part in Europe. There he meets and forms a friendship with Kaiser William of Germany, who plays a formidable part in the development of the story. There, too, he meets the Archduchess Ranata Theresia of the Austrian court, through his sister Alexandra, who has been an intimate friend of the princess for some years previous. The grand passion that involves Fessenden Abbott and the Archduchess partakes of their strong and commanding personalities; the issue of their conflicting wills is foreordained, but the difficulties in the way of an American citizen overcoming the pride and patriotism of a royal princess seem insurmountable. The turmoil of politics and the fate of nations are intermingled with the passionate strife for conquest in two great hearts, and Mars and Venus fight in their courses for the lovers. How the American won his princess, how he met the Emperor of Germany and the Emperor of Austria in high conclave, and demanded and wrested from the latter his consent to his marriage with the Emperor's daughter must be left to the reader. The charm of the idyllic current that flows quietly through the earlier period of Fessenden's life, gives way in these later chapters to the fascination of the romantic surge that rocks and reels with stupendous issues for Europe, while this young lord of the earth holds the future in the hollow of his hand. It is the most dramatic and daring of climaxes, yet in no wise improbable or unsatisfactory to the scientific imagination, whatever canons of art may be advanced to dispute the dénouement. It is impossible to do more in any review of the book than barely to hint at the trend of the story. It must be read to enjoy and appreciate adequately the extraordinary nature of its supreme interest and attraction. It is unquestionably the book of the moment.

The Magic of Radium

By Louis Bell, Ph.D.

A NIMBUS of speculation soon surrounds any important discovery in science, but rarely with so lurid an effect as in the case of radium. Radium is startling enough on the most conservative terms, but when recently some of the phenomena connected with it were adduced as actual evidence for the transmutation of metals, and there began to be grave discussion as to the probable result of a wholesale manufacture of gold, it was time for cautious investigators to call a halt and to consider the matter soberly. Traced to its source, the sensational rumor had its origin in a brief and business-like paper presented to the Royal Society by Sir William Ramsay, announcing that the rare gas helium had been produced from the gaseous emanations of radium bromide. To get a clear notion of what this implies one must recur to the relations already established between the so-called chemical elements. When the properties of these elements, so far as known, have been classified, it is found that the whole list, some eighty or ninety in number, can be divided into a set of groups, the members of which are allied in a very systematic fashion. A typical group of this sort is composed of the metals lithium, sodium, potassium, rubidium, and cæsium. The physical and chemical properties of these present regular gradations, so that if, for instance, potassium were not yet discovered, its properties and those of its principal compounds could be very accurately predicted. Several times, in fact, such predictions have been made to fill up apparent gaps in existing groups, and the metals, afterwards discovered, have verified these predictions with remarkable precision. The kinship of the allied elements is often so close and striking as almost irresistibly to compel a belief in their structural similarity and possible derivation from some common basic stuff. And since the several groups glide into each other by rather easy gradations, the idea of a single fundamental form of matter is a rather old and common one. But it is a long way from the hypothesis to a demonstration and farther still to the production of one element from another.

Nevertheless, there have been some systematic, but thus far futile, attempts at breaking down one element into another, and some twenty years ago a very distinguished scientist thought that he had actually produced zinc from cadmium, and announced the discovery in a communication to the Academy of Sciences in Paris. That body shrewdly and quietly passed it over to its committee on papers, which in turn referred it back to the author, with a poisonously polite request for further particulars, and that was the end of the matter. Later, the reputed discoverer found zinc as an impurity in his cadmium, as had been suspected. More recent attempts in similar directions have been likewise fruitless, although in more than one instance some rare substance, at first supposed

to be a well-defined element, has proved to be a mixture of elements separable by chemical processes only with extreme difficulty.

After this excursion into first principles one may better judge the evidence in the radium case, premising that by the term radium is meant here, as generally, not the metal which has not yet been isolated, but more or less impure radium bromide derived from uranium ores by a very tedious and troublesome chemical process. The facts are substantially as follows: Radium gives off spontaneously a heavy gas endowed with radioactive powers akin to those of radium itself. These properties it retains, and remains unaltered in spite of the most drastic chemical treatment. The gas is thus apparently very stable and singularly inert, but can be condensed by the intense cold of liquid air, extracted by an air-pump, and in other respects treated like an inert gas of far less spectacular attributes. Now one of the most remarkable properties of radium bromide is that it sets up a slow spontaneous decomposition of water, in which it is dissolved. In the resulting gases, after separation of the hydrogen and oxygen and the chilling out of the less volative components by liquid air, traces of helium were detected by the spectroscope, together with traces of something else, which gave a spectrum not yet identified. This was an interesting discovery, but since helium was already known to exist in minerals containing uranium, its appearance was perhaps not altogether surprising. At the next step in the investigation, however, something happened. Radium gas, such as has just been described, purified by condensation with liquid air, was passed into a vacuum-tube and sealed up. An examination of the spectrum showed no trace of helium, but after four or five days the helium spectrum appeared distinctly, and with it the undetermined spectrum previously mentioned. Originally, the radium gas showed a spectrum different from either of these new-comers. In short, the radium gas appeared to have broken up spontaneously into helium and a gas hitherto unknown. This is the actual physical basis of the brilliantly colored reports, involving the transmutation of metals, with roseate visions of making gold by the ton looming large against the horizon. The evidence, did it concern any other substance than radium, with its glamour of mystery, would be regarded as showing conclusively that radium gas is not an element, but merely an unusually stable chemical compound. Of course it is somewhat difficult to see how a gas which resists very violent chemical treatment can break up merely by standing, but this difficulty is not diminished by supposing the gas to be an element instead of a chemical compound, and, in either case, radium gas is known to attack glass, giving it a violet tinge even in a single night. And substances are already known which resist very violent treatment for hours completely, but yield quite freely when sufficient time is taken.

Just now a popular hypothesis regarding radium is that it eventually disintegrates through its radioactive action, and in the light of this doctrine radium gas has been supposed to be an element derived from radium, and in its turn giving helium as one of the final products. If this hypothesis be correct, one element has been converted into a simpler one, and this again into one or more still simpler. It is certainly a very attractive notion, and in view of the known relations between elementary substances (so called), is not inherently highly improbable. If radium were a fairly common substance the question would soon be settled one way or the other. But working with almost infinitely small quantities of it excludes many important methods of investigation, and from a chemical standpoint the evidence of transmutation of one element into another is as yet extremely inconclusive. It is surely a long reach from the facts already demonstrated even to the breaking down of radium into helium, and a much longer one to the recomposition of radium from helium. It would be cold comfort, indeed, to break down gold into helium, or something equally tenuous, and then to be unable to reverse the process. "*Facile descensus Averni, sed retrorsus, hic labor, hoc opus est*," as the Latin poet pleasantly remarked, and even the most rampant silverite would recoil from the prospect of the alchemy that would change gold into silver and fail to get it back again.

From Japan to Korea

By H. G. Ponting

IT was from the charmingly situated and busy port of Kobe, Japan, at the foot of the mountain of Settsu, by the waters of Izuma Nada, that I embarked on one of the steamers of the Nippon-Yusen-Kaisha for Chemulpo, Korea.

At ten o'clock one night we weighed anchor, and in the glorious light of a full moon entered the Strait of Akashi, the passage between the Isle of Awaji and the mainland of Nippon, that forms the principal eastern passage to the Inland Sea. All next day we were passing through narrow channels where the current ran swift and strong, or wide and open sheets of water that seemed like enormous lakes.

Past curiously shaped islands clad with gnarled and twisted pine-trees we steamed, the vessel's course being altered at times almost every minute to navigate the tortuous winding channels. At one place the good ship appeared to be in imminent risk of being wrecked as we steered straight for a rocky and precipitous cliff of the land which apparently locked us in on all sides. Just as the crash seemed about to come the hitherto unseen opening appeared. Quickly, and timed to the second, went the word of command, hard-over went the helm, and, sharply responding to it, the vessel, heeling over, swung around and slowly glided into a narrow channel with a dashing current like that of a swift river, in the midst of which a great stone lantern stood. On either side of us were quaint villages almost within a stone's throw of the ship, and we could look through the open doors into the houses of the inhabitants. Sampans lined the shores, men were fishing, women were washing and threshing grain, children were playing. But there was time for impressions only as the narrow was a short one, and in a few minutes we had passed it by and gained another open stretch of water. All that morning we steamed through swift races and open reaches and past islands innumerable until we reached Suwo Nada, the widest part of the Inland Sea, so wide that the shores appeared only as a faint blue line on the horizon.

Late that night we arrived at the Strait of Shimonoseki, the western entrance to these landlocked waters, named from the town of Shimonoseki, famous forever in Japanese history as the spot where occurred the most unjust incident that has marked the intercourse of the foreign powers with Japan—the so-called "Shimonoseki affair," which occurred in 1860, when the war-ships of Great Britain, France, Holland, and the United States arrived off the town, and an indemnity of $3,000,000 was exacted from the Japanese government as recompense for injury to their prestige and damage to their ships by the Daimyo of Choshu, who had attempted to close the straits against the ships of all foreigners.

Minister Allen (on the Right) and his Wife on the Steps of the United States Legation at Seoul
From stereograph by the author, copyright by C. H. Graves, Philadelphia

Opposite Shimonoseki lies the port of Moji, a great coaling-station, where we stayed long enough to replenish our bunkers.

We were storm-bound near Moji, and lay at anchor all night, while a fierce hurricane raged. The next morning, the storm having abated, we made for the open sea, and, after a rough passage, arrived at Nagasaki just before dark. Nagasaki is one of the most beautiful small harbors in the world. Surrounded on all sides save the west by green terraced hills on which rice and barley crops are grown, with the neat, flat houses of the town rising up the hillsides from the sea on the right as one enters, and with numerous junks, sampans, and steamers lying at anchor or sailing in and out through the channel, the sight presented here is always one of animation and great beauty.

After leaving Nagasaki we again ran into a terrible storm, which became fiercer each minute until finally, when we were four hours out, the captain decided to turn back and wait for better weather, as the inhospitable Korean coast was no place to be off in such weather as we were then experiencing. We were thus delayed another sixteen hours, but when the wind subsided and we again started out, it was on a clear sunshiny and almost windless day, and the coast-line stood out boldly in the strong clear light. In places the cliffs are very steep, while in others gentle slopes of rice and barley descend to the sea.

We crept into the harbor of Fusan the next morning under a sky of unflecked azure. There are three jagged peaks of rock at the entrance which remind one of the Needles off the south of England coast. Having passed these, we entered a peaceful bay, completely landbound, on the placid waters of which a few junks and two small steamers floated lazily, their images reflected in unbroken detail in the blue mirror beneath them. All around the bay the hills are devoid of almost every vestige of woodland growth, and they presented a strong contrast to the verdant shores of the lovely land we had so recently left.

As we steamed up the harbor our widening wake was the only ripple that marred the perfect calm of the

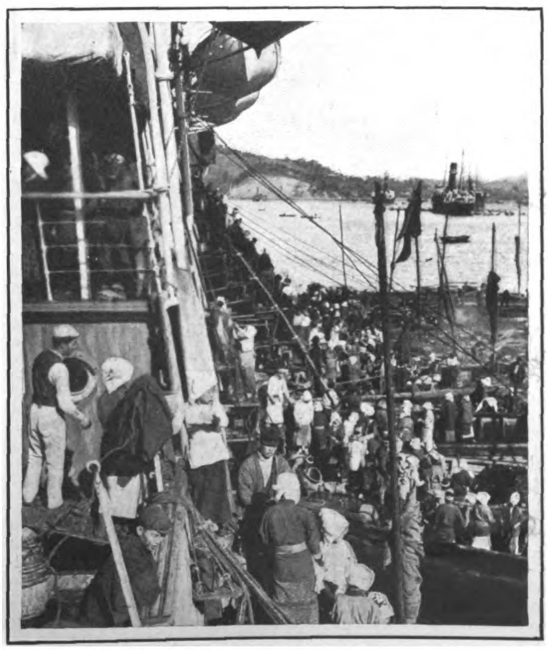
water, but as we neared the town, which in the distance looks like a great batch of toadstools on the hillside, a number of sampans came hurrying out to meet us. On the barren hills a thin line of slowly moving white spots attracted my attention.

"What is that long line of specks over there that looks so much like a train of white ants?" I asked a fellow passenger who had been here before.

"Those are the natives," he replied, "and they are passing to and fro along the road that connects the Japanese settlement with Old Fusan." And, sure enough, they were, for on turning a powerful glass on the spot the white ants were seen to be full-grown human beings, clad in white, who with stately measured steps passed like ghosts along the barren sun-baked highway.

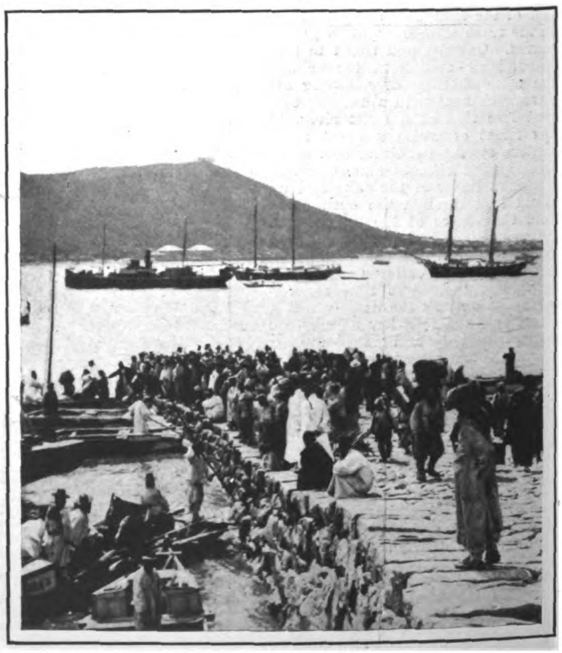
By the time we had finished our inspection of this strange procession the sampans had drawn nearer. As they approached the ship we saw that they were all manned by Japanese, and, indeed, there was a very Japanese appearance about everything. Japanese sampans with Japanese at the *yulos* were not at all what I had expected to see. Where, then, were the Koreans? During our first half hour in Korean waters they were certainly conspicuous by their absence, and, for all I could see, we might have been off some port in Japan, less bustling and less attractive than usual. Presently, however, a steam-launch approached, towing a lighter on which there were a number of what at first appeared to be animated and very dirty flour-sacks. As it came nearer I realized that the flour-sacks were men, but different from any other kind of men I had ever seen before. Each had his hair done up in a small knot on top of his head, and most of them wore long, slender beards. These, at last, were the Koreans: they are much better-looking and different in every way from the Japanese or Chinese. Tall, well featured, and well built, they seemed a very superior type to the busy little Japs who had come on board and who were already at work on the cargo. But these fine-looking men in such dirty white clothing, listless and lazy though they at first seemed to be, held their own when it came to lightering the ship, and under their combined efforts the barges, which one after another came alongside, were rapidly filled up and *yuloed* shorewards.

We embarked on a sampan for the shore, and when we had landed we might still have been in Japan were it not for the numbers of dirty people in dirtier clothing who crowded the street; for Fusan swarms with Japanese, and commerce of every description is in their hands. Neat Japanese buildings with neat little women in them line the street, for this is New Fusan, the Japanese settlement, and the native town, or Old Fusan, lies a couple of miles away. Korean shops are few, but the principal streets are fringed with stalls at which the venders squat and sell their pipes, mirrors, goggles, eating utensils, knives, and other such things.



It is only the lower classes of Koreans whose garments are dirty. The better-class Korean wears an attire the immaculate cleanliness of which is probably unexcelled anywhere on earth. It is certainly the quaintest in the Orient, and as its owner invariably swings along with a supercilious swagger, as if he and he alone were the owner of the street and all he surveyed besides, the incongruity of his manly gait contrasted with his exceedingly effeminate dress is a thing which must be seen to be thoroughly appreciated. He is clothed in white from head to foot, the white being sometimes varied by cream-colored silk, every garment being of spotless cleanliness. He wears the baggiest of baggy breeches, tightened just above the ankles, and his padded white socks are partially enclosed in white and black cloth sandals. He wears—in summer—a silk or grass-cloth coat of gauzy texture, which is tightened under the armpits and spreads loosely from there downwards, and, being stiffly laundered, sticks out in a ridiculous manner all round his legs like the starched frock of a little child. On his head he wears a hat not unlike that formerly worn by Welsh fisherwomen, only the crown is not so high. The hat is black and glossy, and a close inspection of that of a yang-ban (aristocrat) showed that it was made of finely woven silk and bamboo in an open mesh that resembled crinoline, while those worn by the less prosperous are made of horse hair. The truncated cone does not fit the head, but perches jauntily on top of it. At its base is a round brim about four inches wide, and the whole is kept in place by a black cord or band tied under the chin. The office of this peculiar capillary attire is not alone to protect the head from the weather, but to form a receptacle for an equally curiously shaped skull-cap which in turn contains the topknot. This hat is worn on all occasions, both on the street and in the house, and its gauzy construction enables the topknot to be plainly seen within its airy walls.

Only when he goes into mourning does the Korean abandon this headgear, and then it is exchanged for an enormous affair of bamboo three feet or so in width, with a scalloped brim, under which sequestered retreat he conceals his sorrow for his father's death for a period of three long years.



The topknot of the Korean is to him an even more cherished possession than is the queue to a Chinaman. It is assumed only at betrothal, and its assumption is a very painful process indeed: the scalp is shaved and the hair all round is gathered together and tied tightly into a knot, while a black band is fastened round the head and worn always afterwards. So tightly is it applied that I have seen cases where it had made a deep impression even on the bone. Only the Christians cut their hair, and though the quaint hat is still retained, there is no topknot beneath it. Up to the time of betrothal all boys wear their splendid hair in a long thick plait down the back. Korean boys have a very girlish appearance, and probably there are few travellers who do not at first think that the demure and handsome boys, with magnificent thin hair hanging down their backs, are girls.

Marriage to the Korean is the key which opens to him the door of life. Up to the time he secures a partner he remains a boy—no matter what his age may be—and is not admitted to the companionship of those who, though perhaps many years his junior, have become men by marrying.

Marriage is literally, in Korea, a lottery. Neither of the parties to the contract has any voice in the matter. Everything is arranged, through the medium of a matrimonial agent, by the parents of the bride-and-groom-to-be, and not until the actual hour of the ceremony does either of the principals concerned ever see the other. Indeed, as far as the bride is concerned, unless she is of low degree, her husband is probably the only man, excepting her own father and brothers, whom she has ever seen since the days of her childhood, for in Korea a girl from the age of seven is rigidly secluded from the gaze of all masculine eyes. Lucky is the bride of Korea who may at first sight of her husband find the vision pleasing. To her he is all in all, for henceforth she will see no other man. To the husband, however, greater latitude is allowed.

Coaling the Japanese Steamer "Nippon Maru" at Nagasaki

The Harbor and Landing-place, Chemulpo

The chief subjects of remark in Korea are the laziness of the general population and the filthiness of the lower classes. It is well to keep to windward of the Korean coolie, but there is no keeping away from the squalor and smells of the native dwellings. Fusan, however, is of but passing interest, and a great portion of it is Japanese, therefore clean. We shall see more of Korean dirt and methods of living as we come nearer to the capital. We stayed but ten hours at Fusan, but that was time enough for us to see the few sights the place has to show. One leaves the port with mingled feelings of approval and disgust—approval of the neat Japanese buildings with their cleanly spotless interiors, and disgust for the filthy hovels in which the Koreans eke out their slothful, aimless existence.

At five that evening we weighed anchor and steamed once more past those great guardian rocks. Thence we turned southwest and skirted the southern shore of Chol-yong-to, the "Isle of the Interrupted Shadow," commonly known as Deer Island, that shelters Fusan from the frequent storms of the Pacific. From Fusan to Chemulpo, where the first naval engagement of the war took place, a voyage of about thirty hours in fine weather, is probably as difficult and dangerous a course as any to be found the wide world over. A scattered archipelago of desolate islands, lofty crags, and jagged ridges—which are islands at low tide and treacherous sunken reefs at high water,—this forbidding coast, beset with danger for every mile and subject to sudden and impenetrable fogs, has been the grave of many a mariner's hopes.

Chemulpo has no harbor. A few islands which are joined to the mainland at low tide, and a vast expanse of mud-flats with a shallow roadstead suitable only for vessels of the lightest draught, are the chief topographical features. It takes an hour or more to reach the shore in a sampan. The mud-flats extended for miles seaward, for it was low water, but the high-water mark on the wharf revealed the fact that the tide here rises and falls from thirty to forty feet. Chemulpo at high tide and Chemulpo at low tide are almost unrecognizable as the same place, and the flood sweeps in over the slimy ooze with almost the speed that it rushes over the rippled sands of the Solway Firth.

Being the port for Seoul, the capital and the headquarters of all the foreign traders in Korea, as well as the location of the present headquarters of the Japanese army in Korea, Chemulpo at first sight presents a most industrious and very European appearance.

Long rows of great red brick warehouses line the strand, and in front of them, when a ship is in port, may be seen the only evidence of genuine commercial activity in the land. The stone quay at which we disembark is crowded with eager coolies, each with a jiggy on his back. The Korean jiggy is a crutch made of two prong-shaped branches of a tree, joined together by two cross pieces, and on the projecting horns immense loads are carried.

The principal native trade of Chemulpo is in rice, dried fish, and barley. As in Japan, barley is the staple food of the poorer classes, and rice is more or less of a luxury. Dried fish, however, is the food of one and all. There are usually scores of junks moored alongside the wharves, as an immense fleet is engaged in supplying this demand.

The British consulate, on a high wooded knoll near the landing-wharf, is the most noticeable feature, and the pleasantly situated club, with billiard-tables, tennis-grounds, and a well-equipped library, goes far towards making Chemulpo the most desirable place of residence in Korea.

From Chemulpo to Seoul is a distance of thirty miles, traversed by a railroad owned and built by the Japanese. There is a good deal of picturesque beauty along the railroad. The passing panorama is of rolling green hills and rice-fields, alternating with great barren patches which apparently have never been used for any purpose whatever, though the soil bore evidence of being deep and fertile. We crossed the river Han, a few miles out from Seoul, and shortly afterwards the train drew up under the walls of the capital.

Seoul is a walled city of nearly a quarter of a million inhabitants, about a third of whom live in extensive extra mural suburbs. The wall is pierced by eight gateways of massive stone, each with a pagoda-shaped tower of one or two stories above it. The nearest of these to the railway station is the west gate, "The Gate of Bright Amiability," and it is by this portal that almost every visitor enters the capital of the Hermit Kingdom. The name of the city, by the way, is pronounced precisely as we would pronounce the female pig with an l added—*i. e., Sowl.* I have never heard a Korean pronounce the name in any other way.

The word means "Capital," nothing more; but if there is small beauty or originality about the name of the city, there certainly is about its location, for anything more strikingly picturesque than the site of the Korean metropolis would indeed be difficult to find. The city stands in a little valley almost surrounded by rugged, corrugated peaks. High along the top of this mountain ridge runs the city wall. Deep into the gullies it dips, rising now and again to scale the steepest slopes and crown the summits of the loftiest pinnacles. Enclosed within this snakelike barrier is such a strange contrast between wretched hovels and splendid palaces, purposeless loafers and hurrying crowds, broad streets and labyrinthine alleys, spotless cleanliness and unspeakable filth, as I doubt could be equalled elsewhere on earth.

The capital is divided in twain by a thoroughfare of great width running the length of the city from east to west. This street is bisected by another of equal width, one end of which terminates at the Palace gates and the other at the south portal of the city. A few minutes' walk from the west gate is the American Legation. Here I had the pleasure of meeting Dr. Horace N. Allen, the United States minister, his wife, and Mr. Gordon Paddock, secretary of the legation. Owing to the kindness of these gentlemen, I secured the valued privilege of admission to the precincts of the old palaces and many other favors, for which I am deeply grateful.

Once inside the west gate, we are drawn irresistibly eastwards by the surging stream of humanity that flows towards the centre of the city, for it is early morning, and the streets are crowded with heavily laden men and bulls bearing their burdens to the open markets on the broad thoroughfares in the heart of this quaint Far-Eastern Mecca.

Along several of the main streets are trolley-lines, and every few minutes a modern American electric car whirls past us well patronized with Koreans, both men and women.

Seoul of the past is fast becoming extinct. A modern red brick building, headquarters of the American Electric Company, rises in the centre of the town, and from its tower stately churches and legation buildings can be seen towering above the squat houses of the natives.

"The Dictator" at the Criterion

"The Dictator," a new play by Richard Harding Davis, was produced at the Criterion Theatre April 4, with William Collier in the leading rôle. "Brooke Travers," a young New-Yorker, has accidentally killed a cabman during an altercation, and, in order to escape the consequences, takes a steamer for Porto Baños, Central America. During the voyage he meets "Colonel John Bowie," United States Consul at Porto Baños, and former Dictator under the Central-American President. On their arrival they learn that a revolution has occurred, and that there is a new President; also that a secret service officer is looking for "Travers." "Travers" offers the colonel $5000 for his job, and goes ashore, where he is arrested by the new President and condemned to be shot. Meanwhile the secret service detective has arrested an innocent clergyman, the "Rev. Arthur Bostick," supposing him to be "Travers," with whose fiancée "Travers" is in love. These complications are solved in the end, and "Travers," to whose aid the men of the United States battle-ship "Oregon" have come, returns to New York with the girl of his choice, the "Rev. Arthur Bostick" having consoled himself with a native señora

"Saucy Sally" at the New Lyceum

Mr. Charles Hawtrey appeared at the New Lyceum Theatre on April 4 in "Saucy Sally," a new comedy by F. C. Burnand, the editor of "Punch." Mr. Hawtrey plays the part of "Herbert Jocelyn," a young man who won the affections of his wife by posing as an intrepid explorer and sea captain, although actually he is quite unqualified for either rôle. His mother-in-law, who lives with the young couple, vigorously opposes "Jocelyn" whenever he discusses the wisdom of abandoning his supposed sea life and his pursuit abroad in the cause of science, in order that he may adopt a calling that will enable him to be nearer to his wife. This vigilance on the part of the mother-in-law obliges "Jocelyn" to keep up his imaginary occupations by staying away from home for more or less protracted periods. During one of these enforced disappearances he makes the acquaintance of a pretty girl who is a school mistress and teacher of music. He regales her with tales of his adventures at sea and of exciting encounters with savage tribes and wild animals, impressing her so deeply that she becomes infatuated with him. Though but newly married, "Jocelyn" is so overcome by her hero-worship that he promises to marry her. Complications arise later by the arrival of the real captain of "Jocelyn's" supposed ship, the "Saucy Sally." Then follow differences between "Jocelyn" and his wife, his mother-in-law, and his newly acquired fiancée, which furnish the fun of the play

GERTRUDE ATHERTON, AUTHOR OF "RULERS OF KINGS"

Gertrude Atherton, whose new novel, "Rulers of Kings," is published this week by Harper & Brothers, holds high rank among contemporary novelists. Mrs. Atherton was born in San Francisco, and is a great grandniece of Benjamin Franklin. She has spent much of her time abroad, and is at present living in London. Her novels, "The Aristocrats" and "The Conqueror," have been among the most popular fiction of recent years. For a description of "Rulers of Kings," which is likely to be one of the most widely read novels of the year, the reader is referred to page 588 of this issue of the "Weekly"

Correspondence

NOT SO IN VIRGINIA

RICHMOND, VIRGINIA, *March 30, 1904.*

To the Editor of Harper's Weekly:

SIR,—Personally, I do not think much good is done by continual agitation of the negro question, as the mass of whites and negroes are getting on perfectly well together, but I was much amused by a communication from one Melville Cancryne, dated from Savannah, Georgia, inviting you to come down and kill a few negroes, and see whether or not you would be punished. You very wisely declined the invitation with thanks. I do not pretend to know anything of the situation in Chatham County, Georgia, but I know that a white man in Virginia who killed a negro in cold blood would come pretty near hanging unless it were proven he were insane. I think there are plenty of cases in Virginia where white men have been hung for killing negroes. I know, as a boy at school, several of my white playmates were arrested and fined for molesting negroes, I mean by that, throwing snowballs and like boyish pranks. Would Mr. Cancryne under existing circumstances advise the migration of any great number of negroes from Chatham County to Springfield, Ohio, or Pana, Illinois? According to the latest reports from Ohio a negro fellow citizen of Mr. Cancryne's was strung up to a post and his body filled with bullets by a mob, who seemed to take it as a great joke. There is no evidence as yet of any one's being punished for the crime of lynching this negro in Springfield. Will Mr. Cancryne contrast the lack of precautions taken to protect this negro charged with murder with the expensive and elaborate precautions taken by Governor Montague of Virginia and Governor Vardaman of Mississippi to protect two brutes charged with criminal assault upon unprotected and defenceless women. In the Virginia case eighteen companies of militia were ordered out at an expense to the State of $10,000. In Virginia no negro has ever been burned to death.

I am, sir, WILLIAM GREEN.

AS TO THE TWO-THIRDS RULE.

1033 MASSACHUSETTS AVE.,
CAMBRIDGE, MASSACHUSETTS, *March 27, 1904.*

To the Editor of Harper's Weekly:

SIR,—In urging the abolishment of the two-thirds rule by the Democratic national convention, as you do in your issue of this date, do you not have any apprehension that to do so might have the opposite effect from what you desire, assuming your desire is the defeat of Mr. Hearst. For it is more than possible that Mr. Hearst will have enough to count a majority of the convention, and then what are you going to do about it? The fact is, the conservative element in the Democratic party have very much underrated the anti-Cleveland feeling among the rank and file of the voters of the party. This comes from the fact that most of the influential papers, or rather those papers of large capital and circulation, while not all in favor of the nomination of Mr. Cleveland, yet sympathize with that element of the party that is best represented by him. That HARPER'S WEEKLY has not gauged this feeling properly is shown by a reference to some of its back numbers. On February 20, in its *Comments* it said: "We still adhere to the belief that Mr. Bryan, ex-Mayor Johnson of Ohio, and Mr. W. R. Hearst of New York, will be unable, in spite of their evident though unavowed cooperation, to control a third of the delegates to the St. Louis convention." In to-day's issue, however, and without having known that the Rhode Island delegates were to be instructed for Mr. Hearst, it has concluded that: "On the whole, it is needful for prudent Democrats to confront the possibility that the Bryan-Hearst combination may control a little more than a third of the members of the Democratic national convention. This fact should be accepted as conclusive proof of abolishing the two-thirds rule." But if Mr. Hearst should have a majority of the delegates, and the showing he has made so far justifies the apprehension, the abolishment of the two-thirds rule would prove a boomerang indeed. For it should be remembered that the strength of the Hearst movement in Rhode Island was not understood until after the convention had assembled. On the whole, you may yet conclude that the two-thirds rule is a good thing and should be continued.

I am, sir, L. D. MITCHELL.

NORTHERNERS IN THE SOUTH

CHATTANOOGA, TENN., *April 1, 1904.*

To the Editor of Harper's Weekly:

SIR,—Not the South alone, but in time the entire country, must profit by the discussions of the negro problem appearing from week to week in the columns of HARPER'S WEEKLY. You are doing more, it is the writer's belief, to bring to public view the unvarnished facts bearing upon this question than any other publication.

There is one very significant fact, however, of which I have observed no mention in either your editorial comments or in your correspondence, and I would respectfully beg to call your attention to it. This is the fact that the thousands of persons who have removed from Northern to Southern States since the civil war have promptly and unanimously taken the Southerner's view of this question. Among my circle of friends and acquaintances in Tennessee, Georgia, and Alabama, are scores of such transplanted Northerners with whom I have conversed on this subject times without number, and absolutely without exception I find that their views in no sense differ from my own, which in no sense differs from that held by the great body of Southern whites. So far as I have been able to ascertain (and I have made diligent use of exceptional opportunities for doing this), what is true in this particular of the Northerners whom I have the honor to number among my personal friends, is true of all other Northerners throughout the South.

These people have come down to us from the North, imbued with the usual Northern idea of political and social equality, but after one or two years of residence in the South they have without exception undergone a complete conversion. The conclusion is inevitable that this question has but one aspect for both Northern and Southern eyes, when viewed from the same close range.

I am, sir, H. J. STEWART.

SOME VIEWS OF A CALIFORNIA PESSIMIST

SANTA ROSA, CAL., *April 2, 1904.*

To the Editor of Harper's Weekly:

SIR,—There is much being said these days concerning the pending Oriental war, with sundry and varied expressions of sympathy, and much speculation as to the ultimate result and what figure, if any, this country will cut in the imbroglio. This evidences a profound public interest in the situation.

It seems quite clear to me that we will not be able to keep out of it, even if we wished to do so. Whether we wish to is a debatable question. I was talking a few days ago with a half dozen Americans, of average intelligence and standing, and all of them were expressing in a general way their hopes that we would not be drawn into it. To test them I asked each one to express his sincere wish about it. Over half of them frankly admitted a desire that our government should have offered it any fair excuse to get in, and the others were similarly disposed if they could see how we would be benefited by it. It occurs to me that this is about a fair expression of how our people stand on the matter. These men were at first *talking* along the lines of time-honored trends of thought; they were *feeling* along the new lines of American life. Once and for all we had just as well be square with ourselves and admit that deep down, behind the pose, elemental and basic, there is a great big, lusty, full-grown spirit of imperialism in this nation. I am not speaking of the "higher thinker," the moralist, or the doctrinaire, but of the masses of our people—the average men.

When interference begins it will set the world on fire. One step by England, France, Germany, Italy, Austria, China, or this nation would make them all take sides, and it is inevitable that England, Japan, and this country will go together. They cannot help it. Their interests demand it. If there is such a thing as projecting the future by reasoning along lines of human interest and natural alignment we must conclude that this will be the combination against all the rest who take a hand, and that we will soon be at it "hammer and tongs."

Is it best for us to do so? If the combination be this nation with Japan and England against the rest, I say, yes. Of course there would be much blood spilled, but God made man a fighting animal (at least I suppose so, or he would not be always at it), and the millennium has not yet come, and no signs of its early advent are apparent.

Japan, England, and this country could wipe the navies of all the other nations off the face of the earth, and if the fight comes they will be fools if they do not do just that thing, and do it thoroughly. In this commercial age that would make this triumvirate masters of the commerce of all peoples and all lands. They could dictate to all the other nations, for they would hold all commerce at their mercy; and commerce is the life of modern nations. They could then force a cessation from the burdens of the present immense naval and military armaments that are weighing so heavily upon men all over the world.

What a splendid picture of beneficent imperialism! How much would the words of "the fathers" amount to when this lusty young giant, greedy for his first great fling in dominating big things, saw that picture before him? It would be as it always has been: he would find a way to reconcile what he wanted to do with those precepts that would satisfy himself, or he would say, "Oh, well, the old boys were all right; they meant well enough, but they did not know about this thing."

The theoretical philosophy that tries to put nations on a higher plane is not more than a veneering scarcely hiding the Tartar of old human nature. It is good in a way, just as the fiction that all men know the law is useful, but is just as false and unnatural all the same. Nor will it ever stand much of a strain. It is all right under ordinary conditions, and may, while only a theory, seem to be the very groundwork of a people's policy, but when confronted by an adverse condition it has much of the quality of a rope of sand. I am, sir,

JAMES W. OATES.

Progress of the War

THE important results of the war in the Far East prior to March 31 may be briefly summarized as follows: The Russians have had ten war-vessels disabled—the *Czarevitch*, *Retvisan*, *Poltava*, *Pallada*, *Novik*, *Askold*, *Diana*, *Variag*, *Koricta*, and the torpedo-boat *Stereguschtchi*. Of these several have been or are being repaired and made ready for further use. The Russian cruiser *Boyarin* and the cruiser *Yenesei* were sunk by accidental contact with a mine; but the *Boyarin* is reported to be again in use. Five Russian commercial steamers were captured by the Japanese during the first week of the war. Japan is known to have lost one torpedo-boat, and several other of her ships are believed to have been injured in the Port Arthur engagements; but definite knowledge of this is withheld. Port Arthur has been repeatedly bombarded, with damaging effect, by the Japanese, and Vladivostok was attacked by them on March 6, though without serious damage to the port. Admiral Togo has made two attempts to blockade the entrance to the inner roadstead at Port Arthur by sinking merchant steamers in the chanel. Both attempts were unsuccessful. The first land engagement of any importance took place at Chongju, Korea, on March 28 and resulted in a Japanese victory.

March 31.—The Japanese official report of the land battle at Chongju, Korea, on March 28, made public to-day, gives the Japanese loss as five killed, including a lieutenant, and twelve wounded. As previously reported, the Russians have announced that their loss was three killed and sixteen wounded.

It is reported to-day that on March 28 the entire Russian squadron left the harbor of Port Arthur and proceeded to the Miactas Islands. The cruiser *Novik* fired upon and sank the Japanese steamer *Hanien Maru*, which refused to stop when ordered. The squadron then returned to port.

April 1.—There is continuous skirmishing between the advance guard of the Russian and Japanese armies along the Yalu River, and it is reported that many on both sides have been killed. General Kuropatkin has proceeded to Liao-Yang, and it is believed that he intends soon to attack the Japanese in northern Korea. The disarmament of the Russian gunboat *Mandjur*, which has been at Shanghai since the opening of the war, has been completed to the satisfaction of the Japanese consul, and the Japanese cruiser *Akitsushima*, which was lying in wait outside the harbor, sailed to-day.

April 2.—It is reported that during the night of March 30 and 31 Admiral Togo made another attack on Port Arthur for the purpose of ascertaining the effects of the last attempt to bottle up the Russian fleet. The report is not officially confirmed. Viceroy Alexeieff has arrived at Port Arthur. Together with Admiral Makaroff and General Stoessel, the commanders of the Russian naval and military forces at Port Arthur, he made an inspection of the war-ships which have been injured during the various engagements since the opening of the war.

Marquis Ito has returned to Tokyo from Seoul, where he went as the special envoy of the Mikado.

The Paris *Figaro* to-day publishes the following estimate of the strength of the Russian forces in the Far East, which is regarded as semiofficial:

"The list was drawn up on the evening of March 28 by the general staff at Harbin. There were then in Manchuria 170,000 infantry, 17,000 cavalry, and 256 cannon. Of this number 20,000 infantry, 5000 cavalry, and 32 cannon have been told off to guard the railway.

"Although the bulk of the troops are concentrated opposite Korea, the strategical front extends 1600 kilometres from Vladivostok to Newchwang, on the left bank of the Liao River, the right bank being considered neutral territory.

"By June 28,130 more infantry, 30,000 cavalry, and 250 cannon will have been sent out."

April 3.—A telegram from Seoul states that 2000 Russian troops, including Cossacks and infantrymen, have encamped on the south side of Wiju. The Russian authorities at Newchwang to-day arrested an American press boat having aboard two Japanese servants, on whom maps were found, and who were evidently spies. The Japanese were imprisoned, and the press boat was later released by order of General Kuropatkin.

April 4.—The Japanese land forces continue to advance northward toward the Yalu. They have occupied without opposition the town of Seng-Chang (Son-Chon), about forty miles south of Wiju, and are reported to have reached Chel-Sam, thirty miles south of Wiju. The Russians have been gradually withdrawing their forces across the Yalu, and the Russian scouts are retreating northward. The ice on the Yalu is now well broken up, and in the future the river must be crossed either in junks or over pontoon bridges.

April 5.—It was reported to-day that Japanese scouts entered Wiju on April 4 and found no signs of the Russians, the latter apparently having retreated beyond the Yalu River.

Admiral Alexeieff has left Port Arthur. The Japanese fleet has not been seen there for several days, and its whereabouts is unknown.

April 6.—Reports were to-day received to the effect that the Japanese first army, consisting of 45,000 men, which had been concentrated at Anju, is moving on towards Wiju by three different routes. It is believed that the Russians have evacuated Korea, and it is expected that the Japanese forces will soon be lined up along the south bank of the Yalu River.

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic and is the best remedy for diarrhœa.—[*Adv.*]

THE PERFECTION of a pure, rich, unsweetened condensed milk is BORDEN'S PEERLESS BRAND EVAPORATED CREAM. It is always available for every use to which raw milk or cream is devoted, and is far superior to the average quality of either. Prepared by Borden's Condensed Milk Co.—[*Adv.*]

RESIDENCE Telephone Service pays for itself in car-fare saved. It saves time, too. Low rates. Efficient service. New York Telephone Company, 15 Dey St., 111 West 38th St.—[*Adv.*]

TIRED brain and nervous tension relax under the potent action of Abbott's Angostura Bitters. Label on bottle tells Abbott's.—[*Adv.*]

CHILDREN will take PISO'S CURE without objection, because its taste is pleasant. At druggists. 25c.—[*Adv.*]

USE BROWN'S Camphorated Saponaceous DENTIFRICE for the TEETH. 25 cents a jar.—[*Adv.*]

ADVERTISEMENTS.

THE TRUANTS

BY A·E·W·MASON

SYNOPSIS OF CHAPTERS

In the opening chapter Pamela Mardale is introduced to the reader as a young society woman of London, beautiful and of rare personal charm. Into her early life has come a mysterious influence which dominates and directs her whole career. What this strange influence is only two of her friends suspect—a young schoolmaster who knew her as a child at Roquebrune, and Alan Warrisden, who is in love with her, and who, though his proposal of marriage is refused, determines to win her. Late one night at a ball, Pamela and Warrisden, while seated on a balcony, observe a young couple leaving the opposite house. They are Tony and Millicent Stretton, who live in a gloomy home presided over by the rich but unjust father of the young man. They are in reality kept prisoners by the whims of the tyrannical old man, and it is only by playing truant and going out by stealth late at night that they are able to enter at all into the life of the outside world. This practice they keep up for a year, but finally both of them grow extremely weary of their monotonous life, and in a moment of exasperation Tony determines to go to America to make his fortune, while Millie is to be left behind and sent for as soon as her husband is able to establish a home. Tony has some misgivings about leaving Millie, for he has been warned by Pamela Mardale that she should never be left alone; but at last he departs, after Pamela has promised to be a stanch friend to his wife. Some months later, while Pamela is calling on Millie, two letters arrive. One is from Tony and contains the news that he has lost all of his small fortune and will have to make a new start; the other is from a friend, Lady Millingham, inviting Millie to stay with her at the beginning of the New-year. Millie accepts; and when Pamela, who has also been invited, arrives there she finds that her warning to Tony is having a disagreeable justification. For on the very evening of her arrival she discovers that Millie has become infatuated with Lionel Callon, a gentlemanly adventurer, who is also a member of Lady Millingham's house-party. Late that evening Pamela visits Millie in her room, and inquires about Tony. Millie tells Pamela of her husband's determination to stay in America and attempt to retrieve his failure, and Pamela learns from her that she has sent him discouraging letters, advising him to give up the struggle. She cannot understand why Tony had replied shortly, saying that she must not expect to hear from him until he had reestablished himself in her eyes. Millie tells Pamela that she believes her husband's reticence to be due to the fact that he no longer cares for her. Pamela assures her that she must be mistaken, but she returns to her room much troubled. She is impelled to do something to help untangle the situation, although the recollection of her own history warns her. But she has given her promise to Tony to befriend his wife, and that is one thing she could do. She wires Warrisden to come down by an early train. When he arrives, Pamela tells him that she needs him, and that she is going to ask him to help her. She has been, she says, a looker-on in life ever since an unfortunate affair of her youth. She was eighteen then, and loved a man who, like herself, was poor. It was her mother's ambition that her daughter should make a great marriage; and thinking that if Pamela fell in love and found love to be a thing of fruitless trouble, she would come the sooner to take a sensible view of the world and marry where marriage was to her worldly advantage. So she had short-sightedly encouraged the affair, which had ended as she knew that it must—the man had no prospects, and he and Pamela had had to part. After that, Pamela had put all thought of serious things out of her life—"Until to-day." Warrisden interrupts, "when you need my help." Then Pamela tells him that what she wants of him is that he shall find Tony and bring him home again. Warrisden accepts the commission, and starts on his return to town. Pamela has advised him to call on a Mr. Chase, head of a London mission, at whose suggestion Tony had chosen New York as a field of adventure. Warrisden applies to Mr. Chase, an eccentric cleric, for information as to Tony's whereabouts. Warrisden tells him that it is absolutely necessary that Tony should return. Mr. Chase at first refuses to give the desired information, but on learning that Tony's father is dying, he tells Warrisden that Tony is in the North Sea on a trawler, and he offers to assist Warrisden in reaching him. He makes an appointment to meet him the next morning and arrange for his passage.

CHAPTER XI

ON THE DOGGER BANK

THE *City of Bristol* swung out of the huddle of boats off Billingsgate Wharf at one o'clock on the next afternoon. Mr. Chase, who stood on the quay amongst the porters and white-jacketed salesmen, turned away with an Episcopal wave of the hand. Warrisden leaned over the rail of the steamer's bridge, between the captain and the pilot, and shouted a reply. The *City of Bristol*, fish-cutter of 300 tons, was a boat built for speed, long and narrow, setting low on the water, with an upstanding forecastle forward, a small saloon in the stern, and a tiny cabin for the captain under the bridge on deck. She sidled out into the fairway, and went forward upon her slow intricate journey to the sea. Below the Tower she took her place in the long single file of ships winding between the mud banks, and changed it as occasion served; now she edged up by a string of barges, now in a clear broad space she made a spurt and took the lead of a barkentine, which swam in indolence with bare masts behind a tug, and at times she stopped altogether, like a carriage blocked in Piccadilly. The screw thrashed the water, ceased, and struck again with a suggestion of petulance at the obstacles which barred the boat's way. Warrisden, too, chafed upon the bridge. A question pressed continually upon his mind—"Would Stretton return?" He had discovered where Stretton was to be found. The tall gray spire of Stepney Church rose from behind an inlet thick with masts upon the left; he was already on his way to find him. But the critical moment was yet to come. He had still to use his arguments, and as he stood watching the shipping with indifferent eyes the arguments appeared most weak and unpersuasive. Stretton's father was dying, it was true. The son's return was no doubt a natural obligation. But would the natural obligation hold when the father was unnatural? Those months in New York had revealed one quality in Tony Stretton, at all events; he could persist. The very name of the trawler in which he was at work, seemed to Warrisden, of a bad augury for his success. The *Perseverance!*

Greenwich, with its hill of grass, slipped behind on the right; at the Albert Docks, a huge Peninsula and Oriental steamer, deck towering above deck, swung into the line; the high chimneys of the cement-works on the Essex Flats began to stand out against the pale gray sky, each one crowned with white smake like a tuft of wool; the barges, under their big brown spritsails, now tacked this way and that, across a wider stream; the village of Greenhithe and the white portholes of the *Worcester* showed upon the right.

"Would Stretton return?" The question revolved in Warrisden's mind as the propeller revolved in the thick brown water. The fortunes of four people hung upon the answer, and no answer could be given until a night and a day and another night had passed, until he saw the "Blue Fleet" tossing far away upon the Dogger Bank. Suppose that the answer were "No!" He imagined Pamela sinking back into lassitude, narrowing to that selfishness which she, no less than he foresaw, looking on again at the world's show with the lack-lustre indifference of the very old.

At Gravesend the *City of Bristol* dropped her pilot, a little white-bearded wizened man, who, all the way down the river, balancing himself upon the toprail of the bridge like some nautical Blondin, had run from side to side, the while he exchanged greetings with the anchored ships; and just opposite to Tilbury Fort, with its scanty fringe of trees, ran alongside of a hulk and she took in a load of coal.

"We'll go down and have tea while they are loading her," said the captain.

The dusk was falling when Warrisden came again on deck and a cold wind was blowing from the northwest. The sharp stem of the boat was cutting swiftly through the quiet water; the lift of the sea under her forefoot gave to her a buoyancy of motion; she seemed to have become a thing alive. The propeller cleft the surface regularly; there was no longer any sound of petulance in its revolutions; rather there was a throb of joy as it did its work unhindered. Throughout the ship a steady hum, a steady vibration, ran. The *City of Bristol* was not merely a thing alive; it was a thing satisfied.

Upon Warrisden, too, there descended a sense of peace. He was *en rapport* with the ship. The fever of his questioning left him. On either side the arms of the shore melted into the gathering night. Far away upon his right the lights of Margate shone brightly, like a chain of gold stretched out upon the sea; in front of him there lay a wide and misty bay, into which the boat drove steadily. All the unknown seemed hidden there; all the secret, unrevealed, beyond. There came whispers out of that illimitable bay to Warrisden's ears; whispers breathed upon the north wind, and all the whispers were whispers of promise, bidding him take heart. Warrisden listened and believed, uplifted by the grave quiet of the sea and its mysterious width.

The *City of Bristol* turned northward into the great channel of the Swin, keeping close to the lightships on the left, so close that

Warrisden from the bridge could look straight down upon their decks. The night had altogether come — a night of stars. Clusters of lights low down upon the left showed where the towns of Essex stood; upon the right hand the homeward-bound ships loomed up ghostlike and passed by; on the right, too, shone out the great green globes of the Mouse light like Neptune's reading-lamps. Sheltered behind the canvas screen at the corner of the bridge, Warrisden looked along the rake of the unlighted deck below. He thought of Pamela waiting for his return at Whiteweb's, but without impatience. The great peace and silence of the night were the most impressive things he had ever known. The captain's voice complaining of the sea jarred upon him.

"It's no Bobby's job," said the captain, in a low voice. "It's home once in three weeks from Saturday to Monday if you are in luck, and the rest of your time you're in carpet slippers on the bridge. You'll sleep in my chatoo to-night. I sha'n't turn in until we have passed the Outer Gabbard and come to the open sea. That won't be till four in the morning."

Warrisden understood that he was being offered the captain's cabin.

"No, thanks," said he. "The bench of the saloon will do very well for me."

The captain did not press his offer.

"Yes, there's more company in the saloon," he said. "I often sleep there myself. You are bound for the mission ship, I suppose."

"No. I want to find a man on the trawler *Perseverance*."

The captain turned. Warrisden could not see his face, but he knew from his attitude that he was staring at him in amazement.

"Then you must want to see him pretty badly," he commented. "The North Sea in February and March is not a Bobby's job."

"Bad weather is to be expected?" asked Warrisden.

"It has been known," said the captain, dryly; and before the lights of the Outer Gabbard winked good-by on the starboard quarter at four o'clock in the morning the *City of Bristol* was taking the water over her deck.

Warrisden rolled on the floor of the saloon —for he could not keep his balance on the narrow bench — and tried in vain to sleep. But the strong light of a lamp glared upon his eyes. Moreover, the heat was intolerable. Five men slept in the bunks; Warrisden made a sixth; at four in the morning the captain joined the party through his love of company. The skylight and the door were both tightly closed; a big fire burned in the stove, and a boiling kettle of tea perpetually puffed from its spout a column of warm, moist steam. Warrisden felt his skin prickly beneath his clothes; he gasped for fresh air.

Living would be rough upon the fish-carrier, Chase had told him, and rough Warrisden found it. In the morning the steward rose, and made tea by the simple process of dropping a handful of tea into the kettle and filling it up with water. A few minutes later he brought a dish of ham and eggs from the galley and slapped it down on the table.

"Breakfast," he cried, and the five men opened their eyes, rubbed them, and without any other preparation sat down and ate. Warrisden slipped up the companion, unscrewed the skylight, and opened it for the space of an inch. Then he returned.

The *City of Bristol* was rolling heavily, and Warrisden noticed with surprise that all of the five men gave signs of discomfort. Surely, he thought, they must be used to heavy weather. But, nevertheless, something was wrong. They did not talk; finally the captain looked upwards and brought his hand down upon the table.

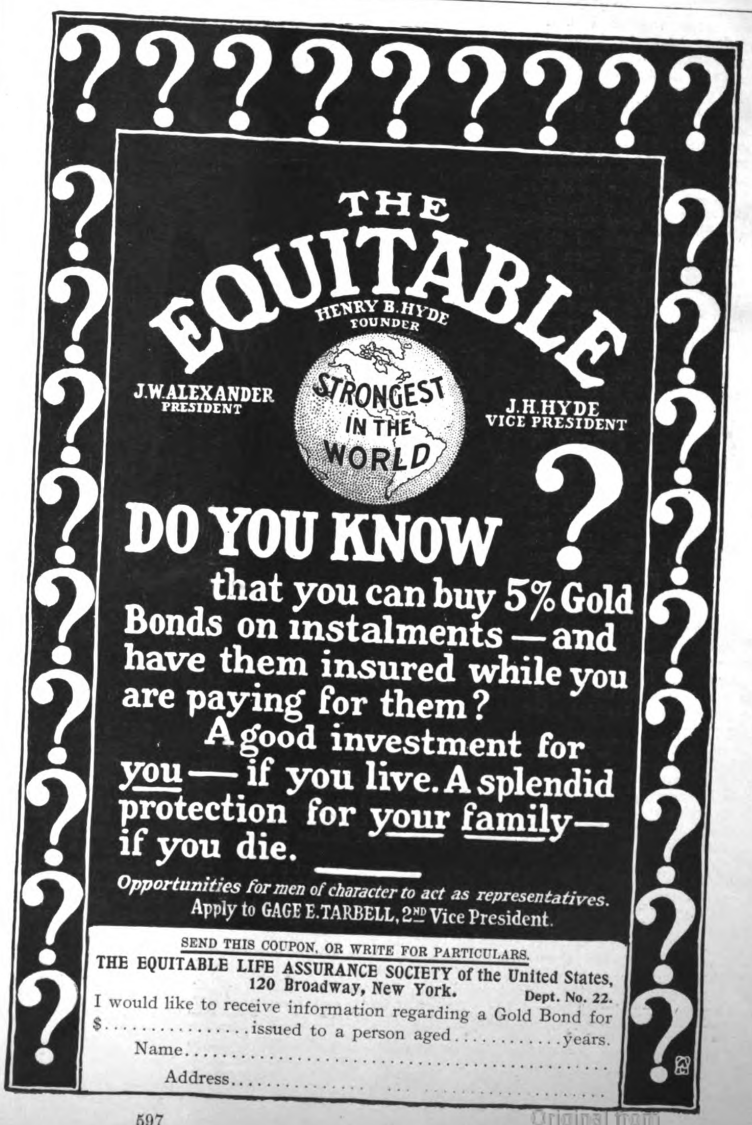
"I felt something was wrong," said he, "the skylight's open."

All stared up to the roof.

"So it is!" they exclaimed, blankly.

"I did that," Warrisden said, humbly.

At once all the faces were turned on him in great anxiety.



"Now why?" asked the captain. "Don't you like it nice and snug?"

"Yes, oh yes," Warrisden said, hurriedly.

"Well, then," said the captain, and the steward went on deck and screwed the skylight down.

"After all, it's only for thirty-six hours."

thought Warrisden, as he subsequently bathed in a pail on deck. But he was wrong. For the Blue Fleet had gone a hundred miles north to the Fisher Bank, and thither the *City of Bristol* followed it.

The *City of Bristol* sailed on to the Fisher Bank and found an empty sea. It hunted the Blue Fleet for half a dozen hours, and as night fell it came upon a single trawler with a great flare-light suspended from its yard.

"They're getting in their trawl," said the captain, and he edged up within earshot.

"Where's the Blue Fleet?" he cried.

"Gone back to the Dogger," came the answer.

The captain swore and turned southwards. For four days and nights Warrisden pitched about on the fish-carrier and learned many things, such as the real meaning of tannin in tea and the innumerable medical uses to which "Friar's Balsam" can be put. On the morning of the fifth day the *City of Bristol* steamed into the middle of the fleet and her engines stopped.

These were the days before the steam-trawler. The sailing ships were not as yet laid up, two by two, alongside Gorleston Quay, and knocked down for a song to any purchaser. Warrisden looked over a gray, savage sea. The air was thick with spindrift. The waves leaped exultingly up from windward and roared away to leeward from under the cutter's keel in a steep uprising hill of foam. All about him the sailing-boats headed to the wind, sinking and rising in the furrows, so that Warrisden would just see a brown topsail over the edge of a steep roller like a shark's fin, and the next instant the dripping hull of the boat flung out upon a breaking crest.

"You will have to look slippy when the punt from the *Perseverance* comes alongside with her fish," the captain shouted. "The punt will give you a passage back to the *Perseverance*, but I don't think you will be able to return here. There's a northwesterly gale blowing up and the sea is increasing every moment. However, there will be another cutter up to-morrow, and if it's not too rough you could be put on board of her."

It took Warrisden a full minute to realize the meaning of the captain's words. He looked at the tumbling, breaking waves; he listened to the roar of the wind through the rigging.

"The boats won't come alongside to-day!" he cried.

"Won't they?" the skipper replied. "Look!"

Certainly some manœuvre was in progress. The trawlers were all forming to windward in a rough semicircle about the cutter. Warrisden could see boat tackle being rigged to the main yards and men standing about the boats capsized on deck. They were actually intending to put their fish on board in the face of the storm.

"You see, with the gale blowing up, they mayn't get a chance to put their fish on board for three or four days after this," the captain explained. "Oh, you can take it from me. The No'th Sea is not a Bobby's job."

As Warrisden watched, one by one the trawlers dropped their boats and loaded them with fish-boxes. The boats pushed off, three men to each, with their life-belts about their oilskins, and came down with the wind towards the fish-carrier. The trawlers bore away, circled round the *City of Bristol*, and took up their formation to leeward, so that, having discharged their fish, the boats might go down again with the wind to their respective ships. Warrisden watched the boats piled up with fish-boxes coming through the welter of the sea. It seemed some desperate race was being rowed.

"Can you tell me which is the boat from the *Perseverance*?" he asked.

"I think it's the fifth," said the captain.

The boats came down, each one the kernel of a globe of spray. Warrisden watched, admiring how cleverly they chose the little gaps and valleys in the crests of the waves. Each moment he looked to see a boat tossed upwards and overturned; each moment he dreaded that boat would be the fifth. But no boat was overturned. One by one they passed under the stern of the *City of Bristol* and came alongside under the shelter of its wall.

The fifth boat ranged up. A man stood up in the stern.

"The *Perseverance*," he cried. "Fourteen boxes," and as he spoke a great sea leaped up against the windward bow of the cutter. The cutter rolled from it suddenly, her low bulwarks dipped under water on the leeward side, close by the *Perseverance's* boat.

"Shove off!" the man cried who was standing up, and as he shouted he lurched and fell into the bottom of the boat. The two men in the bow pushed off with their oars, but they were too late. The cutter's bulwark caught the boat under the keel; it seemed she must be upset and men and boxes whelmed in the sea unless a miracle happened. But the miracle did happen. As the fish-cutter righted she scooped on to her deck the boat with its boxes and its crew. The incident all seemed to happen within the fraction of a second. Not a man upon the fish-cutter had the time to throw out a rope. Warrisden saw the cutter's bulwarks dip, the sailor falling in the boat, and the boat upon the deck of the cutter in so swift a succession that he had not yet realized disaster was inevitable before disaster was avoided.

The sailor rose from the bottom of the boat and stepped on deck, a stalwart, dripping figure.

"From the *Perseverance*, sir. Fourteen boxes," he said, looking up to the captain on the bridge. And Warrisden, leaning by the captain's side upon the rail, knew the sailor to be Tony Stretton. The accent of the voice would have been enough to assure him; but Warrisden knew the face too.

Drawn by William Hurd Lawrence

He stood in front of Warrisden, firmly planted, swaying to the motion of the ship

"This is the man I want," he said to the captain.

"You must be quick, then," the captain replied. "Speak to him while the boat is being unloaded."

Warrisden descended on to the deck.

"Mr. Stretton," said he.

The sailor swung round quickly. There was a look of annoyance upon his face.

"You are surely making a mistake," said he, abruptly. "We are not acquainted," and he turned back to the fish-boxes.

"I'm not making a mistake," replied Warrisden. "I have come out to the North Sea in order to find you."

Stretton ceased from his work and stood up. He led the way to the stern of the cutter, where the two men were out of earshot.

"Now," he said. He stood in front of Warrisden in his sea-boots and his oilskins, firmly planted, yet swaying to the motion of the ship. There was not merely annoyance in his face, but he had the stubborn and resolute look of a man not lightly to be persuaded. Standing there on the cutter's deck, backed by the

swinging seas, there was even an air of mastery about him which Warrisden had not expected. His attitude seemed, somehow, not quite consistent with his record of failure.

"Now," said Stretton, "we must be quick. The sea is getting worse each minute, and I have to get back to the *Perseverance*. You are—?"

"Alan Warrisden," said Warrisden, "a stranger to you."

"Yes," Stretton interrupted; "how did you find me out?"

"Chase told me."

Stretton's face flushed, angrily.

"He had no right to tell you. I wished for these few weeks to be alone. He gave me his word he would tell no one."

"He had to break his word," said Warrisden, firmly. "It is necessary that you should come home at once."

Stretton laughed. Warrisden was clinging to a wire stay from the cutter's mizzen-mast and even so could hardly keep his feet. He had a sense of coming failure from the very ease with which Stretton stood resting his hands upon his hips, unsupported, on the unsteady deck.

"I cannot come," said Stretton, abruptly, and he turned away. As he turned Warrisden shouted, for in that high wind words carried in no other way,

"Your father, Sir John Stretton, is dying."

Stretton stopped. He looked for a time thoughtfully into Warrisden's face. But there was no change in his expression by which Warrisden could gather whether the argument would prevail or no. And when at last he spoke it was to say,

"But he has not sent for me?"

It was the weak point in Warrisden's argument, and Stretton had, in his direct way, come to it at once. Warrisden was silent.

"Well?" asked Stretton. "He has not sent for me?"

"No," Warrisden admitted, "that is true."

"Then I will not come."

"But though he has not sent for you, it is very certain that he wishes for your return," Warrisden urged. "Every night since you have been away the candles have been lighted in your dressing-room and your clothes laid out in the hope that on one evening you will walk in at the door. On the very first night, the night of the day on which you went, that was done. It was done by Sir John Stretton's orders, and by his orders it has always since been done."

Just for a moment Warrisden thought that his argument would prevail. Stretton's face softened, then came a smile which was almost wistful about his lips, his eyes had a kindlier look. And the kindlier look remained. Kindliness, too, was the first tone audible in his voice as he replied. But the reply itself yielded nothing.

"He has not sent for me?"

He looked curiously at Warrisden as if for the first time he became aware of him as a man acting from motives, not a mere instrument of persuasion.

"After all, who did send you?" he asked. "My wife?"

"No."

"Who, then?"

"Miss Pamela Mardale."

Stretton was startled by the name. It was really the strongest argument Warrisden had in his armory. Only he was not aware of its strength.

"Oh!" said Stretton, doubtfully. "So Miss Mardale sent you!"

He thought of that morning in the Row; of Pamela's words: "I still give the same advice. Do not leave your wife." He recalled the promise she had given, although it was seldom long absent from his thoughts. It might be that she sent this message in fulfilment of that promise. It might be that, for some unknown reason, he was now needed at his wife's side. But he had no thought of distrust, he had great faith in Millicent. She despised him, yes; but he did not distrust her. And, again, it might be that Pamela was merely sending him this news, thinking he would wish to hear of it in time. After all, Pamela was his friend. He looked out on the wild sea. Already the boats were heading back through the foam, each to its trawler.

"One must take one's risks," he said. "So

"99% of Camera value is in the lens"

The "Style B" Goerz lens lets light through with the least possible resistance—this is necessary for instantaneous photography. Our new formula for the Goerz Style B has produced a lens which enables the amateur to make pictures under conditions which have heretofore been considered unfavorable. When you buy a camera tell the man you want a Goerz Lens.

Red Hot Hands

Burning, itching, cracked, and bleeding with Eczema, are instantly relieved and speedily cured by soaking them in hot water and Cuticura Soap, and bandaging with Cuticura Ointment, the great Skin Cure.

much I have learned here in the North Sea. Look!" and he pointed to the boats. "Those boats are taking theirs. Yes, one must take one's risks. I will not come."

He went back to the middle of the ship. The punt of the *Perseverance* was already launched, the two fishermen waiting in it. As it rose on a swell, Stretton climbed over the bulwarks and dropped into the stern.

"Good-by," he said. "I have signed on for eight weeks, and only four have passed. I cannot run away and leave the ship short-handed. Thank you for coming, but one must take one's risks."

The boat was pushed off and headed towards the *Perseverance*. The waves had increased, the crests toppled down the green slopes in foam. Slowly the boat was rowed down to the trawler, the men now stopping and backing water, now dashing on. Warrisden saw them reach the ship's side and climb on board; he saw the boat slung upwards and brought in onto the deck. Then the screw of the *City of Bristol* struck the water again. Lurching through the heavy sea she steamed southwards. In a few minutes the Blue Fleet was lost to sight.

To be Continued.

The Strength of Russia on Land and Sea

(Continued from page 585.)

clude the two East Siberian army-corps, commanded by Generals Linevitch and Zassulich, and each containing two divisions, or four brigades, or eight regiments. On a war footing each of these regiments contains about four thousand men, with eighty officers. This gives about sixty or seventy thousand Russian infantry for the two East Siberian corps. A third corps has just been formed, which will bring the total up to a hundred thousand. A fourth and fifth corps will probably be added, each containing about thirty-five thousand men. Next come six East Siberian rifle-brigades, commanded by Generals Gerngross, Anissimoff, Kashtalinski, Fock, Alexeieff, and Trusoff, all of whom distinguished themselves in the Boxer uprising. Each of these rifle-brigades contains four regiments, and each regiment, on a war footing, numbers about two thousand riflemen. The six rifle-brigades, therefore, with their officers, will amount to some fifty thousand men. Two more rifle-brigades are under formation, which will bring the total of riflemen up to about seventy thousand. Add these to the three existing East Siberian army-corps, and the total is about a hundred and seventy thousand to two hundred thousand.

This is the probable number of Russian troops in the Far East at present, but they are being added to day by day, and it is not improbable that the immense total of four or five hundred thousand will actually be reached before the summer closes. Russia, it should be borne in mind, is particularly strong in cavalry, and will not unlikely have fifty thousand in the field, including Cossacks, within a comparatively short time. Needless to say that a due proportion of artillery will support the infantry and cavalry, both in the fortresses and in the field.

When we consider Russia's military problem in the Far East, the immense bodies of troops spoken of are evidently none too many. Russia must maintain a front extending in a half-moon shape from Vladivostok along the Korean frontier, thence along the coast to Port Arthur, and thence to Newchwang, and westwards toward Mongolia. Japan may try to break this front at any one of four points—the north Korean frontier near Vladivostok, the Korean frontier near the Yalu and Wiju, the coast between the Yalu and Port Arthur, and the coast between Port Arthur and Newchwang. Russia must be sufficiently strong in each of these four directions to stop the strongest army Japan can place in the field; say from one to two hundred thousand men at any one of these four points. Then there is the base to be held, from Harbin to Mukden. To maintain these positions, and, at the same time, to prosecute an aggressive campaign in Korea, as General Kuropatkin wishes to do, will tax even a force of four hundred thousand men.

Progress of Science

A New Method of Color Photography

CONSIDERABLE interest in photography in colors is now being manifested in Europe, and several inventors are at work on processes whereby photographs in natural colors are obtained by the use of a single negative. While the underlying idea is not entirely novel, yet the achieving of practical results results is an important accomplishment, and this is claimed for at least one of the inventors. The process involves the use of a specially prepared pigment paper and an ordinary negative prepared in the usual manner. The paper is coated with a series of layers of coloring matter containing films, or layers of gelatine, the red being next to the surface of the paper, the green in the middle, and the blue on top. These layers are composed of bichromate of potash and gelatine, which, as is well known, under the influence of light becomes insoluble. In the photographic negative the portions corresponding to the dark objects or shadows are transparent, while the light portions, such as the sky, are opaque. Consequently, when the specially prepared paper is placed beneath the negative in a printing-frame and exposed to the light, the dark portions will cut off most of the light, and the small amount that goes through will affect only the upper or blue layer, rendering it insoluble. The portions corresponding to the greens are more transparent, and the intermediate or green layer will be affected by the light, while the transparent part of the negative corresponding to the red and black objects permits the light to pass in sufficient amounts to penetrate to and act on the red layer. The paper is then laid with its face down on a second sheet, to which the coating is transferred, and the print is developed by washing with warm water, which removes all the bichromatized gelatine except that made insoluble by the rays of light. The layers are now reversed from their original position, the red being above and the blue next to the surface of the paper. In actual operation it was found desirable to employ a greater number of layers instead of the three fundamental colors, and in certain instances as many as fourteen pigments have been used. As can be seen, great care is required in preparing and manipulating the paper, but the process, if capable of general application, seems particularly useful, as any negative can be used for making a colored print. Difficulties have been encountered in obtaining suitable pigments, and it would appear that the process requires considerable additional work before it is perfected. Should this be accomplished, it suggests great possibilities for not only new photographs, but for those from existing negatives.

Contamination of Deep Wells

By a series of experiments which proved how readily deep wells and springs could experience pollution, the town of Quitman, Georgia, has doubtless been saved from the danger of an epidemic of disease. In this place the water-supply of the town is derived from wells, and in planning a sewerage system it was proposed to dispose of the public sewage by discharging through a bore-hole into an underground stream. The possibility that contamination might result, however, was early suggested, and led to practical experiments being undertaken by the United States Geological Survey, and the Geological Survey of Georgia, in order to determine the matter definitely. Two tons of salt were placed in the well where it was planned to empty the sewage, and the water from the various wells which had been previously examined, especially as to their chlorine contents, was again analyzed, samples being taken at intervals during and sometime after the experiment. It was found that the salt had permeated all of the wells in the town, demonstrating conclusively that disease germs could be readily communicated to the drinking-water. These experiments are in line with some carried on in Europe several years ago, where it was found that bacteria, placed in certain wells, could be detected at other sources of water in the vicinity, and emphasize the importance of carefully examining and safeguarding water supplies under all conditions.

Lincoln and the Mules

SENATOR DEPEW of New York, who has carried his prestige as a raconteur into the Upper House of Congress, relates a hitherto untold story about President Lincoln. It is apropos of the demand for an immediate strengthening of the United States navy.

"I remember," said the millionaire New-Yorker on the floor of the Senate, "being in the Executive Mansion at one time and in Mr. Lincoln's office when a telegram was handed to him which gave the information that a brigadier-general, through foolishness of an extreme sort, had been captured down in Virginia. In his command was a long train of pack-wagons and mules. Mr. Lincoln read the despatch. Then he took up his pen and said,

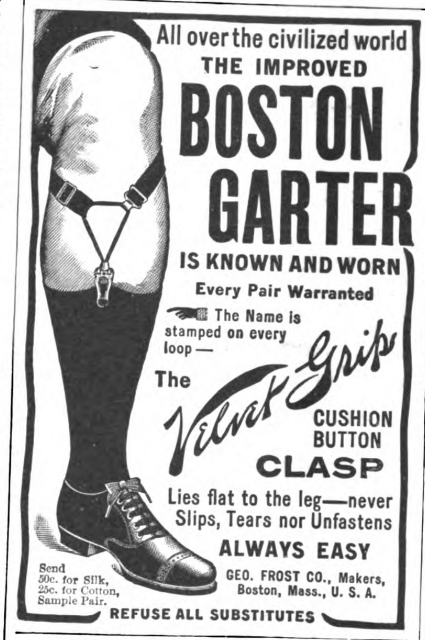
"'With that pen I can make a brigadier-general in a minute, but I cannot replace those mules!'"

Commerce at the Seat of War

THE total commerce of the territory fronting upon and immediately adjacent to the scene of present hostilities in the Far East aggregates, in round terms, about $600,000,000, of which considerably more than one-half is imports. Japan's commerce is about equally divided between imports and exports, but in the case of China and Asiatic Russia imports greatly exceed exports, and this is also true of Hongkong, which passes most of its imports on into China and draws from China most of the articles which become its exports. Probably three-fifths of the total commerce of the countries in question, taken as a whole, is in the form of imports, and the United States is year by year supplying a larger share of those imports of the countries in question and gaining upon other countries in the relative share which it supplies thereof. Of the exports from the countries named the United States is the largest single purchaser. The tea, the raw silk, the manufactured silk, the rice, the mattings, and other products of this character which form the bulk of the exports of China and Japan go more largely to the United States than to any other single country of the world, while as to Asiatic Russia and Korea, their exports are at present so small as to be of little importance in a discussion of the commerce of the countries in question. The more important of the exports of the United States to the section in question are cotton and cotton goods, kerosene, flour, lumber, manufactures of iron and steel, manufactures of leather, and tobacco. Raw cotton exported to this particular section of the world goes chiefly to Japan, and the market in Japan for American cotton is influenced largely by the surplus of cotton in India, which is of shorter staple and therefore of lower price. In years of short supply in India Japan turns to the United States for its raw cotton.

Director Conried's Horse Story

DIRECTOR HEINRICH CONRIED, of the Metropolitan Opera House, who is a good raconteur, tells this story of a horse whose theatrical experiences were embarrassing. This horse, it seems, was prominently on view during a certain scene in an opera which was having a run some time ago in Germany. He was ridden on every night by one of the actors, and his duties consisted simply in standing still in the centre of the stage while his rider dismounted and sang a duet with the heroine. One night the horse which usually took the part was indisposed, and a substitute had to be pressed into service. Just as he was ridden onto the stage there was a loud fanfare from the orchestra, and the startled animal began to neigh in terror, quite spoiling the effect of the scene. The manager, standing in the wings, swore feelingly beneath his breath.



"He ought to be fined," he muttered, as the horse, still neighing loudly, was led off by a stage-hand—"he's extemporizing!"

Hamlin Garland's HESPER

A New Novel of the West

BY THE AUTHOR OF "THE CAPTAIN OF THE GRAY-HORSE TROOP"

A novelist, speaking of Hamlin Garland's Western love story, recently said: "When I read 'Hesper' I can feel the wind come down the cañon and see the mountains rise before me." One of the charms of Mr. Garland's novel is that the reader is irresistibly made to feel the exhilaration and the beauty of outdoor life depicted. Another charm is Ann Rupert, the New York society girl "out West."

Schlitz

The Beverage of Health

Pure beer—Schlitz Beer—is the best drink in the world for you.

The malt is a food; the hops a tonic. The alcohol—only 3½ per cent—is an aid to digestion; a healthful stimulant.

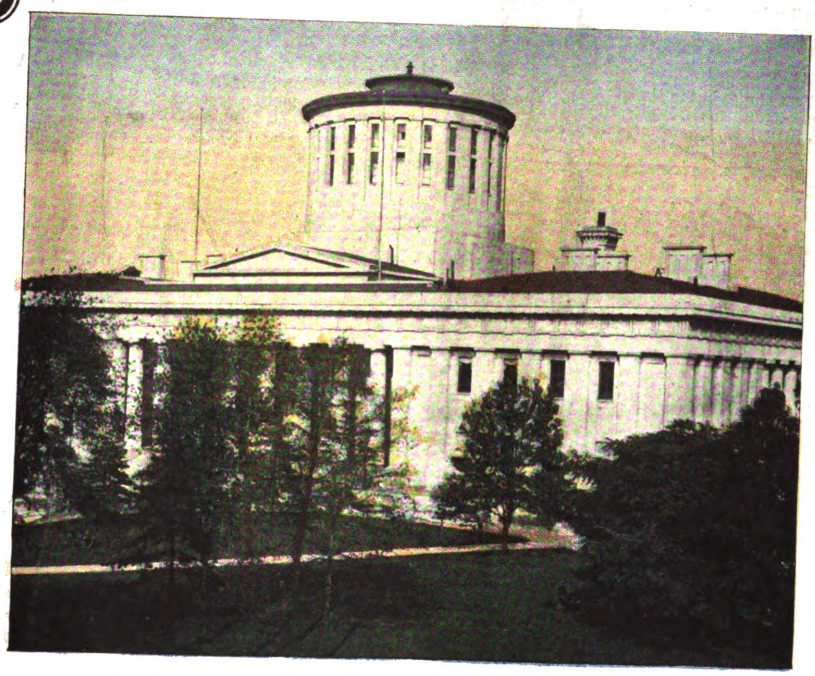
The most healthy nations in the world—the most hardy, most energetic—drink the most of it.

But the beer must be pure.

Impurity means germs and germs are harmful. That is why we brew Schlitz in absolute cleanliness. That's why we filter even the air that touches it, then filter the product, then sterilize every bottle.

And the beer must be aged.

Green beer causes biliousness. That's why we age Schlitz for months before we market it.



Schlitz beer is absolutely pure; it can't harm you. And the habit of drinking it is good for you. Ask for the brewery bottling.

The Beer That Made Milwaukee Famous.

HARPER'S MAGAZINE

for MAY

Our System of Neutrality

By JOHN BASSETT MOORE, LL.D.

Professor of International Law and Diplomacy, Columbia University

This is the second of Professor Moore's valuable papers on the history of our diplomacy. It deals with the development of our system of neutrality from Revolutionary times down to the present day.

Travel

ARTHUR SYMONS, the English poet, contributes one of his vivid impressions of the old Italian city of Verona—a picturesque article daintily illustrated in tint by H. D. Nichols.

Science

Dr. C. W. SALEEBY, the well-known scientific writer, has written a most valuable scientific paper, which he entitles, "Whence and Whither," a new theory of the beginnings of all worlds.

Edwin A. Abbey's Pictures for "Hamlet"

Four remarkable pictures by EDWIN A. ABBEY, R.A., illustrating Shakespeare's "Hamlet," are the striking artistic feature of this number. The pictures are accompanied by critical comment on the play by Theodore Watts-Dunton.

Nature

Dr. H. C. MCCOOK, whose nature papers have proved so attractive a feature of the MAGAZINE, writes of the Ballooning Spiders and their remarkable aeronautic feats. His article is fully illustrated with drawings from the author's own sketches.

Archaeology

HENRY SMITH WILLIAMS, LL.D., in his article on "The Primitive Book," traces the development of the book from the early stone-tablet inscriptions and parchments. His article is interestingly illustrated with many reproductions of ancient MSS., etc.

The Fleet on "The Labrador"

By NORMAN DUNCAN

Mr. DUNCAN has lived among the rugged fishermen of the Labrador fleet. His article is a dramatic narrative of their adventurous lives. He writes with wonderful directness of what he has seen—his article is more interesting than a story.

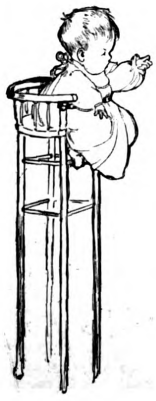
8 Short Stories

There are eight short stories in the May MAGAZINE, including tales by E. S. Martin, Warwick Deeping, Elizabeth G. Jordan, Mary Tracy Earle, Robert W. Chambers, Philip Verrill Mighels, Ohiyesa, etc.

Art

In addition to Mr. Abbey's pictures, reproduced in tint, there are pictures and some remarkable photographs in color by H. D. Nichols. Henry Wolf contributes one of his most notable wood engravings.

The funniest of biographies—



The Memoirs of a Baby

by

JOSEPHINE DASKAM

Author of "The Madness of Philip"

NEVER before has the dignified title of "Memoirs" graced so funny a book as this latest tale of Josephine Daskam's—a writer widely known for her clever child studies. The sorry side of life—the tribulations of the little tots—have no place in this irresistibly amusing record of the home-life of a typical American couple. The baby refuses to develop psychologically or scientifically according to the theories set down in his Aunt Emma's books, but he grows to robust boyhood after a fashion of his own. All the various incidents of a lively youngster's boyhood here find laughable portrayal. The unceasing arguments between the common-sense young father and the theoretical "Aunt Emma" not only afford such amusement as Josephine Daskam alone can give us, but go to make a clever satire on "modern" methods of rearing children.

F. Y. Cory, whose pictures of baby-life have never been equalled for cleverness and humor, has illustrated the book copiously with pen-and-ink drawings. The pictures are every bit as funny as the narrative, and the book will provoke the laughter of any one who turns the pages.

COMMENT

NATURALLY Mr. Roosevelt's friends are giving a great deal of attention to the question, What nominee for Governor of New York would be most likely to promote the success of the Presidential ticket in that State? Nobody pretends that any strength would be added to the ticket by the renomination of Governor Odell, who in 1900 ran behind Mr. McKinley by more than 32,000 votes, and in 1902 barely managed to secure a reelection by a plurality of less than 9000. Nothing, however, can prevent Governor Odell from securing a renomination if he wants it, for he is absolute master of the Republican machinery in the city, as well as in the State, of New York, only a phantom of authority being left to Senator Platt. But Mr. Odell knows that if renominated and defeated he would be extinct, considered as a political force, and he knows also that New York will be a doubtful State this year, unless the Democrats are guilty of some grave blunder at St. Louis. He probably will deem it expedient to permit some other man to receive the honor of a nomination and to face the chances of defeat, while he (Odell), as chairman of the Republican State Committee, retains his grasp on the machine. There are two men who indisputably would strengthen the ticket, to wit, ex-Secretary Root and ex-Governor Black. We do not believe that either of them would consent to enter the field this year, unless, indeed, the unexpected should happen and somebody of the Bryan stamp should be put forward for the Presidency at St. Louis. Then probably a Republican nomination for the Governorship of New York would "be equivalent to an election."

Nobody yet predicts who will be the Democratic candidate for the office. There is no doubt that Mayor McClellan could have the nomination should an agreement be reached between the "up-State" forces controlled by ex-Senator Hill on the one hand and Tammany Hall on the other. If those two wings of the New York Democracy shall remain unreconciled, the nomination seems likely to go to Comptroller Grout. There is no foundation for the report that Mr. Bird S. Coler may be renominated. His exit from the political stage is final; not only because he was defeated in 1902, but because that event was followed by the deposition of his sponsor, Mr. McLaughlin, from the leadership of the Brooklyn Democracy. That the Democratic nomination for the Governorship of New York would be refused this year by any one is unlikely. Some shrewd observers of the political situation in the city and State of New York go so far as to predict that the Democratic candidate for the Governorship will be elected even should the Empire commonwealth give its electoral votes to the Republican nominee for the Presidency. That was what happened, it will be remembered, in 1888, when Warner Miller fell "outside the breastworks," which were successfully stormed by General Harrison.

At this distance, when every day sheds a new light on the situation, who would presume to forecast the outcome of the St. Louis convention? Certain facts, indeed, seem indisputable. Should the Democracy, in convention assembled, make up their minds to request the only man who has led them to victory since 1856 to uprear once more in his sturdy hand the Democratic standard, the news of his nomination would undoubtedly cause the Republican candidate and the shrewdest among his managers many a sleepless night. We are by no means certain, however, that Democratic foresight and sagacity will keep Mr. Roosevelt and his friends awake. The awful blunders perpetrated by leading Democrats at national and State conventions during the last eight years scarcely encourage us to believe that the Democracy at St. Louis will commit an act of sanity. The sceptical mood which, at the hour when we write, is prevalent may be ascribed to the report that ex-Senator Hill, who proposes, we are told, to write a platform to be put forward on April 18 by the Democratic State convention of New York, has framed one which, considered as a truckling and cynical bid for the good-will of the Hearst-Bryan faction, and even of the Socialists, may be compared with the programme which cost Mr. Coler the Governorship in 1902. It will be remembered that even Mr. Coler, who was not supposed to have definite and rooted ideas concerning the purport of the Federal Constitution, shrank from endorsing the doctrine that the Federal government was constitutionally endowed with the power to enter the State of Pennsylvania and seize the anthracite coal-fields by the right of "eminent domain."

How Judge Parker would have treated such an assertion is plain to those who keep in view his legal training or who have read his judicial opinions. Judge Parker is inflexibly opposed, we are informed, to the insertion in the platform to be adopted by the New York Democratic convention of a pronouncement in favor of government or municipal ownership of all "utilities." Judge Parker is unquestionably right in believing that the acceptance of such a plank at Albany on April 18 would seriously impede the success of his candidacy, and would work harm in the national convention at St. Louis. His conviction is that the platform to be put forward this year by the Democracy should be constructed on conservative lines, and that no concession whatever should be made to the authors of the Kansas City and Chicago programmes. The fact that Chief-Judge Parker and ex-Senator Hill, if they have not come to the parting of the ways, are already at variance regarding the policy which it behooves the Democracy to pursue, will surprise nobody who, like Mr. Cleveland and Mr. Cleveland's friends, acknowledges the solidity of Parker's qualifications for the Presidency. That Judge Parker would draw so many votes from the independents as would Mr. Cleveland nobody, we imagine, believes; but we have the ex-President's authority for thinking that Parker would deserve to do so.

As was to be expected, an attempt is making in the Hearst-Bryan newspapers to show that ex-President Cleveland's approval of Judge Parker's candidacy is an injury to the New-Yorker. One of these journals publishes five alleged telegrams from Denver, four alleged telegrams from Omaha, two despatches from Columbus, Ohio, and one from St. Louis—all of these to the effect that Mr. Cleveland's endorsement is either valueless or hurtful. Colorado was carried by Mr. Bryan in 1896 with a plurality of nearly 135,000; it was carried by Mr. Weaver, the Populist candidate, in 1892; at the four preceding Presidential elections it was carried by the Republicans. It is quite possible that Mr. Cleveland, or a candidate cordially approved by him, might fail to get the four electoral votes of Colorado. What would the loss amount to? As to Nebraska, it went for Weaver in 1892, for Bryan in 1896, but was recovered by McKinley in 1900 with nearly 8000 plurality. Under the circumstances, there is no reason to doubt that Mr. Cleveland himself, or a nominee endorsed by him, would draw sufficient votes from the McKinley following to carry the State. As for Ohio, we suppose nobody in his senses imagines that a Democrat of the Hearst-Bryan stripe would get the electoral votes of that commonwealth. The only Democrat who could carry it would be one of Mr. Cleveland's stamp, for it should not be forgotten that in 1892

the ex-President got one of Ohio's electoral votes. That is an achievement which no Democratic nominee for the Presidency has rivalled for half a century.

Is it possible that any reasonable person can doubt that sober-minded Democrats, and many Republicans as well, in Ohio, Indiana, Illinois, New Jersey, Connecticut, and New York, will be profoundly impressed by Grover Cleveland's published statement that the recent movement looking to a concentration of the Democracy on Judge Parker's candidacy has afforded him the greatest possible relief and satisfaction? Was he not justified in saying that he did not see how any one professing to be a genuine and intelligent Democrat could hesitate to accept Judge Parker, should he be nominated, as a fit representative of safe and conservative Democratic principles, and entitled to hearty and unreserved Democratic support? That the ex-President would have preferred ex-Secretary-of-State Olney to the Chief Judge of the New York Court of Appeals is an inference which, perhaps, is warranted by his statement that "some of us may have been of the opinion that another nomination might be more expedient." Not for a moment, however, should we overlook the fact that Mr. Cleveland adds, "That should be a mere matter of opinion which should pass out of sight immediately if the choice of the convention should fall upon Judge Parker."

We are not surprised that a great deal of attention has been attracted to the address delivered by Mr. James M. Beck, formerly Assistant Attorney-General of the United States, at the eighth annual meeting of the American Academy of Political and Social Science. It will be remembered that Mr. Beck was one of the lawyers who made arguments in the Northern Securities case before the United States Circuit Court. In his address Mr. Beck pointed out, what we have suggested in these columns, that the diversity of the grounds on which the decision in that case was defended in the opinion of Justice Harlan and three colleagues on the one hand, and in the opinion read by Justice Brewer on the other, foreshadows a future retreat by a majority of the court—a majority made up by the adhesion of Justice Brewer to the four minority justices, Fuller, White, Peckham, and Holmes—from the extreme position taken in the joint-traffic case that the Sherman anti-trust law forbade all restraints of trade, whether reasonable or unreasonable. Mr. Beck recalls that at common law the courts reserved the right to determine whether, under the circumstances of a particular case, a contract in restraint of trade was reasonable or unreasonable. To the ex-Attorney-General it seemed indisputable, in view of the opinions read in the Northern Securities case, that there is an increasing tendency in the United States Supreme Court to regard such restraint, except in extreme cases, as reasonable.

Mr. Beck, however, was of the opinion that the burden of determining just when a railroad consolidation was reasonable or unreasonable ought not to be cast upon the Federal judiciary. The courts, he said, are already overloaded with questions that are semijudicial and semilegislative, and he thought that upon Congress, as being the law-making representative of the American people, should rest the responsibility of determining by statute the extent, if any, to which the consolidation of competing carriers should be permitted. That is a step further than Senator Foraker, in the bill which died a-bornin', proposed to go. Mr. James B. Dill, a well-known corporation lawyer, replying to Mr. Beck, ridiculed the United States Supreme Court as the "Court of Last Conjecture," and declared that he did not believe in Federal control of street corporations at all. With unparalleled frankness he said: "I don't believe in anti-trust legislation. I believe in pro-trust legislation." Mr. Dill thought that the logical effect of the Northern Securities decision—which, we repeat, was rendered by five judges against four, and even the five did not agree as to the grounds—was to relegate us back to the time when it took seventeen railway companies and seventeen separate tickets to carry a man from Philadelphia or New York to Chicago. Mr. Beck, as we have seen, had spoken of retreat on the part of the Supreme Court. "Retreat to what?" asked Mr. Dill. "To more expedients, more guesses, more circumlocution, and more kaleidoscopic views of law and justice?" Mr. Dill concluded with a candid avowal of his conviction that "the trusts are here to stay, and they are bigger than any one State in the Union."

By the second section of the third article of our Federal Constitution it is provided that the judicial power of the Federal courts shall extend to controversies between two or more States. Originally the provision covered controversies between a State and citizens of another State; but the Eleventh Amendment of the Federal Constitution declares that the judicial power of the United States shall not be construed to extend to any suit in law or equity commenced or prosecuted against one of the United States by the citizens of another State. Can a citizen of the United States evade the clear intent of the Eleventh Amendment by transferring a chose in action, which before the enactment of that amendment he would have had against a given State, to some other State? The question is commonly supposed to have been answered in the affirmative in the case of South Dakota against North Carolina, and an attempt is now making to elicit from the same tribunal a more comprehensive and definite answer. It may be remembered that the individual owner of certain bonds of North Carolina, the interest and principal of which bonds could not be by him collected, transferred them to the State of South Dakota, and that the Legislature of the State authorized the acceptance of the bonds, and ordered suit for their collection to be instituted. By a vote of five to four the United States Supreme Court held that under the second section of the third article of the Constitution, South Dakota could sue North Carolina for the value of the bonds mentioned.

It should be borne in mind, however, that a dissenting opinion was delivered by Justice White, in which Chief-Justice Fuller, Justice McKenna, and Justice Day concurred. Mr. Justice White opined that it was an elementary rule of constitutional construction that no one provision of the Constitution can be segregated from all the other provisions and considered alone, but that all the provisions bearing upon a particular subject must be brought into view by the court, and so interpreted as to carry out the main purposes of the instrument. If, in following this rule, it should be found that an advocated construction of any one provision of the Constitution would, if adopted, neutralize a positive prohibition elsewhere set forth in the instrument, the inference is that such proposed construction must be erroneous, since its enforcement would mean, not to give effect to the Constitution as a whole, but to destroy a portion thereof. Justice White's mind, therefore, could not escape the conclusion that if, wherever an individual has a claim against a State, he may, by transferring it to another State, bring into play the judicial power of the United States to enforce such claim, then the prohibition embodied in the Eleventh Amendment is a mere letter without spirit and without force. Mr. John B. Manning, of New York city, is resolved to find out whether the five judges composing the majority, or the four constituting the minority, of the highest Federal tribunal expressed the permanent judgment of the court. He has offered to present the Commissioners of the District of Columbia with ten $1000 bonds of the State of South Carolina, assuming, of course, that the Commissioners will proceed to test the validity of the bonds, upon which, as a private individual, Mr. Manning is disqualified by the Eleventh Amendment from suing. It is probable that the United States Supreme Court would hold that the District of Columbia, like a Territory, has all the rights conferred upon a State by the second section of the third article of the Constitution; but whether the Commissioners of the District of Columbia will think it worth while to incur the expenses of a suit remains to be seen.

We hope that the Senate will approve that provision of the Philippine bill which proposes to give a government guarantee of interest on a portion of the capital that may be invested in railways in the archipelago. It is well known that railway-building is much more expensive in the tropics than it is in the temperate zone, owing to the tremendous downfall of rain in the wet season, and to the frequency with which water-courses, almost or entirely dry during a part of the year, are

converted into raging torrents. Nevertheless, the problem of railway construction and maintenance in the tropics has been solved in English, French, and Dutch dependencies, and Sir William Van Horne may be said to have presented the latest solution in Cuba. In the island of Luzon there is a railway, the Dagupan line, which has 120 miles of track, and which would never have been constructed had not the Spanish government guaranteed eight per cent. interest on five million dollars of its stock. Secretary Taft, who undoubtedly is the highest authority on questions relating to the Philippines, considers the creation of a railway network in Luzon indispensable for the development of that large island. At the same time experience has convinced him that American capitalists cannot be persuaded to undertake the venturesome task, unless a moderate rate of interest on the money invested shall be guaranteed by our government for a term of years. It has been suggested that the guaranty should be five per cent. on forty thousand dollars a mile for thirty years, a part of the guaranteed interest being set aside to form a sinking-fund for the repayment of the loan. It certainly is our duty to give the Filipinos treatment at least as generous as they received from impoverished Spain.

We are told that the Republican leaders have agreed upon a Statehood programme, and that a bill will be reported to the House of Representatives providing for the admission of two States, to be known respectively as Oklahoma and Arizona. The former State will comprise Oklahoma Territory and Indian Territory, while the latter will be made up of two Territories now known as Arizona and New Mexico. The new State of Oklahoma will have an aggregate area of 70,430 square miles, including the Cherokee Strip and No Man's Land; the total population of this area, according to the last census, was 790,391. There is no doubt that the population is growing rapidly, and is likely to exceed a million and a half when the State is admitted to the Union—an event which, according to the bill, cannot take place before 1906, by which date it is expected that all of the Indian lands in Indian Territory formerly held in tribal ownership will have been allotted in severalty. To the admission of a State thus constituted there can be no valid objection, provided adequate precautions are taken to safeguard the rights of the Indians. The proposed State of Arizona stands on a very different footing. The aggregate population of the Territories of Arizona and New Mexico in 1900 was only 318,241, and there is no prospect of any early and rapid increase. On the other hand, the total area of these Territories is 235,600 square miles, or only about 30,000 square miles less than the area of Texas, which in 1900 had 3,048,710 inhabitants. Fortunately, nobody proposes to force Arizona into the Union against its will, and there seems to be no doubt that the people of at least one, if not both, of the Territories concerned will vote against the suggested fusion. There is, therefore, no immediate danger of seeing fewer than 350,000 persons represented by two Senators in the Upper House of the Federal legislature.

We are glad to commend the words uttered by President Roosevelt in Washington on April 7 at a dinner given by the Periodical Publishers' Association of America. The President made it clear that he concurs with his predecessor, one of the secrets of whose success was that he "kept his ear to the ground," in recognizing writers as a "real governing class" of the republic. Mr. Roosevelt said he had arrived at the conclusion that citizens of the United States cannot keep too fresh or too preponderant in their minds the fact that the men ultimately responsible for the conduct of the Federal government are not the constitutional representatives of the people in Congress assembled, but the people themselves. This has been true for eighty years, and purblind are those that fail to see it. The last year in which members of Congress presumed to dictate the nomination of a President was 1824, and their dictation was repudiated at the ballot-box. Over and over again since then have the wishes of members of Congress been disregarded by national conventions. So far as Democratic national conventions are concerned, that was the case in 1868, in 1876, in 1884, in 1892, and in 1896. Republican national conventions paid but little heed to the desires of Republican members of Congress in 1856, in 1860, in 1876, in 1880, in 1892, or in 1896. We add the last-named year because it would be absurd to assert that, before the national convention met, a majority of the Republican Senators and Representatives were in favor of Mr. McKinley.

No one, then, will dispute, we imagine, our assertion that for eighty years the American people, and not their constitutional spokesmen in the Houses of Congress, have been the real masters of this country. But how is anybody to find out what the people want and mean to have? No doubt each of the great political parties has an opportunity of expressing its wishes, at intervals more or less widely apart, in municipal, State, and national conventions. But how, meanwhile, is any one to detect the drift of public opinion and popular sentiment? It is manifest that, unless one's conclusions are to be exclusively *a priori*, or, in other words, guesswork, and therefore, in all likelihood, worthless, they must be deduced from a careful study of the newspapers, the ability of which to shape or to reflect the views of large or influential sections of the American people is attested by the number of their readers or by the serious attention with which they are read. That is something which foreign diplomatists could not be expected to understand, least of all those whose experience has been acquired at the courts of autocratic or semiautocratic rulers. Not even in France or England do newspapers, however respected or however large their circulation, exercise the controlling and irresistible influence which they possess in the United States. What could be accomplished by an unofficial moulder of feeling and opinion was foreseen by the Scotchman who said, "Let me make the songs of the people, and I care not who makes the laws." Thomas Jefferson foresaw it with even more distinctness, though in his time the American press was but a rudiment of what it has since become. In later days few persons have better comprehended than did Samuel J. Tilden the tremendous leverage that newspapers have it in their power to exert. It is satisfactory to observe that Mr. Roosevelt has, perhaps somewhat tardily, awakened to a truth which was so patent to his predecessor. If he, like President McKinley, will "keep his ear to the ground," or, in other words, mark the echoes only detectable through newspapers, he is unlikely to make any serious mistakes hereafter. Does this mean that newspaper writers are the most trustworthy interpreters of the fundamental convictions and paramount wishes of the people? We answer, Yes; because, by the very law of their existence, they are compelled to study from day to day and with the utmost wariness the signs of veering or fixity in those wishes and those convictions.

While we cannot get the exact figures and positions of the troops under General Kuropatkin's command, we can come pretty close to both if we carefully understand the problems he has to face. It is probable that the Russians have between two hundred and three hundred thousand troops already in Siberia, including, perhaps, fifty thousand cavalry and Cossacks, who are practically mounted infantry of a high grade, as well as a large proportion of both field and siege artillery. Now, as to the disposition of these troops, there is, first and most important, a large nucleus at Harbin, where the railroad from European Russia branches eastward to Vladivostok and southward to Port Arthur. It is necessary to have troops at such a point, in order that they may be sent with equal rapidity to whichever of the points on the front is weakened, or menaced by a heavy attack. It is the old simile of the handle of the fan, the semicircular edge of the fan being the fighting-line, with the reserves at the handle, equally near to any point on the rim. After the Harbin contingent, we should count the railroad guards, along both branches of the line, and compelled to stay there. Then we have the two garrisons of Vladivostok and Port Arthur, also forced to remain where they are. Now comes the interesting part of our problem. We know that Manchuria is menaced from four points: First, from the eastern ports of Korea, anywhere between Vladivostok and Wonson. An army of invasion would have two or three mountain ranges to cross before reaching any vulnerable point along this line, the first vulnerable point in the direction of Harbin being Kirin, connected with Harbin by a branch line, and therefore easily reenforced. Russia has, without doubt, a considerable body of troops somewhere between Kirin and

Wonson, probably upwards of twenty thousand, screened by a body of Cossacks and cavalry, who are in touch with the Japanese advance columns in the Wonson region. Then we have the second point, the lower Yalu region, from which most of our news comes, in the general direction of the Japanese army between Ping-yang and An-ju. To this we may join the third vulnerable point, which supposes a Japanese landing between the mouth of the Yalu and the Liao-tung peninsula. An uninterrupted body of troops, grouped in a half-moon, covers both these points, and this is necessarily the strongest centre of Russia's Manchurian army for the time being. There must be a hundred thousand men in this division, with a screen of cavalry reaching down as far as the Japanese advance posts, and constantly in touch with these. Finally, we have troops at New-chwang to guard against a Japanese landing there. As they can easily be reenforced from Mukden and Harbin, in a few hours at the outside, these troops are at present not very numerous, probably from thirty to forty thousand, but well supplied with artillery. Here no screen of cavalry is needed, since there is no foe in sight. This will remain the general situation until the Japanese advance begins, for it is evident that General Kuropatkin does not intend to enter Korea with an army of invasion at the present time.

Writers who set out to annihilate Christian Science perform, as a rule, less to the satisfaction of their readers than of themselves. They deny too much, or scoff too sneeringly, or gibe with overmuch intolerance, and leave us, usually, disposed in mood if not by conviction to get down on the side of the fence that is not theirs, and to feel that the only writer that the Christian Scientists have very much reason to fear is their own Mrs. Eddy. Somehow Dr. J. W. Churchman, who has discussed this topic in the April *Atlantic Monthly*, has had better success than most of his fellows. He is not a minister, but a doctor—an assistant in Johns Hopkins Hospital. He has the air of having examined his subject, not only thoroughly, but with the intention of discovering truth, rather than with a purpose prepense of annihilation. Discussing Mrs. Eddy's philosophy, he states her basal propositions, rehearses her logic without flippancy, and gravely discloses why he finds her philosophical system unsatisfactory, her idealism an evasion, her theology pantheism, her science laughable, and her religion "fundamentally un-Christian."

But, after all, he says, the most obvious task, in view of the popular identification of Christian Science with its therapeutics, is to determine whether this thought-deformity has really anything of value to offer orthodox medicine as regards either its theory or practice. That is undoubtedly what we most want to know. Christian Science, he says, offers a theory of disease which is manifestly not the true one, but "medicine ought to remember that her own pathological theory of the thing, though perfectly satisfactory so far as it goes, ceases to be invulnerable where all natural reasoning begins to weaken,—at the mysterious blending of physical and 'mental' conditions." That seems to mean that there are still things that are not known, and that though Mrs. Eddy's guess at them is wrong, medicine has not yet guessed right. "How satisfactorily to comprehend the etiological importance of mental states in disease, and the relation of tissue changes to psychoses; how intelligently to apply to therapeutics the mental factor which present ignorance forces us to neglect altogether, or to treat as a mere plaything,—these," he says, "are the problems which the 'mental movement' is giving over to science for solution." Christian Science, he adds, may have succeeded in calling attention to a neglected group of phenomena. Certainly it has failed to interpret them satisfactorily; but "just as certainly, in spite of a tendency to shun the issue or regard the question as closed, the last word is very far from having been said on this mysterious subject."

So it seems to many lay observers, who cannot but believe that the constant experiments of large numbers of volunteers with every phase of mental treatment will at least supply useful opportunities for observation, and data which will help the advance of knowledge. One argument of men like Professor William James against attempts at the suppression of Christian Science by legislation has been that it is useful to have attention directed to the relations of the mind to the body, and that to choke off experiments in that direction would be inexpedient even if it were possible. Possibly Dr. Churchman is of this mind, though he does not say so. He does point out that the relation of intelligence to disease is a clinical reality, that in a certain proportion of cases habit of mind seems to be an important factor in determining the occurrence or issue of disease, that high intelligence offers a stronger front to disease than low, and that with a properly schooled mind the man of an average constitution, decently cared for, "may actually avoid that great class of diseases which, though their etiology is not yet clear, are certainly furthered if not started by an improper mental attitude."

Some weeks ago the newspapers discussed somewhat profusely the question whether a Chicago bank clerk ought to marry on less than a thousand dollars a year. It was not difficult to see that the main question was how much work the bank clerk's bride would be willing to do, or be capable of doing. A kindred question has been discussed more recently by Professor Simon N. Patten, of the University of Pennsylvania, who argues that the social problem of thousands of married couples would be solved were the wife to continue a wage-earner during the early period of marriage. When two young people who are earning ten or twelve dollars a week apiece marry, Dr. Patten would have both of them continue to be wage-earners until the husband's income increases to twenty dollars a week. Then, he thinks, it is better that the wife should give herself up to the home, and that both should live on the husband's income. It is desirable, thinks Dr. Patten, that persons of small wage-earning capacity should be married, provided both continue wage-earners. Dr. Giddings of Columbia University seems to have kindred leanings, for though he feels it to be desirable that after marriage the wife be relieved as far as possible from a money-earning occupation and have plenty of time to maintain the home, he points out that the middle-class Frenchman's wife is usually a shopkeeper or manages a restaurant, and that there is no better family life anywhere than in the middle classes in France. In this country he finds that the wife of a foreigner is nearly always a breadwinner, but that American women have no tendency to become wage-earners independent of their husbands. As an abstract consideration he thinks that women, whether married or single, should have absolute freedom and opportunity to earn money. He would take away all legal and conventional barriers and let women take their chances in the industrial world with the men.

The American prejudice against wage-earning by married women appears in the effort occasionally made to make the employment of teachers in the public schools terminate with marriage. But thousands of American married women do earn wages, thousands more would gladly do so if they could, and other thousands would be happier and better off if they did. The prejudice against it seems disadvantageous. American men, as a rule, prefer to support their wives if they can. If an American married woman works for pay, it is either because it gives her pleasure or because her husband's income is insufficient. She does not do it as a matter of course. How long she can keep it up depends upon what the work is, and upon other circumstances. If she has children, that, of course, interferes with her wage-earning if it does not stop it altogether, and general acceptance of a custom which would restrict or discourage child-bearing is not to the public advantage. Marriage tends, and should tend, to withdraw women from wage-earning, but it need not stop it *per se* and abruptly. To make marriage a bar to future wage-earning by a woman operates in restriction of marriage, and that is at least as much against public policy as restriction of child-bearing. It will always depend on circumstances whether a young wage-earning woman who marries had better go on with her work, but Dr. Patten seems to be right in holding that it is often best that she should do so, and that it is often better that she should marry and still earn wages than not marry. Prejudice should not determine conduct in these matters. There should be a freer choice.

The New South

In a volume to which he has given the name *Problems of the Present South*, Mr. Edgar Gardner Murphy, of Montgomery, Alabama, discusses from the view-point of one who is a Southerner by birth, traditions, education, training, and experience, some of the existing educational, industrial, and political issues in the Southern States. He does not profess to put forward his conclusions as final, or even representative. He does not presume to offer an authoritative interpretation of Southern opinion. On the contrary, he recognizes that his ideas are likely to be rejected by some influential persons at the South, though he hopes to see them accepted by others. What he has tried to accomplish is to contribute, by illumination and suggestion, toward the slowly forming, collective verdict with reference to Southern issues, in which the public opinion of the whole country, North and South, may be expected at last to find rational and articulate expression. It is a legitimate and honorable aim, and Mr. Murphy's efforts to attain it deserve, and are certain to receive, careful consideration.

We desire here to concentrate attention on the data collected by Mr. Murphy with regard to the present industrial development of the South. This, he points out, is not really a new phenomenon, but should rather be described as a revival. It is, he shows, a mistake to assume that the old order of things at the South before the outbreak of the war between the States was an order destitute of industrial ambition. At various times during the first three-quarters of the eighteenth century attempts were made, not only in Virginia, but in North Carolina and in South Carolina, to create an iron industry. In 1795, however, came the invention of the cotton-gin, after which, for half a century, the energies of the South were absorbed in the production of cotton. Yet, in the decade preceding the civil war, a strenuous effort was made to direct Southern enterprise and capital to other fields, and a marked and rapid evolution of manufacturing interests at the South ensued. The total number of Southern factories in 1860 was 24,590, representing an aggregate capital of $175,100,000. In 1850 the South had but 2335 miles of railroad, as contrasted with a combined total of 4798 miles for New England and the Middle States; but by 1860 the South had quadrupled the mileage of 1850, and had 387 miles more than were credited to the two Northern sections just named. Then came the catastrophes of the civil war and reconstruction period. A few figures attest the awful economical significance of the political and social cataclysm. In 1860 the wealth of the South had exceeded the combined wealth of the New England and Middle States by $750,000,000; in 1870 not only were the conditions reversed, but the wealth of the New England and Middle States exceeded the wealth of the whole South by $10,800,000,000. The assessed value of property in New York and Pennsylvania in 1870 was greater than that of all the Southern States put together. In 1860 South Carolina had been third among all the States in per capita wealth; ten years later she had become the thirtieth. In 1870 the assessed property of Rhode Island and New Jersey surpassed by more than $685,000,000 the assessed value of all the real and personal property of South Carolina. Mr. Murphy, from whom we take these figures, invites us to pause a moment, and consider what tragedies of suffering lie beneath them: what "deep-hidden, recurrent pulses of despair, of self-repression, of patience, of silent and solemn will, of self-conquest, of ultimate emancipation!"

About the year 1880 the long-hoped-for and long-deferred economical change began. Ten years later the industrial revival was in evident progress. By 1900 the South was universally perceived to have entered upon one of the most remarkable epochs of economical development to be found in the history of the modern industrial world. What we are witnessing is the reemergence of the tendency which was so manifest in the statistics of 1860; a vehement reassertion of the South's capacity for manufacturing. In 1860 the value of the manufactured products of the South had been less by $200,000,000 than the value of her agricultural products. In 1900, on the other hand, the value of Southern manufactures exceeded the value of Southern agricultural products by $190,000,000; nay, if mining interests be included, by nearly $300,000,000. In 1880 the products of Southern factories had not attained a valuation of $458,000,000. Two decades later they had reached a total value of more than $1,463,000,000, an increase of more than 220 per cent. These statistics bear witness to a vast industrial and social change. They signify that the industrial centre of gravity at the South is shifting, slowly but surely, from the field to the factory; and that the factory is to take its place by the side of the church, the schoolhouse, and the home, as one of the effectual and characteristic forces of civilization in our Southern States.

In his discussion of the political problem presented by the negro in the Southern States, Mr. Murphy evinces a temperate, and, so to speak, scientific, spirit. He holds that the nation owes to the South an adequate opportunity for the trial of the difficult experiment which she has undertaken—the experiment of securing under democratic institutions a safe and just coordination of the strong Anglo-Saxon race with another race which, socially and politically, is almost the least efficient of the families of men. The solution of such a problem will tax not only the utmost resources of the human intellect, but will also need the cooperation of Time, the healer and adjuster. Definite results, a full determination of success or failure, cannot be looked for in five years or in ten. Meanwhile critics of the actual attempts at political readjustment in the South should deal sympathetically with the question, "What is the alternative?" They should recur again and again to the thought that the fundamental embarrassments lie in the elementary conditions that precede all the evils and all the remedies. Partially anomalous remedies will always arise out of essentially anomalous conditions. So complex, in fine, is the task with which Southern whites are confronted, so inscrutably formidable are the inseparable difficulties, so deep-rooted and far-reaching are the issues, involving as they do the passions of races and of parties, that onlookers at the North may well pause before trying prematurely to substitute for the pending policy of extrication adopted by their Southern brethren another policy, even though the latter should seem based on more consistent, though perhaps academic, conceptions of public life. As one who himself has opposed the imposition of unequal or uneven tests of qualification for the franchise, Mr. Murphy feels authorized to say that there would be nothing gained and much lost by any return to former conditions, and that to the whole scheme of Southern readjustment, whatever its theoretic inconsistencies, a reasonable trial should be given.

In an appendix Mr. Murphy reproduces some of the observations on the relations of advanced to backward races which have been lately made by the Rt. Hon. James Bryce, author of *The American Commonwealth*. It may be remembered that the moral drawn by Mr. Bryce from the case of the Southern States is that, however excellent your intentions, and however admirable your sentiments, you must not legislate in the teeth of facts. The great bulk of the negroes are not fit for the suffrage; nor, under the American Federal system, is it possible (without incurring other grave evils) to give them effective protection in the exercise of the suffrage. It is clear, therefore, to Mr. Bryce that "it would have been better to postpone the bestowal of the dangerous boon." No doubt rocks and shoals were set thick round every course; no doubt, also, it is easier to perceive the evils of a course actually taken than to realize other evils that might have followed some other course. Nevertheless, Mr. Bryce concludes, the general opinion of dispassionate men has come to deem the action taken in the reconstruction period, and embodied in the Fourteenth and Fifteenth Amendments of our Federal Constitution, a mistake.

An English View of Our Negro Problem

There is an interesting discussion from an English view-point of certain aspects of our negro question in the book, *Asia and Europe*, which is attracting much attention. The author, Mr. Meredith Townsend, considers, first, the future of the negro, without reference to any particular environment, and then examines the special conditions under which he exists in the United States. He begins by pointing out how conflicting are the opinions concerning the capabilities of the black race, that have been, or still are, current. One set of observers, exemplified in the well-known explorer, Captain Burton, who had studied the negro in his original African home, regard him as a nearly irreclaimable savage, a being who cannot be ruled, except by terror, and who is, by nature, incapable of rising to the level attainable by the white, and even, in many respects, by the yellow and the brownish man. They pronounce his savagery instinctive, his laziness incurable, and his sensuality far in excess of anything observable in Europe. Because of the negro, in fine, they declare Africa an accursed continent. Other observers, including many missionaries, think that the repulsion caused by the negro's external aspect makes ordinary white men unjust to him; and these more optimistic onlookers describe him as a docile creature, indisposed to vindictiveness, and, though not clever, fairly ready to receive instructions, which, they allege, may be carried occasionally up to any point that can be reached by white men. The third opinion, which commends itself to Mr. Townsend, and which seems to be accepted by the majority of missionaries, by many residents in the West Indies, and by the majority of white men in the United States, is to the effect that the negro is mentally and morally indistinguishable from the white man, or the yellow man, but for the remarkable and, apparently, decisive exception that he cannot rise in the scale of civilization beyond a certain point. The originating power of the European and the imitating power of the modern Asiatic are not in the negro, or, at least, not in the same degree. He remains, under all circumstances, more or less of a child, bad or good, like other children, but never quite a man.

We cannot deny that for this conclusion there is historical foundation if we bar from consideration those persons in whom there is an admixture of white blood, and fix our eyes exclusively upon full-blooded negroes. It is true, as Mr. Townsend recalls, that never in the long record of the human race has any negro of the full blood risen to first-class eminence among mankind. Not only

has there been no negro philosopher, inventor, artist, or builder, but there has been no negro conqueror, nor, with one or two exceptions—Toussaint l'Ouverture, for instance—any negro general above the rank of a guerilla chief. To what can the phenomenon be attributed except to race? We are sometimes told that the negro's backwardness is due to his age-long seclusion in the heart of the Dark Continent. As a matter of fact, however, he has been in contact on the Nile with the Egyptian, or the Greek, or the Roman; in South Africa with the Spaniard; in North America with the English-speaking Teuton. From none of these neighbors has he learned much. Another apology for his arrested development is based upon the fact that he has been always a slave. So, as Mr. Townsend reminds us, were the majority of white people in the Mediterranean world during the Roman period. There is scarcely any reason to doubt that most modern Italians, for example, are descendants of the white slaves that belonged to the Roman gentry. Then, again, if it be true that his backwardness is due to his habitual slavery, why did he submit so long to servitude, when the Chinese, and the red Indian, and even the native of India will not? Why has the negro, about whose bravery there is no doubt, never emerged voluntarily from his African jungles and subdued neighboring races? Repeatedly have the non-Aryan natives of central Asia invaded Europe; nay, there was a time when one Tartar family ruled over China, India, and Russia. How comes it to pass that the negro has never achieved such conquests? Why, again, unlike the Asiatics, has he never invented a creed of the slightest spiritual or moral merit; never, in fact, risen above fetichism? Nobody can answer these perplexing questions, or unriddle the puzzle presented by the history of the negro race, except upon the assumption that there are breeds of men in whom an arrest of development occurs at a relatively early stage. The negro went by himself far beyond the Australian savage. He learned the use of fire, the fact that sown grain will grow, the value of shelter, the use of the bow and of the canoe, and the utility of clothes. There he stopped, apparently unable, until stimulated by crossing with another race like the Arab, to advance a step. He does not die out like the native Australian or the Maori of New Zealand; neither does he sink, like one or two varieties of the red Indian and of the aborigines of South Africa, into a puny being, hardly like a man. But he stops at a given point, as if further progress were impossible. It is not even certain that, when instructed and stimulated by contact with a superior race, he will go on improving. The Haitians are Christians, they are free, and they are in continual contact with white races; yet, according to the testimony of Mr. St. John and other competent observers, they are retrograding.

Mr. Townsend is thoroughly alive to the tremendous gravity of the problem presented by the negro inhabitants of the United States, who, before the close of the twentieth century, are likely to number twenty millions. They already constitute a great nation, camped, so to speak, on the territory of a still greater nation, which, under no circumstances, will tolerate intermarriage with them. They are possessed of all the advantages which, according to the philanthropists of the eighteenth and nineteenth centuries, would certainly raise black men to the level of the better Asiatics, if not to that of the highest Europeans. They are not only free from servitude, but, in a large majority of the States, they possess, practically, and in all the States theoretically, the same voting powers as do the whites. Mr. Townsend points out, what not a few Americans forget, that there is nothing whatever in our Federal Constitution or in our laws to prevent a full-blooded negro from becoming President of the United States, just as a full-blooded Indian (Juarez) became President of Mexico. Moreover, in the United States, the negroes are all, nominally or really, Christians; they have all the means of education which are open to the whites; and they have had for generations the severest drilling in industry to which any dark race has been subjected. Yet nobody any longer alleges that the mass of full-blooded negroes in the United States are the intellectual and moral equals of any equal mass of white men, or even of Asiatics. It is an indisputable truth that the whites in the United States dislike the negroes more than they did fifty years ago. The dislike is even more pronounced and pervasive at the North than it is at the South. Seldom, if ever, will Northern whites, or, for that matter, Southern whites, receive the sacrament at the same altar with black Christians; and in both sections the idea of a negro clergyman presiding over a white congregation is unthinkable. John Brown's raid, which, at the time, was regarded with admiration by certain professed philanthropists of New England, would now provoke only wrath and indignation at the North. There is not a doubt that, were there an uprising of the negro majority against the white minority in such a State as North Carolina or Mississippi, the whole power of the Northern whites would be arrayed upon the side of their own race. Mr. Townsend is right in averring that the North would not tolerate a negro victory even in one State, and it is doubtless the hopelessness of ultimate success that restrains our black men, even where they possess a majority, from attempting to renew the experiment which has failed in Haiti.

Mr. Townsend sees that the future of the negro in the United States is unpredictable, because none of the trenchant solutions that have been proposed for the problem he presents is practicable. The extirpation of the negro, which de Tocqueville seems to have expected, is not, of course, to be thought of for a moment. Deportation or expulsion is equally impossible. A suggestion that four or five of the Southern States might be abandoned to the negro, in order that the rest of their section might be purified, would provoke undoubtedly another civil war. Mr. Townsend believes that the great majority of the blacks are destined to remain, even though they may acquire a tincture of education, hewers of wood and drawers of water, a proletariat usually quiescent, and always productive of wealth for other men, but liable at times to outbreaks of discontent. The larger part of them, he thinks, will gradually become peasant proprietors, slowly acquiring land and living on it in a poor way, and making customs for themselves which will have the force of laws, as other dark races have done in the past. To raise the mass of them up to even the mental position of the races of upper India will take centuries of patience and exertion, if, indeed, the task be not impossible of accomplishment.

The Future of Haiti and San Domingo

THERE is one standpoint from which discussion of the future of Haiti and San Domingo may well be considered, namely, the standpoint of the negro in this country. What has he to say of the success of the negro in self-government? What of annexation of the island republics by the United States? The April number of *The Voice of the Negro*, a periodical recently established in the South for the purpose of giving the better-educated negroes an organ of opinion, contains a symposium on this matter which is worth noting.

There seems to be agreement on two points by all of the contributors, namely, that the present state of revolution, of conflict between factions, of destruction of property, cannot go on much longer without interference from without, by powers whose subjects' property rights are at stake. Second, that such intervention will be by the United States.

Where the negro writers dealing with this problem differ is as to the benefit that will, or will not, come to the negroes of the islands by our interference. Mr. Archibald Grimke, a college and Harvard Law-school graduate, formerly United States consul in San Domingo, is a radical negro who opposes Booker T. Washington, and denounces the present attitude of the North and the Republican party. He admits as fully as the other participants in this discussion that present conditions are intolerable, and that a change must come. But he longs for a strong man, a tyrant president such as San Domingo once had in General Ulisse Heureaux, who, he admits, was a past master in the art of duplicity and flattery, merciless in destruction of his opponents, subverting liberty, and overthrowing constitutional government, but making life and property safe.

Why, it may be asked, does not Mr. Grimke prefer the rule in San Domingo of the United States to the rule of a tyrant such as he describes. Because "there will appear with the coming of the white man from the United States, for the first time in San-Dominican history, caste distinction, race contempt, race rule, inequality, and oppression."

Quite a contrary view with respect to Haiti is taken by Mr. William Pickens, of Yale University, now a student, but one of the promising men of his race, who is an opportunist, not a radical. His review of Haitian history and present conditions leads him to declare that "the Haitian government is a failure financially and instrumentally," and a "complete historical proof of the inability of any uncivilized race for maintaining a civil community with no outside constraining force." He admits that "the savage and the child to rise to higher things must feel the power of a stronger hand," and contends that it is just because the negro in this country has had the aid of the white man and his constraining uplifting force that during the forty years since the civil war he has advanced "centuries ahead of his Haitian brother, who has been self-governing for a hundred years." Consequently, Mr. Pickens believes that "all weak sentimentalism should be dismissed," that "the letter of humanity should be violated for the sake of the spirit," and that Great Britain or the United States should subjugate and annex Haiti. That it would require good stout fighting it is hinted at by Mr. John S. Durham, in his article on "The Hidden Wealth of Haiti." Mr. Durham was once United States minister to San Domingo.

The contrast between Mr. Grimke's and Mr. Pickens's position is striking. They represent different generations of the African-American who has received a liberal education. Mr. Grimke came of a family inseparably identified with the abolition movement; the tragedies of the war are vivid in his mind; he has held office and knows what power is. Mr. Pickens knows the conditions of the South of to-day; he has been educated in an age dominated by the scientific spirit and impressed with the conception of the rela-

tivity of truth, and hence is a foe to radicalism. He chances to prefer rule by a democracy like this country or a constitutional monarchy like Great Britain to the autocracy or tyranny of a man like General Ulisse Heureaux. He is willing to admit his race's limitations, and the need it has of the present superior governing and organizing ability of the Caucasian. He is typical of the negro graduate of the Yale of to-day, just as Roscoe Conkling Bruce is of the Harvard negro graduate of to-day. Each is an opportunist, not a radical.

Whatever is done or is not done with respect to annexation of the black republics by the people of this country will be done without much consideration of the opinion or feelings of our negroes; but that their attitude is of interest must be admitted. Were we, for instance, to set up in San Domingo a school system such as we have established in Porto Rico or the Philippines it would be to graduates of Atlanta, Fisk, Tuskegee, and Hampton that the government would turn for many of the officials and teachers. Positions in the civil service naturally would go to some of the best educated and most thoroughly tested of our negroes. We should expect, of course, to put the highest posts at the command of men of the race that Mr. Pickens admits is best qualified to bring order out of governmental and business chaos; but those officials would mitigate whatever revolt there might be at first to their beneficent rule if they could have the broad principles of government they lay down carried out by competent negroes trained in this country.

Patching Up the Dreibund

Two or three months before the Russo-Japanese war broke out, German foreign politics were at a low ebb. To begin with, Germany had raised irritation in this country by her policy in Venezuela. England had not forgiven the attitude of Germany concerning certain details of the Boer war, and the Chamberlain campaign, and especially the threatened retaliation of Germany against Canada, had stirred the embers of national enmity.

Apart in origin from the American and British feeling towards Germany, but similar in result, was the new situation created in the Near East by the Lamsdorff-Goluchowski understanding concerning the policy of Russia and Austria in the Balkans. This understanding in part at least healed a wound which had smarted ever since the Crimean war. It is notorious that, when Hungary was fighting Austria for the independence which was finally gained after Sadowa, Nicholas I. of Russia sent his armies to the aid of the Austrian Emperor, and thus changed the outcome of the war, and confirmed the Emperor of Austria in his domination of the Magyars. When Turkey, France, and England attacked Russia in the Crimea, Nicholas firmly believed that Kaiser Franz Josef would repay the services which Russia had rendered him, and come out openly as an ally. Austria's failure to meet these hopes, when Russia's fortunes were at the lowest ebb, caused great bitterness in Russia, which was by no means diminished in 1878, when Austria practically supported England and Germany in their anti-Russian policy at the Berlin Congress. The Lamsdorff-Goluchowski understanding, therefore, opened a new era of Russian friendship towards Austria, and therefore of the partial alienation of Austria from Germany and the Dreibund. A close relation with Russia accentuates the Slavonic character of the Austrian Empire, and therefore tends to overshadow the Teutonic side, and with it the nearness to Germany.

Finally came the better relations between Italy and France, greatly strengthened by the good feeling which both were beginning to feel towards England, as a result of the visits of Edward VII. It was at one time possible that Italy would refuse to renew the Triple Alliance, so far had her enthusiasm for the alliance with Germany cooled. We of all people are in a position to understand that the Dreibund cost Italy very dear, bringing her, in fact, to the verge of economic collapse. Under the terms of the Dreibund, Italy is bound to maintain a large army, having, in fact, a total of three millions three hundred thousand on a war footing. If we remember that Italy has a population of just over thirty millions, and that Russia, with a population about five times that of Italy, has a total army on a war footing only about half as large again, we may realize what an immense burden Italy's army is, and what a price she has to pay for her association with the two central European empires. The taxation of Italy is nearly twice as heavy per head as that of the United States, while the debt of Italy exceeds ours, though we have nearly three times Italy's population. Moreover, the taxation of Italy takes very onerous forms, such as a house tax, a very heavy income tax, a land tax, a salt tax, and so forth, with a result that a large proportion of the subjects of Victor Emmanuel are in a condition of chronic semi-starvation. These are some of the reasons why the Italian peasants throng our ports in hundreds of thousands.

We can see why Italy is not keenly in favor of the Dreibund, and she has besides her private quarrel with Austria concerning the Italian provinces occupied by the Austrian armies. Italy has never forgiven Austria for holding the Adriatic coast about Trieste and Pola, with its three-quarters of a million Italians, who should pay allegiance to Rome and not to Vienna. Italy feels that were she to get back her own in the northern Adriatic she might easily extend her power down the Dalmatian coast, and so have a claim on Albania when the Sultan's empire finally breaks up, thus turning the Adriatic into an Italian lake.

The recent meeting at Abazzia between the Italian Foreign Minister Signor Tittoni, and Count Goluchowski, was primarily intended to smooth over the irritation of Italy towards the Dreibund, and especially her feeling of half-concealed enmity towards Austria; but this meeting seems to have done more harm than good, as it was the cause of strong anti-Austrian disturbances and demonstrations, not only among the Italian subjects of Austria, but also within the boundaries of Italy. There was also a second purpose behind the Abazzia meeting: the Emperor of Austria has a specially close relation to the Holy See, and is bound to respect the wishes and precedents of the Vatican. He cannot, for instance, go to Rome, because his visit to the Quirinal and the Italian court would be a slight to the Vatican, which persistently refuses to have any dealings with the Quirinal. Therefore Franz Josef cannot visit his ally Victor Emmanuel in his own home. And this it is now sought to alter.

But the real motive of the Abazzia meeting is to strengthen the bonds of the Triple Alliance, now that Russia is at a disadvantage, owing to the war with Japan, while France, busy with her friendly attitude towards England, is less concerned with Italy than a short time ago. Germany is very adroitly trying to make hay while the sun shines, to regain lost ground, to patch up the somewhat worn fabric of her foreign relations. And it seems that to a considerable extent Germany is destined to succeed.

Proportionate Values

In the olden days, before the wane of ecclesiastical training, men prayed for the seven gifts of the Holy Spirit, the second of which was understanding, or a sense of proportionate values. Alas! that the prayers should have ceased before the gifts were permanently bestowed. All through life nowadays we miss the sense of relative values, but nowhere more than in literary criticism. Even as in the field of ethics we hear conventionality and grace of manners put on a par with loyalty and courage; in literature we meet the permanent and the current yoked together, regardless of effect—Pegasus and the dray-horse jog-trotting side by side.

A recent English journalist writes of a new book, "It is worthy to stand by George Meredith's *Egoist* and Barrie's *My Lady Nicotine*," and the phrase is seriously quoted in an American literary review. Is it to be wondered at that Mr. Meredith tells the public, when it bestirs itself to inquire for his health, that it is none of its business how he is? What, indeed, has a public, glutted with wind-stuffed, empty fiction of the day, to do with a master? Can any man choose to eat husks and then appreciate ambrosia? If it is true that as a man eats so he is, how much truer is it that as a man reads so he thinks. Ruskin in *Fors* describes the breakfasts of two old women. "How do I know they are good old women?" he argues. "Because they ate preserved pears, bread, and milk. If they had been bad old women they would have wanted gin and bitters for breakfast." There is no such great gulf between hygiene and literature. The same laws prevail. To chance upon your neighbor's book, as he lays it down and find it Milton's *Sampson*, Fichte's *Blessed Life*, or George Meredith's *Richard Feverel*, stamps him a man and a brother. Doubtless he breakfasts on milk and honey, or sweetbreads and toast, but if his book be *The Tormentor* or *The Gadfly* he may be suspected of gin and bitters.

Meantime in this age of chaotic criticism how are the public to choose books? If our reviews seriously advise the public that a book is worthy to stand by Shakespeare's *Hamlet* and Marie Corelli's *Boy*, what is a bewildered reader to think? If Miss Glasgow's large and seriously wrought novel *The Deliverance* comes bracketed by the unfortunate chances of time and season of publishing with Mr. Harland's *My Friend Prospero*, how are the readers to know that one is a Rodin statue and the other a Dresden china shepherdess? It almost amounts to the impossibility of the growth of a literature in this country.

"There are things upon which we must all agree," writes an epigrammatic young writer recently—"the ten commandments, the exiguity of American literature, and monogamy." It is grievous to see him face so calmly the exiguity of American literature, but it is true that if a literature ever does flourish in our mercantile land it will be by first facing the odds and consenting to make terms with a sterile soil. Even this is for the future. The question now is can a real literature live here? Or shall we go on hopelessly mixing up the big and the little until we have press and public incapable of a sense of proportion?

INSIDE THE RUSSIAN FORTIFICATIONS AT VLADIVOSTOK

The photograph was taken recently at Vladivostok, Russia's most important Siberian seaport, and shows the Governor of the town visiting the fortifications. Vladivostok is the northernmost outpost of the frontier which Russia has to guard in the Far East. This front extends from Vladivostok, along the Korean frontier, along the coast to Port Arthur, from there to Newchwang, and westward toward Mongolia. Vladivostok's chief feature of interest at present is the naval squadron which Russia is holding in reserve at that port

The Situation in Japan

By William Dinwiddie

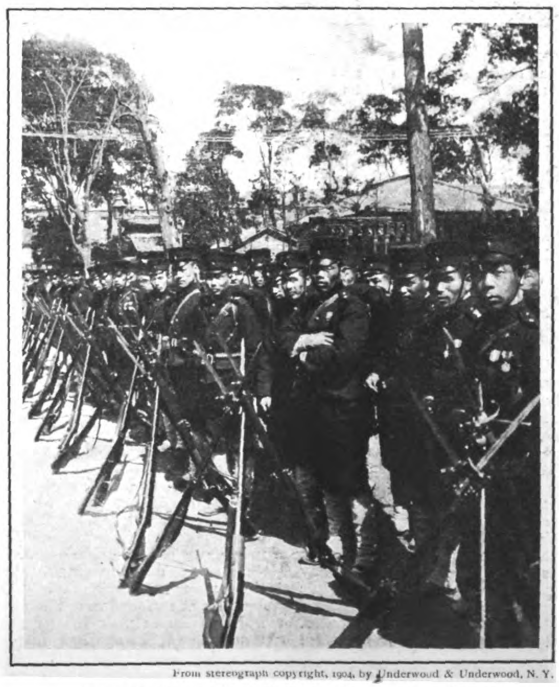
Special Correspondent of "Harper's Weekly" in the Far East

TOKYO, JAPAN, *March 18, 1904.*

THE Japanese army is literally stealing away from the shores of their beautiful sea-girted land, silently, and with an attempt at profound secrecy which makes one marvel at the official and even national capacity for self-repression of utterance, which makes it possible to keep practically hidden all their preliminary manœuvres.

In tactics they resemble the bull-dog—or more properly they are to be likened to the bull-terrier, for, after all, Japan is a little fellow—who, with the low guttural growl marches into the grip of death if need be, and there clings tenaciously, willing to take punishment without complaint, or to acquire victory, if possible, without demonstration.

We know to-day, indirectly, that about one hundred thousand soldiers have left Japan in transports bound for Korean ports, which, we conjecture from the hints dropped here and there, are north of Chemulpho, on the west coast. Also, that thousands of soldiers are leaving almost daily, and reserves are being called out to make up an army of over three hundred thousand men. Japanese officials, when approached openly or by strategy with a question as to the number of troops that have already sailed for the seat of war, will smilingly say they do not know, or lead one to believe that some such insignificant number as ten or twenty thousand have so far been transported to the north.



They know that the trained war correspondent knows better, but every man connected with the service is instructed not to divulge any information, and this system is carried out to such a degree that even officials of fairly high rank do not themselves actually know what is transpiring. No skilled politician at home ever possessed a greater capacity for evading direct questions, or for smiling with bland skepticism and saying nothing, when you have accurately told them facts and requested their confirmation; yet, when the issue is a diplomatic, military, or financial one, which should be circulated abroad for their national benefit, they are precise and clever talkers, and their press-bureau-exploiting sense is admirable.

I have heard the Japanese spoken of by foreigners as "cockey" in the conceit of their new-found civilization, and that, in self-admiration, they have an immense contempt for other nations of the earth, but I assure you such remarks strike wide of the truth and are not borne out by the facts, for it may be safely said no nation on earth would, under the circumstances and in such critical times, have given vent to so little bluster and brag as the Japanese. We are never surprised when the Anglo-Saxon boldly indicates that he will eat his enemy up directly, or when a Latin race sues for sympathy by adopting the humble-proud attitude of sacrificing the nation's heart-blood for the honor and love of country. Japan is doing neither. She is not boasting, begging for acclaim, or doing any belligerent, vain-glorious strutting. She knows what she wants to accomplish, the strength of her enemy, the obstacles in her way to success. She is saying nothing, but sawing wood.

A prominent official said privately, "We ask to be measured with impartiality and treated with fairness, and we gratefully esteem the confidence already reposed in us by America and Great Britain. We believe we are fighting the battle of civilization for the world—that is, to preserve the integrity of China, and to secure the open-door policy for the Far East." This implied confidence in the country's prowess and dignity certainly commands respect.

But to hark back to the proposition that Japan is rapidly and quietly mobilizing a great army in Korea, with which to strike a decisive blow against Russia on land, it may be said the only way to get a realizing sense that the army is moving on and away from Japanese territory is to haunt the railway stations after midnight, and to travel at night by rail.

In the darkness of early morning train after train glide out of the low-roofed passenger sheds of Tokyo, packed with soldiers, equipment, horses, and general supplies. First a shrill whistle or two from the locomotive, then the triumphant "Nippon Banzai!" (Japan forever!) from the throats of a handful of irrepressible friends who have, perhaps, waited for hours in the shivering chill of a retarded spring night, and the train moves slowly and heavily away from the misty arcs of electric light, clicking and clucking over the frogs and switches of a paper-lantern-lit yard, and into the darkness to the south, farther and farther away from the shivering handful on the platform, who finally turn, with close-drawn kimonos, and break the silence by pattering away on their wooden clogs.

From stereograph copyright, 1904, by Underwood & Underwood, N. Y.

Japanese Troops in Tokyo starting for the Front

Every district, every hamlet is contributing its quota of fighting-men, and that a great army may be massed will be understood when it is said that, in Japan, there are 630,000 men who have had actual military training, and are available for immediate service if it is so desired. This number represents only the one in every nine men who have been drawn by lot, from the physically able, to serve either the one or three years' enlistment in Japan's compulsory military service, and therefore it does not even touch the several millions of able-bodied men who are subject to conscription at a moment's notice.

The conservative Japanese leaders of affairs believe an army of 300,000 sufficient to win success with Russia, and the enthusiasts say, "If need be, we will put a million and a half to two million men into the field."

As we travel from Tokyo, the northern capital, to Ujina, lying four hundred odd miles to the south, on the placid, hazy inland sea, where the greatest concentration of soldiers taking transport may be found, the night is certainly far more damp and cheerless than is at first appreciated. The rays of a full moon struggle behind the leaden clouds, and only succeed in feebly illuminating the endless hand-tilled and terraced gardens in a sickly, shadowy yellow.

The army has ranked the civilian out of the trains carrying sleeping and dining cars, and perforce he must take the draughty, small day-coaches, heated by cans of hot water resting on the floor, which are replaced with those containing hotter water—according to the marrow-chilled senses of the traveller—at very rare intervals.

From all the discomforts suffered in a train, sullenly bumping over the rails on flattened wheels, and creeping from station to station with prolonged waits, one gains the positive knowledge that an army is moving in the land of the Mikado. Every station seems to be giving up its fathers and sons. They stand huddled on the short platforms of the smaller stations, in wide-sleeved and padded kimonos, each with his bundle of clothes wrapped loosely in a knotted cloth, and suspended upon his back. Their slant-eyed faces literally beam with satisfaction, as they smilingly or solemnly indulge in endless highly automatic genuflections from the hips, to one another and to their surrounding friends, the aspect of the visage, and the number of bows being apparently determined by the rank of the person addressed or the size of the compliment which has been uttered.

To one accustomed to the noise and vigorous action and language of American soldiers, this excessive, nay, even pathetic, politeness makes one feel like moving around carefully on tiptoe, with hat respectfully doffed, for fear of giving offence in the presence of such Chesterfieldian manners. And these are rookies, not raw rookies, because they are trained soldiers, but rookies without uniform, going to garrisons where they will be clothed in soldiers' habiliments, and, for a few weeks, be drilled and manœuvred into fit condition for the field.

At the large towns the delays to our crossroads' local are prolonged, and, as we lie on the sidings, train-load after train-load of tarpaulin-covered supplies rumble past, with now and then one packed solidly with soldiers. At all hours of night and day, apparently, crowds of country people throng outside the surrounding fences of the stations, and, when the soldier-laden trains roll by, joyfully shout the inevitable "Bonzai," which has nothing in it of the fierce, yelling hurrah of an enthused American community. Every station, every store, every house, in fact, the very streets are gay with banners and flags and streamers.

Royal purple emblems of the Imperial Household hang from high poles at every station, pennants from a few feet to thirty in length are inscribed with hieroglyphics which, when interpreted, mean all sorts of confusion to the bear, and patriotic

THE RUSSIAN FORTIFICATIONS AT VLADIVOSTOK

spurring on of the people, and whip in your face as you walk the streets. The vermilion-red sun, with rays shooting, on a white background, to the edges of the bunting, is common, but the simple national flag—a great circular ball of red in the centre of a white field—is to be found literally by the thousands in every town. The stores, the private houses, the ships, the carts, the children, all have them.

At Ujina the harbor is filled with transports, some thirty or forty in number, the many large barracks swarm with soldiers, and, after seeing them thus crowded, and watching an endless parade of the military through the streets, marching in companies and regiments, thousands with passes from quarters wandering aimlessly through the town, loitering around the stores or buying little nicknacks for the transport trip, one wonders where they can possibly find room to sleep at night under shelter of roof.

The transports moving in and out so erratically, and the loading and sailing usually taking place at night, it is extremely difficult to keep track of them, or make any very intelligent estimate of the number of troops embarking.

Every foreigner is constantly shadowed at the transport towns, and an excess of inquisitiveness, by word or action, generally results in a polite request, from a uniformed officer, for information as to who you are and what is your business. At Moji, which is still farther south and the largest coaling station for transports bound for Korea, the writer was followed for hours by civilian spotters, who took turns in the shadowing. An attempt to go onto the railway station platform, where soldiers were loading cavalry horses into box-cars, was promptly blocked, and every inquiry addressed, by an interpreter, to officials—either military or civilian—as to where the troops were going, was answered by "I don't know," and followed by a suspicious stare, though, as a matter of fact, the troops were simply transferring by ferry and taking train to the centralizing point of Ujina.

There were thousands of troops at Shimonoseki, which lies only a mile away from Moji, across the narrow western outlet of the Inland Sea, preparing to leave for Ujina, and one was strongly impressed by their quiet behavior and gentleness, as compared to soldiers of the white race. Never a loud sound was heard, though they were resting at ease waiting for trains, and, in some instances, entire regiments were cooking their rations in the street. All the rough horse-play, noisy gags, and singing indulged in by foreign troops were lacking: neither could one find a single sullen, frowning, or discontented face; instead, friends, acquaintances, and strangers gathered about the soldiers and, in fact, mixed freely among them, both sides bowing, smiling, laughing delightedly, and all in a polite gentleness devoid of hysterical or boisterous enthusiasm, which makes one instinctively feel that he should take off his hat to every person he meets on the street.

To use a camera in the southern island towns means its polite but immediate confiscation and a punishment by fine. By great courtesy, a display of passports, and a proper degree of self-reproach for having ignorantly disobeyed the laws, you *may*, at the end of twenty-four hours, secure the return of the camera, minus the roll of films. So strict is the camera regulation at fortified ports, that an English lady who took a picture of the captain on the bridge of one of the vessels in the harbor of Moji, was approached, several hours later, by a member of the harbor police, and asked to deliver up her camera. Protests were useless, and the camera was taken ashore, the films probably developed, as they were never returned, and the camera was sent back the following day.

On another occasion, a traveller who opened up a small pocket camera in the streets of Shimonoseki, was promptly piloted to the station-house, violently protesting he had done no wrong, and that he had not attempted to make any photographs of fortifications nor soldiers. The diminutive and quiet captain of police, who spoke English brokenly, remarked, solemnly, "We will see," and the tourist waited four hours while they saw. At the expiration of this time he returned and said, "What you said was true, but we shall, notwithstanding, be obliged to punish you with the extreme severity of the law in this case. You have photographed no fortifications or soldiers, but you have committed a crime"—and, while the trembling culprit blanched in terror, he finished—"and your fine will be eighty sen" (forty cents).

As a final evidence of the immense number of troops that are being moved and shipped away from Japan (in spite of the absence of optical proof in the shape of very large bodies of men moving, and scenes of confusion), it may be said that the entire second army-corps is now to be mobilized, the first having been practically transported, and orders have gone forth that, for fourteen days, no commercial traffic, except a train or two a day, will be permitted. It speaks volumes for the organization of the Japanese army that several hundred thousand men will, by the time spring is well on in Korea and Manchuria, be in the field and ready to fight, though not for a moment will this tremendous exodus be particularly noticeable on Japan's soil, or really apparent to the every-day visitor, except in restrictions to civilian, railroad, and shipping traffic.

Foreign Books Read in Japan

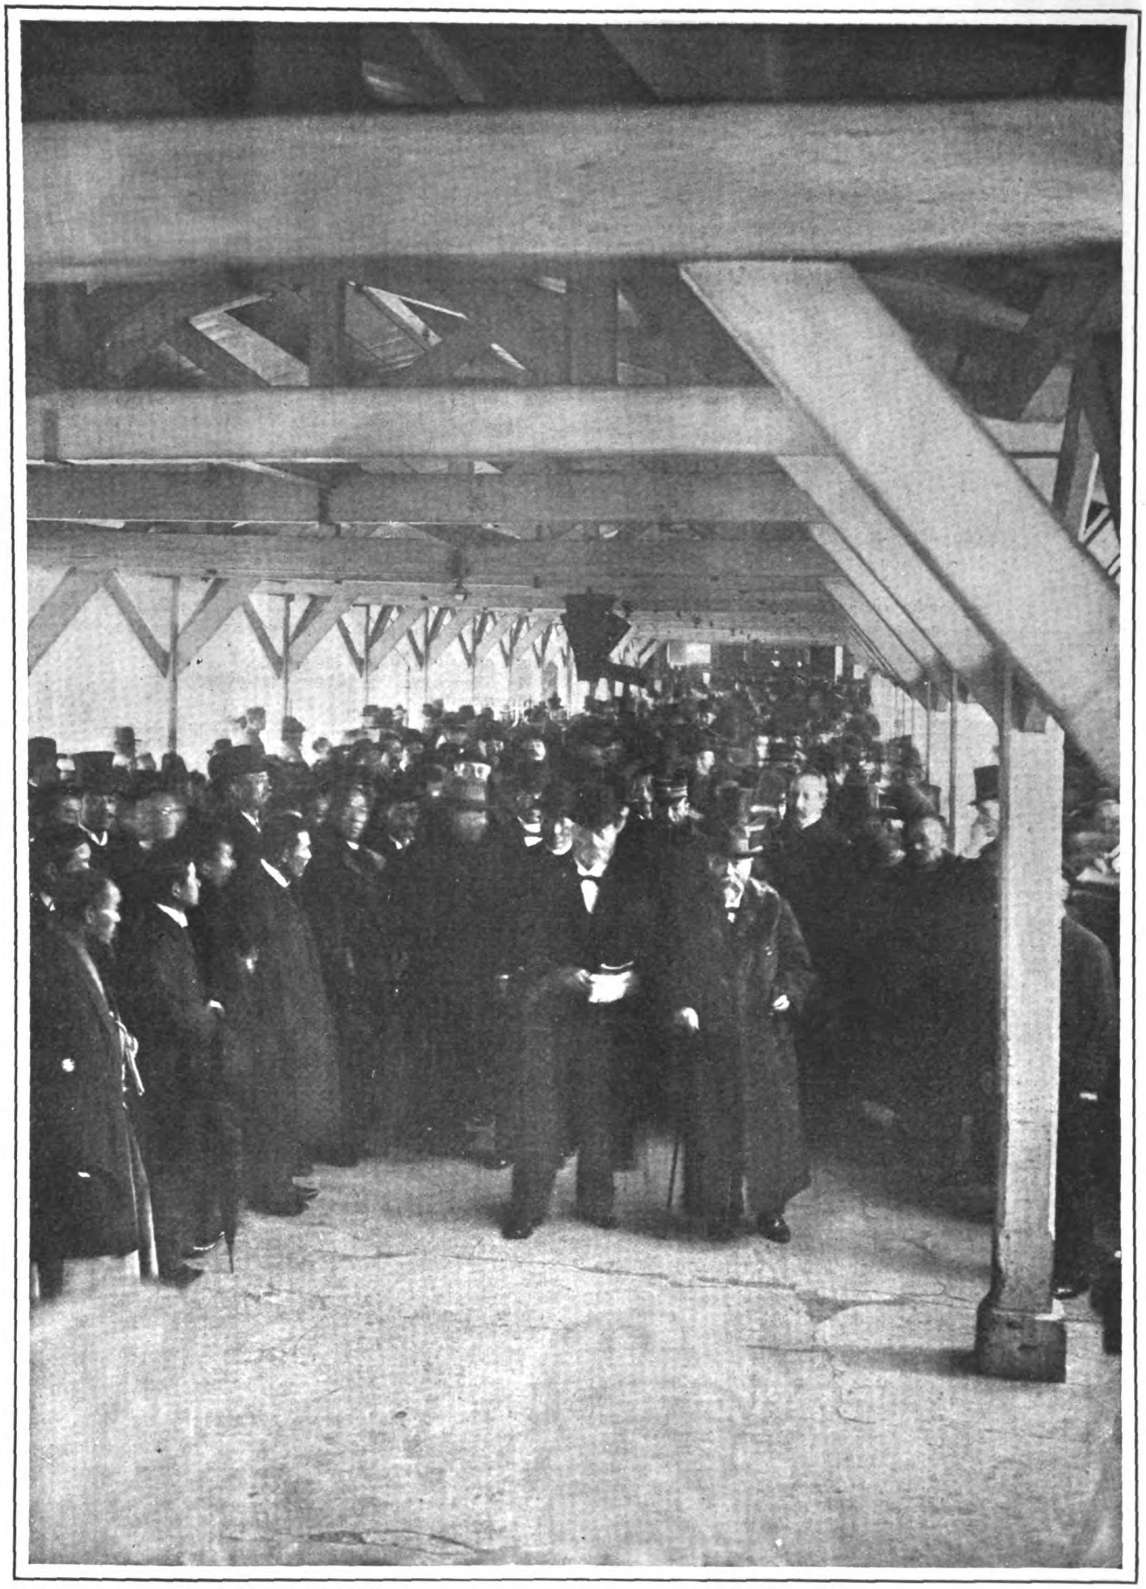
By Kiichi Kaneko

New York Correspondent of the "Heimin Shinbun," Japan

CHINESE literature was the only foreign element which deeply affected Japanese life and thought, until she opened her eyes to the West some forty years ago. The study of the Dutch language was our first attempt to acquire a foreign tongue. Now, while the English is the most common among our people and is studied by all high-school pupils, German and French are favored generally by our scholars and physicians. We have established a foreign-language school in Tokyo, where almost all languages are taught—English, German, French, Spanish, Italian, Chinese, Korean, and Russian. And of these, curiously enough, Russian is the favorite.

The study of English literature in Japan is well represented by Professor Yuzo Tsubouchi, who is best known for his earnest devotion to the study of Shakespeare. While he has made a reputation by his dramatic and critical writings he gave up his literary career, and is now giving most of his energy to educational and ethical problems. He has translated into Japanese some of Shakespeare's plays—"Othello," "Macbeth," and the "Merchant of Venice."

The most widely known English writer in Japan is Carlyle. All students of English literature in Japan read his works. He has many worshippers, especially among the younger generation. The two great students of Carlyle are Mr. Kanzo Uchimura and Professor Nitobe. The former is known as the Japanese Carlyle on account of a similarity in his use of logic and his philosophic view of every-day life and events. Next to Carlyle comes Macaulay. The new style—what we call Hanyaku or translation style—was practically created by borrowing his language by the Minyushamen, a literary band in Tokyo. Emerson is admired by some of the English students. And we see the influences of his writings among many Japanese journalists to-day. It is needless to say that Mill and Herbert Spencer have had a tremendous influence upon the thought of modern Japan.



In poetry, Tennyson, Longfellow, Wordsworth, Byron, and Milton, and in fiction Irving, Thackeray, and Dickens are best known. A part of *David Copperfield* was translated a long time ago by Mrs. Iwamoto, the translator of *Little Lord Fauntleroy*. While Longfellow's "Evangeline" is heard from the lips of any little girl in a girl's seminary in Japan, Emerson's "representative men" is often discussed by the Eigaku Shosei of Kanda. Bellamy's *Looking Backward* has been recently translated into Japanese. Mrs. Stowe's *Uncle Tom's Cabin* and Henry George's *Progress and Poverty* are now translated.

In Japan to-day one who has no knowledge of the German language is not regarded as a scholar. The first to introduce German literature to the Japanese was Dr. Rintaro Mori, who organized the "Shigarami Band," an association of Japanese German scholars. By the efforts of this band translations of Goethe's "Werther's Leiden," Lessing's "Nathan Der Weise," and a part of "Faust" have been made. Recently there has been much talk in Japan of Friedrich Nietzsche. His philosophy was first introduced by one of the critics of the *Taiyo Magazine*, and quickly spread over the literary circle of Japan. Unfortunately, it was only a flash-light that soon disappeared with the sudden death of this eccentric critic. Ibsen and Björnson, Jokai and Synkiewitz, are read in some circles; and one of the strangest things to be observed of foreign influence on Japan is the fact that we have so many admirers of Russian literature. Tolstoy has many worshippers. Although his books are read through the translations of German or English, there are many people who read him in original Russian. *Kreutzer Sonata*, and *Master and Man* and many of his short stories have been translated. Of his religious and ethical writings, *My Religion* and *My Confession* have lately been done in Japanese. Dostoyevski's *Crime and Punishment* was translated by Roan Uchida about ten years ago. Nowadays we hear some talk in Japan of Gorky and Tchecoff. It is interesting to note that when Tolstoy's *Resurrection* was being played at the Victoria Theatre of this city last fall, the same story was running as a serial story in the *Mainichi Shinbun*, a Tokyo daily, and was played at the Harukiza Theatre afterward.

In French literature it was Rousseau's book which first taught the Japanese the idea of civil right and liberty. His famous work *Contract Social* was translated by one of our French scholars just after the restoration, and has been circulated in every Japanese home. It was the same book that gave Count Itagaki his political inspiration and led him to form his first political party—the Jiyuto. Notwithstanding the French influence upon Japanese politics, as well as upon society at large, the writers of French fiction and drama do not seem to find many friends in Japan. Victor Hugo had one translation some years ago, though of his comparatively unknown works. *Les Misérables* made its appearance in a daily paper—the *Yorozu*. We have now Hugo's *Notre Dame du Paris* and Maupassant's short stories. Of the latest translations we may mention Zola's *Labor* and *Fruitfulness*, which were done by one of the writer's friends.

Japan comes next to Germany in the matter of book publication. So far as she has adopted Western systems she has made them her own. She will continue and must continue to adopt foreign ideas until there is nothing left to be adopted, and then there will be the true harmonization of the civilizations of the Occident and the Orient. This is the mission of the Japanese.

Marquis Ito

MARQUIS ITO AT THE RAILWAY STATION IN TOKYO ON THE OCCASION OF HIS SPECIAL MISSION TO KOREA

Marquis Ito, the former Premier of the Japanese Cabinet, was appointed by the Mikado as special Imperial Ambassador to Korea. He left Tokyo on March 13, bearing a personal message from the Mikado to the Emperor of Korea, the purpose of which was said to be to cement the friendship of the two countries. Marquis Ito reached Seoul on March 17, and was cordially received by the Korean Emperor. He remained in Korea for about three weeks, and then returned to Japan, arriving at Tokyo on April 1

THE TRUANTS

BY A·E·W·MASON

SYNOPSIS OF CHAPTERS

In the opening chapter Pamela Mardale is introduced to the reader as a young society woman of London, beautiful and of rare personal charm. Into her early life has come a mysterious influence which dominates and directs her whole career. What this strange influence is only two of her friends suspect—a young schoolmaster who knew her as a child at Roquebrune, and Alan Warrisden, who is in love with her, and who, though his proposal of marriage is refused, determines to win her. Late one night at a ball, Pamela and Warrisden, while seated on a balcony, observe a young couple leaving the opposite house. They are Tony and Millicent Stretton, who live in a gloomy home presided over by the rich but unjust father of the young man. They are in reality kept prisoners by the whims of the tyrannical old man, and it is only by playing truant and going out by stealth late at night that they are able to enter at all into the life of the outside world. This practice they keep up for a year, but finally both of them grow extremely weary of their monotonous life, and in a moment of exasperation Tony determines to go to America to make his fortune, while Millie is to be left behind and sent for as soon as her husband is able to establish a home. Tony has some misgivings about leaving Millie, for he has been warned by Pamela Mardale that she should never be left alone; but at last he departs, after Pamela has promised to be a staunch friend to his wife. Millie becomes infatuated with Lionel Callon, a gentlemanly adventurer. Pamela wishes to help her. She wires Warrisden to come by an early train, and asks him to find Tony and bring him home. Warrisden accepts the commission. Pamela has advised him to call on a Mr. Chase, head of a London mission, at whose suggestion Tony had chosen New York as a field of adventure. Warrisden learns from Mr. Chase that Tony, having lost all of his small fortune in New York, is now in the North Sea on a trawler. He starts out to find him, and finally reaches him far up in the North Sea. Warrisden uses every argument to prevail upon Tony to come back, but he refuses, and Warrisden is forced to return alone.

CHAPTER XII

WARRISDEN had failed. This was the account of his mission which he had to give to Pamela Mardale; and he gave it without excuses. He landed at Billingsgate Wharf at eleven o'clock on the second day after the sails of the Blue Fleet had dropped out of sight behind the screen of breaking waves. That afternoon he travelled down to the village of the three poplars. It was night when he stepped out of the train on to the platform of the little station. One can imagine what bitter and humiliating thoughts occupied his mind. Away on the crest of the hill the lights of the village shone brightly through the clear night air, just as the lights of Margate had shone across the bay when the steam-cutter had sprung like a thing alive to the lift of the sea beneath her bows. Then all the breeze had whispered promises; now the high hopes were fallen. "Do not fail!" Pamela had cried, with a veritable passion, hating failure as an indignity. He could hear the words in the very accent of her voice. Once she had suffered failure, but it was not to be endured again. That was what she had meant; and he had failed. He drove along that straight road which he had traversed with Pamela at his side; he slept under the roof of the inn where Pamela had claimed his help. The help had been fruitless, and the next morning he rode down the hill and along the road with the white wood rails—"the new road"—to tell her so. The sun was bright; there was a sparkle of spring in the air; on the black leafless boughs birds sang. He looked back to the three poplars pointing to the sky from the tiny garden on the crest of the hill. Quetta—yes! But it seemed there was to be no Seistan.

He had started early, fearing that there might be a meet that day; and he had acted wisely, for in the hall there were one or two men lounging by the fire in scarlet, and Pamela was wearing her riding-habit when she received him. He was shown into a little room which opened on to the garden behind the house, and thither Pamela came.

"You are alone!" she said.

"Yes; Stretton would not come."

"None the less, I am very grateful."

She smiled as she spoke, and sat down, with her eyes upon him, waiting for his story. The disappointment was visible upon his face, but not upon hers. Pamela's, indeed, was to him at this moment rather inscrutable. It was not indifferent, however. He recognized that, and was, in a way, consoled. It had been his fear that at the first word she would dismiss the subject, and turn her back on it for good. On the contrary, she was interested, attentive.

"You found him, then?" she asked.

"Yes. You would like to hear what passed?"

"Of course."

"Even though I failed?"

She looked at him with some surprise at his insistence.

"Yes, yes," she said, a little impatiently.

"We were nearly three days longer in reaching the Blue Fleet than we anticipated," he began. "Stretton came on board the fish-cutter—" And Pamela interrupted him:

"Why were you nearly three days longer? Tell me about your own journey out to the fleet from the beginning."

She was, in fact, as much interested in her messenger as in the errand upon which she had sent him. Warrisden began to see that his journey after all was not entirely a defeat. The alliance to which they had set their hands up there in the village on the hill was bearing its fruit. It had set them in a new relationship to each other, and in a closer intimacy.

He told the story of his voyage, making light of his hardships on the steam-cutter. She, on the other hand, made much of them.

"To quote your captain," she remarked, with a smile, "it was not a Bobby's job."

Warrisden laughed, and told her of Stretton's arrival in the punt of the *Perseverance*. He described the way in which he had come on board; he related the conversation which had passed between them at the stern of the cutter.

"He hadn't the look of a man who had failed," Warrisden continued. "He stood there on the swinging deck with his legs firmly planted apart, as easily as if he were standing on a stone pavement. I, on the other hand, was clinging desperately to a stay. He stood there, with the seas swinging up behind him, and stubbornly refused to come."

"You told him of his father's illness?" asked Pamela.

"He replied that his father had not sent for him."

"You spoke of the candles lit every night?"

"His answer was the same. His father had not sent for him. Besides, he had his time to serve. He had signed on for eight weeks. There was only one moment when I thought that there was a chance I might persuade him; and, indeed, my persuasions had really nothing to do with it at all. It was just the mention of your name."

"My name?" asked Pamela, in surprise.

"Yes. In answer to a question of his I told him that I had been sent out by you, and for a moment he faltered."

Pamela nodded her head in comprehension.

"I understand; but he refused in the end?"

"Yes. He said: 'One must take one's risks.'"

Pamela repeated the sentence softly to herself; and Warrisden crossed over to her side. His voice took a gentler note, and one still more serious than that which he had used.

"Do you know what I think?" he asked. "You sent me out with a message to Stretton. I think that he has sent me back with a message for you—'One must take one's risks.' He said that he had learned that in the North Sea. He pointed to the little boats carrying the fish-boxes to the steamer through the heavy, breaking seas. Each man in each of the boats was taking his risks. 'Whether it's lacing your topsail or taking in a reef,' he said, 'one must take one's risks.'"

Pamela was silent for awhile after he had spoken. She sat with her hands folded in her lap, and her face most serious. Then she looked up at her companion with a very friendly smile; but she did not answer him at all. And when she spoke, she spoke words which utterly surprised him. All the time since the ketches had disappeared behind the waves he had been plagued with the

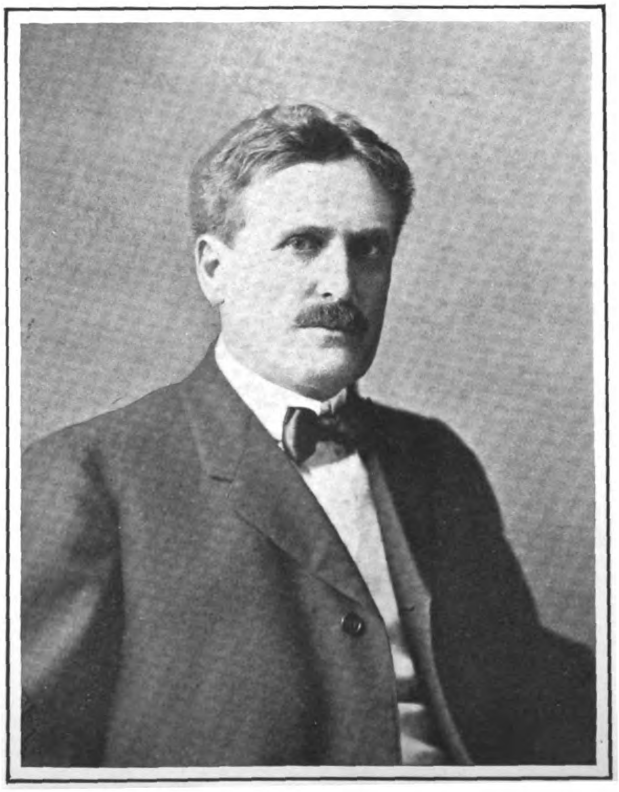
PROGRESS IN OHIO

The State House, Columbus



SENATOR HANNA AND THE STATE

BY MYRON T. HERRICK, GOVERNOR OF OHIO

TO my mind Senator Marcus A. Hanna was the typical Ohioan of to-day. The great national questions to which we are now giving our attention he studied in miniature here in Ohio. As a pioneer in the development of the immense lake-carrying trade he worked out the high value of canals and other artificial waterways. When the Panama matter came up to be solved in the Senate he was found ready with the successful solution. Early in his career as a shipper, miner, and manufacturer he had encountered every phase of labor difficulties, and had worked out to his own satisfaction and that of his army of employees the proper way to avoid strikes. When he was summoned to that great council of master minds, the Civic Federation, and bidden to confront the giant task of harmonizing capital and labor, the call found him fully prepared. Far above riches, social standing, and political power he placed this honorary position. Nay, he stood ready to sacrifice all his laurels to achieve success in this direction. It may have been his hobby, his fad, his amusement, but there is much sweetness in the remembrance that he was in earnest, and that if death had spared him he would have accomplished much for the betterment of this great American family of ours. As a builder and master of ships he pointed out to the doctrinaires at the capital the weakness of our navigation laws, together with the remedy.

In the present hour his advice seems too radical to many in power, but I have no fear but that its soundness will be justified with the years. Of his eminent success in the field of politics there is little call to speak. Yet the secret of his success was an open one. He applied to the management of political affairs the methods he used in conducting his business. To our merchants and manufacturers he preached the sound doctrine that looking after politics was as much a matter of business as looking after sales and shipments. It was a ruthless invasion of the rights of the professional governing class, but American politics has been the better for the business man's coming into the great game of government.

Senator Hanna liked to see other people happy. For twenty years or more it was his custom to assemble a party of from ten to twenty guests at his home on the lake shore every Sunday afternoon, where dinner was served at four o'clock. The party was made up of his intimate friends, and was affectionately designated by him as "the gang." The Celtic in him showed at these gatherings, for his eye would twinkle and his face beam as he looked down the long table. The best picture ever taken of President McKinley was at this table in the Senator's dining-room at one of these affairs. During the wearying work of the campaign he comforted himself always with the thought, "Next Sunday we'll be at home and have 'the gang' out at the house, and we'll forget all our troubles."

Hon. Myron T. Herrick, Governor of Ohio

All my life I had known that Hanna was a man of indomitable courage and of inflexible will power, but I never realized his strength until the last campaign. He entered the tour of Ohio after a period of sickness and in a weakened physical condition. Yet he made every speech assigned him. Many times I have seen him come back to the car nearly exhausted. His limbs would stiffen from standing too long, and he would have to be fairly carried into the living-room. Yet the next morning he would be ready for more work. One evening after making five speeches he got into a corner seat with difficulty, where he lolled in sheer exhaustion and tried to smoke. Looking at the end of his cigar, he told this story: "I feel like the soldier in the civil war who, while leading a charge, was knocked over, stamped on, rolled in the mud, and kicked by a mule. Gathering himself up, he followed his regiment with a sore mind and sorer body. As he limped

along, he said: 'I love my country. I hev fit fur her, I hev bled fur her, an' I stand ready to die fur her. But when this blame war is over I ain't never a-goin' to love another country.'"

What he meant was that he intended to drop active political work after his election as Senator. His heart was in that fight, and therein he showed his pride of character. Six years ago an effort was made to cloud the title to his Senatorship. From that hour he strove to vindicate his claim to the position, and the rousing majority given him, I verily believe, brought him more joy than would the election to the Presidency. His own people, as he put it, had given the lie to the charge, and had voted renewed confidence in him.

Senator Hanna's Policy

Senator Hanna's policy in Ohio was for a clean administration along safe and conservative lines. Every friend he left is endeavoring to carry out that policy. He was not a political boss, but the antithesis of one. People who think that he named the candidates upon the State ticket are very much mistaken. Many times I have seen him lose his temper with men who came to him asking that they be preferred for nominations.

"What have I to do with it? See the delegates," was his oftentimes choleric reply to such pleadings. So long as the personnel of the candidacy for the various offices was clean and honest it was next to impossible to get him to announce a preference, even though a delegate to the convention himself. But if a bad or suspected man presented himself the Senator was not afraid to come out openly and declare that he must not be nominated. This condition of non-interference applied to appointive positions as well.

After I was chosen Governor I had no opportunity to talk with the Senator until he came to Columbus to prepare for his re-election. I expected that he would, as the head of the organization and as a candidate, have many obligations which he would expect assistance in having redeemed. When I asked him if the administration could be of service to him in the way of appointments, I really thought that he would have a formidable list. To my utter astonishment, he said that it would be a matter of deep personal obligation if I could secure a clerkship for an old boyhood friend in Cleveland who was in a bad financial way. That and nothing more.

Later, when the matter of filling the position of State Inspector of Mines and Mining came up, the Senator entered into a description of the kind of a man I must appoint—one who would be fair to the operators and just to the men, and endowed with certain qualities that would especially fit him for the place. "Who is this gentleman?" I asked, thinking that his remarks were simply a prelude to a recommendation. "I don't know; you must find him for yourself," was the answer. Next to the last letter I got from him was one endorsing two appointments I had made, the news of which he got through the newspapers.

When consulted on the organization of the General Assembly, his only demand was that honest and capable men be chosen as its officers and that no radical legislation be permitted to pass. It was he who two years ago insisted upon the adoption of the excise laws heavily taxing corporations in this State.

"They ought to pay more," he said. "They have not been bearing their proper share of the burdens of government, and the opposition is right in the charge it makes of their escaping taxes."

Public Clamor and Sentiment

On the other hand, he would strenuously oppose all bills that had what might be termed a class tendency. In handling these questions he acted just as I knew him to do in business. Once convinced that he was right, he was not to be dissuaded. Away back in the seventies he broke the iron-clad rule of the coal operators never to deal with their employees in a just and reasonable way, when he said, "These men are right in their demands, and I am going down in the valley to talk with them." Down he went, and when he came back the era of strikes had ended for him. There never was another. He could tell the difference between public clamor and public sentiment most unerringly. Public clamor he never heeded, but to public sentiment he was always respectful. In this respect I sometimes think he was a better judge than McKinley, who afterward developed his sense of discernment most remarkably. He was human, and got angry just like other positive men.

When he decided that the Civic Federation was right and should be supported, he was compelled to endure the sneers of a certain class of men who give Wall Street its bad name. It particularly incensed him to be called the "walking delegate," or, as some of them paraphrased it, the "talking delegate," but it only made him the firmer. When the feeling was at its height and when he was accused of bidding for the Presidency, one day he made a most unusual proposition to a representative of the interests to which I have referred.

"Tell your people," said the Senator, "that if they will agree to arbitrate this question [the coal strike] and pledge themselves to abide by the decision I will sign a paper and give bond not to accept the nomination for President, and to refuse the office if elected against my will and consent."

"Machine" Organization in Ohio

Let me say that Senator Hanna's power in Ohio was not due to his machine or to the organization, so called. In point of fact, machines have never prospered in Ohio. The great men of the State owe their standing and prominence to the remarkable independence of our voters. Rutherford B. Hayes had no machine, and yet he repeatedly carried the State and was made President. Garfield had no machine, and yet he was made Senator and President. John Sherman, who was in office for a quarter of a century as Senator, had no machine. William McKinley, defeated one year for Congress, was unanimously nominated for Governor the next. He had no machine. It is true that for a time Senator Hanna, before he became the power that he finally grew to be, owed something to his connection with organized politics. But after the people of the State got to know him, all other organizations disappeared in the popularity that his personality gave him. So it may be truthfully said that for the past seven years of his political career Senator Hanna owed nothing to any power save the people who loved him well. It will always be that way in Ohio, too, I think. No machine will keep an unworthy man in position, no matter what his strength as a politician or the amount of his worldly goods. If the people of Ohio are not with a man he must go down before their verdict of disapproval.

Incalculable good has flowed from the great lesson Senator Hanna taught. He showed himself the true statesman and ideal representative of a people. Our State has produced many great men, whose names are synonymous with that of the fame of the nation, but it is a question whether his comparatively modest attainments did not, when combined, make him the peer of the greatest of them.

Some Men of the Moment

It has ever been the boast of the Buckeye State that it furnishes the man and the idea in great emergencies, and once again I must refer to the history of the nation for the justification of this bit of self-flattery. Beginning with the first Governor, Edward Tiffin, who checked the spread of Federalism into the Northwest Territory and nipped in the bud at Blannerhassett Island the expedition of Aaron Burr, we successively point to Grant, the Shermans, Chase, Stanton, Garfield, Thurman, McKinley, and a host of others, who not only served their country well, but in the hour of need when such service was doubly dear.

For half a century Ohio has been undergoing transition from an agricultural to a manufacturing State. In the eastern counties where there were once thousands of flocks, which made the State famous for its wool production, there are now the stacks of steel-mills and oil-derricks.

In place of the villages of a quarter of a century ago there are now large manufacturing cities. Over fifty per cent. of the millions of Ohio live in urban centres, and the percentage is steadily growing larger.

The centre of the steel industry has changed from the Monongahela to the southern shore of Lake Erie, where the coal of Ohio and the ore of northern Minnesota are brought together and transformed. Engineering improvements on the Ohio River will in a few short years bring about an industrial development along her banks that will exceed the wildest dream of the most enthusiastic of the earlier settlers in the Ohio Valley. When one thinks that with these improvements it will be possible to float freight in thousand-ton barges from Pittsburg to New Orleans, the foregoing language will not seem extravagant. As a factor in our new trade with South America through the Panama Canal this one item of water transportation is the most powerful in all the treasury.

The Outlook for Prosperity

Keeping pace with the industrial growth of Ohio are the railways, both steam and electric. Before the coming of the electric-cars the steam-railway lines had gridironed the State. After their coming there was no diminution in their extension wherever business demanded service. Experience has shown that the newcomers are not parasites, but feeders and nourishers. There are some problems yet to be worked out, but in a short time I expect to see a harmonious working arrangement between these two forms of transportation. When this is accomplished and the smaller interior manufacturing plants obtain direct connection with the great trunk lines traversing the State, our already gigantic production will grow like the storied gourd. The foundation of Ohio's success has been education, in the spread of which neither expense nor effort has been spared since the pioneer Virginians came over the border into the Northwest Territory. We had the schoolhouse before the factory, and in our commercial success we have not forgotten the early lesson taught by the fathers—to maintain the school at all hazards and without regard to cost.

To-day the only direct State tax levied is for the support of our common schools and universities. Money spent in fighting ignorance we think a well-paying investment, our dividends being intelligent men and women and a prosperous State. To capital seeking investment Ohio offers advantages second to no State in the Union. Our laws governing corporations are wise, and intended to encourage legitimate enterprise rather than to hamper and destroy it. Our resources are seemingly infinite and varied, and no burdensome tax or wasteful government robs industry of its earnings. A review of the career of the successful men and women of Ohio shows that conditions here still favor the individual rather than the group. In short, our State, we think, and conscientiously so, stands for that which is best in our day and age.

EDUCATION IN OHIO

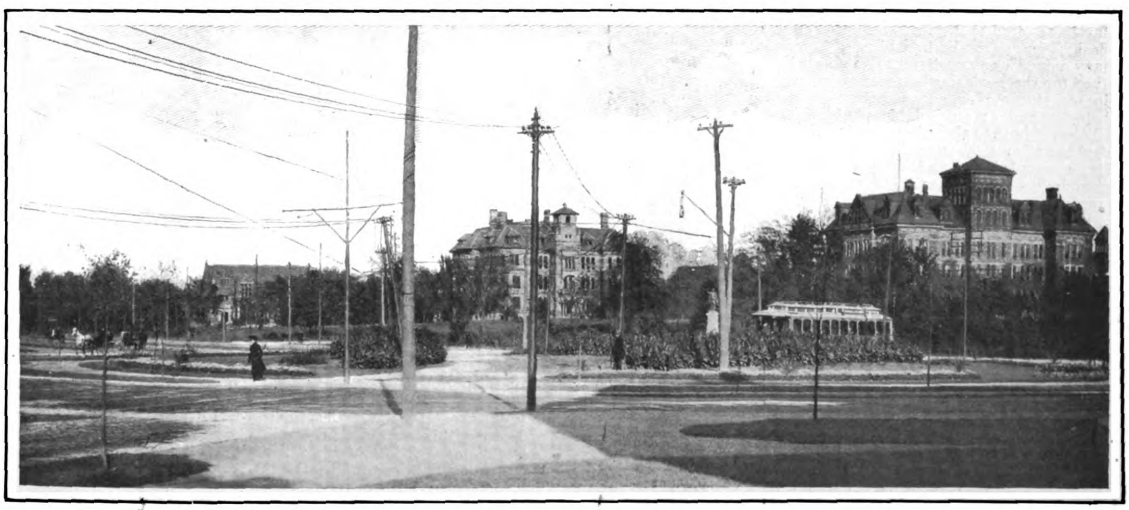
BY CHARLES F. THWING, LL.D.

President of Western Reserve University and Adelbert College

TWENTY years ago, in writing from America to his daughter, Matthew Arnold said, "The picturesque is the rarest of things here," and he adds, "the people have less of the artist feeling than we have." Education in Ohio is not "picturesque," and in dealing with it even under the present happy conditions, I cannot exercise "the artist feeling."

Perhaps the least picturesque thing in the education of Ohio is that which, after all, is the most significant. This fact is the large number of people who possess the elements of a common education. The degree of illiteracy is among the lowest of all the commonwealths. Six States—Iowa, Nebraska, Kansas, Washington, Utah, and Oregon—have a little larger proportion of people who are able to read and write with a certain degree of efficiency. But Ohio is better off than any State lying to the east or to the south of herself. Only four per cent. of her people can be called illiterate, whereas in such Northern States as New Hampshire and Rhode Island the percentage exceeds six and eight, and in South Carolina and Louisiana it approaches forty. The influence of the great principle of the Ordinance of 1787 regarding education still obtains.

The present high degree of education is assured through some twenty-six thousand teachers, of whom about sixteen thousand are women and ten thousand men. The proportion of men is larger than is found in most States, excepting those of the South, and twice or three times as great as is found in the New England States. This great educational result is accomplished at an annual expenditure to each person of the population of about three dollars and a half. This amount is less by a dollar and a half than that expended by either Massachusetts or Colorado, and is practically equal to that spent by the neighboring States of Indiana, Illinois, and Michigan. It may be fittingly added that in Ohio, as in many States, this amount has increased about fifty per cent. in the last thirty years. The cost of educating a single student in the Ohio schools for a year is about twenty-five dollars. This sum is practically identical with the cost found in the larger share of the North-Central States, but it is less by fifty per cent. than the rate which obtains in Massachusetts or New York.



These educational results are accompanied with two untoward conditions. The first condition is the low scale of payment of the teaching staff. Teachers are quite as free from avariciousness as ministers, but, as a rule, the higher the rate of compensation the greater the efficiency. The average monthly salaries of the teachers of Ohio, who are men, is forty-two dollars, and of women thirty-seven dollars. This average is lower than in either Indiana, Illinois, or Michigan, or in the States of Massachusetts, Rhode Island, or Connecticut. The highest individual salaries are quite as high as in several of these commonwealths, but the lower are very much lower. A second untoward condition of educational efficiency is found in the lack of State normal schools. That the State should be concerned with the education of teachers has become a part of the legal and educational procedure of every commonwealth, with the exception of Ohio. Ohio is still content with intrusting the training of her teachers to private normal schools, to the high schools, and to a few normal schools of each of the greater cities. Although on her east New York and Pennsylvania have more than a dozen normal schools each, and on her west Indiana has two, and Michigan three, Ohio has none. This lack would formerly not have been regarded as a condition of loss, but recent years have taught that the professional training of teachers is quite as important as the professional training of ministers or of lawyers. Be it said, however, that recently the State has introduced normal departments into two of its universities—one at Athens and one at Oxford. Other measures also looking to the introduction of professional training into other schools have been considered by the law-makers at Columbus. Associations known as reading-circles are formed among the teachers of Ohio, which prove to be a constant and genuine professional enrichment and inspiration.

What is known as the higher education is less fundamental in certain sections than that of the common school, but it is more impressively conspicuous. The Ohio college is often in the public eye as an object in some ways of contempt. The Ohio college has been rendered conspicuous by its numbers. It is difficult, in not a few States, to say how many colleges do exist; standards of judgment vary. But the last report of Dr. Harris, the United States Commissioner of Education, credits or charges Ohio with thirty-four institutions. The number is large, too large. But the number is not in any appreciable degree larger in proportion to the population than is found in not a few other States. Pennsylvania has thirty-five colleges, Tennessee twenty-four, Kansas twenty, and Illinois thirty-one. Ohio, like not a few States, is inclined to interpret *multa* as *multum*, and bigness as greatness. But if Ohio is too willing to develop many institutions at the cost of a few most worthy, she has worthy companionship in her endeavor. After all, the Ohio college has done much toward the making of the Ohio man.

The professional education of Ohio, taken all in all, I think is of a higher order than the collegiate. In any such comparison many exceptions might be pointed out. There are unworthy medical schools in Ohio as there are unworthy colleges; there are most worthy colleges in the State, as there are a few professional schools of the highest type. Schools for the training of dentists, too, are rendering excellent service. The technical or scientific institutions should be regarded as professional. Of them at least two are giving a good account of themselves through their graduates. The technical department of the State university at Columbus, and the Case School of Applied Science of Cleveland, are admirably located for serving the community, and are justifying their foundation by their works.

In the present condition of education of all grades—the common, the collegiate, and the professional—it is easy to detect the formative power of early influences. These influences are in part personal, and in part racial, belonging to the whole community. For the power of such educators as Hinsdale, who went from Ohio to Michigan, of Horace Mann, who here did his last work and died a martyr to his enthusiasm for it, of McGuffey, of Andrew Freese, of the elder Orton, of James H. Fairchild, and of many others, still abides.

The educational condition of the State is still characterized, as has been its entire history as well as the history of the whole commonwealth, by individualism. The collective principle of Alexander Hamilton, manifested in the Regents System of the Empire State, has had few followers in Ohio. The diverse populations which entered this territory, early projected great diversity and variety of social, ecclesiastical, and educational conditions. Ohio, as the newest of the Eastern States, and the oldest of the Western, has been a reservoir to receive and to send forth many peoples and forces. Its population has been kept in constant flux and flow. Out of such conditions, themselves individualistic, has come indi-

vidualism of character. This character is quite as manifest in education as in any field. The State is not content, like Illinois, Michigan, or Minnesota, with one university; it has three. The State allows much freedom to each city or town in the conduct of its own schools. It provides what are essentially different methods for securing the right to teach in the schools. The people have been unwilling, as they have allied themselves with various churches, to be satisfied with a single college for each of these churches. Although certain denominations are content with a single college, yet the Methodists try to support five or six. In Cincinnati, too, there is a university bearing the name of the Queen City, which may be called a City University more properly than can be most universities placed in the ordinary metropolis.

Warner Hall, Conservatory of Music, Oberlin University

It is, however, to be said that the individualistic condition of education at the present time is regarded by the people as having received too great emphasis. Measures looking to a closer co-operation or even union of various colleges are frequently presented. The present Legislature is considering one or two bills for a State Board of Education, which shall have power to provide for the professional training of teachers, and also shall take charge of such training as may be conducted in several colleges. The Ohio College Association has also endeavored to establish a State Board of Education which should have special relation to the three State universities, and, too, possibly to other institutions. The present drift in Ohio education is toward the collective principle of the State of New York.

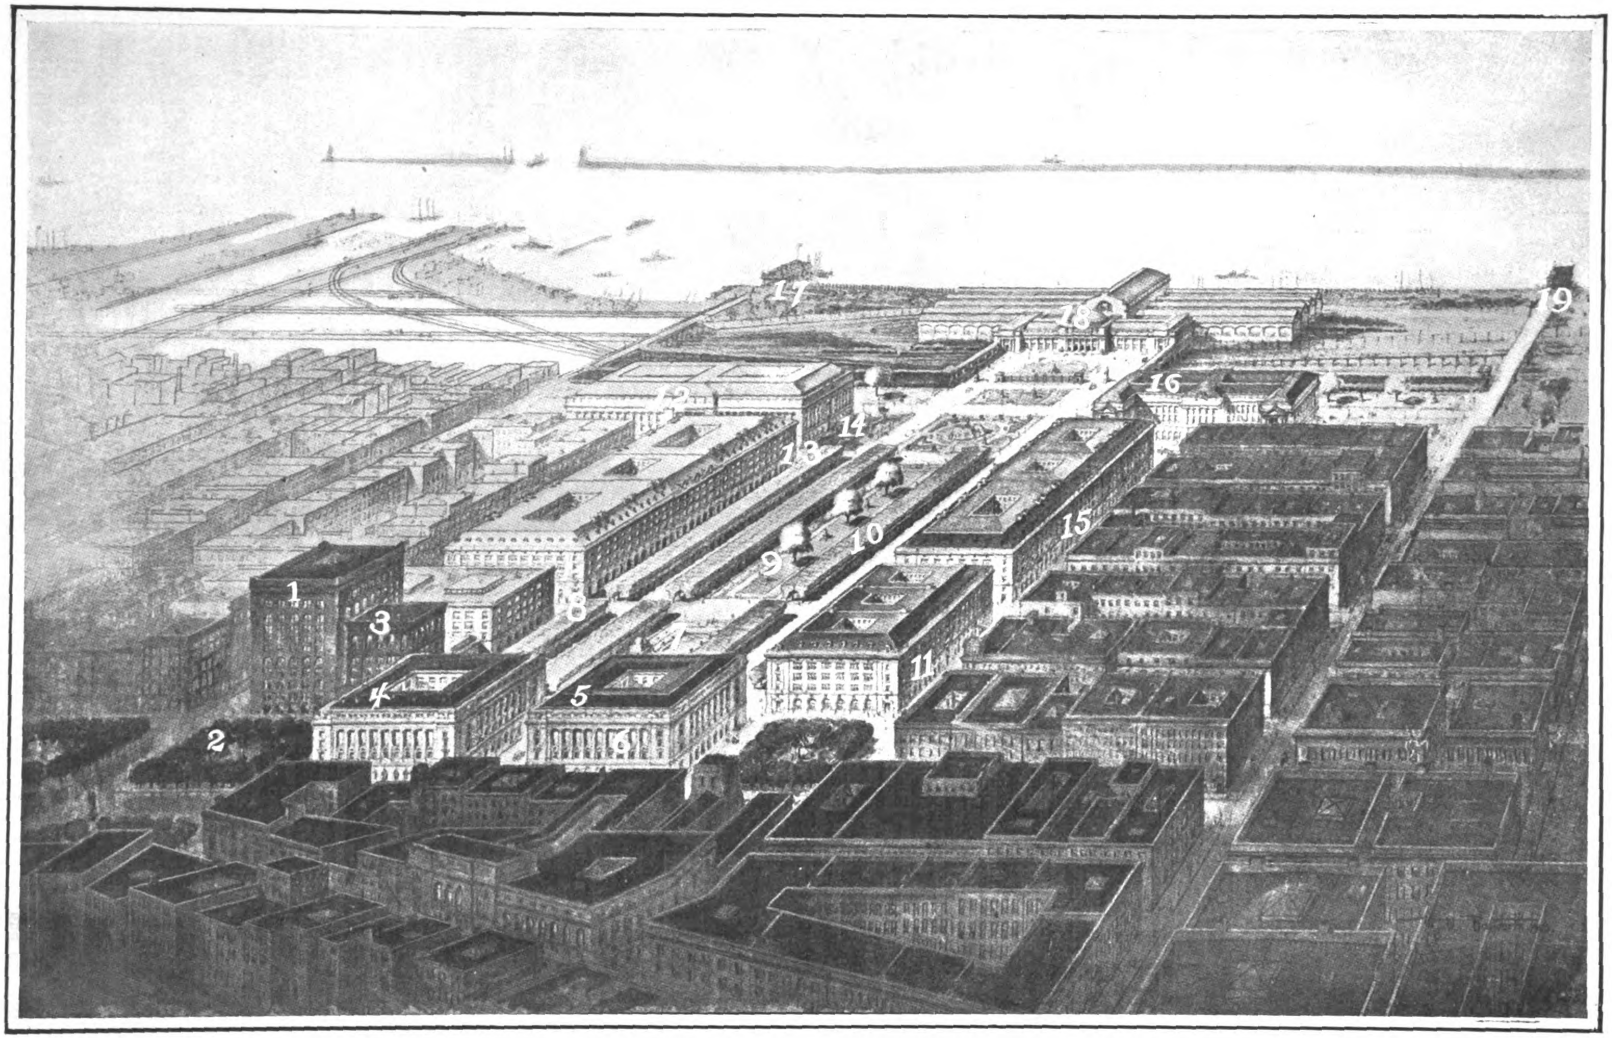
But in the midst of the application of the principle of individualism is found a mighty feeling of good fellowship. The educational gatherings—of the county, of the central, northern, or southern sections, or of the whole State—are very interesting love-feasts. The college presidents are cooperative with all as well as with each other. The "higher" education and the "lower" coexist in harmony, without patronizing or jealousy. The teachers of one set of subjects are frequently organized into associations, and the number of such associations is rapidly enlarging and increasing in influence.

A unique method prevailing in the administration of some public schools should be mentioned. A dozen years ago Cleveland adopted a method by which the business administration of the schools was separated from their scholastic administration. Through this method a director was elected who had charge of the material concerns, and a superintendent was appointed whose duty it was to care for the elements and forces of instruction. As a part of this method was a school board, chosen by the people of the town or city concerned. For twelve years and more the method has worked well. Abolished by a decision of the Supreme Court, yet the method has proved its worthiness. A similar method it has been sought to introduce into all the cities and towns of the State. What is therefore known as the Cleveland Plan has come to have a great influence in the State and also beyond its boundaries.

PLANS FOR A CITY BEAUTIFUL

BY FREDERIC C. HOWE

UP to very recently there has been little that was organized, little that was conscious, and little that was social in a large sense in the average city. The urban communities of the United States have been mere industrial happenings. In the true sense they have not yet become cities. Their life has been not dissimilar from that frontier existence which has ever been found in some portion of the United States just in advance of political organization. But of late years this brick and mortar life has been fusing into a higher order of municipal organization. It has shown some signs of organized purpose.



And nothing more surely indicates this changed conception of the city than the interest which is beginning to be taken in the matter of municipal art. This interest is general. The people of Washington, New York, Chicago, Cleveland, San Francisco, and many minor communities are working through one agency or another for the rendering of their cities more beautiful. This fact is significant more as an indication of the spirit of contemporary thought than as an isolated phenomenon. As in religion, so in politics, it is the spirit that counts. And the distinguishing motive of present-day movements is a belief in the city as a whole, in its life, outward form, and appearance; in its schools, parks, playgrounds; in its purpose to become a better, more wholesome, and happier place of living. We seem to be leaving behind the idea of earlier reform movements, which aimed only at "getting our money's worth out of government."

And it is probable that the great cities of every age have passed through the same evolution. It was so in Athens. It became great as a commercial centre before it was beautified at the hands of Pericles and Phidias. The medieval Italian cities were the work of organized democracy and intelligent despotism. But their beauty was of secondary growth. So it has been in France and Germany, and to-day in America democracy is coming to appreciate and demand fitting monuments for the realization of its life; splendid parks and structures as the embodiment of its ideals. In medieval times, the monumental Gothic cathedrals which dot Europe here and there were the expression of the high ideals and aspirations of mankind. The twentieth century gives promise of setting forth its belief in the ultimate possibilities of democracy in generous expenditure for municipal purposes. The entire country has manifested enthusiastic interest in the superb plan for the carrying out of the design of L'Enfant in the beautification of Washington, through the architectural commission appointed by the Senate. The city of New York has recently had plans executed for the construction of a splendid group of municipal structures about City Hall Park. In London, the same spirit has manifested itself in the working out of a superb architectural effect in the new government buildings and in the widening of the Strand.

Probably no city in the country, outside of the capital, has undertaken the systematic development of public architecture and parkage on so splendid a scale as has the city of Cleveland. This is the more remarkable inasmuch as no city in the country, with the possible exception of Chicago, is as essentially democratic in its instincts. Nowhere have the movements centring about municipal ownership, taxation, and the great industrial issues which are rapidly becoming the dominant political ones, found more ready response at the hands of the voters than in this great industrial centre on the southern shore of Lake Erie. Cleveland is a commercial city *par excellence*. It has been termed the Sheffield of America. It is a centre second only to Pittsburg in the iron, steel, coal, and coke trade. One-third of its population is foreign-born. It is smoke-begrimed overhead and dirty underfoot. But despite this fact, as well as the newness of its life and undeveloped character of its public spirit, it has shown a willingness to expend many millions of dollars in the development of the artistic side of its existence.

The city is fortunate in the fact that all of its public buildings are to be constructed at the same time. A uniform plan of procedure was thus possible. The Federal Building, County Courthouse, City Hall, and Public Library are all to be built. Under ordinary circumstances and with the subterranean political and commercial forces which have heretofore rendered impossible the best results in public architecture in America, isolated construction would doubtless have been the result. But a small coterie of public-spirited men have brought about a harmony of action among the many political agencies which had to be satisfied and placated, and achieved a result which is not far from ideal in its possibilities. Through the aid of State legislation a Board of Supervising Architects was appointed, endowed with a final veto upon location, plans, and style of architecture of all the public buildings of the city. Despite some political jealousies, the city called to this commission Daniel H. Burnham, of Chicago, the supervising architect of the Chicago Exposition; John M. Carrere, supervising architect of the Pan-American Exposition of Buffalo; and Arnold W. Brunner, of New York, the architect of the new Federal Building in Cleveland. The members of this commission were employed by the city at generous salaries and given absolute freedom in the working out of a ground plan for the arrangement

NEW GROUP PLANS FOR PUBLIC BUILDINGS IN CLEVELAND

For a description of the new plans for public buildings in Cleveland the reader is referred to an article on the opposite page. The Federal Building, of which Mr. Arnold W. Brunner is the architect, is now under way, and the corner-stone will be laid about June 1. In the drawing Fig. 1 is the present Society for Savings Bank; 2, Public Square; 3, Chamber of Commerce; 4, Federal Building, including Post-office, Custom-house, and Court-house; 5 and 6, Proposed Library; 7, 8, 9, 10, 13, and 14, The Mall; 11 and 15, Proposed buildings on land along Bond Street to be acquired by the city; 12, Proposed County Court-house; 16, Proposed City Hall; 18, Proposed Union Railroad Station; 17 and 19, Proposed Recreation Piers

and development of the public structures. The commission is also intrusted with the problem of improving the public square, the approaches to the sites of the public buildings, the development of the lake front of the city, as well as of the style and character of public architecture as employed in public schools, branch libraries, and police and fire station-houses. This is the most significant forward step in the matter of municipal art taken in America. It is comparable to the designs of Napoleon III., who remade Paris, with the aid of Baron Hausmann, or to the prescience of Jefferson, who called to the aid of the new government a distinguished architect in the laying out of the national capital on its present scale. The commission thus appointed has been at work for more than a year, and has finally presented the results of its labors in a completed plan for the arrangement of the public buildings. The design has met with such enthusiastic approval that its consummation is practically assured. The total expenditure involved approximates $13,000,000 for public buildings alone, and a probable addition of from three to five millions more for a terminal railway station, music-hall, museum, and the like. It involves the clearing of a large area of land lying between the business portion of the city and Lake Erie, and the utilization of this space as a site for the public buildings, parkage, a splendid mall, and the development of a lake-front park some sixty acres in extent into a splendid terminal railway station as a gateway to the city.

The plan is in the nature of a Roman cross. It is flanked toward the city's centre by the new Federal building in process of construction, together with the Public Library. At the other end of the mall, and nearly a quarter of a mile away, is the projected Union Terminal Station, with its train-sheds carefully screened from the city by high colonnades and dense foliage. On the transverse arms of the cross and facing Lake Erie are located the County Court-house and the City Hall to be erected at a cost of from six to seven million dollars. The mall itself, or court of honor, is the main axis of the plan, and is treated with formal clipped trees planted equally distant, thus forming a useful park. The central portion of the court of honor is depressed to form a sunken garden for statues, etc., alternating with each other. At the south end of the mall is placed a fountain of great size. The entrance to the Union Station, which will be a sort of vestibule to the city, forms a continuation of the court of honor, while on the lake side, the waiting-rooms of the station open on to a wide expanse of lake front, in the foreground of which are recreation piers, playgrounds, and places of popular amusement. Another important feature of the scheme is the location of the City Hall and County Court-house, which are placed to centre at the termini of two important streets, thus forming beautiful vistas, as is provided in so many European cities. As a matter of fact, all the main axes of the scheme afford splendid vistas in whatever direction one may look. As a developed whole, the scheme suggests such avenues as the Champs Elysées in Paris, or the sunken garden of the Luxembourg, or, in America, the Court of Honor at the Buffalo Exposition.

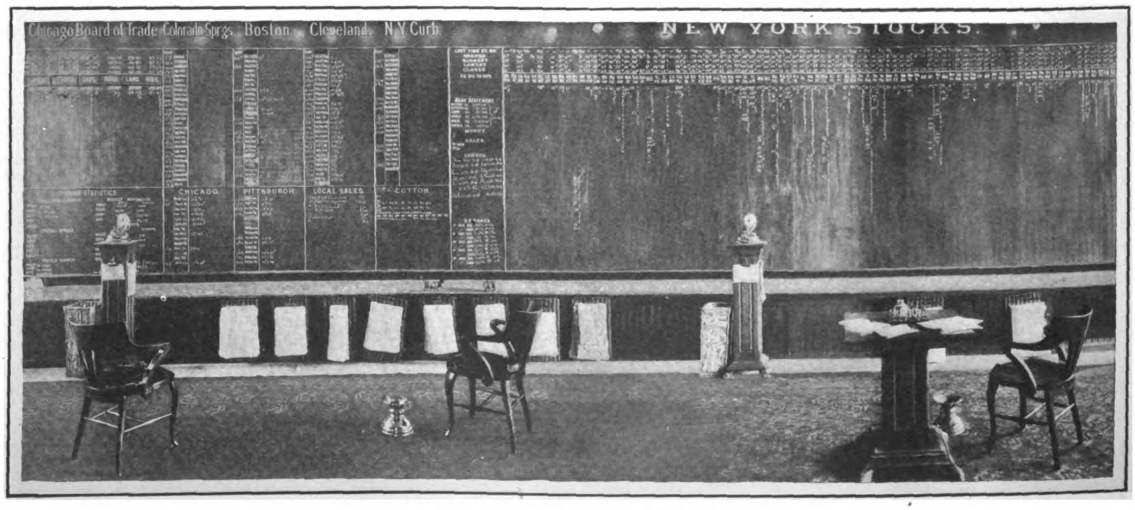
Furthermore, the commission has insisted on uniformity of architecture as of first importance. It recommends that the designs of all the buildings be derived from the historic motives of the classic architecture of Rome, that one material should be used throughout, and that one style of architecture, with a uniform sky line, should be maintained in design. Taken as a whole, the plan is one of architectural treatment rather than of parkage, with the aim of such permanent and thorough construction in all details as to render maintenance a comparatively simple and inexpensive thing.

Along with the central scheme, the commission has taken up the problem of so completing the park and boulevard system of the city, that important avenues should connect the parks and bring them to the court of honor as a focal point. In addition to the public buildings referred to, the court of honor is flanked by the Chamber of Commerce and the projected building of the Board of Education, while private initiative has undertaken the erection of a splendid music-hall, museum, and possibly some other structures, in order that the entire court of honor may be flanked by public or semi-public buildings.

Here is a city among the most radical in its democratic tendencies of any in the country courageously authorizing the expenditure of from ten to fifteen million dollars in the development of an idea. It suggests a new conception of the municipality.

THE BANKS OF OHIO

BY J. J. SULLIVAN



President of the Cleveland Clearing-House Association

NOTHING is more remarkable in the development of Ohio than the growth of its banking business. There are men engaged in active banking to-day who were in the same business when "red-dog" and "wildcat" currency circulated freely, when a bag of coin was transported from one city to another to serve as a reserve fund, when the solvency of a bank could not be guaranteed overnight, and when every possessor of bank-notes kept a counterfeit detector ready at hand to ascertain the quality and value of his money.

Then there were few banks that were counted as sound. When the national banking law went into effect, however, Ohio was quick to take advantage of it. Financial institutions, whose notes were guaranteed by the Federal government, sprang up in all the cities. Incorporated banks, authorized by State laws, were organized also, big savings and loan institutions were started in the cities, and private banks by the score were established. Twenty years ago there were 400 banks in Ohio, 167 of them being national, 10 banking associations authorized by the State laws, 22 savings and loan associations, and 201 private banks. Those 400 banks had a capital of $41,389,735.

The commercial and industrial importance of Ohio is easy to understand when account is taken of its financial resources, as represented by the capital and deposits of its banks at the present time. The national banks of the United States have a capitalization of something like eight hundred millions of dollars. About ninety millions of that sum is the capital of the national banks of the Buckeye State. Thus, it will be seen, Ohio has about one-ninth of the total capitalization of national banks in the whole country.

There are to-day about nine hundred banks in Ohio, including national, State, savings, and private institutions. These banks are capitalized for about $125,000,000, and their deposits run above half a billion dollars, being in round numbers about $555,000,000. There are 375 national banks, with ninety millions of capital, which is more than double the capitalization of all the Ohio banks twenty

years ago, and with deposits of $300,000,000; there are 425 incorporated banks, with a capital of forty millions and deposits of $175,000,000; there are three societies for savings, with a capitalization of about three millions and deposits of at least $60,000,000, and 100 private banks with a capital of three millions and deposits of at least $15,000,000. The depositors in these banks number more than a million; representing all lines of business — the professions and trades, and the wage-earner, the widow, school-teacher, and the retired business man.

The national banks of Ohio have something like 15,000 shareholders, while there are 25,000 shareholders of other banks. Ten thousand at least of the owners of bank shares in Ohio are women. These banks furnish employment to about ten thousand men, whose salaries support upwards of thirty thousand persons.

Cleveland leads all other Ohio cities in bank capitalization and deposits. The banks of that city have $37,000,000 of capital and surplus, and their deposits run up nearly to $200,000,000. Cincinnati comes next, with a banking capital and surplus of about $20,000,000 and deposits of about $75,000,000.

Interior of the Euclid Park National Bank, Cleveland

In round numbers the banking statistics of the other cities of Ohio may be given as follows: Toledo—capital, $10,000,000; deposits, $25,000,000. Columbus—capital, $8,000,000; deposits, $20,000,000. Dayton—capital, $5,000,000; deposits, $10,000,000. Akron—capital, $2,000,000; deposits, $8,000,000. Springfield—capital, $2,000,000; deposits, $5,000,000. Youngstown — capital, $4,000,000; deposits, $10,000,000. Canton—capital, $1,500,000; deposits, $6,000,000.

These are only some of the principal cities. There are at least twenty other incorporated cities and scores of villages which have banks organized to meet the necessities of manufacturing, mercantile, mining, and agricultural development. As these urban centres of activity have grown and prospered, new banks have been organized to supply capital and provide means for the facilitation of business transactions.

The strength of Ohio's banking institutions has been tested frequently. They have always stood the test. Occasionally a rotten or badly managed institution goes down, as it should, but in times of panic, both industrial and financial, the banks of Ohio have stood against the storm. During the panic beginning in 1893 not a single bank in Cleveland failed, and only two national banks in the State were forced to close their doors. One of these resumed in thirty days; the other paid seventy-five cents on the dollar. No other State in the Union came through that period of depression as well as did Ohio, and this was due to the conservative and wise management of its banks. Again, two years ago, when there was a squeeze in the money-markets of the East and a feeling of uncertainty pervaded the West, Cleveland withstood the shock. At that time the Everett-Moore syndicate was engaged in the financing of several big telephone and trolley enterprises. Cleveland bankers had loaned to them liberally. The success of their enterprises depended upon the underwriting of a big issue of bonds. They sought money in the East, but could not get it. That precipitated a crisis in their affairs. The syndicate was forced to go out of business. Had it made an assignment, leaving its securities to find sale upon the open market, serious trouble for the banks of Cleveland, as well as of other cities in Ohio, would have resulted. The Cleveland bankers met the emergency, however. They appointed a committee to take over the Everett-Moore properties and manage them. That committee did its work faithfully and well. Not only was every bank holding Everett-Moore securities protected, but the affairs of the syndicate were wound up in such a manner as to save the most important property interests from serious loss. No better demonstration of the strength of Ohio's financial institutions or the wisdom of its bankers could be given than was furnished them.

The growth of the banks of Ohio has, of course, resulted from the wonderful industrial and commercial development of the State. The great manufacturing industries that have developed in the numerous thriving cities, the railroads that gridiron the State, connecting the coal lands with lake ports, and which haul the iron ore from the lake docks to the furnaces whose stacks are reared everywhere that coal and limestone can be brought together—all these industrial developments have demanded capital, and that has been furnished by the banks of Ohio.

But all of Ohio's capital is not reserved for Ohio enterprises. Within the past four years probably a hundred millions of capital has been supplied by Ohio banks for new enterprises, not only in that State, but in other sections of the Union. Trolley and telephone development in the Middle West has been encouraged by the loaning of Ohio capital, and most of that, by the way, has been supplied by the banks of Cleveland. This capital has gone into Illinois, Missouri, Kansas, and Texas, and some into New York, Pennsylvania, Maryland, and other States East and West. Cleveland bankers have not hesitated to advance money for such enterprises, and they have made few mistakes in granting credit.

There is now a tendency toward more stability in the banking institutions of the

Speculation Ruled Out

Investments for income must be safe as to principal.
Safety is a word that can't be qualified; a loan is safe or it is not safe.
Our loans are safe. Why?
Because we never allow the margin of security to approach within one hundred per cent. of the amount loaned. That's a rule never broken.
Our loans are desirable. Why?
Because principal and interest always come on the day of maturity; also
Because a large commercial demand for money in Cleveland enables us to get good rates; also
Because our loan committee is made up of well-known business men and bankers, who pass on every loan we make; also
Because the title of every piece of land we loan on is guaranteed by a Title Insurance Policy.
We invite correspondence from bankers and individuals having funds not open to speculative investment.

State, and this has resulted in the checking of the increase in the number of banks, which was very marked two or three years ago. Consolidation is now the order of the day, and within the past year there has been a combination of financial forces which has blotted out a number of the weaker concerns by merging them with older and more stable institutions. This has tended powerfully to stability, and has added much to the fine reputation which the banks of Ohio have enjoyed for more than a quarter of a century.

Nowhere else, perhaps, has the consolidation movement been more effective than in Cleveland, where no less than half a dozen mergers have been effected, with the result of establishing more firmly than it was ever established before the fine prestige which that city has enjoyed as a banking centre.

CHAMBER OF COMMERCE

BY J. J. SULLIVAN AND F. A. SCOTT

THE Cleveland Chamber of Commerce is one of the strongest commercial organizations in the United States, if not in the world. This is due not so much to the size of its membership or its wealth, but more to the scope of the work it undertakes and to the fairness and strength of its reports. Its influence has become national, and, in some respects—mainly educational—it has reached out into foreign countries.

The present Chamber of Commerce is the successor of the old Board of Trade which was organized in 1848, and which represented to the best of its ability the interests of the growing city during a period of nearly fifty years. In 1893 the present organization was formed. It now has a membership of fifteen hundred. Its members are mainly business and professional men, but all citizens of good standing are eligible. It is a wealthy organization. It occupies a building which cost about $600,000.

The main purpose of the Chamber of Commerce, as expressed in its charter, is "generally to foster, protect, and advance the commercial, mercantile, and manufacturing interests of the city." As compared with all other similar organizations, it is unique in the respect that it embraces in one body all lines of trade in the city. These trades are represented by suborganizations. There is the wholesale merchants' board, the manufacturers' board, the retail merchants' board, and the convention board, which are all looking out for the special interests indicated by their names, and all are composed of members of the Chamber who are interested in those particular lines of business. This obviates the necessity for separate organizations such as are maintained in some other cities and which so often work at cross purposes. It concentrates all interests in the central commercial body.

The value of this special work by boards is illustrated by what the wholesale merchants' board has done. It has conducted a campaign of surprising thoroughness in strengthening the trade relations of its members and in the extension of the sphere of Cleveland's commercial influence in surrounding territory. By means of trade-extension excursions the members of the board have travelled more than 12,000 miles in special trains, and visited over 400 cities and towns in Ohio and neighboring States. They have worked on the theory that goods, prices, and prompt delivery have more to do with building up trade than the accident of location, and the results of their works seem to indicate the truth of this doctrine.

It has been the policy of the Chamber of Commerce to recognize that civic questions all have a direct effect upon the business of a community, and such questions are, therefore, given due consideration. When public franchises are to be disposed of, for instance, the Chamber, through one of its committees, has undertaken to get at the business side of the question, and let the people know the facts. It has looked into the question of municipal sanitation as it affects sewage disposal and the purity of the water-supply. It has striven for a betterment of the housing conditions in the interest of all the people. It has had much to do with the improvement and enlargement of the system of parks and boulevards. It has worked successfully for the grouping of public buildings—something which no other city has accomplished through a similar agency. It has taken a deep interest in the government of the schools, and is now earnestly striving for the enactment of a general school code for the State. Its interest in educational affairs has extended to the obtaining of liberal appropriations for the support of the schools, and for the proper housing as well as the care of the health of the pupils. The Chamber has also been instrumental in the establishment of public bath-houses. Another important branch of its work consists in the investigation of persons who solicit subscriptions from business men. By means of such investigation, as well as by the issuance of cards of Endorsement to charitable and benevolent institutions, assurance is given that all worthy objects will be supported and at the same time that nobody will be imposed upon.

Chamber of Commerce, Cleveland

The Chamber of Commerce, it will thus be seen, not only looks after the industrial and commercial welfare of the city, but also comes in touch with all the people in a way few other similar organizations have been able to do. It stands for everything that will make Cleveland a bigger and better city and a more desirable place of residence.

THE CLEVELAND STOCK EXCHANGE

BY L. W. PRIOR
President of the Exchange

NOT until four years ago, even though there had previously been a considerable trade in Cleveland securities, was there a regularly organized market in which the stocks and bonds of Cleveland and Ohio corporations could be bought and sold. Before that time the stocks and bonds of local corporations had been bought and sold through brokers, who made that sort of business an incident of their regular

Original from UNIVERSITY OF CALIFORNIA

Society for Savings Building, Cleveland

transactions, upon the New York Stock Exchange and the Chicago Board of Trade.

The Cleveland Stock Exchange was organized in April, 1900, to meet a necessity of the local market. It began business with a small list of active members and a much larger list of inactive members. The latter contributed to the support of the institution by the payment of dues. Its membership is now limited to thirty-one active brokers, and the interest taken in its transactions demonstrates that all men with financial interests regard it as one of the permanent institutions of the city.

From the beginning of its existence the Stock Exchange became a factor in the financial transactions of Cleveland. Although its first operations were confined to limited quarters, the volume of its business grew in a most satisfactory way. Shortly after the exchange began business the bull movement in stocks in New York started, and that resulted in an era of lively speculation in Cleveland, all the local stocks and bonds being affected by the buoyancy felt in Wall Street. During 1900, 1901, and 1902 there was a steady increase in the business done, and it was apparent that men who had dealt in Cleveland stocks and bonds appreciated the advantage of the Stock Exchange which gave official value to the securities they desired to buy and sell.

During 1903 the slump in Wall Street was reflected in the transactions of the Cleveland exchange. There was an abatement of the speculation fever and a falling off in the business. Yet during the year there were bought and sold in the exchange 95,872 shares of stock, valued at $5,993,350. During the four years of its existence the transactions on the exchange have amounted to 770,725 shares of stock, valued at $44,454,570.

The trading on the Cleveland exchange has not been confined to exclusively Cleveland stocks. Among the listed stocks and bonds are those of numerous trolley and telephone companies operating in various sections of Ohio and in different States — companies, however, which are owned and controlled by Cleveland capitalists.

There has been a disposition on the part of the governing committee of the exchange to scrutinize closely the securities that have been offered for listing, and in that respect it has made an admirable record.

The purpose of the organizers and backers of the exchange was to give tone and character to the securities-market, and to put the buying and selling of stocks and bonds upon a business basis. That purpose has been largely achieved.

The Stock Exchange appears to have a wide field of usefulness in Cleveland—a field which will be broadened and which will also be filled more completely as the city's business develops along various lines.

The present officers of the exchange are: President, L. W. Prior; vice-president, Herbert Wright; treasurer, N. C. McLoud; secretary, W. S. Wade; governing committee—C. A. Otis, Jr., L. W. Prior, W. E. Craig, W. H. Lamprecht, Herbert Wright, E. M. Baker, and N. C. McLoud.

OHIO'S TRANSPORTATION FACILITIES

BY GEORGE H. CUSHING

A RECENT Ohio legislative enactment gives point to the discussion of the transportation facilities of this State. A bill was pending before the legislative body which would have given to the Miami and Erie Canal Transportation Company the right to use both the *berm* bank and the towpath of the Erie Canal for transportation purposes. Its passage would have had the effect of virtually turning over to the transportation company the portion of the Erie Canal lying between Dayton and Cincinnati. When the time to put the bill upon its passage came popular indignation was stirred up, and by a majority vote it was decided to lay the bill on the table, from which it can only be removed by a two-thirds vote of the House. This virtually kills the bill for the present session of the Legislature. At the same time there was forwarded a movement which will, if carried to its natural conclusion, rehabilitate the canal system of Ohio. This State has two canals, which formed the primitive mode of travel. One of them extends from Cleveland almost due south to Zanesville, where it connects with the Muskingum River, and thus makes connection with the Ohio River. The other, the Erie Canal, starts at Toledo and runs entirely across the State to Cincinnati, passing through Dayton. In each of the canals there has been possible and is now possible a draught of water for boats of four or five feet. Before the day of steam railroads these canals and the national turnpike were the highways of commerce. The evolution of transportation facilities has classed these two highways together, and has called them obsolete.

To-day the electric traction companies and the automobiles are proving to be factors in the general situation, although feeble ones as yet. All of the difficulties which have come into the discussion and settlement of the intricate relations between the public and these various transportation facilities have found debating grounds here in Ohio. But these debates and bickerings have not stunted the growth of the facilities, and it can hardly be said that there has anything occurred which has even checked the growth.

THE NORTHERN OHIO TRACTION & LIGHT COMPANY operates the Electric Railway and Electric Lighting Companies in the Cities of Akron and Barberton, Ohio. It also operates Interurban lines from Cleveland to Akron, Barberton to Akron and Akron to Cuyahoga Falls, Kent and Ravenna, Ohio, comprising in all (including the Akron City Lines) 100 miles of track.

The Akron, Bedford and Cleveland Division extends from the center of Akron to the Public Square in Cleveland, connecting at the City Limits of Cleveland with the lines of The Cleveland Electric Railway Company, with which Company it has a fifty-year contract for the use of their lines.

Over one-half the distance between Cleveland and Akron is double-tracked, and the entire Division will be double-tracked as soon as construction can be completed with reasonable economy.

Akron is distinctively a manufacturing City, with a population of 50,000 inhabitants, and located 36 miles South of Cleveland, the population having doubled during the past ten years. The principal articles manufactured include Engines, Boilers, Cutlery, Agricultural Implements, Sewer Pipe and Fire Brick, cereals and Rubber Goods of every description. In Akron are located perhaps the largest Rubber Industries in the United States. The Company has a ten-year lighting contract with the City of Akron and a five-year contract with the City of Barberton with perpetual franchises in both places. The franchises of the A. B. C. Division run for a period of 25 years, and expire in 1919. In addition to this the Company owns about 10 miles of private right of way. The franchises of the Akron City Lines also run for a period of 25 years, and expire in 1924.

On December 29, 1902, the Company was reorganized in the name of THE NORTHERN OHIO TRACTION & LIGHT COMPANY, with a Capital Stock of $7,500,000.00, with a like amount of Bonds. The Company has outstanding $5,750,000.00 Bonds, $4,000,000.00 of which are 5% Bonds, and $1,750,000.00 4% and $1,750,000.00 4% Bonds in the Treasury. Also $1,000,000.00 of Common Stock remains in the Treasury. The Gross Earnings of the Company for 1902 were $745,043.00, being an increase of $128,033.00 over the previous year.

The Gross Receipts for 1903 were $882,276.17, an increase over 1902 of $137,232.45, being an increase for the year 1903 of 18.4%. The tracks, rolling stock, power houses (of which there are four) and the lighting systems are all in excellent condition, and a very bright future is predicted for the Company.

The principal offices of the Company are located in the Hamilton Building, Akron, Ohio. Also on the first floor of the same Building the Company furnishes a large and commodious Waiting Room, which is the starting-point for all the Interurban lines entering the City, including The Canton, Akron Railway Company. Connections can be made here going south for Canton, Massillon, Navarre, Canal Dover, New Philadelphia and Uhricksville, making a direct line from Cleveland to the P. C. C. & St. L. R. R., a distance of 110 Miles. The officers of the Company are:

H. A. EVERETT, President.
WILL CHRISTY, 1st Vice-President.
CHAS. CURRIE, 2nd Vice-President & Gen'l Mgr.
C. P. MOORE, Secretary.
J. R. NUTT, Treasurer.

The Directors are:
H. A. EVERETT, E. W. MOORE, C. W. WASON, J. R. NUTT,

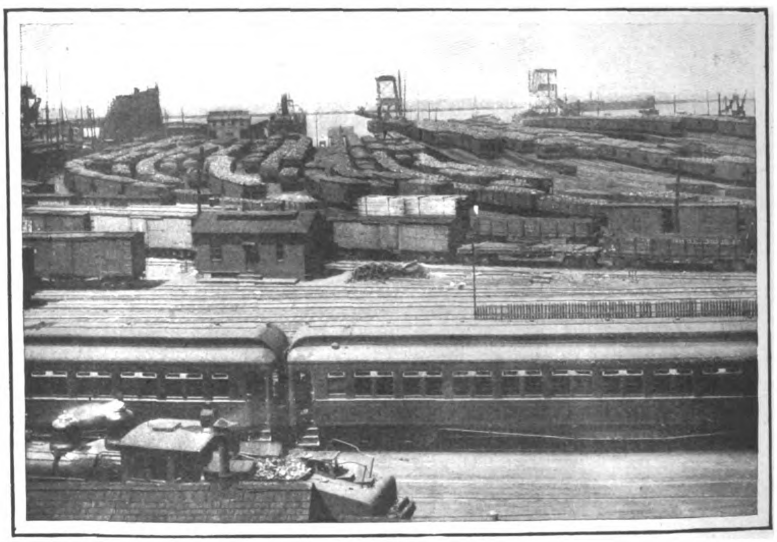
elsewhere, began in a small way, little lines between local points being constructed with no particular idea of building up any sort of a through system. Later the need for through lines and for long-distance connections demanded the linking of these small lines into larger ones. In the nature of things the roads which ran east and west were first constructed into through systems, and later on—but at a considerable distance from the formation of the through east and west railroads—the lines to the north and the south began to be built. Now Ohio is covered with a network of railroads running in every direction, although the general trend is toward the east. The central idea at the time of the construction of the first railroads was to deliver the produce of this territory, then principally engaged in agriculture, to the Eastern markets, which then offered, as now, a good return for the labor and the investment of the farmer. Later the complication of trade relations changed both the trend of the transportation facilities and their character.

Ohio's change into a manufacturing as well as an agricultural centre has brought into existence the need for enlarged and more intricate railroad facilities. Raw or semi-finished material has to be transferred from the point of production to the finishing plants and from there distributed to the trade. The transportation of raw material for manufactures has demanded peculiar service, and the need has been met. The ore and the coal trades have formed peculiar channels for themselves, and these have demanded special transportation facilities. In fact, the movement of the ore from the lake docks to the furnaces and of the coal from the mines in southern Ohio to the lakes has brought into existence a system of north and south railroads which have formed the exception to the general rule on that subject. The steam-railroad facilities of Ohio, therefore, comprise the parts of trunk lines which connect the vast Territories of the West with the markets of the East and the smaller railroads which connect the lake docks with the furnaces and with the coal-mines of the southern part of the State.



One prevailing idea in railroading has been that it is the bulk commodities which give the carrier its rich returns. The State of Ohio has developed a few railroads which depend very largely for their commerce upon the small-package business which the smaller towns produce and upon the local travel which is done between the smaller cities. The big through business, upon which so much dependence is put by other railroads, is not so much of a necessity in Ohio. The wealth of the smaller communities makes it possible for them to support the carriers which serve them. This condition, from the standpoint of a railroad man, is, of course, ideal, and is possible in but few places. Generally speaking, it would be impossible but for the wealth of the various communities.

This is shown in the earnings and the status of the companies. It might be said that since the revival of business in 1897 no railroad in this State has gone into the hands of a receiver, and since that time the expenditures for improvements and betterments have been enormous, for steam-railroads alone, to say nothing of the enormous development which has taken place in electric-line construction. The estimates which have recently been made are that the lines through Ohio have earned on the average about $15,000 per mile. The latest figures show that Ohio has about 10,000 miles of railroad-track. This computation being made shows that the railroads of this State earn annually about $150,000,000 upon a capitalization of about $300,000,000 and a bonded indebtedness of about $325,000,000. It is to be taken into consideration also that the conditions through this State as to grade, the cost of fuel, and other material have enabled the railroads to operate with economy.

Simultaneously with the development in steam-railroading there has been the growth of the electric railway. No one as yet has been able to tell just the amount of money that has been expended in this property or to what extent the investments have proved worthless. It is apparent that outlays have been lavish, and that on many of them there will never be any returns, while on others some rich harvests may possibly come in the future. The movement at present is in its earliest stages, and it is too soon to predict either success or failure. The electric lines are starting as the steam-railroads did. What the result will be to transportation cannot be foretold.

At its inception the movement was designed to connect city street-railways with suburban centres and small parks. From that it has grown to be a network of railroads out of the cities of Cleveland, Cincinnati, Columbus, and Toledo, connecting all points of any importance near-by with those centres. Now these aspiring systems are talking of joining to form cross-State railways that shall duplicate, with electric power, what the older railroads have done with steam-power. Putting on through-car service between the important centres and of carrying freight, introducing dining and sleeping car service has been suggested.

Two plans have been put into effect, each of which was expected to bring immediate wealth and popular favor. One was an electric line across the northern section of the State, connecting the larger cities with

Furling Docks on the Shore of Lake Erie

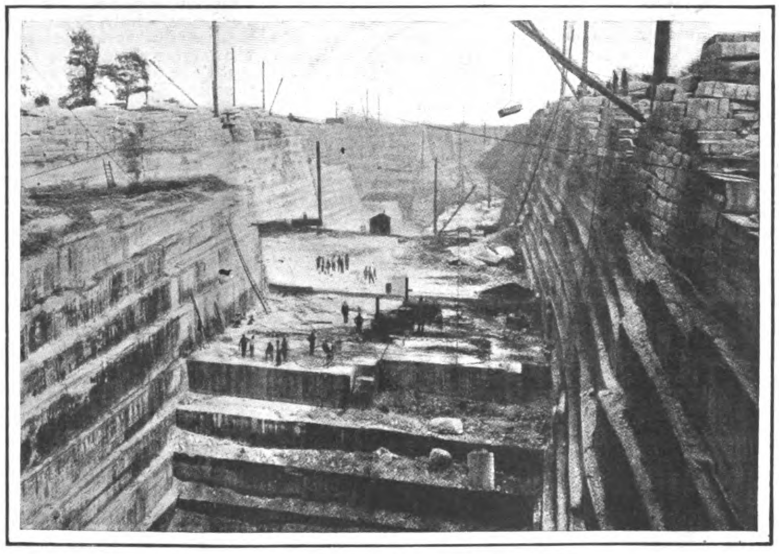
some Michigan points. The necessary railroads were bought, but not absorbed, and financial difficulty ensued. The lines, although burdened with the mistakes of capital which marked their merger, are still in existence as a through line, and have come to be a permanent factor in the transportation facilities of the State. Another plan was the coalition between electric line and canal. The project was to haul boats on the canals carrying freight by means of electric power from the shore. This plan was operated for a time, and proved fairly successful, until a contention among the capitalists which controlled the company, brought its affairs into the hands of the court and stopped development. It was believed that, by the revival of the canals and the introduction of low fares through the State, popular favor might be turned to the electric railroads. It is the collapse of this plan which just now has brought about the adverse legislative action at Columbus.

Out of all of the chaos which has surrounded this miscellaneous extension of steam and electric lines has come one development which must be good for both the carriers and the people in general. The steam-railroads have been quickened to the needs of the small communities, and the electric lines are striving to extend their local service into broader territories. The two carriers striving to better themselves are bringing all sections of the State closer together, and are increasing the exchange of business between the rural districts.

OHIO INDUSTRIES

THE STONE INDUSTRY

BY GEORGE H. WORTHINGTON



President of the Cleveland Stone Company

THE outcropping of two important geological formations, in territory near the southern shore of Lake Erie, between Cleveland and Sandusky, has formed the basis for a permanent and profitable industry. Ohio quarries have, during a period covering three-quarters of a century, furnished structural material for some of the most important building operations in the United States and Canada, hundreds of thousands of tons of heavy masonry for railroad construction, and thousands of miles of street curbing and flagging—these from the famous sandstone quarries of Berea, North Amherst, and Euclid. In addition, an inexhaustible supply of limestone from the quarries at Kelly's Island, Marblehead, Sandusky, and other points furnishes a valuable commodity as a flux for melting iron at the furnaces in the Cleveland and Valley districts, as well as material for street paving, the construction of marine breakwaters, and all forms of structural work, except the superstructures of buildings. For the latter purpose the sandstones first mentioned occupy a leading place.

The sandstone formation is a member of the lower carboniferous series, homogeneous in texture, and composed of nearly pure silica. The principal quarries are located at Berea, North Amherst, Euclid, Grafton, Nickel Plate, Kipton, and Wakeman. At North Amherst, the gray "Canyon" quarry, the largest in the world, has a quarry face of over one and one-quarter linear miles and a depth of 196 feet, the rock running from 140 to 196 feet in depth. From these quarries the shipments often aggregate from 200 to 300 cars of stone a day.

The merit of the Ohio sandstones lies in their silicious character. Analysis shows that they run about 97 per cent. pure silica, and, being well cemented, they are as resistant to weather as granite, and much less affected by the action of fire. They are of a light gray and buff color, and among the handsomest and most durable building stones known. They are well adapted for ornamentation, and the most elaborate design in carving can be executed in the highest relief, retaining clear-cut outlines through generations of time and exposure.

The Berea, the buff Amherst, and the gray "Canyon" sandstones have been used in the construction of numerous post-office buildings erected by the Federal government throughout the country, in leading cities, from Texas to the Atlantic coast. They have been used in the construction of hundreds of municipal, county, and State buildings, schools, colleges, libraries, hospitals, hotels, churches, and residences. The group of the Dominion Parliament buildings at Ottawa, Canada, are of buff Amherst; the Bank of Montreal is of Berea sandstone; the Canadian Bank of Commerce at Winnipeg is of gray "Canyon"; a score of modern and historic buildings in Toronto are of buff Amherst; in the construction of other scores of buildings in New York, Chicago, Philadelphia, St. Louis, and as far west as

Texas, these stones have been used. The second largest single stone arch-span in America, crossing Wheeling Creek at Wheeling, West Virginia, contains 9000 cubic yards of Berea stone.

In addition to building stone and curbing, these sandstones are also widely marketed in the various grades of grindstones which are widely used throughout the entire country and are also exported to a considerable extent. While the quarries of northern Ohio represent probably ninety per cent. of the output of the State, sandstone formations are also found along the Ohio River, and quarries in southern Ohio and other parts of the State are profitably operated.

The limestone formation is an outcropping of the famous Trenton limestone, a porous formation which, at a depth of 1200 to 1500 feet from the surface in northwestern Ohio, carries petroleum deposits, now being operated to the extent of about 1,800,000 barrels of crude oil per month. This rock reaches the surface, as previously stated, along the shores of Lake Erie, in the vicinity of Sandusky and on the cluster of islands dotting that body of water to the north.

The limestone quarries add greatly to the sum total of the stone industry of the State. Like the sandstones, they, too, are found upon the surface at interior points at Dayton, Columbus, and at many points along the Big Four in Ohio.

In the aggregate, the annual output of the stone quarries of the State amounts to between $5,000,000 and $6,000,000 annually. The output has doubled within the last ten years. The supply is practically inexhaustible, and the demand increasing year by year. The actual capital invested in the production of sandstone and limestone in the State is estimated at over $6,000,000.

PIG-IRON AND COAL

TO those who have studied the history of Ohio from the industrial standpoint it seems appropriate that this State should have become one of the leading factors in the production of pig-iron. The State a half-century ago was one of the powers in the growth of cereals. The opening and the development of the vast territory which lies west of the Missouri River and the part it has taken in the growth of the nation's and, in fact, of the world's supply of grain, has caused Ohio to assume a less important station. However, it has stood in close touch with the agrarian development, having turned from the chief point in grain production to lead in the manufacture of farm implements. This assumption of the leading place in that trade is considered indicative of the spirit of the State. The early history of the pig-iron industry of the country was very closely associated with the history of the same industry in this State. It is true that the improved methods of producing pig-iron were first introduced in New England, but Ohio took a principal part in perfecting the methods of soft-steel production and likewise in the improvement of the method of producing pig-iron. At first the ore-fields which lie along the Ohio River were supposed to be adequate to meet any possible demand. The pig-iron trade, however, very soon outgrew the more or less limited supply of the Ohio fields, and the State began to draw its supply from the shores of Lake Superior. It was Ohio capital which first demanded that the ore be brought down from Wisconsin in boats, and it was Ohio enterprise which demanded the building of the Sault Ste. Marie locks and canals. The opening of the waterways gave play to the ports along the south shore of Lake Erie, and Ohio docks soon began to handle the principal portion of the ores shipped from the Lake Superior territory. This position they have continued to hold, Cleveland, Conneaut, Ashtabula, Lorain, Sandusky, Huron, and Toledo being the principal ports at which the material is received. The improved machinery placed upon these docks, the betterment of the ports, and adequate railroad facilities soon caused these ports to play a prominent part in the transmission of ore and, incidentally, helped the Ohio furnaces to take high rank in the production of pig-iron. The great centre of steel production then, as now, was at Pittsburg, and the movement of ore was, naturally, from the Lake Superior region to the point of steel production. A number of furnaces began to spring up in the Mahoning and Shenango valleys, and work has gone on until the valleys from Warren to Pittsburg are lined with furnaces producing thousands of tons of material each month. An illustration of the vast growth of this business is seen in the fact that from the 1st of January, 1903, to the 1st of August of the same year there had been placed in operation in that territory and other parts of Ohio near the lake ore-docks twenty new furnaces with a productive capacity in a year of about 3,500,000 tons of pig-iron of various sorts. Here of late the tendency in Ohio has been to get away from some of the centralization of pig-iron production, and the tendency has become pronounced to build the blast-furnaces nearer to the point of receipt of iron ore. This movement finds the newer furnaces clustering along the lake shore, where only switching charges will have to be met in getting the ore from the ore-docks to the furnace stock-piles.

The natural advantage of Ohio as a pig-iron producing centre arises in part from the enormous supply of limestone and of coal of the grade used in making coke. The stone quarries and the coal-mines are practically at the door of the furnaces, and the supplies of these minerals are virtually inexhaustible, with the result that the pig-iron can be produced at a very low cost, the rates for transporting ore to Ohio being also moderate.

Although in some respects it is subordinate in many ways, the production of coal in Ohio is one of the matters of prime importance to the State industrially. Geologists have said that the deposits through eastern and southeastern Ohio are but the continuation of those deposits which underlie the greater part of Pennsylvania and West Virginia. This fact gives to the coal in Ohio a certain quality which is recognized as the standard. The first discoveries of coal were in the Hocking and Shawnee valleys, which lie in the southeastern part of the State. The next point of production was in what is known as the Jackson district, which is in the same general territory. From there the points of production have spread. Now new mines having an enormous capacity are being opened in eastern Ohio. The Jackson, Massillon, and the Coshocton districts produce what is called domestic coal, while through the Hocking Valley and in eastern Ohio the mines have developed, while not exclusively, to a certain extent, a good run of what is known as steam coal. The varying needs of the State are therefore met from these mines, and, in addition, the enormous lake commerce, which is done through the Ohio ports, is swelled by the output of these mines. This output has been variously estimated. Owing to the peculiar trend of this trade, part of it going for domestic consumption, part of it

moving to the lake ports and thence to the Northwest, and part of it going by the Ohio down to the Gulf ports, it has been difficult to estimate the volume of this traffic. The most nearly accurate figures which have been prepared have indicated that the output during 1902 from Ohio mines amounted to 14,000,000 tons, while that for 1903 was variously estimated by different authorities at between 18,000,000 and 20,000,000 tons. During those two years the average selling price at the mines was about $1 50 a ton.

ART IN BRONZE-WORK

THE establishment of plants for the manufacturing of what is known as high art in bronze work is just now reaching a point of considerable development in Ohio. Bronze is one of the first matters in which high art work is done, but for centuries it seems to have deteriorated, only to reach the place in high art in buildings at this period in which it is but now reaching a state of very high development. The recent progress of the country towards the not been consigned in Ohio alone, but works of art of this manufacture have found a market in all enterprising cities, and quite a few products of this kind have been sold in foreign countries. In some of the factories as high as twenty-five artists are employed in the making of new designs; these designs are then given to the brass-moulders, who construct models from which a cast in wax is made. From these two casts are made, one in iron and one heavy mould in bronze,

Bronze Doors for the Court of Appeals Building at Annapolis

construction of skyscrapers and high buildings was at first along the line of the plain and sombre. The latter developments became more artistic, and now the interior finishings of the work are of the highest character.

Throughout Ohio and throughout the entire nation the greatest possible pains have been taken in the finishing of office-buildings; railings for balconies for all kinds of purposes and of every character. In this work the handling of bronze along the artistic lines has gained considerable in proportion. Lately throughout the State, notably in Toledo, Hamilton, Columbus, Dayton, Cincinnati, and Cleveland factories have been erected which pay particular attention to the making of bronze and metal work, to be used for this purpose. This development has which are put through a hundred different filing processes. The work heretofore has been along the lines of comparatively crude moulding.

The art has come into vogue, however, and the products are not only found in bank buildings, but in homes and even manufacturing places. One company in Cleveland, which is interested in the development of this branch of the bronze industry, has a capitalization of over a million of dollars, being the only one of that kind in the State. This company has branch offices in Pittsburg, New York, and London, and has practically been the founder of the industry in this State. The bronze doors for the Court of Appeals Building at Annapolis, reproduced on this page, were made by a Cleveland firm—the W. S. Tyler Company.

THIS Concern is one of the largest manufacturers of high-grade hardware specialties, being one of the very few producers of this line of goods that require no outside assistance in any process of manufacturing.

To bring about this very and complete up-to-date condition it has been necessary to operate a Grey Iron Foundry, Machine Shop, Japan Ovens, Plating Plant, as well as Carpenter and Pattern Shops, each being complete in itself.

Their Grey Iron Foundry is of large capacity and able to produce more tonnage than could be handled by their other departments.

This excess tonnage has been used to supply the automobile and gas-engine manufacturers with their more intricate cored work, and this feature has added materially to the prestige as a concern able to satisfy exacting demands and to produce duplicate parts of difficult castings at an insured rate of output per pattern.

THE CASH-REGISTER INDUSTRY

THE making of the first cash register grew out of the needs of a storekeeper for protection in his store sales, and it is in the elaboration of this protection that register manufacturers and inventors have been striving for twenty-five years. To-day registers are made which prevent mistakes in, and print a record of, every one of the transactions possible in a shop—cash and credit sales, payments on account, money paid out, and money changed for accommodation of customers. Besides recording every detail of these transactions, these machines show which clerk carried on the deal, and also print a receipt for the customers.

The development of the register industry began in the late seventies. Several attempts to work out satisfactorily the idea of a mechanical cashier had been made prior to this time; but it was a business man of Ohio who succeeded in developing a practical machine. The story is illustrative of American resourcefulness.

In 1879 Jacob A. Ritty, a citizen of Dayton, established a small lunch-counter and eating-house at a railway station in the town, which was growing rapidly under the impetus of the Western tide of travel. This catering venture was outside Ritty's regular business, and he was forced to rely on clerks to care for the details of the management.

Customers were plentiful in the new place, and the proprietor expected to reap a harvest of profit. His surprise was consequently great when, at the end of a certain period, he balanced his accounts and found a loss. The careless handling of the money, made possible by the use of a cash drawer, caused constant loss through mistakes and dishonesty.

While worrying over the problem of stopping the losses Ritty went on a trip abroad. While on the passage over he was one day in the ship's engine-room when his eye lighted on the automatic indicator of the propelling shaft's revolutions. As he watched the mechanism he saw in the indicator the germ of the mechanical cashier which would protect his business. Returning home he enlisted the services of his brother, who was an efficient mechanic, and the results of their efforts were the Ritty and Birch patents, which the Supreme Court of the United States in later years declared were practically the basis of commercial registers. With the issuance of the patents Ritty sold his rights to a number of fellow citizens, who formed a company to engage in the making of cash registers.

The first machine made was a dial register of curious appearance. It was crude, but useful, and many were sold. Meanwhile Ritty and Birch had gone on with their inventions, finally perfecting a key machine with indicators in place of a dial.

In 1884 John H. Patterson was a coal-mine operator in a near-by town. In connection with the mine was run a general store, where losses in receipts had grown until the need for some check on sales was a necessity. In this predicament Mr. Patterson bought two cash registers and installed them in the store. Immediately their benefit was apparent, and Mr. Patterson saw that if registers could be of benefit to him they could be to other merchants. He was not slow in acting upon his theory, and with his brother, Frank J. Patterson, began to develop the industry.

In the same year a Louisville firm entered the register business with a capital of $150,000. They called their machine a money-changer, for its particular advantage was in facilitating the making of change; but it lacked proper devices for recording transactions.

During the next four years four new companies were formed to manufacture registers, among them one organized in 1889 with a capital stock of $300,000.

With the beginning of the next decade came the high tide of organization, and within a few years hundreds of thousands of dollars were lost in attempts to float companies and put on the market practical registers. In 1890 ten companies were started. In 1893 the tide reached its height, when sixty companies incorporated for the purpose of manufacturing registers. It was the banner year, for the decline came rapidly, and two years later only eight companies appeared in the field, while in another year only one group of men had the courage to attempt an onslaught upon the register market. Since then no new companies have been formed.

The records show that in the twenty years since the first register was made by Ritty over two hundred concerns have entered the register business. Nearly all failed to succeed, because their machines were not practical. It is estimated that $5,000,000 was lost in a decade by the failure of these companies. The second company in the field discontinued after several years' existence.

Most of these manufacturers are out of active business, many of them because of infringement of the early register patents. Improvements in registers had come rapidly, and where the pioneer company began with two patents in 1880, it holds at the end of twenty years 931 patents, covering some twenty thousand separate claims. This gives an illustration of the growth and improvement in the machines.

Altogether this chapter of America's industrial history is one of exceeding interest and if the inside story shall ever come to be written its romance will overshadow fiction. Ohio is proud that the industry had its origin and development in her borders. It does honor to the energy and enterprise of the State.

ELECTRICAL MACHINERY

THE position which Ohio has taken in the iron and steel trades has made possible and potent a certain collateral development which has come to be of vast importance. When the pig-iron industry grew in New England, it began to spread into the West, finding lodgment eventually in the Ohio valleys. The inspiration which was gained at that time seems never to have been lost, as the American development has been steady ever since. The same thing may be said of the finished steel. English capital supplied the means for the experiments, and the development of the manufacture of soft steel has begun in Ohio. It was in Cleveland that the standard of soft steel was set. These two developments have had a vast influence upon the industrial situation of the State. The device for making soft steel was soon adopted, and now American soft steel is the standard. This accomplished, the next thing was to put up mills which could produce material cheaply. It soon became the central idea in steel-making that certain costs such as labor, fuel, raw material, etc., are what ought to be called fixed. It remained for the steel-makers, therefore, to construct machinery which would bring about economy in the production of steel regardless of the cost of ingredients. At first this work was done by engineers, who made plans upon which others worked. Then the engineers became both designers and constructors, and built their own shops. These factories are now spread all over Ohio. Electric cranes were invented which handle the heaviest plates and beams. Then came the working out of another invention, an automatic furnace "charger." Before that time large plates were handled by cranes with ropes and other devices requiring enormous labor costs. Furnaces were being "charged" by men working with long-handled ladles. The men were removed and supplanted by automatic machinery. About the same time work began on the development of a machine which would make a rod out of a billet with only one rolling, instead of the numerous rollings previously required. This has been successful. As a result of these two inventions alone Ohio companies are producing heavy machinery worth millions of dollars a year.

HEAVY MACHINERY

IT would be very difficult, if not impossible, to make a statement of the amount of money which has been expended in the manufacture of heavy machinery in Ohio.

The industry is divided into two branches. One is for the manufacture of engines to be used in the various shops in the State where steel is made, and the other is for the purpose of making machinery to handle the steel and iron in the various stages toward what is known as the finished product. It becomes difficult to estimate the outlay when it is said that the larger factories alone have a capital of upwards of $3,000,000, while those companies which make machinery for trains and other rolling-mill devices have started with a capitalization ranging up into the millions, averaging, for the larger ones, about $1,000,000 to the plant, many of them running over those figures. There is an important company of engine-builders in Youngstown, and makers of lighter machines in Mt. Vernon, Salem, and Hamilton. Besides these there are companies which manufacture blast-furnace and steel-mill equipment, and which have a large enough capitalization to be classed among the leaders in the industry at Canton, Youngstown, Alliance, and Cleveland. This latter company has two shops, one recently constructed at Cleveland and the other at Akron. It is estimated that the combined output of the engine-works is about 300,000 horse-power, while the average output of the roll-machine implement works is about 117,000,000 pounds per year.

These industries are yet in their infancy in the State. It has been said by some of the more advanced men in the steel industry of this territory that this industry is yet in its infancy west of the Alleghenies, and that the development of the future will be along these lines.

WOOD-WORKING MACHINERY IN OHIO

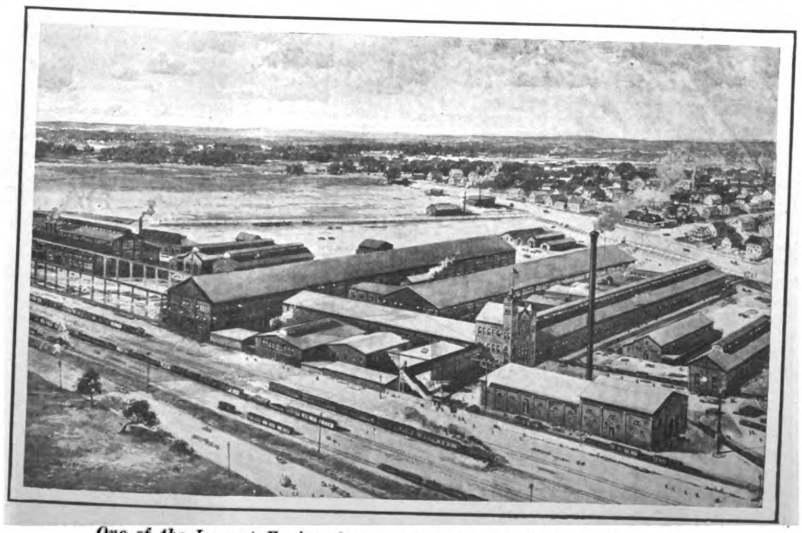
BY ANDREW W. FEUSS

THE State of Ohio, situated in the centre of an extensive timber-producing area, has many large and important furniture-factories, show-case and fixture works, sash, door, and blind factories, saw and planing mills, as well as carriage, wagon, and farm-implement works, veneer and hardwood lumber mills; and the State supplies a large proportion of the intricate machinery used in the working of wood.

Enormous factories occupying acres of floor space, which confine their efforts solely to the manufacture of the highest types of labor-saving devices for working and finishing wood in all its many processes, from the rough-hewn timber to the most beautifully carved and finished cabinet-work, have their home in Cincinnati, which, with its railroads radiating in every direction, and its splendid river facilities, stands to-day preeminent in this important branch of the machinery world.

About the year 1830, before the advent of the railroads across the Alleghenies, certain Eastern manufacturers, realizing the growing demand for wood-working machinery in this part of the country, and knowing the difficulty of transportation across the mountains, located their plants in Cincinnati, Ohio.

This industry has been so thoroughly systematized and so ably handled that to-day there is more wood-working machinery made in Cincinnati than in any other place in the world.

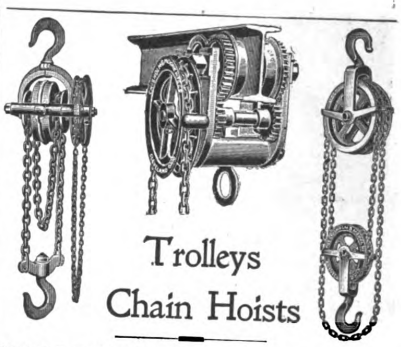


The output of the various factories of that city is fully ten million dollars per annum.

The growth of this industry has naturally gathered together the most skilled designers of machinery, expert mechanical engineers, and the highest type of mechanics. Machinery builders from foreign countries when visiting America rarely fail to visit the works there located, which are recognized as the most advanced in their line.

The extent of the business enables the factories to specialize in their work. Distinctive departments are devoted to the manufacture of planers alone; other departments make exclusively band saws, while others again make only circular saws.

There is hardly an operation in the manipulation of wood formerly done entirely by hand tools that has not its special machine, and many of these labor-saving devices were originated in Cincinnati. For instance, the friezing or shaping machine which is now used in every country of the world originated and was first made and used in a factory in Cincinnati, so also with the "jig" or unstrained scroll saw. Many improvements on other machines were also first made there.



Heavy machines for the working of large-sized railroad and bridge timbers for arsenals and navy-yards are supplied from there to almost every government of the civilized world, and band-saw mills, for the reduction of logs into standard-length lumber, flooring-machines for the manufacture of ceiling, flooring, casing, and drop siding, as well as the all-important machines for moulding, shaping, sandpapering, mortising, tenoning, graining, dovetailing, matching, mitering,

lead the world in the excellence and advancement of their design and mechanism.

An important branch of the wood-working machinery business is that of carriage and wagon machinery. Automatic spoke-lathes which make a complete wagon spoke by simply placing an original model of same in the machine, and hub and rim machinery, bending machines, etc., are most interesting and ingenious inventions. The ingenuity and skill shown in this line of work are a part of the progressive idea which places Ohio more and more every year in the front rank of manufacture and industrial art.

A LIFE-SAVING INDUSTRY

THE most important and effective life-saving device with ships in case of collision or accident is that the hull itself should be rendered non-sinkable. Boats, life-preservers, and all other devices of this nature, however good, are simply auxiliaries and makeshifts after the hull fails in its flotation. The main point in case of marine disasters has been and always will be to maintain flotation of the hull, if not permanently, at least long enough to bring these auxiliaries into effective use. Without flotation first being secured in the hull, all these auxiliary life-saving devices are often absolutely useless. Hitherto this flotation has been properly sought, and in the only way, through an expensive subdivision of the hull by bulkheads. But doorways have been proved necessary in many of these bulkheads for efficiency in working the ship. These doorways are the points where the bulkhead system fails, and unless these doors can be closed water-tight, with certainty and promptness, without danger of injuring or of imprisoning the working force, and without stopping necessary intercommunication, this expensive insurance by bulkheads becomes useless and remains simply a pretence.

It has taken a number of appalling marine disasters, as well as hundreds of lesser accidents, to teach this truth to ship-owners, seagoers, and the general public; and even now, after such lessons as *Victoria*, *Elbe*, *Bourgogne*, and *Rio Janeiro*, many people still retain their time-honored confidence in bulkheads with ordinary doors.

In case of emergency there is now a system which closes the power doors and power hatches from a central station in the pilot-house or on the bridge of a ship, just as if the officer there could reach out and place his hand on each individual door or hatch; it reaches out to save the ship before the collision happens; it saves the ship by perfecting the ship's cellular structure and stopping up the holes in the bulkheads, so making her unsinkable; it does this without endangering any one by sudden closings, and in such a manner that the power remains with the man at any door to reopen it quickly for escape or for passage on duties, the door reclosing automatically.

These electric-power doors are bound to be an important feature in the greater safety of first-class merchant and naval ships in the future. The system was devised in 1895 by an ex-naval officer and graduate of Annapolis who had long experience at sea and in the construction of ships and machinery. In its hydraulic form it was first adopted by the United States navy in 1897, and installed on one old ship for cruising tests; it was then, in its pneumatic form with many improvements, installed on ten new ships of the United States navy for further service tests and development.

In its perfected electric form it is now being installed on thirteen new ships of the largest size in the United States navy. The electric system has also been installed recently on two French armored cruisers for sea tests, and on the American steam-yacht *Noma*. It is a life-saving industry for which credit is due to Ohio capital.

AN OIL-PRODUCING STATE

BY F. F. DUNCAN

OHIO occupies first place among the oil-producing States. Over thirty years ago the limitations of the original Pennsylvania oil-fields had been extended across the Ohio borders. A decade later oil was found to exist in great quantities in the Trenton limestone formation at Lima, in northwestern Ohio. Both fields have reached the maximum of their development. The Trenton fields have extended into Indiana, and the Appalachian fields have crossed Virginia into Kentucky and Tennessee, but of the annual production of the two fields, amounting to about 50,000,000 barrels, Ohio is furnishing 38 per cent.

The southwestern Ohio fields for the twelve months ending February 29, 1904, produced slightly over 5,000,000 barrels, with a total value slightly in excess of $8,000,000. The Ohio division of the Trenton limestone fields produced during the same period over 14,000,000 barrels, netting the producers nearly $16,000,000 at the wells. During the calendar year 1902 the combined product for the two fields in this State sold for $20,757,000. The fact that the product for the twelve months ending February 29, 1904, brought nearly $24,000,000 was due to the highest prices that have obtained for years. The increase in value was made in the face of a decline of about 5 per cent. in production.

That the fields have reached the maximum of their production is evinced from the fact that the drilling operations have been going forward at the rate of over 4000 wells per annum during the past few years, and the new production from these wells is scarcely sufficient to prevent a decline in the total output. Occasional extensions to previously defined limits are found, but the great majority of the new operations are confined to proven territory.

In southeastern Ohio the fields extend from Marietta, in Washington County, north to Scio, in Harrison County, with the centre of operations at Macksburg. In northwestern Ohio, Lima and Findlay are centres of operation, the fields extending westward over the Indiana line, and north to Toledo.

In southeastern Ohio the petroleum deposits are carried in the sandstone formations in strata varying in depth from 600 to 2100 feet from the surface. Wherever the strata take an anticlinal formation oil deposits are usually found, but as there are no surface conformations corresponding to the anticlines of the rock beneath, geological research has failed of any benefit to the prospector for oil. He must drill to find it.

In the northwestern Ohio fields, the oil-bearing strata are more uniform, and wherever the porous limestone formation has been found to produce oil the operations in that vicinity may be followed with reasonable certainty. The famous "Cincinnati Arch" has lifted the Trenton limestone formation into a great broad swell. On and near the crest of this natural gas is found, and farther down the flanks petroleum has accumulated. The two fields mentioned produce crude of a paraffine base, and the distillate furnishes a large percentage of pure illuminating oil. For this reason the crude is of a much higher marketable value than the recent discoveries in Texas and California, which are largely of an asphalt base.

Many companies are active in the development of the fields, but the major portion of the production is owned by stock companies and individual oil operators. Leases are negotiated upon the basis of one-eighth royalty to the owner for the privilege of the oil and gas rights.

WATCHES AND CLOCKS

ANY one who realizes the value of that sturdy pocket mechanism—the watch—may feel that Ohio has rendered great service to the people everywhere; inasmuch as she ranks high among those States producing time-pieces. She has the largest complete watch-factory in the world. Her watch experts have furnished ideas and planned improvements in watch construction that put the American watch of to-day far in the lead. The Ohio watches are particularly remarkable for their character and individuality—they have the proper admixture of Western progressiveness in their constitution. Ohio watch-builders are committed to the "complete watch" idea; movements and cases are not ordinarily sold separately, but each watch goes out in complete time-keeping order.

About the close of the civil war, Mr. John C. Dueber began the manufacture of watch-cases in a very small way at Cincinnati,—this was the first step towards the establishment of Ohio's present watch industry. The business grew slowly at first, and at the end of ten years there were perhaps twenty-five or thirty men employed, most of the business being done near at home. Then more representatives were put out, the East, West, and the South were invaded, and the business advanced vigorously. A larger factory became necessary, and many cities made liberal offers of land and money to secure the watch-case enterprise. Mr. Deuber selected Canton, now famous as McKinley's home city, and established there the new case factory. He also purchased the Hampden Watch Company, and moved its factory to Canton, from Springfield, Massachusetts.

His enterprise—the manufacture of movement and case at the same factory—has grown to such an extent that his plant is the largest complete watch-factory in the world, and his employees are a goodly share of Canton's population.

About ten years ago was introduced a watch especially designed to meet the exacting demands of railroad service. Many tests were made under actual conditions on the Lake Shore and Pennsylvania Railroads. Models were studied and improvements made until now a watch is perfected which shows safe results in railroad time-keeping. These new-idea watches are dedicated to the great railroads of America; and Cleveland, Ohio, became known the country over among transportation men as the home of the new railroad watch, the business man's watch,—for the hurrying man of affairs is also a Cleveland enterprise; and comes fittingly from the home of that great business man and politician,—the late Senator M. A. Hanna.

Both the watch and clock industries in Ohio are at the present time in prosperous condition, and the outlook is good for continued progress in both industries.

AUTOMOBILES

BY ALEXANDER WINTON

OHIO has been designated the first American State, because it was the first commonwealth added to the original thirteen that had been settled by representatives of all the States then existing. Other States were admitted before Ohio, but these had been peopled by pioneers from single States, and not from the entire Union. In the production of automobiles Ohio's position is also that of the first American State. Elsewhere experiments in horseless carriages may possibly have been engaged in earlier, but Ohio was the first to achieve commercial success with the newest form of locomotion, and, in becoming fashion, it has maintained its premiership.

A review of the development of automobile manufacture in Ohio must necessarily be somewhat local in character, for the fact is that Ohio gains credit from what Cleveland has done in greater proportion than from automobile progress elsewhere in the Buckeye State. Barring Cleveland and Toledo, the manufacture of motor-cars in Ohio has not been a great industry, while Toledo's importance is of recent growth. Cleveland, then, is from many points of view the automobile centre.

In February, 1898, it was decided that a Cleveland-made car had reached the point where it could be offered for general sale. This decision prompted the issuance of a challenge for a long-distance race, in which the merits of competing-cars could be thoroughly tested. The challenge was never accepted, and inasmuch as this first carriage was placed on the market in the following month, it is a safe conclusion that in point of priority it held the honor.

The challenge above referred to is interesting in its historical connection and is therefore appended:

CLEVELAND, OHIO, *February 26, 1898.*

We hereby challenge any American or European manufacturer of motor-carriages, working under any system, for a race from Chicago to New York city, or over any other route in the United States of not less than 1000 miles.

The only conditions named are that competitors shall use regular stock machines instead of specially built racing-machines. The object of the trial being a practical test of time, durability, and running expenses, a complete and official record of same shall be kept.

Challenger will compete with a regular single-seated stock phaeton, carrying driver and one passenger. Date preferably in July or August.

From 1898 automobile manufacture in Ohio and particularly in Cleveland has been a series of constant successes. Developments in cars and in plants have been rapid, and to-day the Forest City supplies four-fifths of the big touring-cars that are purchased in the United States, and turns out products, which, from the standpoint of excellence, are inferior to cars made nowhere else. This statement is not intended to draw a comparison between foreign-made touring-cars that sell at $15,000 to $30,000 and Cleveland-made touring-cars that retail at $2500. One has no reason to expect $30,000 quality and refinement at $2500, and yet these same $2500 American-made cars have been known to scale hills, traverse rocky roads, and pull through deserts and swamps where no European car has ever proved its worth.

It was a Cleveland-made car that made the first journey from the Pacific to the Atlantic, and this car is the only one that ever crossed the continent in the hands of an amateur driver and entirely independent of assistance from the manufacturer. It is a Cleveland-made car that holds practically all the world's speed records, whether made on track or beach. And it was a Cleveland-made car that, by defeating William K. Vanderbilt, Jr., in Florida last January, won the world's straightaway-mile championship from the finest, costliest, and highest-powered car ever made in Europe.

In Cleveland millions of dollars are invested in the automobile industry, and thousands of mechanics depend upon the production of motor-cars for their livelihood. The city claims the largest and best-equipped automobile factory in the world.

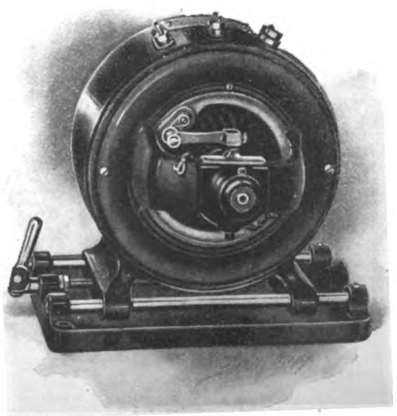
TEXTILES AND WEARING APPAREL

A REPRESENTATIVE merchant in one of our larger Ohio cities, speaking of the methods of merchandizing in days gone by, said: "When I started in business, forty years ago, stocks of ready-to-wear apparel were not a part of the outfit of a merchant's stock of goods. This branch of business, as it is carried on to-day, had not at that time been developed.

"Notice this section of my store, which I now devote to stocks of hosiery and underwear. In those days we carried the yarns; knitting was a home industry. Flannels and other fabrics were sold by the yard in large quantities for underwear. To-day few of these articles are made by individuals. They are invariably bought ready-made.

"Take shoes, for instance, and see what strides have been made in the manufacture of them, and what a small percentage of the people now have their shoes made to order, and go through the entire range of all articles of dress for men, women, and children, and you will find the same conditions prevailing, that instead of these articles being made in the home, or made to order, this method has within the last decade given way to the manufacture of ready-to-wear garments, and any piece of wearing apparel of any kind can now be found on sale, fashioned according to the latest styles."

The manufacture of men's clothing came first. The industry of manufacturing women's wear, as carried on to-day in this country, did not receive much impetus until about thirty years ago. The industry in



THE LAMSON & SESSIONS CO.

Manufacturers of

Bolts, Nuts, Rivets and Wrenches

This firm was organized at Mount Carmel, Conn., in 1867, as a partnership, by T. H. Lamson, S. W. Sessions and I. P. Lamson, and removed to Cleveland in 1869, where their business increased to such an extent that in 1882 they were compelled to build a new factory. On August 17th, 1882, the senior member of the firm, Mr. T. H. Lamson, died, and on November 5th, 1883, the present company was incorporated. Mr. S. W. Sessions died September 7th, 1902, and the present officers and directors are:

I. P. LAMSON, President — F. C. CASE, Vice-President
H. C. HOLT, Secretary — J. G. JENNINGS, Treasurer
and C. H. SESSIONS, of Los Angeles, Cal., Director

"STANDARD" Motors and Dynamos

You should be thoroughly familiar with our comprehensive line of motors, which we make in a wide range of sizes from 1/30 to 15 h. p. Our Standard Motor Book tells lots about them. Copy is yours for the asking.

Ohio can be said to have been established about that length of time.

There were some factories in operation before that time, but their output was comparatively limited. The first thing to be developed was the manufacture of cloaks, which displaced shawls. It took some years before this was brought about, but the industry grew with each year, more manufacturers going into the business, until shawls had been entirely displaced.

This gave the manufacturer only a fall season in which to work his plant, and although a few articles were made for spring wear, he was compelled to look around for something to do to keep his plant in operation during the spring and early summer.

The manufacturer succeeded in developing the suit and skirt business, which displaced to a great extent ordinary dressmaking and also brought about the further development of the trade by the manufacture of shirt-waists, costumes, dresses, etc., until women can now buy their entire wardrobe ready-made, and be assured of the correctness of the styles.

The making of correct styles by manufacturers is one of the features of the women's garment business. The layman often asks the manufacturer, "How do you get your styles, and are you sure they are the correct things?" Of course a retailer's stock must be ordered, in part at least, in advance of the season, and the matter of style is one of the all-important features to be looked after.

In catering to the needs in men's wear fewer difficulties are encountered in bringing out correct styles, although in recent years men's wear has been subject to more changes in style than formerly.

In Colonial times the belles of the nation would go to England and bring over dresses made of the rich brocades and silks of the period. These gowns would remain in a family for some years, to be worn and be considered in style.

The styles do not long remain secrets in the hands of any manufacturer. As soon as his goods are on the market the style becomes public property. The origin of fashions, as employed by the manufacturer of ladies' garments, is interesting. There was a time when the country followed the styles set by the fashionable centres of Europe. This is becoming less the case each year. In Ohio, however, as elsewhere, the trade is still somewhat dominated by European ideas.

As stated above, the growth of this business dates back about thirty years, and, like all large industries, was started in a small way. In its early history it was looked upon as an experiment by those engaged in it, and merchants took hold of the output of the small manufacturers of that time cautiously.

It grew rapidly, and with the advent of large numbers of women into business careers, who could not take the time to make up their clothes as before, and with the energy applied in developing the business, increased demand was created by producing constantly attractive, stylish garments, until we find now an enormous development of this industry.

In the State of Ohio the yearly output of factory-made men's, women's, and children's clothing amounts to probably $40,000,000, giving employment to thousands of men and women. These goods are made mainly in Cleveland, Cincinnati, and Toledo. Cleveland leads in the manufacture of women's apparel, Cincinnati in men's clothing.

In Cleveland the output has been doubled in the past five years, and is constantly growing. The industry in its various departments employs about 9000 men and women in the city of Cleveland. Taking the manufacturing industries of the State, the iron industries lead in volume of product, but the manufacture of men's and women's clothing is the second manufacturing industry at the present time in the State.

Time was when the East predominated in this field. It still maintains a commanding position, but the Ohio cities are strongly intrenched, and the product is of a high order. The manufacturing plants in Ohio are, as a rule, on account of less crowded conditions, cheaper rents, etc., more sanitary in their arrangements, giving better living and working conditions to those employed

patches and commercial messages by telegraph and telephone was established by the officer in command, and the railroad and highways were picketed by the troops so as effectually to control all avenues of communication with the town.

Later in the evening squads of soldiers were sent out, who took in custody thirty-one members of, or sympathizers with, the union, including the editor who was the victim of the first boycott, the vice-president of the Western Federation of Miners, and a former attorney-general of the State, who was at Telluride in the interest of some proposed lawsuits for the miners. These people were committed to the county jail. In the morning they were marched to the depot, and sent, under guard, to Ridgeway Junction in the adjoining county of Ouray.

Thence they went to Montrose, and joined the colony of those "deported" on former occasions. There they lived and fitted up a bunk-house, and took a lease of a restaurant, where they now live.

At intervals of a few days other deportations were made, until the total of the exiled was a little over seventy. Careful investigation at Telluride shows that many of these persons were in no sense agitators, some of them owning their homes there.

Naturally the men thus forced from their homes and property did not look with favor upon these proceedings, and made application to the district judge at Ouray for an injunction against the sheriff of the county and the military commander to prevent the interference with their liberties.

The union at Telluride has built a hospital whose cost was about $30,000. Since the strike it has been closed except as the sleeping-place for some of the union officials. The cooperative store was opened when it was found necessary to supply the union men with provisions. A cooperative restaurant was also opened, and some 300 men were taking their meals there when it was closed by the militia. Another restaurant was opened, and the cooks and waiters—union men—went over there. The meals were served at ten cents apiece to members of the union; men not having the money were allowed to work out their board.

At the union store married men or those who live at home can get their orders filled for the staples. Beef, potatoes, flour, beans, canned goods, and the usual groceries are given out on request. These stores are the nuclei of a cooperative system which promises to be a factor in future conflicts.

The union has its lodging-house, too, and here the miners sleep without charge. Idleness there is at this mining-camp, but no vagrancy nor want.

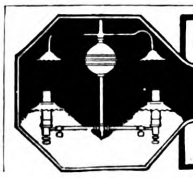
At the time of my visit, before the deportation, when I went into the large room where the union social was to be held, my attention was caught by the group of young men who had just moved in a piano and were singing and laughing around it. I studied them closely, for these were some of the men who were considered dangerous to the security of the town and property. Fear of these men's violence had brought the militia. They were men between twenty and thirty; if they had personal grievances they had either forgotten them or were hiding them.

Later between seventy-five and one hundred men and a dozen women came in and took their seats. There were Scandinavians, Austrians, Italians, and Americans. One of them was pointed out to me as a man out on $1000 bonds for intimidating non-union miners.

I wondered if they underestimated the power of the Mine-Owners' Association, the Citizens' Alliance, and the militia, or if there was an attempt to keep the strikers from any bitterness by exhibiting good-natured contempt for the other side. All the interviews I had with the miners forced me to believe that theirs is a spirit of toleration.

At the second of these socials, a week later, a deputy, Willard Runnels, came into the meeting and announced that the vice-president of the Western Federation of Miners, Mr. Williams, and the legal counsel, General Engley, were under arrest. There was no warrant for either of them; they were told that they should consider themselves under arrest, and that the warrants would be forthcoming in the morning. There was no demonstration against the deputy, but the meeting was very effectually disturbed. The secretary-treasurer of the Western Federation, William Haywood, said to me: "The officials of the federation are in the position of men driving a six-horse stage down-hill. If we hit a stop and there is any disaster—who will get the blame? Why, we will, of course." I could not gainsay him, for I had noticed that the men who were being arrested were the conservative ones, and hot-headed younger men were left in the open.

The morning after the social I planned to drive up the county road and see the famous Tomboy Mine. The matron of the Miner's Hospital, who is off duty now, offered to drive me, and we went to military headquarters for a pass. I explained to the lieutenant that I did not want to go into the mines nor talk to any one, but wanted to see the place. His subordinate called up the two mine managers through whose property the road runs. The answer came back that the managers did not want any represenatives of the press to drive on the county road in the vicinity of their mines.



The strike in this district began last September, and it is still on. Although the managers claim that the mines from now on are to be non-union it is hard to see how they can go on much longer with the unskilled workers, for it appears to be true that all the skilled labor belongs to the Western Federation of Miners. The funds of the federation seem to be increasing, and it may be months yet before the industrial conflict comes to a close.

On March 17 another deportation of eighty union men and sympathizers was brought about through the action of a mob armed with Krag-Jorgensen rifles. Following this, Judge Theron Stevens, of the District Court, issued an injunction allowing these deported men to return to Telluride. Then the citizens called for military support, which was at once sent by Governor Peabody. The injunction was not obeyed. Judge Stevens then issued a writ of habeas corpus for the president of the Western Federation of Miners, arrested on the charge of desecrating the flag. This was ignored by the adjutant-general, Sherman Bell, at the order of the Governor. Judge Stevens has now ordered his arrest for contempt of court.

Miss May de Sousa in "The Wizard of Oz"

After a prosperous season on the road "The Wizard of Oz" has again returned to the Majestic Theatre, where it scored a success last year. Messrs. Montgomery and Stone are still playing the "Scarecrow" and the "Tin Woodman"

De Wolf Hopper as "Wang"

Mr. Hopper's revival of his former success was put on at the Lyric Theatre, New York, on April 18. The book has been brought up to date by the addition of a number of new jokes, but the music of the original production remains the same

Alice Fischer and Joseph Miron

Eddy Foy as "Peter Pouffle"

"Piff, Paff, Pouf," at the Casino

The first of the summer musical plays, "Piff, Paff, Pouf," described as a "musical cocktail," was produced at the Casino Theatre on April 2, with Eddy Foy in the leading part. The plot, so called, has chiefly to do with the experiences of a wealthy widower who desires to marry an attractive widow, but is prevented from doing so by a clause in the will of his first wife, which disinherits him if he marries again before their four daughters have each taken a husband. The four young women have rather peculiar views. The eldest wants a man who has never been kissed; the second a man whose portrait she has seen in a patent-medicine advertisement in a newspaper; and the other two are equally hard to suit. The ingenious widow finally succeeds in finding for her lover a quartet of desirable men, and her marriage to the widower is then assured

Progress of the War

THE important results of the war in the Far East prior to April 7 may be briefly summarized as follows: The Russians have had ten war-vessels disabled—the *Czarevitch, Retvisan, Poltava, Pallada, Novik, Askold, Diana, Variag, Korietz*, and the torpedo-boat *Stereguschtchi*. Of these several have been or are being repaired and made ready for further use. The Russian cruiser *Boyarin* and the cruiser *Yenesei* were sunk by accidental contact with a mine; but the *Boyarin* is reported to be again in use. Five Russian commercial steamers were captured by the Japanese during the first week of the war. Japan is known to have lost one torpedo-boat, and several other of her ships are believed to have been injured in the Port Arthur engagements; but definite knowledge of this is withheld. Port Arthur has been repeatedly bombarded, with damaging effect, by the Japanese, and Vladivostok was attacked by them on March 6, though without serious damage to the port. Admiral Togo has made two attempts to blockade the entrance to the inner roadstead at Port Arthur by sinking merchant steamers in the channel. Both attempts were unsuccessful. The first land engagement of any importance took place at Chongju, Korea, on March 28 and resulted in a Japanese victory.

April 7.—A report received to-day from Seoul says that the Japanese fleet is divided into seven squadrons. Four of these are at Port Arthur, the fifth is patrolling the Korean coast, and the sixth and seventh are cruising between Vladivostok and north Japan.

April 8.—The Japanese government has officially announced its losses in the various attacks at Port Arthur as follows: fourteen killed, nine died of wounds, and ninety-one wounded, forty of whom have recovered.

April 9.—The Japanese minister at Seoul, M. Hayashi, officially reported to the Korean Foreign Office that the Russian troops had retired across the Yalu, and the frontier was now occupied by the Japanese.

United States consul Miller at Newchwang has been notified by the Russian government that the river at Newchwang has been mined, but that neutral ships will be conducted in and out safely. As a result of General Kuropatkin's recent visit, 10,000 reserves have been ordered to Newchwang to reinforce the troops already there, while an additional force of 15,000 men is ready to concentrate upon that place; 2000 artillery and sixty guns have already arrived. The preparations for the defence of the town are now complete.

April 10.—A telegram from St. Petersburg states that Commander Kulezicki has handed a report to the Emperor in which he says he will be able to take the Baltic squadron to the Far East by way of sea of Kara and the Northwest Passage. Commander Kulezicki believes he could get the squadron to its destination by the end of August.

April 11.—The Japanese are reported to be in complete control of the mouth of the Yalu River, and it is believed that the Russians north of the Yalu are not in sufficient numbers to withstand the Japanese advance for a considerable distance beyond the river. General Kuropatkin is proceeding on a tour of inspection of the Russian outposts along the Yalu.

Rear-Admiral Rojestvensky has been appointed to the command of the Baltic squadron. The squadron has been ordered to be ready by July 15, but it is not certain that it will go to the Far East. The fleet will consist of the following vessels: The battleships *Slava, Borodino, Orei, Kniaz, Souvaroff, Alexander III.*, and *Osliabia;* the cruisers *Aurora, Dmitri Donskoi, Svietland, Almaz, Jamtchug*, and *Izumrud*, and the transports *Kamtschatka* and *Ocean*, each carrying 1000 tons of coal.

April 13.—A report received to-day from Port Arthur says that the battle-ship *Petropavlovsk*, while going out to meet an attack by Japanese ships, struck a mine in the outer harbor and was sunk. Admiral Makaroff and 800 of the battle-ship's crew were drowned. It is reported that Grand-Duke Cyril and three officers were the only members of the crew who were saved.

Mail by the Million

IN New York city, during the fiscal year ending last June, the New York Post-office, including Branch H, received 1,354,902 sacks of "fully made up" mail, or 4328 sacks for each working day in the year, which the post-office merely received at the door and sent away intact.

Statistics for the month of June show that the New York Post-office received 108,392 sacks of "fully made up," a gain over that month of the previous year of 15,826 sacks.

During a single month forty-two publications in New York city sent in over 1000 sacks each. This amounted for the whole to 109,886 sacks, of which 83,345 sacks were "fully made up" and 3472 sacks "mixed," the latter being about 3 per cent. of the whole, and the "fully made up" 75 per cent. of the whole.

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

THE OLD CAMPER

has for forty-five years had one article in his supply—BORDEN'S EAGLE BRAND CONDENSED MILK. It gives to soldiers, sailors, hunters, campers, and miners a daily comfort, "like the old home." Delicious in coffee, tea, and chocolate.—[*Adv.*]

TELEPHONE Service lightens the cares of house-keeping, saves time, and prevents worry. Low rates. New York Telephone Company, 15 Dey Street, 111 West 38th Street. —[*Adv.*]

LIGHTER hearts and stronger bodies follow the use of Abbott's Angostura Bitters. At grocers and druggists.—[*Adv.*]

PISO'S CURE will cure your cough, relieve soreness of the lungs, and help difficult breathing.—[*Adv.*]

ADVERTISEMENTS.

HAS A SAY

The School Principal Talks About Food

The Principal of a High School in a flourishing California city says:

"For 23 years I worked in the school with only short summer vacations. I formed the habit of eating rapidly, masticated poorly, which, coupled with my sedentary work, led to indigestion, liver trouble, lame back, and rheumatism.

"Upon consulting physicians some doped me with drugs, while others prescribed dieting, and sometimes I got temporary relief, other times not. For 12 years I struggled along with this handicap to my work, seldom laid up, but often a burden to myself with lameness and rheumatic pains.

"Two years ago I met an old friend, a physician, who noticed at once my out-of-health condition, and who prescribed for me an exclusive diet of Grape-Nuts, milk, and fruit.

"I followed his instructions, and in two months I felt like a new man, with no more headaches, rheumatism, or liver trouble, and from that time to this Grape-Nuts has been my main food for morning and evening meals; am stronger and healthier than I have been for years, without a trace of the old troubles.

"Judging from my present vigorous physical and mental state, I tell my people Methuselah may yet have to take second place among the old men, for I feel like I will live a great many more years.

"To all this remarkable change in health I am indebted to my wise friend and Grape-Nuts, and I hope the Postum Co. will continue to manufacture this life and health giving food for several centuries yet, until I move to a world where indigestion is unknown." Name given by Postum Co., Battle Creek, Mich.

Ask any physician what he knows about Grape-Nuts. Those who have tried it know things.

"There's a reason."

Look in each package for the famous little book, "The Road to Wellville."

ORDER SOME

"Club Cocktails"

SENT HOME TODAY.

You will then have on your own sideboard a better cocktail than can be served over any bar in the world. A cocktail is a blend of different liquors, and all blends improve with age.

The "Club Cocktails" are made of the best of liquors; made by actual weight and measurement. No guesswork about them.

Ask your husband at dinner which he prefers—a Manhattan, Martini, Whiskey, Holland Gin, Tom Gin, Vermouth or York.

PEPITA *And The* KING

BY MAUD STEPNEY RAWSON

DOWN in the great fountain pool of the mountains, with their fine crystal needle-points for its rim, and their million snow rills taking their sudden and sibilant course to its depths, lay the lake, the gem of all the lakes of a certain little kingdom. Other lakes there were, much larger than this, all fringed with villages or marked by towns, but this one showed the deepest color, though only the poorest hamlets clustered here and there at its edge. The deepest in color, the most changeful in surface, it was the one most tenderly protected from the north by the mountains, which guarded it as warriors guard a sleeping queen. The largest city of the little kingdom was not so very far off, as the crow flies, but the road to the lake was sufficiently rough to keep the ordinary town folk away. Sometimes they invaded this valley, and the lake people wondered at them, and went about their fishing and harvesting, their boat-building and fruit-selling with an air of proud aloofness.

The spring was clinging to its last days of empire, and anemones vied bravely with the buds of roses which in two days would put all other flowers in the shade. The sun was mounting higher, and the surface of the lake shimmered. Down upon a narrow strip of white marble beach Pepita knelt, wringing out linen. The sun beat upon her strong young neck, and her blue-black hair, knotted almost on the top of her head, was loosened about her forehead in little curling wisps. Her red linen dress was pinned up round her hips, showing a short blue petticoat and bare feet and ankles. Her sleeves were rolled up, and the muscles of her round tanned arms tense, for what she wrung she wrung mightily. A woman of her own type, but older, went along the path just above the strip of white beach, and paused to gossip.

"Such a thing, Pepita!" she called. "My husband, who went down to the town market last night with our melons says the King is lost! He has been lost for two whole days. Some say it's a plot, and others that he has done it for fun, because he wanted to try something new, and some think that he may simply have done it to spy upon us all. What do *you* think, Pepita?"

"Fuff!" said Pepita. "I am sure it is all nonsense. Why, a King can't be lost. As to a plot, who wants to trouble to get rid of him? He's just a pretty little doll—that's what my future husband says. None of the men fear him, but luckily he can't get in the way of us women, so I really don't see why we need trouble."

"But the other countries—that's what *my* man says—the other countries all round will all want to have a little bite out of us, and we sha'n't be a kingdom any more."

"Fuff!" said Pepita. "It won't matter a bit. One will always have to go on washing and working whether people take little bites out of us or not."

A young man in the dress of a mountaineer, who also followed the path by the lake, paused to listen to the two women. The elder nodded to him, and said, "I suppose you haven't heard the news, young man?"

"Stuff and nonsense," said Pepita, lifting up her head to look at the newcomer.

"Isn't it quite true?" persisted the gossip.

"Perfectly," said the mountaineer. "Are they very much upset in the town?"

"The papers are full of it. . . . But there . . . I have hens to feed, and you'd rather talk to Pepita, I know." And with the roguish glance of the matchmaker, the pretty matron pursued her way to the hamlet.

Pepita went to her basket, took a fresh heap of crumpled linen, and rearranged her little wooden platform noisily at the water's edge ere she knelt down upon it for her laundry work.

The young man stepped onto the beach and threw himself down comfortably upon the warm white pebbles, resting his chin on his hands.

"The King really is gone," he said, impressively.

"Rubbish!" said Pepita.

"Not 'rubbish,'" retorted the young man.

"Yes, *rubbish*. Why, what do you call this?" Pepita flourished a drenched linen garment.

"I really couldn't say," said the young man, embarrassed. "There are things called—er . . . tea . . . jackets, I believe . . ."

"You big silly . . . shirts, shirts. Look at them, twenty-eight shirts, King's shirts."

"Nonsense!"

"Look for yourself. Oh, you needn't think yourself so grand! I wash for the King. If it weren't for me he *would* look a scamp. A little bit of starch, good bleaching, good ironing—it turns a tramp into a swell at once."

The stranger examined a corner of the linen inquisitively. A curious expression flitted across his face, and the girl caught it just as she looked up from her work.

"Humph?" she queried, defiantly. "There it is as large as life. The lion and the crown, and the olive wreath round them both."

"That is quite right," said the stranger; "the lion for strength, the crown for authority, and the olive garland for plenty and prosperity."

"It's silly!" sniffed the girl, "and sillier still to stitch it all into this linen. I am sick of the sight of it, especially the plenty and prosperity part. *He* does not share it with us."

"He was said to be charitable."

"Fuff! He rode by one day when I and my young man were in the market buying me some earrings. The King passed us on horseback throwing money to the market people. My old aunt, who was there, shrieked to us to scramble with the rest for the coins. But I held my lover tightly by the wrist and would not let him stoop. That's not the way for a King to help his people. It's like throwing a bit of sugar down for a faithful horse because you're afraid it will bite your palm. 'Take it or leave it'—that's what he seemed to be saying with his eyes all the time. *I* left it."

Down went her head again, and she returned to her lathering. The young man's face had grown crimson.

"How would you have had him do it, then?"

"Why, come and talk to us and see what we needed. We don't want coins thrown at us like sugar eggs at Easter."

"Ah! If some one had only told him! But now that he is lost what is to be done?"

"Lost!" Pepita threw herself back on her heels as she knelt in fits of laughter. "Lost! Hear him! Look at this, and this, and this." Her arms plunged into the water, and she half-raised the linen she was washing and doused it, and rinsed it and doused it again, with the curious smulching sound of a wet fabric half-inflated by air. "Do you think if a man is going to disappear for good he sends twenty-one of these rags—that's three per day—to the wash, with a rude note to say that the goffering of the last was very bad?"

"The dickens he did!"

"Young man, you don't seem to believe me. I'll show you the note; it is in my pocket. Have you a handkerchief?"

"At your service."

"Don't flourish so. Thank you. It's a nice thing to dry the hands upon. Don't be afraid—I'll wash it for you afterwards. Why—" She pounced upon the olive wreath emblem in the corner.

The young man colored slightly.

"Yes?"

"You've no right to this, young man."

"The King gave it me. It's mine. I'm a great friend of his."

She rose and surveyed him from head to foot.

"H'm—I knew you weren't a real mountain man, in spite of your old clothes. Out with it!"

"You see, I don't want to wear my proper clothes for fear of being talked to about the King. It . . . teases me. If he chooses

to disappear I really don't see why I should be troubled. I knew him very well, and I promised that if I were to hear anything extraordinary . . . like this . . . about him—I would keep out of the way. I should like to live up here. It is so beautiful, and you are so amusing."

The girl flushed this time; she began to roll down her sleeves and rolled them up awkwardly.

"There's a piece of your hair coming down," said the stranger. . . . "No, please don't"—for Pepita made a grab at it—"it looks splendid in the sun. I've seen lots of beautifully dressed women, but none who"—Pepita's fingers instantly seized the coil and began to twist it up as if it had been a piece of wire—"none who could stand bareheaded in the sunlight like you, and look so magnificent," concluded the mountaineer.

"And amusing?" queried Pepita, flippantly. She mumbled it because her teeth were holding a large tortoise-shell hairpin until her coils were ready to receive it.

"And amusing?" assented her companion. "But the others are amusing too."

"How?"

"Oh, well . . . you wouldn't like them, I'm afraid."

"They're just the King's sort, I suppose," she remarked, ironically, as she rammed the hairpin into position.

"Certainly not," dissented the stranger, sharply. "He detests them."

"Why doesn't he banish them, then? Then there would be room for the good, nice people among whom he was brought up—they and their husbands and fathers and kin. Do you mean to say he can't turn them out of the place?"

"It is impossible."

"Poor little silly! No wonder he has disappeared. He must have done it to get away from them because he hadn't the courage to put his foot on them."

"Ah! I wonder!"

"Wonder, indeed? You know him, and you can't deny that's the real truth. He is a born coward. I've always said so to my Francis—that is the boatman whom I shall marry some day. We fight over it pretty often when Francis says he can't get on in his work, and I tell him to go and ask the King to take him as one of his boatmen. Francis always says he can't go to the King. 'Nonsense,' I say, 'of course you can.' 'If I did,' he says, 'the King would never trouble to see me. If he did other people would be angry and jealous, and he would have to hold an audience for beggars every day.' So all that happens is that he sends in his name on a long list to the chamberlain, who doesn't read it, but gives it back to his clerks, and the clerks give it to the steward, and the steward does exactly as he likes. You know what that means. He gives the work to the men who pay him the most for getting it."

"But still, the King isn't a coward," objected the young man.

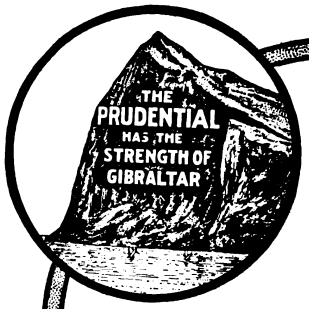
"What else? He is afraid of his own chamberlain, afraid to be worried by the poverty of his real subjects."

"That's a fib!" said her acquaintance, springing to his feet.

"Don't get excited, young man, for the sun is very warm. I am quite right. Moreover, he is terribly afraid of exciting jealousy and intrigue; he is a little, craven-hearted—"

"Stop!" he cried. "I will *not* have him abused!" He stood facing Pepita with flashing eyes. "He has a life of snares and pitfalls of which you know nothing."

"All the more reason for him to be brave! There's every chance of his being well praised for it at least, and it would give us, his real subjects. . . ." Pepita touched the white kerchief knotted over her shoulders with her brown forefinger—"some chance of respecting him."



Then she went down upon her knees afresh to her wringing, piled up the linen, and finally looked round in challenge.

"You've wasted a lot of my morning, so you'd better help me lay out this washing, young man."

He moved towards her, coloring awkwardly, and said, "With pleasure."

"Take one end of the basket, then, and help me onto the bank."

He did so, and meekly imitated her as she laid out the garments in the sun on the

UNIVERSITY OF CALIFORNIA

green slope, weighting them at the corners with marble pebbles. When it was all done she stood with her arms akimbo and laughed.

"Just look at them—funny little manikin garments, all of fine lawn, like a woman's. Fuff! I wish I had him here—twenty-one little ghosts of him, one inside each of these! I'd talk to him like a mother, and then I'd box his ears."

"I wonder which he would mind most," ventured the stranger.

"Which do you think?" retorted the girl. "You know him so well you can tell best."

"I should think the box on the ears."

"H'm. You haven't heard me talk like a mother. Francis has. He is a wiser man now."

"I should like to be wise also. Tell me exactly what you would say to the King if he were here."

"And then you'll repeat it to him?"

"Not if you . . . I mean I cannot. You see, he is lost."

"But you say you're his greatest friend."

"I even sit for his pictures."

"The little lazy drone! I wonder if he is too lazy to eat his dinner, *too*!"

The stranger shrugged his shoulders, and said: "I am waiting. Please begin."

"I'd rather have said it straight to him."

"Never mind. I shall forget nothing; so that if I ever meet him he shall know it all."

"That's something. . . . Well, what I say is this: Your Majesty, you're the biggest coward of your nation, and if it weren't for your crown — that is too big and heavy for the likes of you—I don't know what else could hide you from the truth. They say you are a *good* young man, often dreadfully *tempted* to do all sorts of bad things. Your Majesty, I am tempted, too, and so is Francis, and my sister-in-law, and my lame aunt with St. Vitus's dance, and the whole lot of us lake people—but there is no one to snivel over us and to say we are 'dreadfully tempted,' and to feel for us when we sin, as if we had measles or fever or some disease which we don't deserve. All that is said of *us* is that we have the seed of wickedness in our hearts and are miserable sinners, and we are told that the path of good life is hard and narrow. But your Majesty knows perfectly well that it is much harder to be good when life is a constant struggle to live decently on nothing, and terribly difficult to think pure thoughts with an empty cupboard and a bad harvest or poor boat season. We do not know you, therefore we cannot be expected to love you. But all we ask is that you should help first those who really need it, and not those of whom you are afraid. If I were you, sir, I would get up one morning and call out those people, and say: 'Clear out, the whole pack of you! Get out of my house and my kingdom and my country. I've no room for the likes of you.'"

"And suppose I . . . I mean, suppose the King did this, what next?"

"Oh, *then* he could begin to be a King and a man—work for his bread."

"But he slaves as it is. He opens great institutions, he eats all sorts of dinners to please great bodies of powerful people, he has to shake hands with creatures his soul despises."

"Fuff! That's not a man's work. He has to go about and see his country, like a farmer who looks into every corner of his land to be sure that it is rich and good and plentiful, not like a wretched overseer who rides through once in ten years to terrify the slaves under him." She paused a moment to put a flower in her kerchief, and went on: "And he should set aside hours when he would see people who needed work and justice. There's my Francis, now. The man who got the place he wanted is such a fool that his boats leak and he has to come to Francis to patch them up. It's Francis who gets a few pence for doing the real work, and the other man gets pounds and a grand official title, 'King's Boatman of the Private Lake.' Fuff! I am sick of it all. There's nothing to do but wash and wash, all your life, whether you marry or whether you stay single, till your face is like a piece of leather and your hands as thick as the bark of a birch-tree."

"But there is good Francis to keep you."

"Francis, poor lamb? He can only just keep himself. It's no good talking. He won't go straight to the King and say, 'Sire, *I* patched the boat, or you would be drowned any day in the middle of all your beautiful and wicked friends.' Francis hasn't the courage. That's what comes of having a King who hasn't courage, either. Every decent man under him has no pluck. You are all the same."

"Thank you. Is that the end of your 'mother's talk'?"

"There's nothing left to say. It always ends with that — the manikin king."

"You've forgotten *something*."

The girl raised her eyebrows.

"The salute on the ears."

She laughed satirically in reply.

"If you were my King there would be some sense in it. But as you aren't, why should I trouble? My hands tingle enough as it is with all that blessed scrubbing."

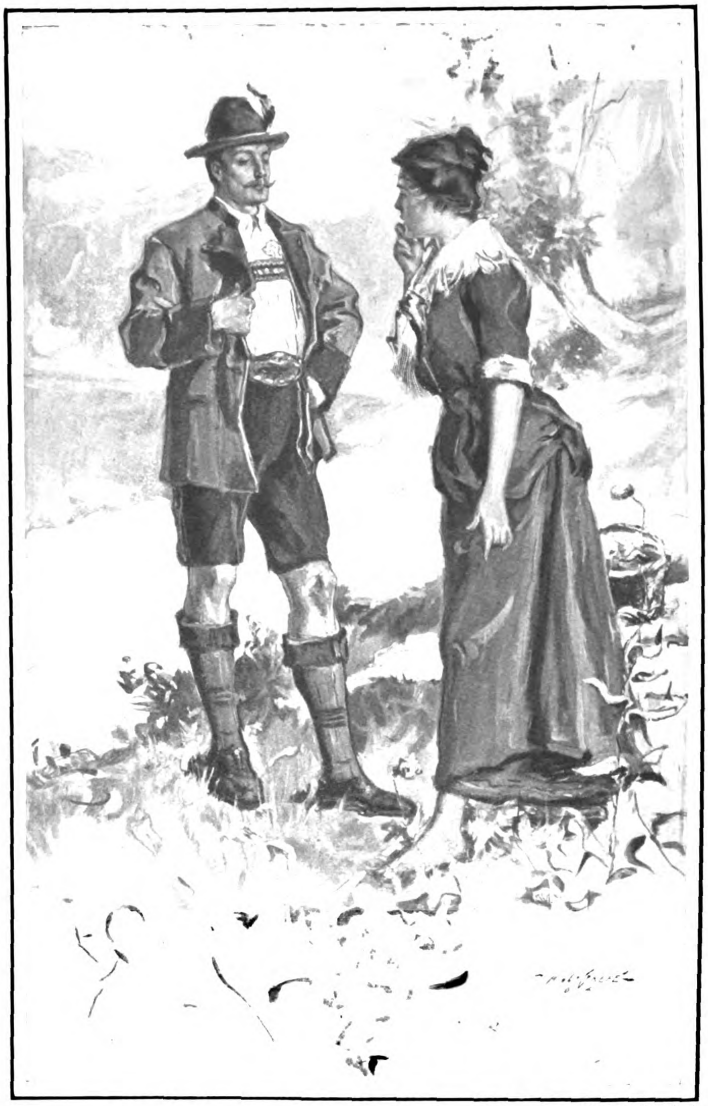
The stranger rose to his full height and approached so close that her skirts almost brushed him.

"I *am* the King," he said.

She started, became conscious of her bare feet and upturned sleeves, and recoiled a few paces. The satirical line about her red lips deepened.

"Fuff!" she said, scornfully.

The stranger unfastened the vest of his shabby green mountaineer's jacket. In gold thread on white satin the olive wreath, with its inset symbols, gleamed out. The wearer of it smiled.



"Afraid, Pepita? The King has more courage than you bargained for."

For five seconds she stood in her startled attitude, her eyes dilating, her heart beating, but her full mouth relaxed its scorn not for the fraction of an inch. Then the reiteration of the taunting "Afraid, Pepita?" took her by the throat. She advanced swiftly, raised first one hand and then the other. . . . There was a quick sharp report. . . . Then, like a deer, she began to scale the gravel slope, sobbing tearlessly as she climbed. Out of the bushes by the path emerged a man carrying a pair of oars, who put out his arms to stop her.

"Why, Pepita!" he cried. "What's this?"

Then his eye caught sight of the figure of the man below.

"Stop her — that's right. Stop her!" called the stranger.

"She's running away from me. She has been so unkind."

"The dickens!" said Francis, angrily. "Of course she has. What else do you expect, you—"

The stranger had tossed aside the shabby green-belted coat, and upon the boatman shone the symbol of his identity.

"The King is found," laughed the ex-mountaineer. "In the town they are offering a great reward to the finder. Pepita must claim it. She has done a great deal more than that, my good fellow. She has helped the King to find his courage. Eh, Pepita?"

"Curtsey!" whispered her lover, nudging her.

"What's the use when I've boxed his ears?" she sobbed back.

"Come, friends, we will go down to the town and show ourselves," said his Majesty.

"If Pepita may get her stockings and shoes first, sire."

The girl dragged her hand out of the grip of her lover, and made the lowest curtsey that is possible with a petticoat which betrays bare ankles.

"And who is to finish your Majesty's shirts?" she faltered. "I am only a poor lavender, sire, but I take pride in my work. The linen is fine, it dries all too quickly."

"'A little bit of starch, good bleaching, good ironing—if it weren't for you I *should* look a scamp'—eh, Pepita?"

"Your M-Majesty, be kind to me," sobbed the girl, "I only want to be p-proud of my work." She subsided on the grass, covering her bare feet.

"Next week I shall have a new coat of arms," said the King, gently. "I shall put a washtub instead of the lion, and in place of the crown a little white shirt. If my conscience could be washed by your beautiful hands, Pepita, I should be the proudest man on earth. But as to the conscience, every man must be his own lavender."

Then he uncovered, kissed the girl's hands, and turning to the boatman put his hand on his shoulder, and said, "Lead on, my good fellow."

So the two of them swung down the path through the gorge beyond which the town lay, and Pepita crouched still on the brilliant warm grass, alternately peeping in amazement at her bare feet, and then at her brown hands, which had been kissed by the King whose ears, but just now, had tingled under them.

Ozone and Radioactivity

ADDITIONAL experiments by physicists increase our knowledge of radioactive phenomena, and present new questions for which answers and explanations must be supplied. Recently it has been found, by Richarz and Schenck in Germany, that ozone and radioactive substances show, in many respects, analogous behavior. Condensation in a steam jet may be caused and conductivity may be imparted to air by freshly prepared ozone and ozone that has been decomposed by deozonizers, just as by the radioactive substances. The photographic effects which are characteristic of the salts emitting the Becquerel radiations have also been observed, but not all fluorescent screens and substances are affected, the hexagonal zinc-blende fluorescing, but the zinc oxide not being affected. The observation of these effects of ozone has led to the suggestion that the formation and decomposition of ozone or hydrogen peroxide are responsible for the small amount of conductivity which is noted in the atmosphere under usual conditions, and also for certain effects which result from the radiation from radioactive salts. The power of ozone to produce condensation, moreover, has suggested the possibility of its being employed to disperse fog in a manner similar to electrical discharges at high voltages as proposed by Sir Oliver Lodge. His experiments on a small scale were successful over a limited area, but the method was hardly deemed feasible in actual practical application. Ozone is made on a large scale in certain chemical works, and water-sterilizing plants and experiments as to the effect on fog on a large scale have been suggested.

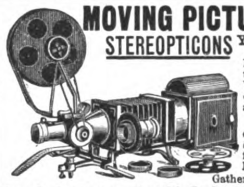
12-14 Horse Power $1750

Self-lubricating, two-cylinder opposed motor in forward bonnet. Cylinders 5 x 4½ inches. Bevel-gear drive. Driving pinions and gears as strong as found in most cars of twice the weight. All-metal clutch running in oil. Positive controlling levers without notches or indices. Easiest of all gasolene cars to operate and maintain.

30-35 H. P. Touring Car, - $4000
Most powerful and efficient car of its weight. Canopy-top, Limousine or Surrey Body to order.

24-30 H. P. Touring Car, - $3500
The car that holds the Chicago-New York record. Canopy-top or Limousine Body to order.

New Model Electric Runabout, $850
Lightest, fastest and most efficient vehicle in its class.



Elberon Electric Victoria, - $1600
In its fourth successful season. Improved this year.

A History of the German Struggle for Liberty

VOLUME III.

By POULTNEY BIGELOW

The third volume of Mr. Bigelow's absorbing recital of the German fight for nationality tells of the period between 1815 and 1848. Prussia's condition after Waterloo, a sketch of the first German Emperor, account of the Carlsbad Decrees—these are a few of the really numerous topics included. It is a spirited account, told with calm judgment, fervor, and enthusiasm.

Uniform with Volumes I. and II.

Illustrated. Crown 8vo, Ornamented Cloth, Uncut Edges, Gilt Top, $2.25 net (postage extra) Vols. I., II., and III., in a Box, $7.25

The Truants

(Continued from page 620.)

thought of the distress which defeat would cause her; and here she was saying:

"I am very glad that you went out to the North Sea for me, even though the journey proved fruitless. It makes us so much the better friends, doesn't it? And that is a gain for me. Think of it that way, and you will not mind the hardships and the waste of time."

She held out her hand—rather a rare act with her—and Warrisden took it. Then came the explanation why defeat meant so little just at this time.

"I need not have sent you at all," she continued, "could I have foreseen. Sir John Stretton died yesterday afternoon, suddenly. I received a telegram last night from Millie. So Tony will naturally come home when his four weeks are up. I wrote last night to Millie telling her where Tony was." She added, "I am glad that I did not foresee."

She rose from her chair, and they walked out through the hall to the front of the house. Warrisden helped her into the saddle, and she rode away.

Sir John had died, and Stretton would now naturally come home. That explained to Warrisden how it was that Pamela made so little of the defeat. But it was not the whole explanation. Pamela was waking from her long sleep, like the princess in the fairy-tale, and the mere act of waking was a pleasure. In the stir of emotions, hitherto rigorously suppressed, in the exercise of sympathies, she found a delight such as one may find in the mere stretching of one's muscles after a deep rest. The consciousness of life as a thing enjoyable began to tingle in her. She was learning again lessons which she remembered once to have learned before. The joy of being needed by those one needs—there was one of them. She had learned a new one to-day—"One must take one's risks." She repeated the sentence over to herself as she rode between the hedgerows on this morning which had the sparkle of spring. A few days ago she would have put that view of life away from her. Now, old as it was, simple as it was, she pondered upon it as though it were a view, quite novel. She found it, moreover, pleasant. She had travelled, indeed, farther along the new road than she was aware. The truth is that she had rather hugged to herself the great trouble which had overshadowed her life. She had done so unwittingly. She had allowed it to dominate her after it had lost its power to dominate, and from force of habit. She began to be aware of it now that she had stepped out from her isolation and was gathering again the strings of her life into her hands.

To be Continued.

What We Buy from Japan

THE exports of Japan to the United States are chiefly of articles which are not produced in this country, and in a majority of cases are those required by our manufacturers. Of the 80,232,805 yen in value exported to the United States in 1902, the value of 46,784,720 yen consisted of raw silk, 8,921,995 yen manufactures of silk, 9,124,085 yen of tea, 6,381,733 yen matting for floors, 577,888 yen rice, 1,516,401 yen chemicals, drugs, etc., while manufactures of bamboo, lacquered ware, and other products peculiar to the Japanese have also figured largely in the list. Exports of raw silk from Japan to the United States have steadily grown, especially since the development of the silk-manufacturing industry in this country. In 1893 the value of her raw-silk exports to the United States was 11,078,748 yen; in 1894, 22,457,348 yen; in 1895, 27,826,245 yen; in 1896, 14,080,981 yen; in 1897, 32,262,900 yen; in 1900, 26,710,050 yen, and in 1902, 46,784,720 yen.

Of raw silk from Japan, the total exportations exceed 50,000,000 yen annually, of which the United States is the largest purchaser. France is the next largest customer in this line, her purchases of raw silk from Japan in 1902 amounting to 14,682,816 yen in value, against 46,784,720 yen by the United States.

Progress of Science

Making Medals by Photography

A PHOTOGRAPHIC process whereby metal bas-reliefs such as medals are produced direct from the living subject has recently been developed, and threatens to rival the work of the die-sinker and sculptor. Samples thus made were shown at a scientific exhibition in London, and aroused considerable interest, due to the faithfulness with which the original subject was reproduced. The process consists in first making an ordinary photographic negative of the head which is to figure on the medal, the only departure from ordinary practice being in the lighting of the subject, which is arranged in a somewhat peculiar way. There are ten planes of illumination produced by lamps of special construction, so placed and adjusted that there is a gradation of intensity of illumination which varies from intense brilliancy on the portion nearest to the camera—that is, the parts which would appear in the highest relief on the medal—to an almost absence of illumination at the background. After the negative has been made it is placed on a plate coated with bichromatized gelatine and exposed to the light. That portion which is affected by the light passing through the transparent parts of the negative becomes insoluble, and when the plate is washed remains, while the part protected from the action of the light by the opaque parts of the negative is washed away, leaving a film of gelatine of varying thickness, corresponding to the negative. From this is made an ordinary plaster mould, with which metallic bas-reliefs can be produced by electro-deposition. Successful results have been obtained with bas-reliefs as large as two inches in diameter and one-eighth of an inch high. This discovery has given rise to the question is the time-honored die-sinker and engraver of medals to disappear, as did the wood engraver when photographic methods were adapted to his work. As most medals and coins are constructed after the death, there is of course the chance that suitable negatives will not be made during their lifetime, but the process seems to possess many possibilities.

The Largest Stone-Arch Bridge

In spite of mammoth steel arch, girder, and cantilever bridges, the stone-arch bridge is still employed under certain conditions, and the largest structure of this kind in the world is now in course of erection at Plauen, Saxony. This bridge will have a span of 295 feet, exceeding by twenty feet the famous Luxembourg bridge opened last year, and by still more the Morbegno bridge in Lombardy and the Cabin John bridge near Washington, D. C., which have held in turn the record as the longest stone-arch bridges. The Plauen bridge differs from the Luxembourg bridge in being of masonry throughout, instead of consisting of two parallel arches connected by iron and concrete. Its cost is estimated at about $120,000, a sum made possible by the low cost of labor in Saxony and the abundant supplies of suitable stone in the vicinity. It is an arch crossing a valley, and a good example of modern stonework.

X-Rays and Pearl Oysters

At a time when considerable attention is being paid to the pearl industry of Ceylon, and the government is taking extensive measures to protect the oyster fisheries there, it is of interest to record a discovery recently communicated to the Paris Academy of Sciences by M. Dubois, relative to using the Roentgen rays to examine the oysters. It has been found that these rays enable an observer to determine at once whether a living oyster contains a pearl or not without injury to the animal, and in case the pearl is small the oyster may be replaced in the bed until further growth takes place and the desired size is reached. In the scientific examination of the pearl oysters in Ceylon it has been ascertained that the popular belief that the nuclei of pearls are formed by minute grains of sand or other particles holds good in but few instances, and that in most cases the pearls or pearly excrescences are produced by the irritation of boring sponges and burrowing worms. The best germs result from the stimulation of a parasitic worm which becomes encased an l des-

THE MAIDS OF PARADISE

Robert W. Chambers possesses, more than any other American novelist, the feeling and quality of romance. The present tale carries the reader into the heart of the Franco-Prussian war. The Boston *Herald* writes that "Mr. Chambers is a superb master of his art as a story-teller of romantic fiction." Another Boston paper calls this romance "a wide-awake book, with plenty of dash and crash in it and many tender passages." Indeed, this charming story is, to quote the Philadelphia *North American*, "the foremost of modern romances."

COMMENT

SOME of the Southern newspapers that regard the nomination of Judge Parker of New York for the Presidency as assured are beginning to suggest that it might be well to take the candidate for the second place on the ticket from a Southern State. If the claim were to be pressed at St. Louis by the section to which a Democratic nominee must look for the bulk of his electoral votes, it could not be refused with any show of decency. It is for Southern Democrats themselves to say whether they care more about establishing a precedent for the recognition of their section than they care about blocking the path of Mr. Roosevelt to a second term. We do not believe that the nomination of a Southern Democrat for Vice-President would cost Judge Parker a single Democratic vote which he would have any chance of getting. On the other hand, it would not gain him others. All of the former slave States, with the exception of West Virginia and the possible exception of Delaware, will be his under any circumstances. We, therefore, submit respectfully to our Southern friends that it would be a waste of ammunition to demand that the nomination for the Vice-Presidency should go to their section. They do not need to establish a precedent. That was done in 1872, when B. Gratz Brown, of Missouri, was nominated by the Democrats and also by the Liberal Republicans for the Vice-Presidency on the Greeley ticket. The result is well known. That ticket obtained 47 electoral votes, as against 286 cast for Grant and Wilson.

We do not, of course, imagine that any such result would follow the nomination of a Southern Democrat for the Vice-Presidency at the present time. On the contrary, we repeat that such a ticket as Parker and Gorman, or Parker and Daniel, or Parker and Bailey, or Parker and Williams, would get every electoral vote that may be said to belong to the Democratic party, including as a possibility the electoral votes of New York. But would such a ticket get the electoral votes of Indiana or Illinois? That is the question. Our Southern brethren may well consider the remarkable fact that in all the five Presidential contests preceding 1896, with one exception (1888), the Democrats have always chosen their candidate for the Vice-Presidency from Indiana or Illinois. Thus in 1876 the candidate was Thomas A. Hendricks, of Indiana, and few Democrats doubt that the Tilden and Hendricks ticket was elected. In 1880 the Democrats nominated for the Vice-Presidency William H. English, of Indiana, but English was not popular in his own State, which gave its electoral votes to the Garfield and Arthur ticket. In 1884, Thomas A. Hendricks, of Indiana, was nominated for the Vice-Presidency on the Cleveland ticket, which was elected. In 1888 the Democrats made the mistake of taking their candidate for the Vice-Presidency, Judge Thurman, from Ohio, a State which they had not the slightest chance of carrying. The Cleveland and Thurman ticket was beaten by 65 electoral votes. In 1892 the Democratic national convention made Mr. Adlai E. Stevenson, of Illinois, their nominee for the Vice-Presidency, whereupon, to the astonishment of the Republicans, that State for the first time since the outbreak of the civil war gave its electoral votes to the Democratic candidates. The Republicans have been equally solicitous to secure candidates from such doubtful States as New York, Indiana, and Illinois. Thus they put forward for the Vice-Presidency in 1876 William A. Wheeler, of New York; in 1880, Chester A. Arthur, of New York; in 1884, John A. Logan, of Illinois; in 1888, Levi P. Morton, of New York; in 1892, Whitelaw Reid, of New York; while in 1888 and in 1892 they put forward Benjamin Harrison, of Indiana, for the Presidency. In view of the potent influence which State pride almost always exercises, Southern Democrats may deem it expedient to secure that leverage by giving the nomination for the Vice-Presidency to one of the pivotal States.

We pointed out in a previous number that almost all of Mr. Cleveland's friends are now openly and earnestly advocating the nomination of Chief-Judge Alton B. Parker at St. Louis. We specified Messrs. Hornblower, Stetson, Wheeler H. Peckham, and Everett Wheeler. We expressed the opinion that it was incredible that such a position would be taken by the gentlemen named unless they had previously taken measures to convince themselves that Mr. Cleveland's proclaimed refusal to accept under any circumstances a fourth nomination for the Presidency was inflexible. It seems, however, that one of Mr. Cleveland's friends in the West, Mr. Don N. Dickinson, of Michigan, neglected to acquaint himself with his former chief's intention, and, in a published interview, made an assertion calculated to repel from Judge Parker the support of the Cleveland element in the Democratic party. The charge made by Mr. Dickinson was that, in 1888, Judge Parker had charge of the Democratic campaign in New York, and that the mysterious, not to say sinister, outcome of his management was that the State elected David B. Hill to the Governorship, but gave its electoral votes to Grover Cleveland's opponent, General Harrison. The assertion is, of course, unfounded, as Mr. Frank Campbell, chairman of the Democratic State Committee, made known to Mr. Dickinson in a letter which has been given to the press. It was, of course, the Democratic campaign of 1885, not that of 1888, which was conducted by Judge (then Mr.) Alton B. Parker, and which resulted in the election of Governor Hill and the entire Democratic State ticket. In the following year (1886), Judge Parker was unanimously elected Justice of the Supreme Court, receiving the votes of both political parties. Never since then has he taken any active part in politics. Mr. Dickinson, since his reception of Mr. Campbell's letter, has frankly acknowledged that he committed a mistake of fact in his published statement, and he expresses profound regret for the error.

Some light has been thrown recently on the interesting question whether Mr. William J. Bryan means to bolt should both the platform and the candidate put forward at St. Louis meet with his disapproval. It has been asserted that he refused to vote for Judge Crisp for Speaker of the House of Representatives in the Fifty-second and Fifty-third Congresses. He now says, over his signature, that it is true that in the caucus of the Democratic members of the House of Representatives in the Fifty-second Congress he voted for Springer, because he personally preferred him for the Speakership. When the caucus, however, decided to make Judge Crisp the candidate of the party for that office, he (Bryan) voted for Crisp in the House on roll-call, as the records of the House will attest. He adds that in the Fifty-third Congress he voted for Judge Crisp in the Democratic caucus, as well as in the House, on a call of the roll. This incident, so far as it goes, would indicate that Mr. Bryan will acquiesce, however reluctantly, in the course pursued by the Democratic national convention at St. Louis.

There is evidence on the other side, however. The fact is recalled that Mr. Bird S. Coler was a delegate to the Democratic national convention held in 1896 at Chicago, and although personally opposed to the free coinage of silver at the ratio of 16 to 1, he, nevertheless, on his return to Brooklyn, accepted, at the request of Mr. Hugh McLaughlin, the post of

chairman of the finance committee of the King's County Democratic organization. It was, we are told, Mr. Coler who, with Mr. McLaughlin's help, raised all the money that was obtainable that year in King's County to support Mr. Bryan's campaign. Again, four years later, although Mr. Coler was as strongly opposed as ever to the free coinage of silver, and although he could have found a pretext for inactivity in his occupancy of the post of Comptroller of the city of New York, he more than once went through the State with Mr. John D. Stanchfield, then the Democratic candidate for Governor, and did everything in his power to promote the success of the Democratic national and State tickets. In 1902, it will be remembered, Mr. Coler was nominated for the Governorship of the State of New York. It will also be noted that he was beaten by less than nine thousand votes. Now there came a time in the campaign when Mr. Coler's managers deemed it of vital moment to secure Mr. Bryan's endorsement. In view of antecedent circumstances, they took for granted that such an endorsement was procurable. Accordingly, Dr. John H. Girdner, one of Mr. Bryan's intimate friends, was sent to Lincoln, Nebraska, for the purpose of securing a statement favorable to Mr. Coler's candidacy. The desired statement was refused. Dr. Girdner returned to New York city, it is alleged, with the announcement that Mr. Bryan declined to advocate Mr. Coler's election on the ground that the latter was "a good man on a bad platform." Mr. Coler was not responsible for the platform which ex-Governor Hill had manufactured for him to stand on in 1902; nevertheless, Mr. Bryan declined to support him. Now, if anything is certain, it is that conservative Democrats will constitute a majority of the St. Louis convention, even if they should chance to lack the two-thirds needed for the designation of a candidate objectionable to the minority. About the platform, at all events, they will do as they please, and nobody in his senses imagines that the free-silver plank will be inserted in it. Although, therefore, the nominee might be some one not personally objectionable to Mr. Bryan, he might feel himself constrained by the precedent established by himself in the Coler case to refuse to uphold the nominee of the convention, as being "a good man on a bad platform." That is the strongest reason yet presented for the assumption that Mr. Bryan intends to bolt if he and his friends shall fail, as fail they will, to frame the platform of the national Democracy at St. Louis.

It was an interesting meeting of the Reform Club of New York city which was held at the Hotel Manhattan on the evening of Saturday, April 16. It is well known that this club is largely made up of the friends of ex-President Cleveland. Among the letters read was one from Representative John Sharp Williams, the leader of the Democratic minority in the House. He was heart and soul, he said, with the great cause of tariff reform. He called it the great cause, he said, because it seemed to him the greatest of all "mere money and physical questions." It is great because it is related to everything which is greatly to be desired in this world. Mr. Williams thinks that people usually fail to attach sufficient importance to the moral side of the opposition to protectionism. In his opinion, protectionism is founded on the old "balance of trade" theory, which, although often exploded, still controls a good many minds. He pointed out that the "balance of trade" theory is founded on two assumptions, both erroneous—first, that foreigners are enemies; and, secondly, that you profit by all that you sell, and lose by all that you buy. The chief feature of the evening was a remarkable speech delivered by Mr. Edward M. Shepard. It was his own conviction, he said, that a political victory which should not by its very battle-cry signify the triumph of sound and indisputable doctrines, a victory which should only signify dislike of the character of one man and a liking for the character and promise of another man, would prove but a Pyrrhic and barren victory in respect of its permanent effect upon the victorious party itself and upon the country. He took for granted, what is, indeed, already evident, that President Roosevelt's party will not hesitate to appeal to the voters to maintain the high protection system. If Democrats, said Mr. Shepard, shall shrink from that issue, if, in their revulsion from what they deem the dangers and disorders of Mr. Roosevelt's administration, they shall invite American citizens to turn from the traditional American programme to merely temporary and accidental Democratic success—if, in other words, the St. Louis platform shall be a tissue of meaningless platitudes,—then the Democrats, in Mr. Shepard's judgment, can hardly hope for victory. Even if, moreover, they should happen to achieve one upon such a platform, it may well be doubted whether the victory would prove worth gaining.

Mr. Shepard assumes that the St. Louis platform will denounce the existing tariff, but he offers an important suggestion as to the scope and method of denunciation. He proposes that the Democratic party shall make the kind of attack on the high protective system which the advocates of that system dread, rather than the kind of attack which they prefer. He proposes, in fine, an attack upon the protective system in detail, rather than a sweeping demand for its immediate and wholesale extirpation. He recognizes that the average American has come to distrust and dislike the name of free trade. In the eyes of large masses of sincere and intelligent business men, free trade is a sort of bogey. We may or may not think the fear unreasonable, but the existence of it cannot safely be ignored. Under a government organized on Democratic principles, the notions which obtain among the masses of the voters, no matter if they be misapprehensions and chimeras, are certain to dominate at the ballot-box, and constitute, therefore, solid facts which must be dealt with by those who desire to practise successfully the art of statesmanship. Tariff reform should, therefore, be approached in a temper of sympathetic appreciation of the rooted beliefs of the majority of business men and working-men. Mr. Shepard's conclusion is that, on the next submission of the question to the American people, Democrats should demand only a partial revision of the tariff, and should select for correction, or, perhaps, in some cases, abolition, duties only affecting certain schedules, and these the schedules the necessity or importance of modifying or abolishing which can be demonstrated most easily.

As to whether the Hearst boom has collapsed opinions differ widely. The New York *American* and the other newspapers owned by Mr. Hearst continue to take an optimistic view of the situation, and profess to believe that he will have four hundred delegates at St. Louis. It is hard for an onlooker to discern any basis for such a forecast. There certainly is no foundation for it in New Jersey, for the State convention lately held there repudiated Mr. Hearst's friends, of whom there turned out to be a good many from South Jersey. His prospect of securing the delegation from Iowa is much less promising than it was a fortnight ago. The counties that first held conventions gave him a decided lead, but most of the counties in which conventions are yet to be held—these constitute a majority—are expected to oppose him. The defeat of Mr. Hearst's supporters in Indiana and Illinois is also counted upon at the present time, though with less confidence in the latter State than in the former. Northern Texas seems to be favorable to the ticket "Hearst and Hogg," but the anti-Hearst sentiment which pervades the southern half of the State seems likely to preponderate. It cannot be denied, however, that Mr. Hearst's friends have had some success in the manufacturing and agricultural sections of Massachusetts. The champions of Mr. Olney concede half a dozen delegates to the New York Representative, and it is possible that he will get a larger number. Under the unit rule, however, the vote of the whole delegation from Massachusetts will be cast for Mr. Olney at St. Louis. On the other hand, it would not surprise us if, under the unit rule, Mr. Hearst could get all of the Maine delegates, and his managers may pick up a few district delegates in New Hampshire and Connecticut. Candid observers acknowledge that the Hearst boom is still a more serious thing than it seemed destined to prove when it was launched. We reiterate our opinion, however, that even with Mr. Bryan's assistance, Mr. Hearst will fall short of controlling the number of delegates needed—one more than a third—to veto the nomination of a candidate to them objectionable. As, nevertheless, such a measure of success on his part is conceivable, we are convinced that the two-thirds rule should be abolished at St. Louis. It is absurd to say that a candidate who has behind him a majority of the

Democratic convention can always secure the necessary two-thirds. The assertion was refuted on two memorable occasions, namely, in 1844 and 1860.

By far the most stunning event, so far, in the war in the East, was the loss of the Russian battle-ship *Petropavlovsk* on April 13 just outside Port Arthur. With the ship went down, according to the Russian official report, forty officers and 750 men, including Admiral Makaroff and the painter Verestchagin. As often happens in naval disasters, it is disputed what sunk the ship. The first reports suggested that she had run against a misplaced Russian mine. Later reports coming from Tokyo represent Admiral Togo as reporting that on the night of April 12 he sunk several mines at the entrance of Port Arthur harbor and enticed the Russian ships out over them the next morning. One of these mines, he says, blew up the *Petropavlovsk*. That seems the most credible story so far, though the Russians reject it, declaring that their ship sunk in water too deep for mines to be laid in, and that she was undoubtedly sunk by a submarine boat, of which, they say, Japan had two. The ship is a very serious loss to the Russian fleet. Still more serious is the death of the Admiral, who is mourned with tears by the Czar, and with grave regret even by the Japanese, as a gallant and admirable officer. Other minor losses leave the Port Arthur fleet still further crippled, and there are more rumors than ever that Port Arthur will either be captured by the Japanese or abandoned, but it will be time enough to count on that when we hear that it has happened. There is no authentic news as yet that the place has been cut off on the land side from communication with Harbin, and even when that is done, if it is done, there will still be a strong fortress, amply garrisoned and provisioned, to reduce.

Our own naval disaster, occurring on the same unlucky 13th of April, resulted in killing five officers and twenty-six men during target practice near Pensacola on the battle-ship *Missouri*. Three rounds had been fired from the after 12-inch gun. In putting in the charge for the fourth round an explosion occurred, killing all the men in the turret, and all but three in the handling-room below. It appears that the magazine of the ship escaped blowing up only by the narrowest margin. Report says a gunner's mate saved the ship by slamming to the magazine door, himself inside, and that he barely escaped drowning when the magazine was flooded, as it was instantly by the captain's order. It seems probable that the accident was due to too much zeal in rapid firing. If so, it befell in a good cause at least, for rapidity of fire is of the first importance in establishing the efficiency of our ships. The report of the court of inquiry will presently disclose, so far as possible, what the trouble was, and how much the risk of such disaster may be avoided in future. Captain Cowles, who was in command of the ship, is highly praised for gallant conduct and doing the right thing instantly; and indeed all aboard the *Missouri* seem to have had their wits about them, and to have done what there was to do without so much as a spasm of delay.

Dr. Leander Jameson, Premier of Cape Colony, has just devised a redistribution bill to circumvent his old enemies, the Boers. As matters stood, the country districts, which were occupied almost wholly by Dutch farmers—that is, Boers—had a very large representation in the Cape Parliament proportionately to their population. The towns, which were largely British, just as Johannesburg was, had too few seats assigned to them. Thus the Boers were well able to hold their own in Parliament, and were, moreover, well organized in the Afrikander Bond. During the war, and for most of the time since peace was made at Vereenigung, Sir Gordon Sprigg, the Cape Premier, was under the shadow of the Bond, and therefore incurred the lasting hostility of the pro-British Progressives, who are the party of Cecil Rhodes. Just before his death it seemed that Cecil Rhodes would make his way back to power, and once more rule in the Cape Parliament, as in the days before the fatal Raid. When he died, it became manifest to all that his mantle had fallen on his faithful friend and coadjutor, Dr. Jameson. A section of the Progressives dreaded the return of Jameson to politics, fearing that the old accusations of the Raid would be revived, and that their party would suffer; but the event has proven the contrary. Dr. Jameson has not only been able to lead his party, but has led it to victory, and his present stratagem will make that victory secure by increasing his majority, now rather slender, by thirteen seats. Like a wise man, he has taken no seats from the Bond and the Afrikanders, which would have caused much ill feeling, and perhaps have brought about the defeat of his party; he has taken the simpler course of adding thirteen seats to the cities, where British influence is preponderant.

It is impossible not to be struck by the romantic vicissitudes of Jameson's career. Hardly seven years ago he was convicted and sent to prison by a British jury, urged thereto by a British judge, and was universally reprobated by English public opinion. Now he is Premier of what dwellers at the Cape love to call the Premier Colony of South Africa. Not less romantic and striking were the earlier transformation scenes of his life. Assistant in a London hospital; then fashionable physician in Kimberley during the great diamond boom, and, it is said, making fifty thousand dollars a year by his practice. Then friend and admirer of Cecil Rhodes, who persuaded him to throw physic to the dogs and go as a special ambassador to Lobengula, king of the Matabeles, at the great kraal at Buluwayo. Dr. Jameson carried his diplomatic point by doctoring the tyrannous old chief of the gout, knowing well that if he did not make a cure, the benevolent customary law of the Matabele would condemn him to be tortured to death. He made the cure, however, and won Rhodesia for the British Empire. He reached the pinnacle of fame when he lectured at the Imperial Institute, with the Prince of Wales, now King Edward VII., in the chair, and was decorated with the Companionship of the Bath. Then came his apogee in the famous Raid on Johannesburg, when with a few hundred troopers he invaded the Transvaal, and ran into the wide-spread arms of General Cronje. He expected to do in a week what the whole British Empire failed to do in two years with a quarter of a million men. The exact extent to which Cecil Rhodes and Mr. Chamberlain were accomplices in the Raid will never be known to the public; but no one has any serious doubts as to the fact. Jameson was made the scapegoat, and served several months' imprisonment, being finally liberated on medical certificate. He was for two years an invalid, and was for a long time not expected to recover. His star rose once more, however, and now he is Cape Premier.

One of the most notable incidents in the week ending April 16 was the creation by Mr. Andrew Carnegie of a fund of five million dollars the income of which is to be used in commemorating and rewarding heroic acts performed by men and women in time of peace within the United States and Canada and the waters thereof. There is a great deal to be said in favor of this benefaction, and we know of but one objection to it. For heroism in war there has never been any lack of recompense. If the hero survives, he generally may count upon receiving fame, honors, fortune. Should the heroic act have been performed by a naval or military officer, he may become an earl, like Jervis or Nelson; or a duke, like Churchill or Wellesley; or a President, like Washington, Jackson, Taylor, or Grant; or an emperor, like Bonaparte. If the hero were merely an able-bodied seaman or a private soldier, he would be almost certain to be decorated and pensioned. In the United States the people will be taxed—if the executive order making the attainment of the age of sixty-two a *prima facie* proof of disability shall be allowed to stand—to the extent of something like one hundred and fifty million dollars a year for the purpose of pensioning not only heroes, but every officer and enlisted man who faced the possibility of being hurt in the civil war. Now it is undeniable that peace hath her heroes no less than war, yet comparatively meagre is the recognition that they gain. When missionaries go to dwell in the midst of lepers, or when surgeons, physicians, and nurses face the horrors of a pestilence, they take their lives in their hands as deliberately and indisputably as if they went into battle; and seldom does a fire take place in any American town at which a splendid example of almost unnoticed heroism is not afforded by some member of a fire department. Far too rarely does there exist any machinery for proving to such gallant men the community's appreciation and gratitude. Of course heroes are born, not bribed; but it must happen frequently that the thought of the wife and the children for whom

his death might mean destitution just turns the scale, and causes a man capable of self-sacrifice to disobey a noble impulse. Medals, of course, are, and ought to be, conferred for courageous conduct on those who rescue the drowning; but medals, obviously, do not suffice. They justly distinguish the survivor of a self-imperilling act; but they do not console the widow and the orphans for the loss of him who kept them above want.

The only objection to Mr. Carnegie's fund that we have heard suggested is that, perhaps, it might have a tendency to retard the recognition by a community—a recognition already sufficiently backward—of the magnitude of its indebtment to the humble heroes of peace. Mr. Carnegie has himself foreseen this objection, and has striven to parry it. In the deed of gift he solemnly urges the commission that will administer the fund to be on their guard against discouraging municipal, State, and national appreciation of faithful and heroic service. It is obvious that the medal for which the fund provides can be offered to every surviving performer of a heroic deed. Whether something more cannot be done judiciously at the request of, or with the approval of, municipal authorities, the commission is left to determine for itself in each case. When a man or a woman dies, or is disabled when performing a heroic act, there can be no reasonable objection to conferring a pension upon the hero or his family, though even here it might be expedient to let employers, or fellow workmen, or communities take the initiative step toward an adequate recognition of the service rendered. They might be stimulated to prompt action by an offer to double whatever contribution they might make. That was what Mr. Carnegie did in the case of Taylor and Lyle, who lost their lives in the recent Harwick mine accident. In this instance, Mr. Carnegie waited until the generosity of the community had full scope, and then duplicated the fund of forty thousand dollars which had been raised.

A lively discussion has been provoked by the report of the Mosely Educational Commission, which seems inclined to regard the growing preponderance of women teachers in American public schools as likely to impair the virility of the masculine half of the rising generation. In the expression of this apprehension all but two of the twenty-six investigators concurred. Mr. Mosely himself does not object to the employment of female teachers for boys up to the age of, say, twelve years, because he recognizes that women can, more easily than men, win the sympathy of young children, and better understand the working of their minds. Beyond the age named, however, Mr. Mosely is strongly in favor of turning masculine pupils over to men. Although they have evinced some difference of opinion, New York educators, including some women, are disposed, on the whole, to regard with approval the views of the British commission. A majority of them are not unwilling to admit that the preponderance of women teachers in the public schools of certain cities, as, for example, Boston and Chicago, does tend to exercise on schoolboys a feminizing influence. The New York educators deny, however, that the criticisms of the Mosely Commission are applicable to their own city. They point out that in the borough of Manhattan the upper classes in the grammar-schools, where the boys' ages range from thirteen to fourteen years, are all in charge of male teachers. They have no doubt that manliness, independence, initiative, and leadership are best developed in boys more than twelve years old who have for their instructors robust and virile men. No doubt if such boys have women teachers they are likely to be more obedient and courteous. But they are also likely to develop into "goody-goody" youths, relatively unqualified for grappling with the world. Touching this point, Dr. Luther H. Gulick, who is the director of physical training in New York schools, says that the good boy, in the academic sense, is the obedient boy. As a rule, he does not develop the power of leadership. The "bad" boy, according to the school standard, is generally one who is evolving the capacity for independence and determination. He would not, for a moment, deny that boys ought to be trained in the courtesies of life, but he sees no reason why they should not acquire them in a bracing atmosphere and under masculine influence. Dr. Thomas S. O'Brien, an associate superintendent, is convinced that a boy is harmed if, during the years of adolescence, he remains exclusively under feminine control.

Mr. Andrew Lang has read a book by Mr. George Ade, which, he says, was given him by a scholar of more than European reputation to fill a gap in his philological knowledge. He complains about it in the London *News*, assuming that some of the language in the book does not convey ideas to him. The book is *Fables in Slang*. Mr. Lang professes not to know what a "steamer rug" is, nor what Mr. Ade's young man meant when he warned a waitress in a restaurant that unless she was careful "some one would sign her as a spotted girl." Why are spotted girls signed, asks Mr. Lang? Among other words and phrases that perplex him he mentions "josher," "graft," "cinch," "a one-night stand," "a rube town," "a four-flush drummer," "a rooter from the days of underhand pitching." In the last expression he suspects an ingredient of baseball, and professes to wonder if a "rooter" is equivalent to a "daisy-cropper." He quotes from Mr. Ade: "She could get away with any topic that was batted up to her, and then slam it over to second in time to head off the runner," and makes surmises about what is meant. Reading of a lad who learned to shoot craps, he balks at "craps," and wants to know what they are. So he goes along, and finally declines to admit that Mr. Ade's deliverances have amused him. But by his own admission they were given to him to increase his learning rather than his joy. The philology of such words as "cinch" and "graft" is worth Mr. Lang's attention, for those are permanent words. A "josher" is said to be one who "joshes" or "jollies" another. The word carries the implication of defective candor. Craps is a game played with dice by street-boys, who "shoot" the dice from their hands. A "four-flush" would seem to be the same as a bob-tail flush, and a "four-flusher" one whose pretensions lack a solid basis. Knowledge of the games of poker and baseball will help Mr. Lang to a better comprehension of the niceties of the American language. But at the American embassy in London they know what all these words mean, and will be happy, we are sure, to put Mr. Lang on to them.

In two recent letters to the *Sun* Dr. Austin Flint has imparted two pieces of interesting information. Apropos of certain attendants of the Manhattan State Hospital who have been committed to prison, pending investigation as to their responsibility for the recent death of an insane person, Dr. Flint points out that they are entitled to a suspension of judgment on the part of the public. For it is well known to alienists, he says, that the chronic insane, especially those of advanced age, are subject to discolorations of the skin, without violence, that simulate severe bruises. And they also not infrequently develop "bone degeneration of the insane," especially in the ribs, which leads to fractures from very slight causes in no wise connected with violence. It does not necessarily follow, therefore, that insane persons who are found with their ribs broken and skins discolored have been unduly knocked about, and an unscrupulous lunatic whose bones and skin have degenerated can get the worthiest attendants into undeserved trouble. This point is worth knowing. Dr. Flint's second disclosure is that left-handedness is an abnormality, and is often associated with defective moral sense. Six per cent. of us are left-handed, and 31.6 per cent. of the left-handed are criminals. That, at least, seems the reasonable inference from Dr. Flint's statement that "68.4 per cent. of the left-handed are not to be classed as criminals." Dr. Flint tells us that out of every hundred criminals 19 are left-handed, and that out of every hundred incendiaries 28 are left-handed. That is interesting if true, and not incredible, nor especially disconcerting. What *is* disconcerting is the suggestion that nearly a third of all the left-handed children are prospective criminals. That would imply a provision of a million and a quarter left-handed criminals in the United States alone, which seems too generous, for it would mean a total criminal population of more than six and a quarter millions. It is not impossible for any one who reads *McClure's Magazine*, or who knows about politics in St. Louis or Philadelphia, to believe that so many criminals as that exist in the United States, but that so many have been caught, counted, and classified by statisticians does exceed belief.

Wireless Telegraphy in War

On April 15 the Russian ambassador, Count Cassini, informed our State Department that Admiral Alexeieff, the Czar's lieutenant in the Far East, had issued a declaration to the effect that if neutral steamers having on board correspondents who might communicate war news to the enemy by means of perfected apparatus not foreseen by existing conventions should be arrested within the zone of operations of the Russian fleet, the correspondents would be looked upon as spies, and the steamers furnished with wireless telegraphy would be seized as prizes of war. Before pointing out the objections to the high-handed action threatened by Admiral Alexeieff we should define the bounds within which control may legitimately be exercised by a belligerent over the transmission of news. There is no doubt that a naval commander may refuse to permit the presence of newspaper correspondents on any vessel of his fleet, and it is equally certain that military authorities may decline to allow them to accompany an army. During our own civil war, General Grant and General Sherman gave excellent reasons for their unwillingness to tolerate the transmission of news by newspaper correspondents at certain critical conjunctures. It is obvious, indeed, that in this way their strategic movements and their contemplated objective might be made known indirectly to their antagonists. On like grounds General Kitchener, when he set forth on his memorable expedition into the Sudan, which ended with the overthrow of the Kalifa Abdulai, showed himself inflexibly opposed to the untrammelled despatch of information concerning his operations to British journals. What may be debarred altogether can, of course, be restricted. No sensible person has ever objected to a rigorous official censorship of telegrams and letters sent by newspaper correspondents from the scene of hostilities. We, ourselves, imposed such a censorship during our war with Spain; and, during the present contest, similar precautions against the communication of important data to the enemy have been taken in Japan, on the one hand, and in that part of the Asiatic mainland which is controlled by Russia on the other. Now there is no doubt that the invention and use of wireless telegraphy have rendered such precautions exceptionally difficult. Unless a newspaper correspondent equipped with a wireless-telegraphy apparatus is kept under lock and key, or is subjected to sleepless vigilance, how is it possible to guard against his use of such apparatus by night, if not by day, or to make sure that no uncensored message will be transmitted? Under the circumstances we are inclined to think that, pending an international convention dealing with the subject, either the Russians or the Japanese might legitimately prohibit the use of wireless telegraphy within territories occupied by them, or inside of the three-mile maritime limit within which, under international law, they may exercise authority. We believe that either the Russians or the Japanese might issue and enforce an order to the effect that if thereafter within the areas named any foreigner should be found equipped with wireless-telegraphy apparatus, such apparatus would be confiscated, and the possession of it would be regarded as *prima facie* evidence of an intention to communicate information directly or indirectly to the enemy. So far we are at present disposed to go, though we are willing to hear argument against our view, and we recognize that it may be plausibly contended that such *prima facie* evidence ought to be submitted to a civil tribunal, instead of a court martial.

It will be observed that this concession, far-reaching, and, perhaps, too far-reaching, as it is, falls far short of justifying the position taken by Admiral Alexeieff. If, indeed, the Czar's lieutenant had confined himself to saying that if a neutral vessel overhauled on the high seas by a Russian war-ship were found to be carrying a wireless-telegraphy apparatus, such apparatus would be treated as contraband of war, we are scarcely prepared to allege that such a declaration would be *extra vires*, because, owing to the extreme novelty of the invention, no international agreement prescribes the category—contraband or non-contraband—to which it belongs. In the absence of any international convention on the subject a belligerent is, no doubt, at liberty to declare wireless-telegraphy apparatus, captured on the high seas, contraband of war; but neutrals are equally at liberty to take the opposite ground, and to defy the belligerent to enforce the declaration. As we have formerly pointed out, there is no international agreement making food contraband of war, unless it can be shown that the cargo seized was intended for a blockaded port, or for the victualling of a hostile fleet. We have never doubted that, if an alliance of Continental powers should be formed for the purpose of attacking England, one of their primary moves would be to declare all breadstuffs contraband of war. In such an event, however, it would be equally open to the United States as a power deeply interested in preserving the rights of neutrals, to repel the declaration and to defy the Continental league to interfere with our function of purveying food to Great Britain.

It will be observed that Admiral Alexeieff, if he was correctly reported by the Russian ambassador at Washington, did not restrict himself to declaring a wireless-telegraphy apparatus found on the high seas in a neutral vessel to be contraband of war. He went very much further, and announced that the newspaper correspondents who might be in charge of the apparatus, and who, therefore, presumably, might communicate war news, directly or indirectly, to the enemy, would be looked upon as spies. The Czar's viceroy did not say in so many words that the correspondent would be shot, but we know what treatment is usually meted out to persons who are adjudged to be spies, after a summary trial by court martial. As to this threat, it should be said that the Russian Foreign Office has withdrawn it by notice that Russia does not contemplate any immediate action in the matter. Moreover, the report of the resignation of Admiral Alexeieff from his office of viceroy leaves the whole question more than ever open. That is well, for unquestionably, if in pursuance of this rash and novel order, either of the two American operators who are using wireless telegraphy on the high seas should be harmed, we would hold the Russian government to an instant and stern account.

It is just as well to bear in mind that this *ukase* of the Vice-Czar Alexeieff, though levelled ostensibly at all neutrals, was really provoked by the vessel *Haimun*, sailing under the British flag, which has for some time been cruising in the Yellow Sea and adjacent waters, and which has been chartered for news-gathering purposes by the London *Times*, the New York *Times*, and the Philadelphia *Public Ledger*. This is the only steamship in the Far-Eastern seas that uses wireless telegraphy. The apparatus was manufactured by the American De Forrest Wireless Telegraph Company, and was forwarded to Tokyo, where a part of it was placed on the *Haimun*, the corresponding part being sent to the station at Wei-hai-wei. Both sections of the apparatus are operated by American citizens, Mr. H. E. Athearn and Mr. H. J. Brown, who left New York for the Far East on January 17. Now it is to be observed that, when the apparatus was put on board the *Haimun* at Tokyo not a word of protest was heard from the Mikado's government. Moreover, since it has been at sea, the *Haimun* has frequently been in contact with Japanese war-vessels, and Admiral Togo could at any time have exercised the strictest supervision over the wireless correspondence had he chosen to do so. He did not so choose. It remains to point out that on April 6 the *Haimun* was overhauled by the Russian cruiser *Bayan* flying the flag of the Russian admiral. The officer in command of the Russian vessel sent two officers on board the *Haimun*, who examined the wireless-telegraphy plant and the correspondent's messages, but only detained the steamer long enough to satisfy themselves as to her mission, and then permitted her to continue her course. Happily the Russian government has reconsidered its viceroy's opinion that an enterprise carried on for weeks with the full knowledge of both belligerents is of so dangerous a character that it must be suppressed by the most violent and outrageous means.

The New York Convention

The outcome of the convention held at Albany on April 18 was to put forward a candidate for the Democratic nomination for the Presidency who is acceptable to almost all Democrats in his native State. It will have been observed that even the 149 delegates who opposed instructions were careful to declare that they regarded Chief-Judge Alton Brooks Parker with respect, esteem, and confidence. In view of that declaration, it must be admitted that Judge Parker goes before the nation with the prestige of the almost unanimous endorsement of the New York Democracy. The Democratic convention in Pennsylvania showed itself favorable to him, though it declined to instruct in his favor. We have no doubt that the Georgia convention will inscribe his name upon its standard. We may take for granted that the conventions of many, if not all, other Southern States will follow Georgia's example. Nor, indeed, should we be surprised to see a Parker wave sweep across the country.

So far as he is personally concerned, Judge Parker is an ideal candidate for reconciling and harmonizing purposes. In his character and career conservative Democrats will recognize ground for trust, while the radical wing of the party cannot dispute his "regularity," since he is known to have voted for the nominee of the Democracy in 1896 and 1900. He has no enemies of his own, and it is already pretty clear that he will not permit himself to be made the tool of another's vindictiveness and spite. It is believed to have been his interposition which at the last moment shielded Tammany Hall from the humiliation which had been planned for it by ex-Senator Hill, and which, if inflicted, might have provoked a rankling and desperate hostility that could hardly have failed to cloud Judge Parker's prospect of triumph at St. Louis. His firm refusal to mortify the representatives of an organization without whose earnest support he could not hope to carry his own State was as wise as it was just. It indicated that, should Judge Parker be elected President, there would be no power behind the throne. It was of vital moment to his fortunes that misgivings touching his capacity for independent judgment should be dispelled. In was, in truth, indispensable to convince his fel-

low Democrats that, should he by chance be nominated and elected, no Mephistophelian figure would cast its baleful shadow over the tenant of the White House.

We now deem it extremely probable that Judge Parker will be the Democratic nominee for the Presidency. Whether he can be elected is a very different question. The answer depends largely, if not entirely, on the platform put forward at St. Louis. In this respect his position is materially different from that which will be occupied by his Republican opponent. Mr. Roosevelt could run without a platform. His record, for those who like it, would be platform enough. To many people his personality is exceedingly engaging, and to all it is familiar. He is at this moment about the best-known man in the United States. This is a strong point in his favor. There is only one living Democrat who is as well known as he. Judge Parker, on the other hand, had never been seen or heard of before a few months ago, outside of his native State, and there he is known chiefly to the members of the bar. Under the circumstances, it is obvious that, not the man, but the platform, must play the principal part in the campaign on the Democratic side. It is possible, and even probable, that, upon the framing of that platform he may exercise much influence. If, indeed, his nomination should appear inevitable when the convention assembles at St. Louis, we may take for granted that the platform adopted by the committee on resolutions will be virtually dictated by the candidate. Even should this prove not to be the case, he would be at liberty in his letter of acceptance to remodel the platform by expressing approval or disapproval of particular planks, as nominees for the Presidency have done before him. It becomes, therefore, a matter of paramount importance to learn on what kind of a platform Judge Parker desires to stand. Until that question is answered he cannot reasonably expect to secure the support of those independents without whose cordial cooperation his election would be impossible. Whatever may happen to be the case with the State of New York, it is clear to all students of statistics that, throughout the rest of the country north of the Potomac and the Ohio—if the section be viewed as a whole—Democrats constitute but a weak minority. Never since the civil war have they been able to elect their nominee without the help of the non-partisan independent vote. That vote was theirs in 1876, in 1884, and again in 1892, when it enabled Grover Cleveland to beat Benjamin Harrison and James B. Weaver combined by 110 electoral votes. Whether Judge Parker will commend himself to independent citizens cannot be foreseen until his political principles and aims shall be made known.

Have we any indication of them in the resolutions adopted by the State convention of New York? Those resolutions, it is understood, were penned by ex-Senator Hill, but it is reported that the original draft was altered materially in compliance with Judge Parker's peremptory demand. Pending, therefore, an explicit declaration of principles over his signature, we, presumably, are at liberty to infer that the resolutions, as read and accepted at Albany, meet with his approval. To some of those resolutions no objection can be raised, except that they lack distinctness and emphasis. For instance, the Albany convention demands a "reasonable revision of the tariff." This may mean anything or next to nothing. The convention went on, however, to declare that, in its opinion, duties on imported raw materials ought to be abolished. There we have something positive. Another resolution recognizes that "unsteady national policies" engender alarms that check our commercial growth. It is equally certain that commercial growth is checked by abrupt tariff changes, or by the threat of such changes. How, then, is a reasonable revision of the tariff to be accomplished without disturbing the business world? The Albany convention did not attempt to solve this problem, but, doubtless, there is a solution, and we may expect to see it offered in due time. The assertions that this is a "government of laws, not of men," and that "honesty in the public service" must be enforced, are unexceptionable, but academic. Satisfactory, also, though somewhat vague, is the final plank of the platform tentatively framed at Albany: the demand for "the impartial maintenance of the rights of labor and of capital." On the whole, we are inclined to think that the Albany resolutions, as revised and pruned by Judge Parker, will do his candidacy no harm, though a more definite pronouncement from his own lips will be needed to secure the votes of independents.

Opening of the St. Louis Fair

THE date of this issue of the WEEKLY will see the formal opening of the great World's Fair at St. Louis. President Francis says on another page that the Exposition is really ready, and that the opening day will see the buildings all complete, and the exhibits, with very few exceptions, installed. The spring is late, and it will take a little seasonable weather to bring to their full beauty the shrubbery and landscape effects which are an unprecedented feature of the great show, but we have Mr. Francis's assurance that the preliminary work is all done, and that May visitors will see an exhibition that is practically complete.

Of how wonderful a Fair it is, the reader can get an idea by turning over the pages of this number of the WEEKLY. Besides the pictures of the grounds and buildings he will find short articles by the various heads of departments, setting forth briefly the scope of the several exhibitions for which they are responsible. Necessarily restricted as these descriptions are, they demonstrate that this great Exposition not only measures well up to the full standard of shows of its class, but goes, as it should, considerably beyond any former exposition.

No doubt the later months of the Fair will see much greater crowds of visitors than the earlier ones. The majority of Americans have more leisure in the fall than in the spring, but for persons who can get to St. Louis in May or June there are decided advantages in an early visit, when the crowds will be smaller and the weather cool. But whether it is more convenient to go early or late, by all means go sometime. Remember that such a Fair as this that St. Louis offers leaves no intelligent visitor where it found him. It fills him full of pictures and of knowledge that keep coming up in his mind for years afterwards. It gives him new standards, new means of comparison, new insight into the conditions of life in the world he is living in.

Go to St. Louis by all means. Whatever it costs in time, effort, or money will be spent to vast advantage.

The Agricultural Life

IN Mr. Meredith Townsend's recent book on *The West and the East* he points out that the Asiatics have shown, in two domains of thought at least, great intellectual acumen and power. They have obviated that inherent discontent which so often besets the agricultural worker; they have invented numerous systems of land tenure curiously varied to suit the varying districts and conditions; they have shown fertility and versatility in the matter of sociological organization, while in the field of speculative metaphysics they have so led the world that every creed received by a considerable body of civilized men had its birth amongst them.

There is something particularly interesting in this marriage of the contented intimacy with the soil and the speculative intelligence. It seems to suggest the only solution of the vexed question as to them who are to be the farmers of the future. In this country no one class is more radically discontented than the soil tillers. And, indeed, with the enforced deprivations of the agricultural life, however lessened by modern mechanical devices which are compressing the girth of the world, with the necessary monotony of the labor and the unremitting war with such natural enemies as floods, frosts, and droughts, it is easy to see how only a self-poised intelligence and a meditative nature can happily fulfil its being thus cut off from the bustle and amusement of the mart. To live bounded by the two great silences—the silent and hidden processes of nature, on the one hand, and the inexorable and inscrutable reserve of the great Beyond, on the other, is a task either for a sage or a brute. The capacity for solitude without brutalization, solitude that heightens instead of blunting human faculties, would be one of the most valuable lessons the European could learn of the Asiatic. For to the end of time the pursuit of agriculture as a livelihood will mean a certain separation from fellowship. It will demand a certain power of self-sustainment, and for such life to be compatible with a high development of the individual not only must the physical senses be sharpened and kept alert to all the phenomena of nature, but that other side of man's being which moves in the vast spaces of the intangible and the immeasurable, must be exercised and kept joyously alert.

It is only when we shall have developed philosopher farmers like Levin in *Anna Karènina* that the full charm of the agricultural life will be disclosed.

Certainly to the imaginations of poets and philosophers no other life offers the same enticement. The riot of delicate color in the early spring and the gradual revival of nature's vocal life, the sense of expectancy in the stretch of February fields when the whole landscape might be sketched in sepia and white, the shut-in season of the winter when the world is asleep and the farmer may send his own thoughts far afield into the whence and whither, that slow, soundless, uninterrupted flow of hours wherein to read and think, the dropping veil of twilight after long sleepy summer afternoons, the chant of frogs and locusts after dark, the steady drip of autumnal rains and the blazing death and fall of the leaves, all these are natural heritage of the tiller of the soil. It was such a life that Montaigne led on the little estate that bears his name near the Loire. He boasted that, though he lived through the most troublous and warlike times in the history of France and his house was open at all times to all parties, such was the candor of his life and peaceableness of his pursuits, he remained throughout unmolested and unsuspected.

The stress upon this point of the Asiatic temperament in Mr. Townsend's book goes to prove not only the value of thought in the most earthy of pursuits, but that thought is, in itself, more than a mere kind of observation and tallying of recorded sensations—it is the one true source of action and of being.

THE RUSSIAN BATTLE-SHIP "PETROPAVLOVSK," SUNK BY THE JAPANESE AT PORT ARTHUR, APRIL 13

Russia's 11,000-ton battle-ship, the "Petropavlovsk," was sunk by a mine placed by the Japanese at the mouth of the harbor of Port Arthur, on April 13th. The "Petropavlovsk" was the flagship of the Russian fleet, and carried down with her Admiral Makaroff, commanding Russia's naval forces in the Far East, together with 790 of her officers and men, and the distinguished Russian painter Verestchagin, who was on board as a guest of the Admiral. The "Petropavlovsk" was a battle-ship of the first class. Her armament consisted of four 12-inch and twelve 6-inch guns, with thirty-four of smaller calibre. She was launched at St. Petersburg ten years ago

TRANSPORTING RUSSIAN TROOPS ACROSS LAKE BAIKAL ON SLEDGES

Until the recent completion of the ice-railroad across Lake Baikal Russian troops on their way to the front were transported across the surface of the ice on sledges, and this method is still used to supplement the railway service. The distance between the two ends of the Trans-Siberian line is forty-three miles, and the passage across takes about thirty-six hours

OPENING WORLD'S FAIR

A Vista in the Plateau of States, the Missouri Building in the Middle

THE OPENING OF THE FAIR

BY DAVID R. FRANCIS

President Louisiana Purchase Exposition

At the time this article is being written the great Louisiana Purchase Exposition is within a few days of its appointed opening. It has been promised from the inception of the enterprise that there would be no delay, and that when it did open it would be in a completed condition. Now we can see the fulfilment of our promise. The twenty thousand workmen now on the grounds can, by laboring day and night, which they are doing, complete their tasks, and when the gates are thrown open to the public on the 30th of April, the anniversary of the historical event we celebrate, there will not be an exhibit building uncompleted nor an exhibit not duly installed, unless we may except some rare instances of foreign collections possibly delayed in transmission. All exhibits received on the Exposition grounds, some hundreds of car-loads each day, are finding their allotted places as fast as active hands and modern machinery can handle them. In some cases landscape effects may not attain their perfection and full beauty until the season advances. But, practically speaking, the May visitor will see the Exposition as completely and satisfactorily as he who comes later; and ample accommodations for all have been carefully arranged.

It is not believed that the Exposition will be a disappointment. It certainly justifies the claim that it is in all respects the largest exposition in the history of the world, and we believe its quality is commensurate with its dimensions. We have had the experience of all other fairs of this kind to aid us, and we have endeavored to avoid their mistakes and preserve their excellencies. To the end that our efforts might result in as perfect success as possible we have drawn to our assistance the most experienced exposition-builders in this country and in Europe. The classification of exhibits is unlike that of any other universal exposition, its simplicity being a decided improvement. As enormous as is our roofed space, the great number of exhibits for which room has been asked has made it necessary that nothing be accepted but the most perfect and attractive of its class. There has been, therefore, a sort of preliminary competitive test, with the gratifying result that all our floor space has been filled with the very best examples of art, mechanical, and scientific developments. The commonplace and tawdry have no place in the exhibition.

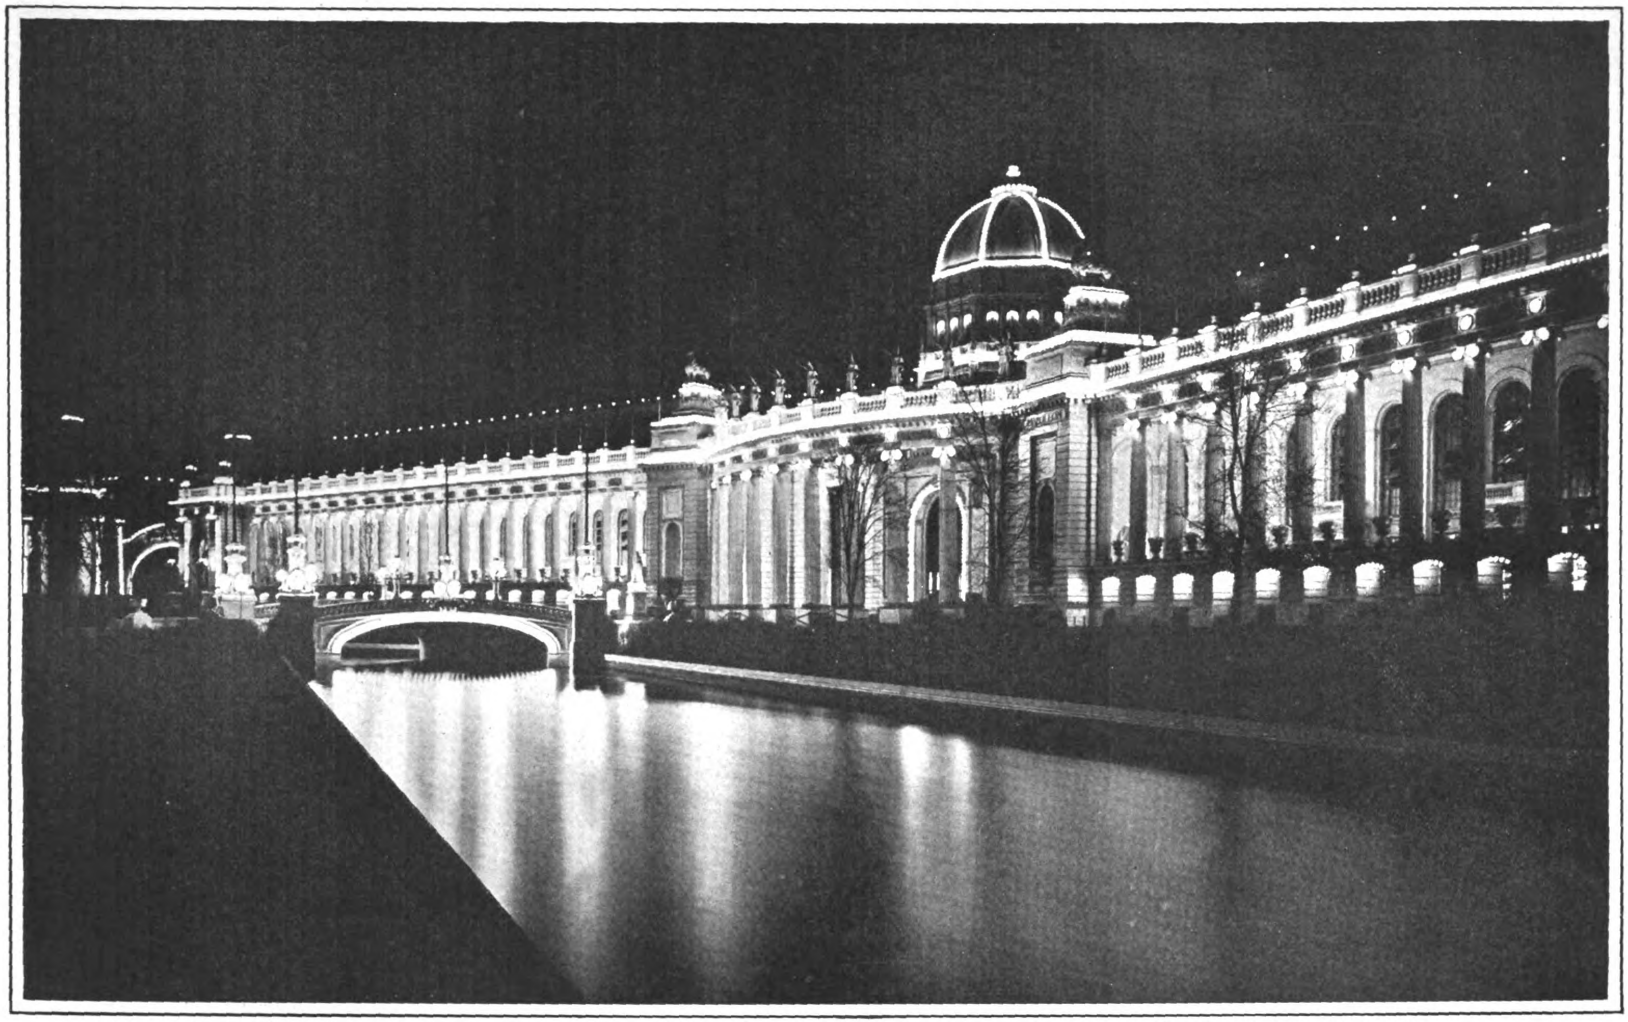
In my own opinion, the out-door exhibits, a feature minimized in all former expositions, but emphasized in this, will be prime attractions. They embrace agriculture, horticulture, mining, forestry, game and fish, anthropology, ethnology, live-stock, landscape-gardening, and the practical application of industrial progress generally, as well as the exploitation of processes.

We have kept steadily in view our purpose to make this an exposition worthy of the dignity and glory of the government of the United States, which has so generously contributed to its success in money and moral support. It has been lifted entirely above locality and provincialism, and it belongs to the nation. It was intended to make it the pride of the whole country. How far we have succeeded the world can now sit in judgment, and the management of the Louisiana Purchase Exposition Company awaits its verdict with fullest confidence.

HOW AN EXPOSITION IS MADE

BY ISAAC S. TAYLOR

Director of Works



Two and a half years ago, where the World's Fair city of over a thousand separate buildings stands now, there was nothing but forest and farm. The hills and valleys, with the bit of level ground lying to the north, have been extended, and are now covered with eight magnificent exhibit palaces. A little river with a great watershed with unsightly mud banks made tortuous windings at the foot of the hills that are now crowned with stately buildings. The only available level areas in the Fair grounds as now constituted were the Washington University tract, where five granite buildings were in course of construction, and a tract which has been graded and put in shape for city subdivision.

The conversion of the forest-covered grounds into Fair City, in the short space of time at hand, was a work of no little difficulty. A wearing task in connection with this conversion was the clearing of the land, the blasting of the stumps and cutting down of hills, to shape them to the ideals of the landscape architect. In this work extensive limestone deposits were encountered, which rendered the work not only difficult, but very expensive. The first engineering work of magnitude was the establishing of a new channel way for River Des Peres, which, on its course through the site, travelled a length of 8800 linear feet, and which in its new channel was reduced to a length of 4650 linear feet; the new course for the river was formed by a heavy wooden enclosure forty-five feet wide and fifteen feet high. The top of this enclosure was paved with asphalt, and now forms the main central avenue on the Exposition grounds.

The physical construction of the Louisiana Purchase Exposition began with the appointment of the Commission of Architects, in the midsummer of 1901, by the Board of Directors of the Exposition. The commission was made up of nine firms of architects, representing various cities of the United States. Of this commission I was appointed chairman. The general supervision of the erection of the buildings and of all physical work was in my province. To each member of the Commission of Architects the designing of one large building was assigned at the second meeting of the commission in St. Louis. The designing of the United States Government Building was the work of James Knox Taylor, supervising architect of the United States Treasury Department.

Six hundred and sixty-eight acres, comprising the western half of the Forest Park in St. Louis was given by the city as the nucleus of the World's Fair grounds. To this ground area private tracts of almost equal extent were added by lease, so that the total area of the Fair grounds is now 1240 acres. In the Forest Park section of the Fair the ground was generally rolling, with a portion to the north comparatively level. On this plain eight of the large exhibit palaces were placed. The grounds to the south rose rapidly to the height of sixty-five feet, forming a range of high ground extending the whole length of the site in Forest Park. The centre of this range was formed by nature into the shape of a

THE ILLUMINATION OF THE VARIED INDUSTRIES BUILDING

The view shows the south façade of the building, with the Lagoon in the foreground. The Palace of Varied Industries is of almost the same dimensions as the Palace of Manufactures—1200 feet long by 525 feet in width. It covers about fourteen acres, and cost $620,000. The exhibits will present examples of industrial work having an artistic character, as distinguished from the exhibits in the Manufactures Building, which will show articles of practical use only. The building is over twice as large as the Palace of Industries at the Paris Exposition

crescent; this was most happily seized upon by the architects of the commission, and used to form the main picturesque feature of the Fair by placing the Festival Hall as a central feature, with the two pagoda buildings flanking it, all connected by the grand Colonnade of States. This range also presented the natural height and slope for the three cascades that discharge their immense volume of water from the crown of the hill into the basin below.

The "main picture" of the Louisiana Purchase Exposition, formed by big exhibit buildings, trees, lawns, lagoons, basins, and cascades, is in the shape of a fan. The decorative interest centres at the handle of the fan—at the top of the crescent-shaped hill, at which point are located the Festival Hall, the Art Palace, the cascades, and the cascade gardens. The components of this feature are:

1. Three cascades surpassing in size and beauty work of like nature that adorn the capitals of Europe.

2. The main cascade basin, semicircular in shape, 600 feet in diameter.

3. Four fountains that rise with a diameter of three inches in the main basin on each side of the smaller cascades, and on a quiet day attain a height of seventy-five feet.

The three cascades issue from appropriate sculptures at the top of the hill, and by a series of descents plunge into the basin. As all the buildings and avenues of the Exposition radiate from this feature the waters are visible from all the radiating avenues of the main picture.

Along the edges of these cascades are powerful vertical and horizontal jets of water issuing from appropriate sculptures and falling into the cascade basins. These jets serve the double purpose of agitating the water and thus adding to its picturesqueness and of reinforcing the supply of water as it spreads over the widening ledges.

Along the radiating avenues of the fan-shaped picture, the central of which is 600 feet wide and the others 300 feet, the big exhibit buildings are located. Each of these has an individuality. Each was designed independently by a firm of architects in obedience to the architectural scheme devised by the entire commission. The style of architecture selected was the free treatment of Italian Renaissance.

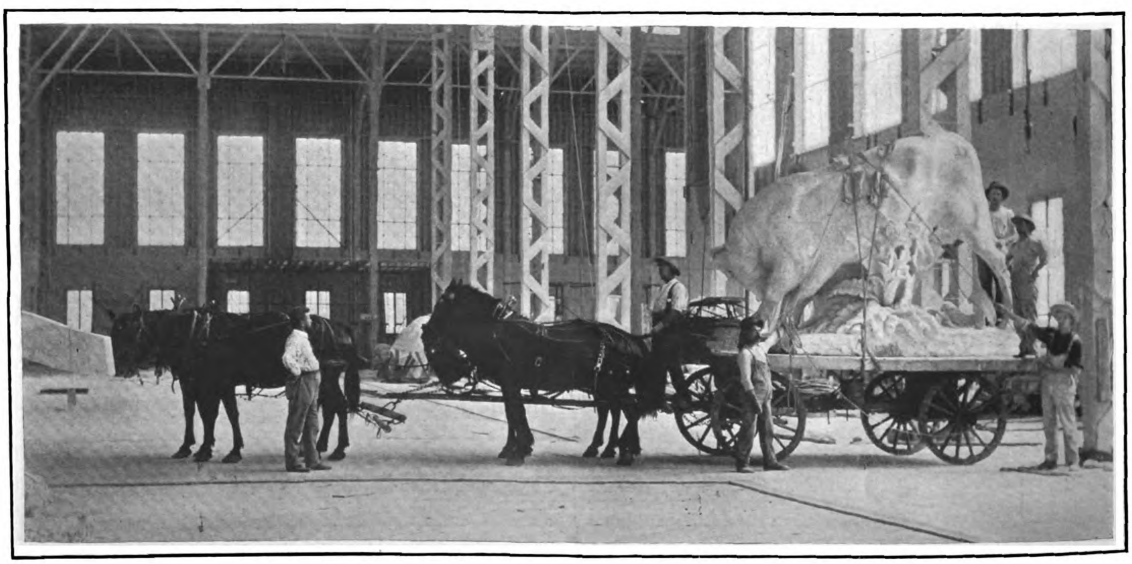
Except the United States Government Building, which has steel trusses, and the Palace of Art, which is a brick and stone building, all the big exhibit buildings of the Exposition are of wood and staff. The floor areas are spanned with heavy timber trusses, while the architectural details are rendered in plaster and staff, applied to a bewildering mass of sheathing, furring, studding, and framework.

The color of the exhibit buildings is not, as it was in Chicago, dead white. This was deemed too trying on the eye. Ivory white has been substituted, with dashes of color on the roofs and in the shaded places, such as screen walls, the tympani of entrances, etc. Ivory white has just a tinge of yellow. This preserves the majesty of the white, while at the same time it lessens the strain on visitors' eyes.

All these features show above ground in the Exposition. There is, in addition, under ground an incredibly vast and complicated network of storm-water sewers, soil-water sewers and drains, water-pipe for domestic service, water-pipe for fire service, gas-pipes, and electric conduits. The installation of these utilities was the first work done. The water service for domestic use and for fire use is distinct. The fire-service system, on which fourteen big fire-pumps maintain, automatically, a pressure of 200 pounds to the square inch, is the finest fire-protection system ever installed in the world. It reaches all portions of the grounds, including the roof of every building.

Spreading over a district one mile wide and two miles long, the Fair grounds furnished a problem in intramural transportation, on which the success of the Exposition to a great extent depended. The problem has been effectively solved. An electric overhead trolley-road, with double track throughout, serves every portion of the Fair grounds. The road is elevated in many places, surface in others, and subsurface in still others. It is so protected that good speed can be made at all times without danger to visitors. This intramural transportation is reinforced by all the usual methods of transportation, from the jinrikisha to the gondola, as well as by a number of novel transportation devices, such as the electric automobile-chair and by an automobile line, which will run along prescribed avenues at various speeds.

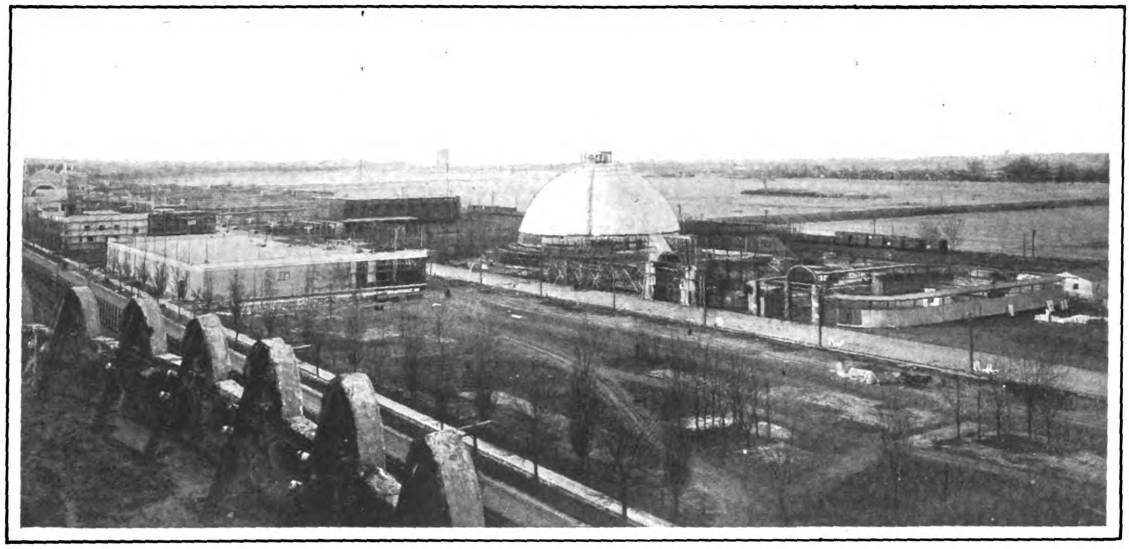
In addition to the big Exposition buildings there are the foreign, State, Territorial, and Concessions buildings. Taken as a whole, the magnitude of the Fair has never been equalled. We must wait for the artist and the citizens of the world to pass judgment on its true worth.



THE EXTENT OF THE EXPOSITION

BY WALTER B. STEVENS

Director of Exploitation



"EXPOSITIONS are the timekeepers of progress." Mr. McKinley's apt and telling words used in his last public utterance have been brought home forcibly to those engaged in the World's Fair building at St. Louis. It is just eleven years since the Columbian Exposition was held at Chicago. That Exposition occupied 650 acres of ground. It had eighty-two acres under roof. It cost more than $20,000,000. Seventeen years earlier, in 1876, was held the Centennial Exposition at Philadelphia. As compared with that, the World's Columbian Exposition marked great progress.

When the Louisiana Purchase Exposition was planned the foundations were laid on broad lines. This universal exposition, the third in the history of the United States, was to be the timekeeper for the eleven years of advancement beyond Chicago. A larger site was provided in the early stages of preparation. Larger buildings were designed than those at Chicago. When assurances were given of these plans President McKinley issued his proclamation. He invited all of the nations of the earth to participate in this celebration of the centennial year of the greatest peaceable acquisition of territory the world has known. The results were revelations. It soon became apparent that not merely more ground than Chicago provided, but a site twice as large was demanded. Tract after tract was annexed by lease to that portion of Forest Park which the city had donated for the Exposition. The site

Looking West from the Top of the Palace of Varied Industries towards the "Pike"

grew until to-day there are 1240 acres within the walls. The form of the ground is a parallelogram one mile and three-quarters long by one mile and one-quarter wide.

To the original "layout" of exhibit palaces, building after building has been added until the roofs cover 128 acres, as against the 82 at Chicago.

Of the forty-five States, five Territories, and three groups of island possessions of this nation, forty-four States, all of the Territories, and two groups of islands participate. The geographical parts of the United States represented at Chicago were fewer than forty. Their combined appropriations were little more than one-half of the amount being expended at St. Louis.

It is in foreign participation that the responses have been most significant. At St. Louis more than sixty foreign nations and colonies are represented. Their exhibits, their buildings, their expenditures are beyond precedents in exposition participation. Every nation save two in Europe is represented.

On the Western Hemisphere there is almost no geographical subdivision without representation.

Who remembers whether Filipinos were present at the World's Columbian Exposition? They are in evidence at St. Louis. They occupy a reservation as large as the sites of the expositions given at Atlanta, Nashville, or even New Orleans. They have eight large exhibit buildings of characteristic architecture, in which 70,000 exhibits of the resources of the archipelago are shown. The life of the islands is illustrated in the presence of four companies of constabulary, two hundred scouts, an orchestra of eighty native musicians, and several hundreds of representatives of various tribes. This exhibit of the Philippines represents a cost of $1,000,000.

Alaska is at this Exposition, with her building and her resources. So are the Porto-Ricans, who were aliens when the World's Fair was held in Chicago. The world has moved in the last ten years, but the United States has moved faster.

Oklahoma has a mansion among the most imposing upon the Plateau of States, and with half a million of people is making ready for her début into Statehood. The Indian Territory was only that by stretch of imagination ten years ago. It has its building, its organization, its exhibits at this World's Fair.

An intramural car can be taken at any one of the ten entrances, but the circuit, made at the speed of ten miles an hour, requires thirty-five minutes. Down the Pike is a distance of a mile, with concessions in unbroken front on both sides. The lagoons are more than a mile in length. Eleven granite buildings constitute the university group formed in quadrangles upon the campus of one hundred and ten acres. Fifteen exhibit palaces cover one hundred and twenty-eight acres; they cost $6,312,336 19. Walks and roadways measure seventy-five miles. The United States government buildings number eleven, and the buildings of foreign countries are thirty-three. Upon the Philippines reservation are thirty-nine exhibit, restaurant, and service houses, besides scores of small habitations of native architecture. There are forty State and Territorial buildings, six erected by organizations, fifty-three restaurants. The structures, great and small, installed for concessions, are four hundred and forty-eight. Upon the hotel within the grounds, the Inside Inn, has been expended $400,000. Of decorative features there are eight hundred and fifty installations. Service and small exhibit buildings add sixty-two, giving a total of fifteen hundred and seventy-six distinct constructions, ranging in cost downward from the stone and steel Palace of Art, costing $1,000,000. The construction accounts figure $27,435,029 14.

THE EXHIBITS

BY FREDERICK J. V. SKIFF

Director of Exhibits

IN its exhibit features the Universal Exposition of 1904 is exceptionally interesting. The progress of the world, as evidenced by the extraordinary development in every line of invention and of scientific and industrial achievement and endeavor, since the Columbian Exposition, has provided an almost inexhaustible field of marvels for display at St. Louis. This fact has helped to make the Exposition of 1904 the most remarkable and interesting array of social development and achievement so far presented to the world. In addition to this, expert ability and organization have been applied to the selection and collection of the exhibits for this Exposition. The creation of expositions has become a profession. Paris and Chicago have been training-schools, experiment stations, as it were, from which have graduated capable specialists in all lines of exposition work; and from these the best have been selected for the duty of assembling the exhibits at St. Louis.

The word "universal" should be epecially emphasized in connection with the St. Louis Exposition, as it is in fact an international universal exposition of the most complete organization and extensive scope ever planned or assembled. Every important nation of the world is creditably represented by interesting exhibits. Indeed, the collection of displays by foreign nations in the various great exhibit palaces is such as will surprise and delight all who may inspect them.

A dominant note of the Exposition is variety and motion. The demonstration of interesting processes of production and manufacture is shown in connection with all of the Departments of Exhibits. Where feasible, the object exhibited is presented, not alone, but in connection with the illustration of its evolution. Its development from the crude, through the various stages and processes to the finished state, is fully presented—a departure which adds infinitely to the popular interest as well as the educational value of the Exposition.

The organization of the Division of Exhibits embraces sixteen leading departments. These are: Education, Art, Liberal Arts, Manufactures, Machinery, Electricity, Transportation, Agriculture, Horticulture, Forestry, Mines and Metallurgy, Fish and Game, Anthropology, Social Economy, Physical Culture, and Live Stock. These grand departments are presided over by specialists, designated chiefs; and they are subdivided into an extensive series of special groups and classes, under which are presented, in systematic array for inspection and comparison, every feature of the earth's resources and man's activity.

In connection with the exhibits of the Exposition are to be held a series of international congresses of arts and sciences. In its exhibits sections, therefore, the Exposition will be practically an epitome of the world's progress and promise, as well as of its history.

THE EDUCATION PALACE

BY HOWARD J. ROGERS

Chief of the Department of Education

THE Palace of Education is a beautiful building of modern architecture, covering seven acres of ground, and situated in the very centre of the Exposition. This is the first building erected at an international exposition solely for the presentation of educational work. Even at Paris educational exhibits have always been installed in the gallery of the Liberal Arts Building.

The entire field of education has been divided for exhibit purposes into eight groups: First—Elementary education, including public, private, and parochial schools; second—Secondary education, showing the work of high schools and academies; third—Higher education, showing the work of colleges, universities, professional and technical schools, laboratories and museums; fourth—Fine arts in education, including both art schools and music schools; fifth—Special education in agriculture, which will include the agricultural and mechanical colleges of the country, and experiment stations connected therewith; for this exhibit Congress has appropriated a special fund of $100,000; sixth—Special education in commerce and industry, which includes industrial, trade, and business schools, evening industrial schools, and special education for the Indian and negro; seventh—Education of defectives; eighth—Special forms of education, including summer schools, extension courses, the work of scientific societies, associations, etc.

The value of an educational exhibit lies in the opportunity for comparison. Methods of administration, methods of teaching, equipment of schools and colleges, courses of study, with the demonstration of the theory which underlies their construction and the results which attend their enforcement, are brought side by side from every quarter of the globe for the investigation of the student.

One of the innovations at the St. Louis Exposition has been the endeavor to make it an exhibit of processes. So far as possible, this has been introduced into the educational department. Laboratories will be in operation, and domestic science and manual training-rooms where pupils are at work.

Thirty-three of the most prominent States in the Union will take part in the public-school exhibit, and four cities—New York, Chicago, St. Louis, and Cleveland—will make special exhibits demonstrating the working of a highly organized municipal school-system.

In the university section of the exhibit are grouped the exhibits of more prominent universities of the country. Among these are Harvard, Yale, Columbia, Cornell, Johns Hopkins, Chicago, Illinois, Michigan, Wisconsin, Missouri, Washington, and St. Louis. The work of the polytechnic schools of the country is presented by the Massachusetts Institute of Technology, Troy Polytechnic Institute, Purdue University, Pratt Institute, Worcester Polytechnic Institute, and others. In the Department of Higher Education of Women, the participants are Vassar, Wellesley, Bryn Mawr, Smith, and Mount Holyoke.

In special education in fine arts, which receives attention at this Exposition never before given in an exposition held in the United States, six of the more prominent art schools of the country are preparing very extensive and thorough exhibits.

Foreign participation, although disappointed somewhat by the withdrawal of Russia owing to the war, is still the most complete ever held in this country, and includes thorough exhibits from England, France, Germany, Sweden, Belgium, Italy, Bulgaria, Japan, China, Ceylon, Mexico, Cuba, Brazil, and Argentina. The participation, both domestic and foreign, will render it possible to successfully carry out the aims of the department, namely, to make a valuable comparative exhibit of the educational systems of all the more prominent countries; and a comprehensive exhibit of the educational resources of the United States.

The Palace of Education, the Palace of Manufactures in the Distance

THE ART EXHIBIT

BY HALSEY C. IVES

Chief of the Department of Art

THE standard of excellence of the exhibits in the Art Palace of the Louisiana Purchase Exposition will be exceptionally high. In proof of this it may be stated that applications for space have exceeded by forty per cent. the total amount available in the four pavilions of the Art Building. The aim of the department has been to gather a collection which would be thoroughly representative of the art-producing countries of the world.

In a very satisfactory measure this has been achieved. A few plain facts will show the degree of success that has been met with in this respect. Twenty foreign governments have space in the galleries of the Art Building. This list includes not only the leading countries of Europe, like Great Britain, France, Germany, Russia, Italy, and Austria, but Latin-American states like Mexico, Brazil, Argentina, Venezuela, and Cuba. The Orient will be represented by Ceylon, China, and Japan. Among other European countries, Sweden, Hungary, Holland, Belgium, and Norway will be represented by comprehensive collections. Our neighbor on the north, Canada, will also be represented by a varied collection, showing the result of her artistic activity.

The collections from foreign countries have been gathered under the supervision of official commissioners appointed by the authorities of the several countries, and it has, naturally, been a matter of pride with the members of these commissions that the exhibits for which they were responsible should excel in every particular. Thus the collections so assembled will afford visitors to the Exposition every opportunity for studying the products of the art-workers of every important country where art and artists are factors in the life and institutions of the people.

As for the exhibits representing the United States, it is safe to say that they will reveal a great stride in the development of art in this country during the past ten years. This is the more true because at this Exposition for the first time in America the distinction has been removed between fine art and industrial art. This will enable a most interesting showing to be made, as to the way in which the younger generation of American artists have been directing their energies along lines wherein art and industry come in close contact, as well as along lines where art is pursued for art's sake. Under the broad classification adopted in the Department of Art of the Louisiana Purchase Exposition, all art work, whether

Public Domain, Google-digitized / http://www.hathitrust.org/access_use#pd-google

on canvas, in marble, plaster, wood, metal, glass, porcelain, textiles, or other material, is recognized as equally deserving of respect, and will be judged in proportion to its worth from the standpoint of inspiration and technique. Special galleries have been provided for the exhibition of "original objects of art workmanship," and in these galleries the works in glass, earthenware, metal, leather, wood, and textiles, as well as examples of artistic bookbinding, etc., will doubtless receive a generous share of public attention.

In the United States section the exhibits are classed under three heads: First, a contemporaneous division, in which are shown works produced since the Chicago Exposition of 1893, and in which all exhibits may be in competition for awards, consisting of gold, silver, and bronze medals and a grand prize. Second, a retrospective division, including works produced between 1803, the year of the Louisiana Purchase, and 1893. Third, a loan division, devoted to especially interesting works borrowed from institutions and private owners, which may represent any period in the history of art, and will comprise only masterworks of the highest character.

The central portion of the Art Palace, which constitutes the permanent part of the group, is entirely devoted to the United States section, the foreign exhibits being installed in the adjacent temporary pavilions.

In the assemblage of these works of art, the chief of the department has had the help of Charles M. Kurtz, Ph.D., as assistant chief, who was associated with the work in a similar capacity at Chicago in 1893, of George Julian Zolnay, as superintendent of sculpture of the Department of Art, of Frederick Allen Whiting as superintendent of the Applied Art section, also of the well-known New York artist, Will H. Low, as superintendent of the loan section of foreign masterpieces, and, in addition, has had the cordial cooperation of painters, sculptors, and other artworkers in the United States and foreign countries, to whom a large measure of the credit should be given for the satisfactory results at last achieved.

THE LIBERAL ARTS

BY JOHN A. OCKERSON

Chief of the Liberal Arts Department

IT is extremely difficult in a short article to give a comprehensive idea of what is included in the Liberal Arts Department at the Universal Exposition at St. Louis. The use of this term at different expositions of the past has varied in character, so that the classification of exhibits under this head has to be somewhat arbitrary. Generally speaking, it may be said that the Liberal Arts Department is nearly related to that of manufactures, and also in many ways scarcely distinguishable from the Department of Art and from those departments in which scientific exhibits such as electrical apparatus and machinery are installed. In respect to art it may be said that only original objects of art workmanship are received in the Art Palace of the Exposition, while in the Liberal Arts Building art productions may be seen into whose creation some process of manufacture enters. The Liberal Arts exhibits include many things which illustrate scientific progress, although other departments of the Exposition should also be sought in order to obtain a full view of the achievements of the scientific world.

It is impossible to mention even briefly all the features of the exhibits from our own and foreign countries in the Liberal Arts Department. The public will perhaps be most interested to know something about what may be seen in the Liberal Arts Building representing such countries as Great Britain, France, Germany, Italy, Mexico, Argentina, China, and the United States. Great Britain has assembled a most comprehensive display. It includes a large collection of specimens of typography, of photography, and of chemistry. The photographic collection includes specimens of historic photographs from the collection of Sir Benjamin Stone, M.P. Many models, plans, and photographs of great engineering works are shown, including the model of the Assouan dam, maps from the Royal Geographical Society, exhibits by the Palestine, Egyptian, and Cretan exploration funds, also ancient and modern coins, medals, and seals from the British mint.

One of the most notable exhibits in the British section is that of Professor Dewar, who has achieved remarkable results in the liquefaction and solidification of hydrogen, and has succeeded in producing a temperature of minus 259 degrees centigrade.

The German Empire will occupy a generous amount of space, and besides exhibits of printing from the German Imperial Office, and specimens of typography, photography, and geographical works, there will be an exhibit showing graphically the achievements of German engineers in public improvements, such an exhibit having been specially arranged for by the Prussian Minister of Public Works. The hygienic exhibition organized by the Imperial Board of Health is another notable feature of the German display in this department.

The French exhibits touch every group of the department, with particularly fine displays in graphic arts, photography, music, chemistry, and instruments of precision.

The remarkable progress which the republic of Mexico has made in recent years will be illustrated by the interesting exhibits this country makes in the Liberal Arts Department, showing engineering works, chemical productions, and typographical achievements.

One must pass over the multitude of interesting things shown in this department by American exhibitors in all lines, but just a word should be said about the exhibit in what is termed the graphic arts. With the assistance of Mr. S. W. Bolles, formerly assistant superintendent in special charge of this branch of the department, an exhibit exemplifying the progress made in the various allied printing arts has been gathered which may safely be characterized as superior to anything of the kind ever seen before at an exposition. Operative exhibits show the visitor much more graphically than language can the steps successively taken in the development of these great industries and inventions which have helped to produce the results that form so characteristic an achievement of our age and time.

SCULPTURE AT THE FAIR

BY KARL BITTER

Chief of Sculpture

IF I could put the millions who will visit the Fair into the mood of regarding the Exposition from the standpoint of art and poetry, as the best manifestation of the material and intellectual progress of the entire world, I believe that the temples and the statues of our World's Exposition would speak in plain words that could be understood and appreciated. In sculpture the mere reproduction from life would vanish, in architecture the mere housing and sheltering quality of the Exposition buildings would be forgotten, and the magnificence of this unparalleled spectacle would arouse the highest enthusiasm.

The statuary at the Fair may be divided into two classes—works of historic significance and importance and those whose subjects are purely allegorical. The historical subjects in the form of portrait-statues and the like are grouped with the buildings which are devoted to the more material side of the Exposition; the allegorical sculpture has been used in connection with structures devoted to a more ideal mission, such as the Festival Hall, the Palace of Fine Arts, and the Cascades.

Karl Bitter's Group, "The Signing of the Purchase Treaty"

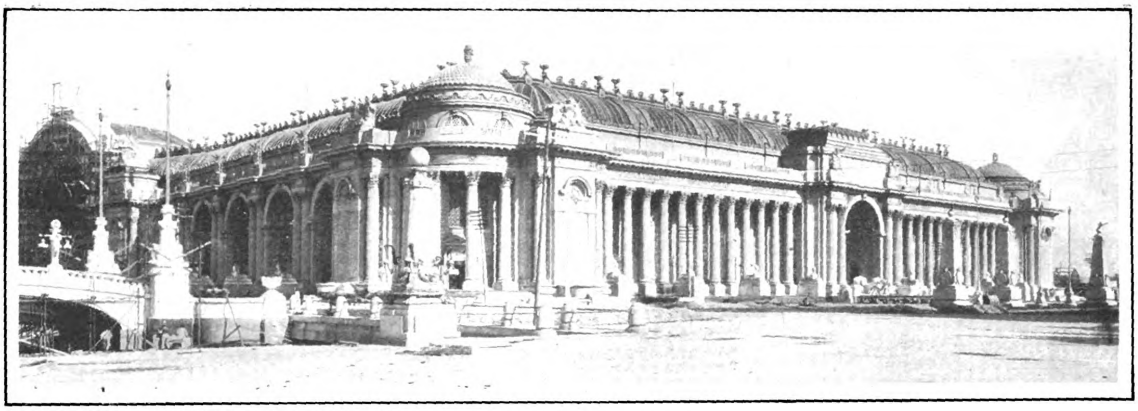
The historical sculpture recalls the memory of the discoverers, pioneers, soldiers, and statesmen prominently associated with American history. Among the notable figures in connection with the Louisiana Purchase are the statues of Napoleon by Daniel C. French, and of Thomas Jefferson by Charles A. Grafly. The signing of the treaty is commemorated in the Louisiana Purchase Monument, designed by Mr. Emanuell Masqueray, and of which the sculpture is my own work. The principal group illustrates the moment of the signing of the treaty by Robert R. Livingston, James Monroe, and Marbois, Napoleon's Minister of Foreign Affairs.

Much of the allegorical sculpture was modelled for use in connection with the Cascades and the Colonnade of States. Now that the Colonnade, designed by Mr. Masqueray, and the Festival Hall, designed by Mr. Gilbert, are completed, the effect is something to which I can find no parallel. The Court of Honor at Chicago, and the Electric Tower and Court of Fountains at the Pan-American Exposition are certainly surpassed in beauty and grandeur by the Cascades and their surroundings at St. Louis. Nowhere have I seen a series of statues of such size and in such splendid architectural setting as the colossal statues of the fourteen States composing the Purchase region.

When so much effort is bestowed upon sculpture that can live but a short time, it is satisfying to know that arrangements have been made for some permanent work, such, for example, as the marble statues of "Sculpture" and "Painting," by Daniel C. French and Louis St.-Gaudens, and other decorations by able sculptors for the permanent portion of the Art Building.

It has been my endeavor to give commissions to such as appeared to show promise and needed only an opportunity in order to advance to the front rank. And in that respect my task has been most gratifying.

Among the names that should be mentioned in reviewing the sculptural work done for this Exposition are many that appear before the public for the first time, but are destined to become well known to all who are concerned in our country's intellectual progress.



Miss M. B. Wilson, the Sculptress who modelled the Figures on Machinery Hall, at Work in her Studio

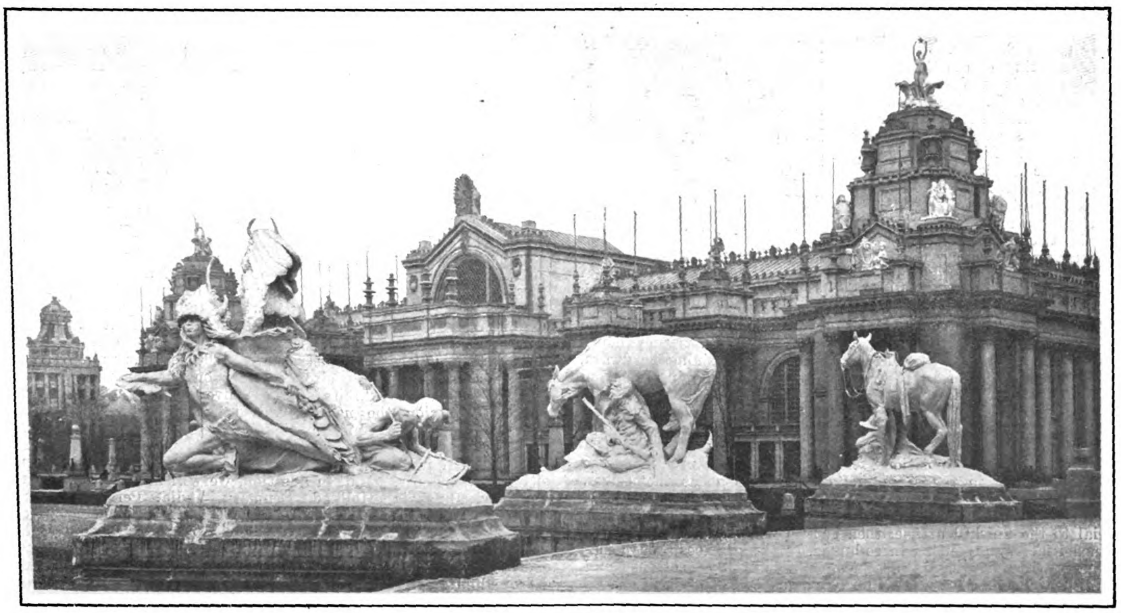
The Palace of Manufactures

MURAL AND DECORATIVE PAINTING

BY LOUIS JULIAN MILLET

Chief of the Department of Mural and Decorative Painting



THE World's Fair of 1904 at St. Louis is not devoid of color. Though the great exhibit palaces present the aspect of stone structures and the use of color on plain stone surfaces would be offensive to architectural standards, ways have been found to introduce color so as to secure appropriate, harmonious effects. As a general rule the plain surfaces of the buildings are an ivory white, but touches of color have been put into the general picture in many places. Monotony has been avoided, while at the same time the eye is not burdened by a bewildering use of paint.

The aim of the Department of Mural and Decorative Painting has been to adapt the color treatment to the architecture of the different buildings, emphasizing their purpose and originality, while contributing to the variety and beauty of the general picture.

The architectural features lending themselves especially to color treatment are recesses and doorways, pavilion interiors, and the backgrounds of plastic decorations. Color has been used more freely on three of the large exhibit buildings—Agriculture, Forestry and Fisheries, and Mines and Metallurgy. Here the departure from conventional ideas has been marked. In the case of the Agriculture and Forestry and Fisheries buildings the character of the buildings and their close associations with nature justify treatment of this kind, while the architecture of the Mines and Metallurgy Building, which has so little of the conventional and is so near an approach to the so-called "secessionist" idea in architecture, calls for striking and original methods of color treatment. This building also offers special opportunities for mural decorations.

To give a more specific idea of how color has been used at St. Louis it may be well to describe in some detail the decorations of this building. Tall obelisks flanking the main entrance and a sphere surrounded by statuary give an Egyptian effect. In harmony with this are the relief ornamentations of the entrance finished in tones of bronze and old metals. On either side of the entrance are large panels which contain mural paintings representing in a fanciful way the philosophy and poetry of the ideas associated with the structure. The eaves of the structure overhang about eighteen feet, the walls being set back and forming a covered loggia which surrounds three sides of the building. At the base of the columns screening the walls are sculptured panels illustrating various picturesque themes. These reliefs are finished in bronze colors, giving them individuality and character. The background of the sculptured figures is a rough golden-colored glass which will be illuminated at night and show the figures in silhouette. The rear wall back of the columns is a rich Pompeiian red. The spheres with statuary surrounding them are finished in statuary bronze. It can be seen from this brief description that the color treatment of the building, as a whole, is intended to give an effect of richness and variety.

The main entrances of the Machinery Building have large vestibules containing mural paintings dealing not so much with Greek goddesses as with the world of to-day, and yet conceived in the allegorical spirit. The surfaces of the corner pavilions of this building are practically all in color, and the sculptural decorations have a background of color, increasing the richness of effect and giving an impression of filigree work. A similar plan is followed in the decorations of the Varied Industries and Manufactures

Mr. Borglum's Frontier Groups in Front of the Palace of Electricity

buildings. Some exquisite effects have been obtained in connection with the color treatment of the Liberal Arts Building and certain portions of the Art Palace. When we come to the Agricultural Building, which is not in the central picture, but about a half-mile to the right of the Cascades, both the character of the structure and its location permit of a different plan in its decoration from any that would be appropriate in the buildings of the central group. Here color has been applied to some extent to the plain surfaces.

Fruit and vegetables and waving corn in more or less conventionalized forms, such as festoons and garlands, are used in profusion, forming striking and pleasing contrasts in color with the plain surfaces. A similar treatment has been given the Forestry and Fisheries Building. In many parts of the grounds touches of color appear, and towers and roofs have been tinted. The color treatment of the World's Fair at St. Louis is not a thing that can be easily described. It must be seen to be understood, and it is the hope of the Department of Mural and Decorative Painting that intelligent visitors will carry away favorable impressions of the results achieved in this field.

THE EXHIBIT OF MANUFACTURES

BY MILAN H. HULBERT

Chief of the Department of Manufactures

TWO of the great palaces in the main picture of the Exposition have been assigned to the Department of Manufactures—the Palace of Varied Industries, which will contain exhibits of goods made to please the eye; and the Palace of Manufactures, which will contain exhibits of goods of a purely utilitarian nature. Each of these palaces is 1200 feet long and 525 feet wide, and the total cost of the two approximates $1,500,000. A unique feature of their construction is an open court in the centre which adds much to the lighting and ventilation of the buildings.

The enormous size of the buildings, with the thousands of people who will pass through during the Exposition period, suggests a small city, and following the practice in cities the aisles have been laid out like streets, each having its name, and each exhibit its number.

The enthusiastic cooperation of the manufacturers of the United States and the unprecedented support of the foreign governments of the world have accomplished for the Department of Manufactures of the St. Louis Exposition a result far above the expectations even of the officials most intimately connected with the work. This liberal treatment is due to several things, apart from the campaign of educative exposition methods carried on for the last three years by the department itself with the 512,000 manufacturers who compose what may be termed its "clients." The most important items are the higher appreciation in the last few years of the value of ocular impression in advertising as compared to written description, and therefore an increased attention given to the proper display of merchandise.

At the time of the Chicago Exposition it was generally considered sufficient if goods were installed in a manner answering commercial necessities. At St. Louis attention to artistic display has given the Department of Manufactures a well-balanced installation which makes all parts of the two buildings equally interesting. This has led to the abolishment of the main aisle. All aisles in the building are of equal width, and so each has equal value to the sightseer.

A Group for the Manufactures Building, by Isidore Konti

There are three great divisions of the merchandise in the two buildings. The Textile section, containing textiles, tissues, clothing, fancy work, etc; the Hardware section, containing hardware, glass, heating and cooking apparatus, modern plumbing, lighting appliances, cutlery, sporting goods, etc.; and the section of Industrial Art, including all those objects made to please the eye, such as art pottery, art glass, jewelry, bronzes, silverware, precious stones, etc.

Unlike previous expositions, the machinery for producing the goods is shown in the same section with the goods themselves, and throughout both buildings the process of manufacture in actual operation will be seen. Hides will be converted from the raw material to the finished article, then cut up and made into shoes by a model factory producing three hundred pairs of shoes a day; machinery will be seen in operation making silks, cottons, and woollens. These materials will in turn be cut, many thicknesses at a time, by rotary shears and converted into both men's and women's clothing. Other machines in this same section will be turning out hats, gloves, hammocks, Indian blankets, and so on.

Surrounding these exhibits of machinery in motion will be the displays of finished goods, each containing some special exhibit, such as a $5000 blanket in the blanket section, and a combined exhibit made by the costumers in a pavilion known as the Pavilion of Costumes and Fashions.

High-speed envelope-machines, a model paper-box factory, blank-book manufacturing, and the latest type of wire-screen weaving-machine, all in operation, and supplemented by many moving displays, such as a large windmill made of thousands of hatchets with revolving sails, house cleaning done by the pneumatic process without moving the carpets and hangings from their places, will all add to the interest of the hardware section.

In the Industrial Art division the visitor will be impressed with the advance made in the last ten years in the manufacture of artistic merchandise. Until recently, strictly speaking, we have been a commercial nation working almost wholly for the useful and economical, but the displays that will be made in art silverware, art pottery, glass, bronzes, jewelry, china, furniture, interior decorations, tapestries (examples of which will be shown surpassing anything that has ever been done abroad) will convince the public that there is no more necessity of going to Europe now for the artistic in merchandise than there is for plate-glass, silks, and the thousand other commodities which at present are made as satisfactorily in the United States as anywhere in the world.

In this Industrial Art section will also be found such operative exhibits as the manufacture of imitation diamonds, the grinding, polishing, and setting of turquoise, and an Indian expert making hammered silverware.

In addition to an extensive display of clocks in the exhibit palace proper, one of the most novel features of the Exposition will be the floral clock to be built on the Agricultural Hill by the Department of Agriculture, for which the Department of Manufactures will furnish the mechanism. This will consist of a dial 100 feet in diameter, the numerals of which are to be approximately fifteen feet high, and made entirely of flowers. In its representative foreign exhibits the Department of Manufactures will far surpass the great industrial exhibit at Paris in 1900.

The Paris Palace of Industries was 1200 feet long and 160 feet wide, less than half the size of either one of the palaces to be devoted to similar exhibits at the Universal Exposition of 1904. On this occasion the nations whose exhibits stood out prominently were France, United States, England, Germany, Italy, Austria, and Japan. Each of these nations is preparing an exhibit of its special products of manufacturers for the Universal Exposition at St. Louis. And, in addition, we will have here Belgium, Hungary, Bulgaria, Holland, Denmark, India, Persia, Norway, Sweden, Switzerland, Mexico, Siam, Cuba, and Argentina. Germany, whose exhibit at Paris was by far the best display of industrial arts that a nation has ever made, will have in the Palace of Varied Industries at St. Louis a much more extensive and elaborate exhibit. France will install in the Palace of Manufactures the most important and representative display that that country has ever made in a foreign land. The exhibits of Italy, Austria, Japan, and China will be distinguishing features.

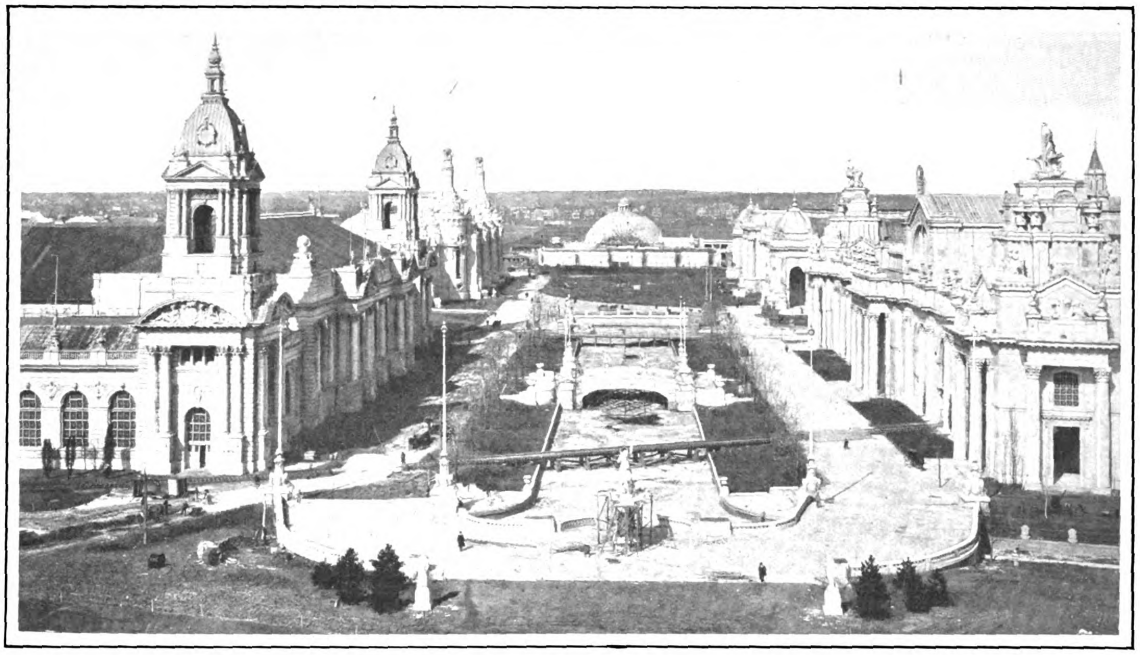
its foreign section, State section, food section, dairy section, and implement section. Each is crowded to the utmost with exhibits of an interesting character.

The Palace of Horticulture, covering six acres, presents in the centre of the building the spectacle of four acres of fruit on view. More than a hundred refrigerator-car loads of fruit are in cold storage to replenish the supply, to say nothing of the fresh fruits coming in their season. In the eastern end is the conservatory of plants, and the western is filled with cut flowers and horticultural implements. Outside, these palaces are surrounded by ten acres of roses and about forty acres of formal and informal landscape-gardening.

THE FORESTRY DEPARTMENT

BY DR. TARLETON H. BEAN



Chief of the Departments of Forestry and Fish and Game

THE Department of Forestry is associated for exhibit purposes with the Department of Fish and Game in a building 300 feet wide and 600 feet long, near the Administration Building and the Palace of Agriculture.

The exhibits of this department occupy rather more than one-half of the building and also several acres of ground on the outside. Some of the principal out-door displays are the tree-planting tract and the demonstration of methods of timber preservation by the United States Bureau of Forestry, a nursery to be installed by the Forest, Fish, and Game Commission of New York, very large timbers grown in Canada, Mississippi, Oregon, and California, and the building known as the House of Hoo-Hoo, which is intended to show the commercial possibilities of various native woods.

The entire range of forest illustration at universal expositions is covered in the exhibits brought together from various sources, both domestic and foreign, by individuals, firms, associations, and governments. The display relates to the distribution of forests, their composition, their utilization, destruction, protection, reforestation, and management. Nearly all of the great States and at least sixteen foreign countries contribute to the forest exhibits.

On the commercial side the selected displays in the Forestry Palace aim to illustrate the economic uses of valuable trees, such as pines and other conifers, as well as many of the hardwoods. The secondary products of the forest—woodenware, cooperage, basketry, etc., the general industries based upon wood-pulp, the forest by-products, form instructive and important features of the installation.

View showing the Plaza of St. Anthony

The United States Bureau of Forestry, in addition to its out-door demonstrations, will occupy a large area in the building with its splendid series of transparencies and its illustrations of appliances and processes used in forestry. The transparencies show forest trees, forest conditions, forest topography, methods of lumbering, and forest destruction by fire, insects and other enemies. The character and extent of government work in the United States, both from the economic and scientific side, will be more fully understood than at any previous universal exposition.

FISH AND GAME

BY DR. TARLETON H. BEAN

ONE of the most popular features in this exhibit is the display of living aquatic animals to which Canada, Minnesota, Missouri, New Jersey, Pennsylvania, and the Intercolonial Railway of Canada will contribute.

The tanks number above sixty, and range from three to ten feet in length. They will contain valuable food and game fishes of the contributing States. Minnesota will show its black-bass, pike-perch, maskalonge, and many other well-known favorites of the angler. Missouri will have bass of various kinds, pike-perch, the trout, crappie, and specimens of its gigantic catfish, and other huge denizens of the fresh waters. It will also bring together the remarkable blind fish and salamanders of its caves. Canada will exhibit families of beaver. Pennsylvania will show a great number of food and game fishes. The Intercolonial Railway of Canada proposes to show living salmon, trout, and striped-bass. New Jersey has the great central pool, forty feet in diameter and five feet deep, for a collection of very large fishes of the Atlantic coast.

The out-door display of Missouri, west of the building, will surround an artificial lake, 200 feet in length, on which angling

The Palace of Mines and Metallurgy

tournaments will be held. Tributary pools are provided for a display of live wild ducks, geese, and swan. Living deer, wild turkey, raccoon, opossum, otter, beaver, mink, foxes, mountain lion, quail, pheasants, and eagles are to be housed in suitable enclosures around the lake. A hunting-lodge furnished with equipment for hunting and fishing will complete this exhibit.

Arrangements are completed for testing rifles and camping equipment in this department. Several log cabins intended for the use of hunters and fishermen are being built in the building.

Particularly interesting will be the exhibit of taxidermy from nearly all parts of the world, the graphic illustration of the great salmon fishery of the Pacific coast, and the splendid collection of equipment of every kind from widely remote places intended for the use of the hunter and fisherman.

MINES AND METALLURGY

BY J. A. HOLMES

Chief of the Department of Mines and Metallurgy

THE first department chief selected by the directors of the Louisiana Purchase Exposition was the head of the Department of Mines and Metallurgy.

For three years now the work of exploitation and collection for this department has been under way, and the end certainly justifies the effort. In the Palace of Mines and Metallurgy will be displayed all that is rarest and best in our natural mineral resources, and side by side with the coals and iron ores, and the rarer golds and silvers, will be the laboratory, the furnace, and the reduction-mill to show the method of obtaining the finished product.

Among the special features in connection with the display of natural material will be the native gems and gem stones that are now becoming a decidedly important factor in the world of luxury and art. The rare free crystalline and wire gold from Colorado's rich deposits will be shown, and with them the equally rich tellurides of Cripple Creek and Boulder, the unequalled collections of California, gold quartz and nuggets, and the latest products from the mesas of the far North.

For the finished appliances and products there will be exhibited working models, concentrating-mills in actual operation, river dredges, an operating assay office directed and controlled by students from one of the leading scientific schools of the West, a turquoise mine, a miner's cabin and tunnel lined with rock in place, together with demonstrations of lapidary polishing and of rounding the rare product into ornaments.

Connected with the display in the Palace of Mines and Metallurgy will be a shallow ravine extending from the Mines and Government buildings for a length of over 2000 feet, with a width of from 300 to 500 feet, where oil-well drilling appliances will be in actual operation; where one will see cement works of the most modern patterns; an equipped operating coal-breaker; one or more gold-mills pounding out values from the Dakota ledges brought across the plains for the purpose of illustrating the most modern methods for extracting value from low grade or refractory material.

Here also will be installed in full size the great hydraulic appliances that have torn away the California summits and washed them into the sea. Aerial tramways will traverse the tree tops, delivering to distant points crude material in the fashion now so common in Western transportation.

Besides these modern and thoroughly equipped installations will be an old Mexican mining-camp, where, with the arastra and the patio, native miners will operate on precisely the same material and by the same method as that used thousands of years ago.

In contrast will be shown a copper-mining camp of modern type, where refining copper by means of converters and electrolitic processes will be fully demonstrated. Coal mining and the infinite variety of metallurgical products dependent upon this will be given abundant space, and no one interested in any department, no matter how technical or crude, will fail to find either in the Palace of Mines itself or in the adjacent "gulch," an opportunity for informing himself along every line of metallurgical advance. From the fifty-ton ingots from which cannon are rolled to the infinitely minute particles of radium, the range is wide, but has been fully met. The chief of the Department of Mines and Metallurgy has never failed to bear in mind the importance of meeting the full official classification, and in doing so promises to present to the student and intelligent observer everything that he may need on which to base an opinion or found a theory.

Every State will be represented by its mineral and metallurgical products, and these will be supplemented by the records of individual effort. The United States government, as always before, will be liberally represented through the work of the Geological Survey, including publications, maps, and special collections.

LIVE STOCK AT THE EXPOSITION

BY F. D. COBURN

Chief of the Department of Live Stock

NO opportunity approaching that presented at the St. Louis Exposition has ever been offered to the stockmen of the world to demonstrate the progress made in the many branches of animal husbandry. The Exposition management has accorded a generous recognition to the live-stock interests, and justly so. No other group of exhibits has made such rapid advancement in recent years, nor has any other a greater importance in the Louisiana Purchase territory.

The live-stock exhibits afford the most striking response to the oft-heard deprecation from persons who have failed to give a world's fair a second thought, so far as its general scheme is concerned, that it seems a mistake not to preserve the marvellously beautiful and instructive features beyond the six or seven months through which they may be assembled for display. The live-stock show for any kind of animal or fowl will last no more than two weeks—except the exhibition of dairy cows. Yet the good from

the Exposition live-stock show is certain to last for a considerable period. An exposition is merely a summing up and a decision; the importance of it lies in the momentum it gives to an art or an industry, and not in the display itself.

This is already marked in the progress of the preparations for the live-stock exhibition at St. Louis. Breeders and fanciers have been selecting and fitting animals for some time to make sure of showing exhibits worthy of so great a competition. The exhibitors are stimulated to bring the best possible specimens for display and judging. Breeders in this country have gone to the homes of the original stock to secure, if possible, better animals than might be found in the United States. All this process of mating and selection makes for a general uplift of the live-stock industry through an assembling of a higher quality of stock and the dissemination of better ideals in the industry.

Now that animal husbandry is coming to more systematic advanced methods and is finding wider fields of usefulness, this summing up at the Fair of its progress and status has an especial significance. Provision has been made at the Exposition for a show of 3000 horses, beginning August 22; for the exhibition of a like number of cattle for two weeks, commencing September 12; for exhibits to follow these of sheep, fowl, a kennel show, and so on. There will also be an exhibition of Southern breeding cattle and that of the range cattle which cannot be shown to halter. The sum of $280,000 has been appropriated by the management for cash prizes for live stock.

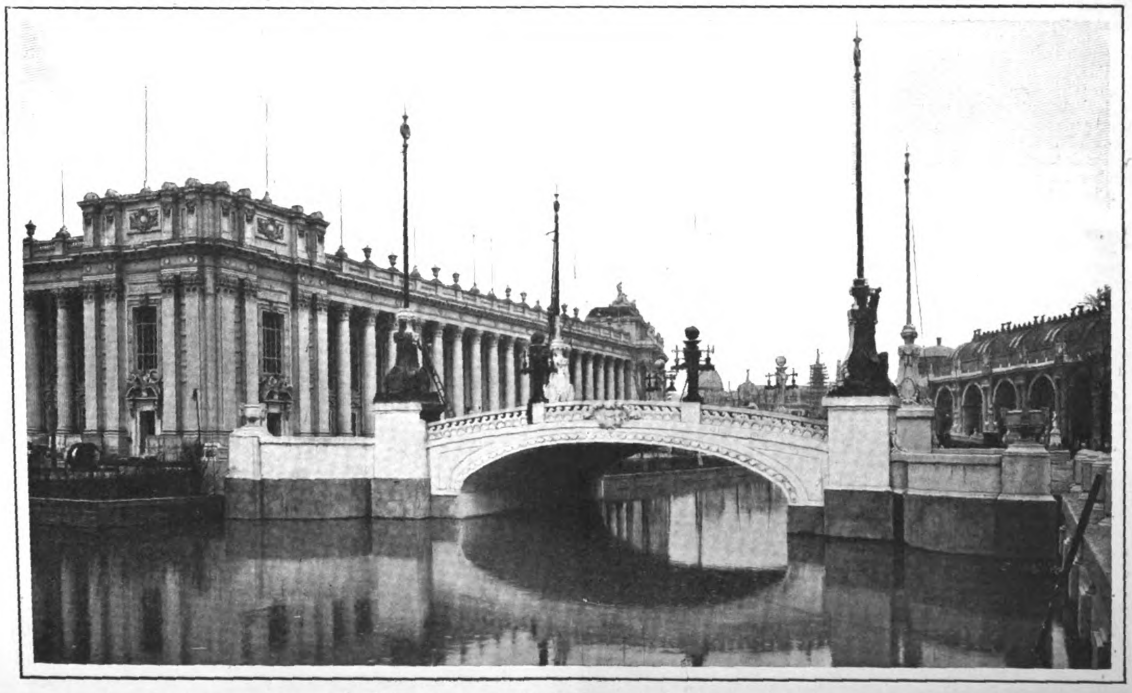
THE ANTHROPOLOGY EXHIBIT

BY W J McGEE

Chief of the Department of Anthropology

THE exhibit of anthropology is designed to show what man is in his various types and what he has done through that creative genius which has given him mastery over most of the powers and the resources of the earth. The department is organized in sections, each devoted to the science of man in some distinctive aspect.

The section of ethnology is devoted to types of both race and culture (or development). The race-types include the pygmies of Central Africa, with other tribesmen of the Dark Continent hardly known hitherto; the Tehuelche Indians, which since the time of Magellan have been known as Patagonian Giants; the Ainu people, or hairy folk, of whom little is known beyond the facts that they are white, rather than brown, that they are among the shyest and most secluded of the world's peoples, that they are the aborigines of the Japanese Archipelago, and that they are most abundantly bearded. These are supplemented by various Indian types from the United States and Mexico, and by more than a dozen tribes of Filipinos, as well as by the several alien peoples gathered by concessionaires on The Pike. Generally, the primitive folk will occupy habitations erected by themselves from materials brought for the purpose, and will live and work in their accustomed ways; so that on the Exposition grounds may be seen every stage in industrial progress with the development in the arts, languages, social customs, and beliefs characteristic of each stage of human advancement.



The Indian school section has for its nucleus a model Indian school established under a Federal appropriation to illustrate the most advanced methods of raising our surviving aborigines to the plane of citizenship. The school is conducted by Hon. S. M. McCowan, Superintendent of the Indian Exhibit, and one of our foremost Indian educators; and the interest of the modern training will be constantly enhanced by the contrast between aboriginal handicraft and that of the trained pupils, both displayed in the same building.

In the section of archæology there are several notable collections representing the arts and industries of ancient Egypt, early Mexico, prehistoric Peru, and other lands, in addition to those of the mound-building Indians and other aborigines of the present territory of the United States. So far as practicable, the archæologic collections are arranged in synthetic series illustrating the stages of human development shown also in the ethnologic section.

The section of history is devoted to manuscripts, maps, relics, and other records of one of the most striking developments the world has seen—the transformation of the Louisiana Purchase Territory from a wilderness ranged only by wild beasts and savage men into a family of great commonwealths. Special attention is given to the pioneers of the Territory and the makers of the States.

In the sections of anthropometry and psychometry the opportunities afforded by the Exposition for comparing the physical and mental characteristics of all the world's peoples are utilized. The measurements comprise not only external physical characteristics such as stature and weight, but rates of respiration and pulsation, acuteness of the senses, times of sense reactions, capacity for coordinating impressions, and other faculties of the human creature, so that the race-types and culture-grades assembled on the grounds may be brought within the range of comparative study. The opportunity will be utilized, also, for obtaining similar measurements from the trained athletes assembled in connection with the Department of Physical Culture.

On the ground of logical arrangement, the Department of Anthropology is a combining element, converting the whole western portion of the grounds, from the Philippine exhibit in the southwest, through the model Indian school and adjoining Indian encampments in the central west, to the Department of Physical Culture in the northwest, in a great exhibit of man—balancing the vast series of man's works, in the central and eastern portions of the grounds.

WOMEN AT THE FAIR

BY MRS. MARGARETTA MANNING

President of the Board of Lady Managers

THE participation of women in the great Exposition at St. Louis, toward whose making the whole world has so generously contributed, is in every way fitting, dignified, distinctive, yet in no sense and at no time separate or segregated. Indeed, woman's participation in the march of events is too well assured at this period of the world's advancement to make an assertion of herself or a segregation of her position either tenable or desirable.

From the very beginning of the movement to celebrate the purchase of the Louisiana Territory woman's part was carefully considered. The highest recognition was accorded her, thus giving ample testimony to the world's recognition of woman's participation in the real and true expansion of our great nation.

For the first time in the history of American expositions, the Louisiana Purchase Exposition is outlined upon the basis of competition entirely without regard to race, color, or sex. So that within its plan and scope there is designed no separate display of the work of woman, no segregation of her productions in any line of endeavor whatsoever. But in art, industry, science, or the simplest handicraft, her work is accorded equal recognition with that of man, and is exhibited directly in competition.

In accordance with the broad plan of the Exposition itself, a special act of Congress set the stamp of government approval upon the enterprise, and provided that a Board of Lady Managers should be appointed by the National World's Fair Commission of such number and to perform such duties as the commission and the Exposition Company should prescribe. While the act further provided that the Board of Lady Managers should exercise general supervisory control over all that pertains to the participation of women in the Exposition, the highest prerogative accorded was in prescribing that the Board should appoint one member of every jury of awards that is to judge of work produced in whole or in part by woman's effort. This high privilege delegated to it by act of government has made it possible for the Board of Lady Managers to accord recognition to women of ability and achievement in every line of endeavor where woman's work has sought exhibition in the various departments of the Louisiana Purchase Exposition.

In order that this "greatest Exposition" should be equally great in all its parts, it was early designed that the social features in connection with it should be duly emphasized and made in every way distinctive. Thus it came about that the Board of Lady Managers found themselves called upon to perform the altogether delightful and charming task of acting as hostesses of the nation. In the building set apart for their use by the Exposition Company, and which is fitted up with salons, banquet halls, tea rooms, and administrative offices, the Board of Lady Managers will be at home to the women of the world, and expect throughout the period of the Exposition to entertain distinguished visitors from every country on the globe. Among the large entertainments already planned will be a reception in honor of Mrs. David R. Francis, wife of the president of the Exposition Company; a luncheon to the delegates of the General Federation of Women's Clubs; and receptions to the Daughters of the American Revolution, the Colonial Dames, the Daughters of the Confederacy, and so on. Other functions will be planned to cover the entire World's Fair period.

The money items that make up a part of the Board's history are not without interest. A statement rendered to the Board on March 1, 1904, showed that the Exposition Company, out of the original $5,000,000 appropriated by the government for exposition purposes, had, as disbursers of the fund, paid out on behalf of the Board of Lady Managers during the two years since its appointment the sum of $16,856 21. As the opening of the Exposition approached, the Board of Lady Managers found that in order successfully to carry out the purposes for which it has been created, a fund entirely at its disposal was a necessary part of its existence. In recognition of this necessity, the general government by special act of Congress passed February 11, 1904, provided that of the $4,600,000 loaned to the Exposition Company to complete the great enterprise it was promoting, $100,000 should be set apart to the Board of Lady Managers, to be expended in such sums and for such purposes as it desired in the performance of its duties.

The entire membership of the Board is as follows: Mrs. Daniel Manning, of New York, president; Mrs. Edward L. Buchwalter, of Ohio, first vice-president; Mrs. William H. Coleman, of Indiana, treasurer; Miss Lavinia H. Egan, of Louisiana, secretary; Miss Helen Gould, of New York; Mrs. John M. Holcombe, of Connecticut; Miss Anna L. Dawes, of Massachusetts; Mrs. Fannie L. Porter, of Georgia; Mrs. Frederick M. Hanger, of Arkansas; Mrs. W. E. Andrews, of Nebraska; Mrs. Helen Boice-Hunsicker, of Pennsylvania; Mrs. Richard W. Knott, of Kentucky; Mrs. M. H. De Young, of California; Mrs. Belle L. Everest, of Kansas; Mrs. Marcus A. Daly, of Montana; Mrs. Louis D. Frost, of Minnesota; Mrs. Finis P. Ernest, of Colorado; Mrs. Mary Phelps Montgomery, of Oregon; Mrs. John Miller Horton, of Buffalo; Mrs. Carl Von Mayhoff, of Virginia; Mrs. James Edmund Sullivan, of Rhode Island, and Mrs. Annie McLean Moores, of Texas.

SPECIAL DAYS AND CEREMONIES

BY COLONEL EDWARD C. CULP

Secretary Committee on Ceremonies

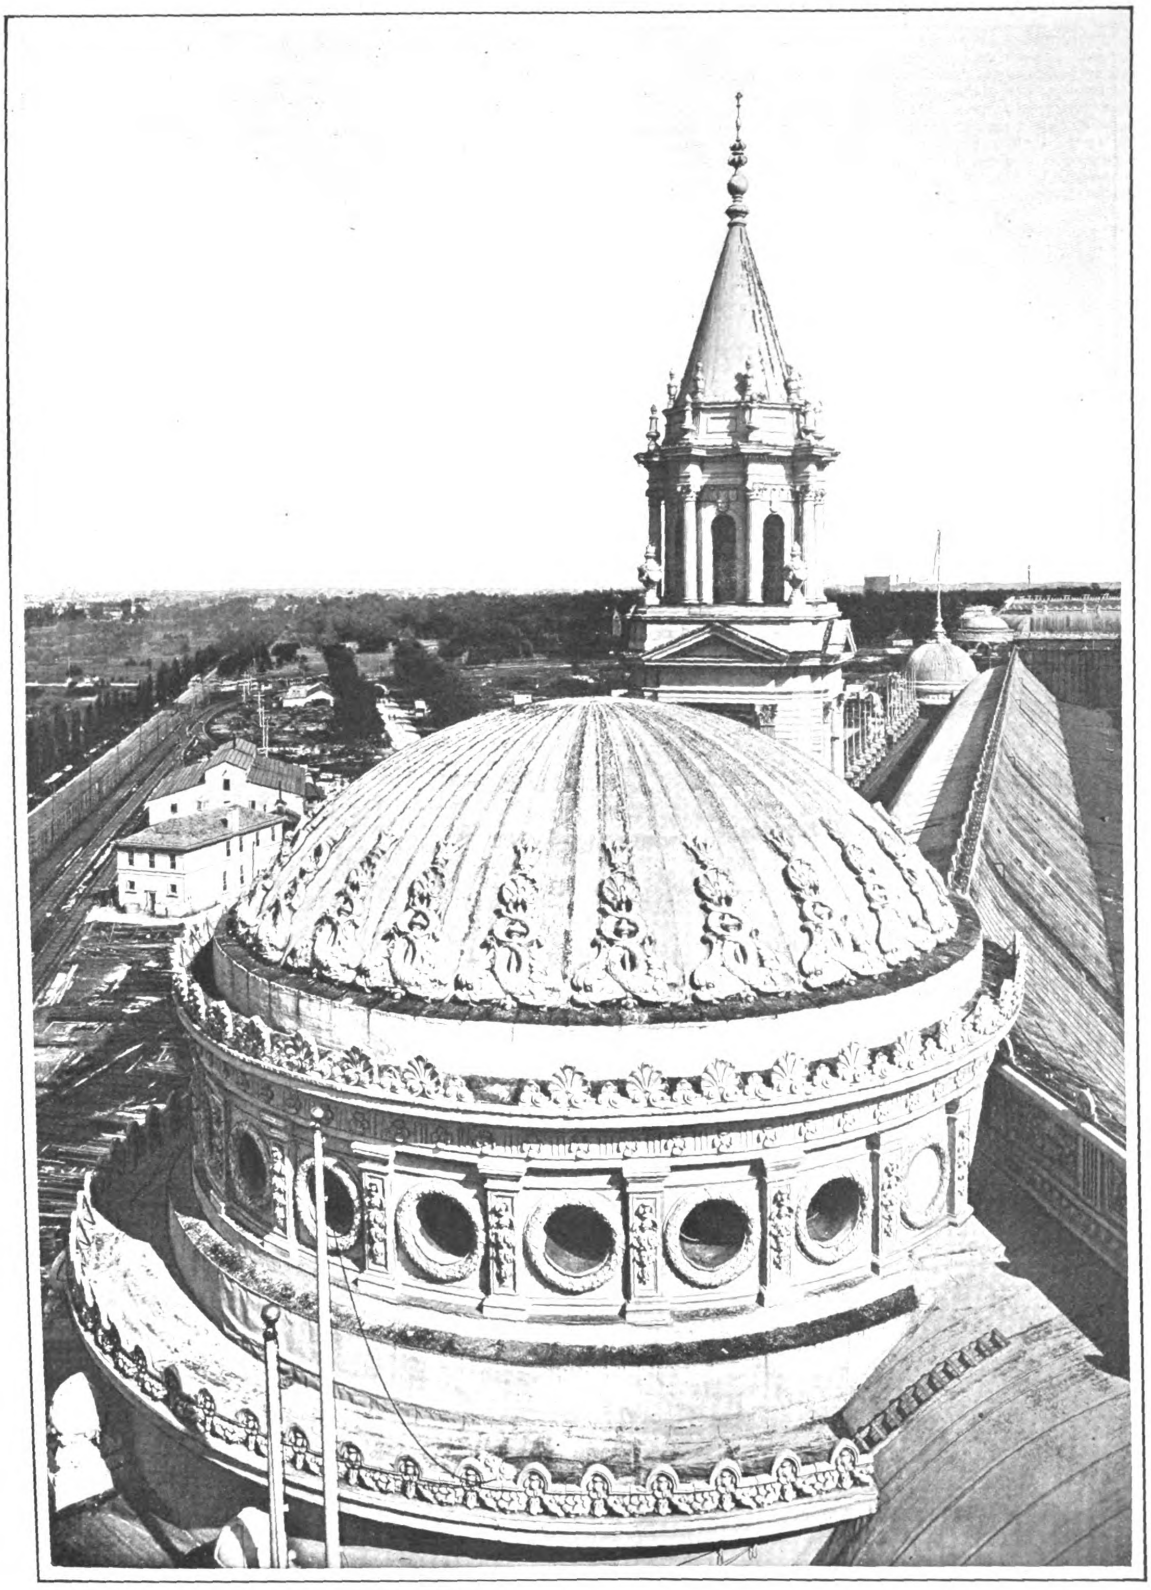
IT was one of the first ideas of the Committee on Ceremonies that unusual opportunities to examine the exhibits at the Fair, especially those of the government, should be afforded to military organizations, military schools, and such semi-military bodies as would at once, by reason of drill and discipline, be available for military defence. Invitations were extended to them, the cadet schools being allowed to visit the Fair under charge of their teachers. The acceptances have been so prompt, coming from the leading schools and military organizations of the United States, that seven sets of barracks, each accommodating 320 men, are already taken up from May 25 to September 15, while there are many assignments for October and November. A large number are awaiting the action of the committee in arranging assignments. These organizations are coming from Maine to Oregon, from the Gulf to the Northern lakes.

Invitations were also sent to fraternal associations to hold their annual conventions on the Exposition grounds during the Exposition, and several auditoriums were provided free of charge for such organizations. States were invited to name "special days" commemorating some important anniversary. Congresses, representing the most advanced thought of the world, were invited, and religious societies and various associations have accepted the invitations, the participants coming from all parts of the world.

At the World's Columbian Exposition there were one hundred and nineteen "special days," three of them coming in May and eight in June. At the St. Louis Universal Exposition we have already assigned forty-seven for May and ninety-seven for June. Knowing the congestion that would be unavoidable if all events were postponed until the last three months of the Exposition, the Committee on Ceremonies crowded special events into May, June, and July as far as possible, and reported them to the executive committee, coupled with a statement that early railroad rates must be secured. The railway passenger agents visited the Exposition, examined the buildings and extent of the grounds, and made a particular study of the assignment of dates in the early days of the Exposition. They recognized the necessity for immediate decision, and the result is that two months before the opening of the Exposition the management was able to announce a railroad rate unparalleled in expositions, commencing three days before the opening of the gates.

The "special days" assigned up to March 11 are classified as follows: Congresses, 18; associations and conventions, 67; Olympic games, 63; special events, 65; State days, 43; patriotic days and family reunions, 24; municipalities, 6; foreign and international, 8; fraternal associations, 65; military assignments, 51. Many of these congresses, associations, societies, and Olympic games cover a period of one week, and several necessarily are on the same day, occupying all the halls we have. While we have assignments that at first glance appear to cover four hundred and ten days, in all they really cover one thousand and sixty-eight days. This does not include any of the great musical events, which cover the entire period of the Exposition.

ATHLETICS AND OLYMPIC GAMES



BY JAMES E. SULLIVAN

Chief of the Department of Physical Culture

A COMPREHENSIVE schedule of athletic events has been arranged for the Exposition. The games are scheduled to take place in the Stadium, which is situated in the northwest part of the Exposition grounds, and which will have a seating capacity of 27,000 spectators. The Olympic games, which are held only once every four years, will take place for the first time in America during the Fair. Other international contests such as rowing, golf, tennis, baseball, bowling on the green, roque, archery, cricket, and almost every sport known to Americans will be decided in the city of St. Louis during the present year. Champions from all over the country and from England, France, Germany, Sweden, Denmark, Belgium, Greece, Australia, etc., will be seen in the different contests.

The Olympic games, a revival of the contests of ancient Greece,

THE DOME OF THE PALACE OF VARIED INDUSTRIES

The view is looking east toward the city, and shows the dome, the tower, and part of the roof-line of the building. The Palace of Varied Industries is one of the two buildings which have been assigned to the exhibits of the Department of Manufactures. It is 1200 feet long and 525 feet wide, and cost, together with the Palace of Manufactures, $1,500,000

are intended to last one week. The first of these modern Olympiads was held in Athens in 1896. The second was held in Paris in 1900, where American athletes carried off the lion's share of honors. The games have received the official endorsement of all governing bodies in this country, and their earnest support is assured. In rowing, the National Association of Amateur Oarsmen, the strongest organization of its kind in the world and the governing body of that sport in America, has decided to hold its regatta at St. Louis during the Fair. The regatta will take place at Creve Cœur Lake, and nearly every rowing organization of note will be represented. Crews from foreign countries are already making preparations to take part. The Young Men's Christian Association will have an association week in conjunction with the Olympic games. It is particularly worthy of note that the governing bodies of nearly all branches of athletics have endorsed the games to be held in St. Louis during the Exposition.

A feature of the physical-training exhibit will be the Olympic lecture course, which will be held in the gymnasium erected on the grounds, and which is under the management of the Physical Culture Department. The lecture courses will take place during the month of August. Arrangements have been made for those who are interested in the movement to hold conventions in the gymnasium. In the Olympic course the lectures will be a complete history of all phases of the subject.

AMUSEMENT CONCESSIONS

BY NORRIS B. GREGG

Director of Concessions and Admissions

STRIVING for leadership in every feature, the Louisiana Purchase Exposition has made its "concession" street an integral part of the greatest World's Fair, and on The Pike the same consideration has been given to amusement as to the more serious subjects in the large exhibit palaces. The Pike is a touch of pantomime and mimicry in the midst of art and realism, and here cosmopolitan life is to be found in its jolliest mood.

On both sides of a street one mile long and on one side of an irregular avenue that extends into the hilly woodland are these pavilions of amusement where the funmakers and illusionists of the world have a store of whole-souled refreshment. Nor is it all idle pastime, for The Pike affords the student of human nature opportunity for a closer observance of the foreigners and their customs than is permitted elsewhere. On the Streets of Cairo or within the Walls of Jerusalem one may eat at their tables and ride their camels, and in Chinese and Japanese villages one may eat Oriental food and hear the babel of tongues.

Among the peaks of the Tyrolean Alps will be found a pleasant retreat in warm weather. Equally refreshing will be an imaginary trip, with icebergs and polar bears for companions, from New York to the North Pole.

Under and Over the Sea—a journey by submarine boat and return by air-ship—is one of The Pike's sensations, and quite as thrilling will be a ride on the Observation Wheel, which rises to a height of 250 feet and gives the passenger a view of the entire Exposition picture.

Visitors are whizzed into the noisy darkness of a magic whirlpool. Another remarkable experience is a ride of many miles in a railroad-train which, however great the deception, does not leave the building.

Creation is a pleasing illusion that has an instructive as well as spectacular value. The visitor is taken back through all the ages to the beginning of time.

Famous battles are fought over again in the great Battle Abbey, where painted canvas has been made to resemble famous scenes and men wage warfare as they did in history.

Night View of the Main Entrance of the Palace of Electricity

Wild animals roam at large among the natural surroundings in the greatest zoological exhibit ever seen in this country, and between their lairs and the audience there is no bar or screen to obstruct the vision, yet the visitor is in no peril. On The Pike children may ride upon the backs of great turtles, guiding them with bridle and bit as if they were horses.

Exhibitions of fire-fighting, which will include the "burning" of a four-story building, will be given by expert firemen detailed from the departments of the large cities. They have their trained horses and the latest equipment. In connection with this is a museum of apparatus used in olden-times, one piece being a fire-pump once used by Benedict Arnold.

Life of the cliff-dwellers will be shown in a bit of New Mexico

scenery transported to the Exposition. The South Sea Islanders have a village near by in which natives will typify the habits and customs of the race. A Moorish street and scenes from Seville are some of the other attractions.

Ireland's industrial exhibit is on The Pike, and here have been gathered many specimens of Irish skill as well as attractions of historic and romantic value. The famous House of Parliament of Dublin is at the entrance to the Irish quarter. Old St. Louis, as it existed at the time of the Louisiana Purchase, one hundred years ago, has been reproduced with many quaint bits of scenery.

Parisian scenes, a street from Constantinople, and people of Asia are also on The Pike. There is also a scene from the famous Ozark Mountains in southwest Missouri, and a part of the Siberian Railway is reproduced with its Russian environments.

Costumes of all ages, with the various styles of dressing the hair from the earliest times are shown. There is also a naval exhibit, where miniature battle-ships duplicate famous battles at sea.

Not belonging wholly to The Pike, but one of the concessions, is "Hardscrable," the log cabin built near St. Louis by General U. S. Grant. It will be a centre of attraction for all Americans, for it was in this modest home that the former President lived before winning military distinction.

Life in the South as it was before the civil war is shown in "The Old Plantation." In the "Streets of Seville" will be depicted life in Spain. These, with the Russian village, the Moorish palace, the submarine divers, are some of the attractions on The Pike which possess amusement or educational features of unquestioned value.

PLANS FOR MUSIC

BY GEORGE D. MARKHAM

Chief of the Bureau of Music

WHEN the Exposition directors had to face the expenditure of a large amount of money in the Department of Music they turned to the men who had been active in supporting and directing the St. Louis Choral Symphony Society through many years. Messrs. Schroers, Hedges, Tebbitts, and Markham were requested to prepare a plan for the music at the World's Fair. They studied the experience of Chicago and Paris, and concluded that the greater part of the Exposition's expenditure should be not for classic concerts, but for music which the mass of the people would enjoy.

The report of the committee recommended that classic concerts should be limited to such number as the public would attend, and that the open-air music should be unlimited. These were the two most striking features in the decision. In addition, the Exposition Company believes that well-designed band and choral contests will secure better standards of brass-band work and of choral singing throughout the nation. They believe that they must choose between having very fine music, which only a comparatively few people would hear, and music of a more "popular" order.

After more than a year of extensive correspondence, a European tour by Mr. George W. Stewart (manager of the Bureau of Music), and several American journeys by both Mr. Stewart and Mr. E. R. Kroeger (Master of Programmes), the actual contracts were closed with but little change from the original plans.

The indoor concerts will take place in Festival Hall, a beautiful structure of the Renaissance order. In it will be installed the largest organ in the world. Eminent organists, among them M. Guilmant, will give daily recitals. Mr. Charles Galloway, of St. Louis, is the official organist.

The orchestra for the Exposition is made up of fifty men from the St. Louis Choral Symphony Society and thirty men from other cities. Mr. Alfred Ernst will be the official conductor. Mr. Max Bendix, who played so long with Thomas, will be concert-master. One concert will be given each week with a single vocal soloist.

Two distinguished European conductors of "popular music" will direct the orchestra in daily concerts in the Tyrolean Alps. These are Josef Hellmesberger and Karl Komzak, of Vienna.

The chorus work is to be done by a great local chorus. Outside choruses of note have asked to come at their own expense for the honor of singing at the Exposition. The choral contests will occur in July, and prizes aggregating $20,000 have been offered. The band contests will occur in September, and the prizes amount to $30,000. These contests have already excited great interest throughout the country.

Military bands, foreign and American, have been engaged to give daily concerts. The *Garde Republicaine* band comes from France. This band is sent as a distinguished mark of favor from the French government. The Grenadier Guards' Band of England comes for an engagement of six weeks, by special permission of King Edward. Von Blon's famous Berlin band will be here eight weeks. Among the United States bands are Sousa's, Innes's Boston, etc. There will be a Mexican band and one from the Philippines.

GREAT BRITAIN AT THE EXPOSITION

BY COLONEL C. M. WATSON

Commissioner-General for Great Britain and Secretary to the Royal Commission

THE Royal Commission, of which H. R. H. the Prince of Wales is president, was appointed on the 23d of April, 1903. A sum of £150,000 ($750,000) was granted to meet the expenses of organizing the British exhibits and of providing a national pavilion. This pavilion, which is situated near the Administration Building, is a reproduction of a well-known example of the work of Sir Christopher Wren—the orangery at Kensington Palace which was built by order of Queen Anne early in the eighteenth century. The Royal Pavilion, which will serve as the headquarters of the Royal Commission during the period of the exhibition, is surrounded by a garden laid out in the style of the Queen Anne period, where will be shown plants and flowers contributed by British horticultural firms.

His Majesty King Edward has been graciously pleased to lend for exhibition a selection from the Jubilee presents of the late Queen Victoria, and these will be arranged in the Library Building of Washington University. The principal British exhibits in the different departments of the exhibition will be as follows:

In the Department of Education there will be a thoroughly representative collection exhibit to which most of the leading educational establishments in England, Wales, Scotland, and Ireland have contributed. It will include universities, primary and secondary schools, and schools of art and technical direction. It will probably be the most complete educational collection from the United Kingdom that has been shown at an international exhibition outside of Great Britain.

In the Department of Art the British section will contain a fine collection of paintings (oil and water color) by the best English, Scottish, and Irish artists, including members of all the different art societies. This collection has been made with great care by the Fine Art Committee of the Royal Commission, and is certainly equal, if not superior, to that at the Chicago Exhibition of 1893. There will also be shown a large number of drawings, etchings, engravings, and architectural designs and some excellent specimens of the smaller class of sculpture. Besides the exhibit of fine art, the British galleries will contain a very interesting collection of objects in the group of applied art.

In the Department of Liberal Arts, in the British section, will be included a number of collection exhibits of considerable importance, each of which has been organized by a special committee. Among these are the following: Books and engravings; pictorial, scientific, and historical photography; geography, topography, and exploration; civil engineering; instruments of precision; chemical and pharmaceutical arts, etc. The chemical exhibit will be very extensive, and in connection with it there will be demonstrations of Professor Dewar's researches with respect to the liquefaction of hydrogen and other gases.

In the Department of Manufactures the space allotted to Great Britain is in the Varied Industries Building. The most important exhibits will be in the groups of ceramics, furniture, lace and embroidery, and textile machinery. The collection exhibit of British and Irish lace will be specially worthy of notice.

There will be few British exhibits in the Department of Machinery, as the market in the United States is much restricted by the high custom tariff, which excludes foreign machinery to a considerable extent. In the Palace of Electricity there will be a good display of the higher classes of electrical instruments by some of the best British makers. The London General Post-office will also make an important contribution.

In the Department of Transportation the principal British steamship companies will make a considerable display of ship models. Among the ship models are the *Albion* and the *Ophir*, lent by H. R. H. the Prince of Wales. The *Ophir* was the vessel in which the Prince circumnavigated the world. Some of the larger railway companies will exhibit, and there will be an interesting display illustrative of travelling in Egypt and of a travelling camp in the Holy Land.

The space allotted to Great Britain in the Agricultural Building is small, but there will be a considerable exhibit of chocolate, baking, and confectionery machinery, and collections from South Africa and the gold coast. As already mentioned, the principal horticultural exhibits will be in the garden of the British Royal Pavilion.

In the Department of Fish and Game the principal exhibit will be that of the Marine Biological Association, and there will be a good collection of British sporting guns by some of the leading manufacturers.

The British exhibit in the Department of Mines will illustrate the geology and mineral resources of Great Britain and Ireland.

The collection exhibit of social economy, which will be shown in the Palace of Education, will contain much useful information regarding social conditions in the United Kingdom.

Speaking generally, the British section of the St. Louis Exhibition, though it necessarily cannot be regarded as a complete display of British industries, will, it is believed, be representative and interesting.

GERMANY AT THE FAIR

BY DR. THEODOR LEWALD

Imperial German Commissioner-General

WHEN a nation accepts an invitation to participate in a foreign universal exposition it may be actuated by commercial reasons or by the desire, in displaying a picture of its intellectual, scientific, and artistic labor, to give to the country which extends the invitation a proof of its neighborly feelings in contributing its share towards the accomplishment of the desired aim.

This latter feeling has prompted the German Empire to accept the invitation of the United States to take part in the universal exposition. If the decision had been left with the German Chambers of Commerce and the large commercial corporations only, they would have declared, "The commercial ties between Germany and the United States are so strong and ever-increasing that a fostering of them by means of the Exposition is not required." But the German people and, in the first instance, the German Emperor, wished to be represented.

Thus the German exhibit gives widest scope to art, science, and education. As commercial purposes are only a second consideration, one will not be surprised to see that some of the most important industries to which is due a great deal of Germany's position as one of the leading powers in the commercial world, are not represented at all; for example, the industry of electricity, the industry of steel and iron, and paper manufacture. The chemical industry is represented only as a scientific exhibit of the universities.

The centre of the German section will be the German Government Building, the "Deutsches Haus." It is situated in the heart of the Exposition, overlooking the cascades and gardens. The architectural idea is the Emperor's own: his Majesty chose the Charlottenburg Castle for a model. This castle represents a period which marks the development of Germany—the founding of Prussia's kingdom. Costly furniture and silverware, for centuries in the possession of the royal family, will decorate its rooms. The various styles of furniture which have been dominant under the various Kings of Prussia will be found in the building.

The exhibit of arts and crafts, comprising an area of 80,000 square feet, is the most important and most elaborate which Germany ever had at any of the domestic and international expositions. All the leading men which Germany has in this field among the younger generation will be here. Berlin is sending Bruno Moehring and Professor Grenander; Munich Professor Duelfer; Dresden Professor Kreis; Stuttgart Professor Pankok; Karlsruhe Professors Hoffacker, Laeuger, and Billig; Darmstadt Professor Olbrich—just to mention some of the most prominent men who, supported by large government and state funds, have been hard at work for more than a year in preparing exhibits to show the progress of decorative art in Germany.

The fine arts exhibit will give a picture of German art in the last thirty years, and will bring a large number of Germany's foremost artists to the notice of the American public.

In accordance with the dominant idea of the Exposition, special consideration has been given to the exhibit of German universities and technical high schools, and a splendid display of German educational methods will be shown.

Four laboratories will contain the most complete collection of scientific instruments that has ever been sent out of Germany. The most prominent German scientists, men like Professor Waldeyer, will be at the head of the medical, botanical, and biological exhibits.

In the Liberal Arts Building—Germany's exhibit here comprises an area of 65,000 square feet—will be found the exhibit of the German printers, models and plans of large engineering works, a large exhibit of hygienic institutions, displayed by the Imperial Board of Health, and finally the exhibits of certain manufactures, such as cutlery, laces, silks, perfumery.

The Transportation Building will contain the exhibits of the large German steamship companies, locomotive exhibits, and the welfare institutions of the government and of the various railroads. Special features will be the exhibit of the "highest ascended" air-ship, the fastest automobile, and plans of the two electric-cars which have reached a speed of 130 miles an hour.

The German section would be incomplete were it not to give an exhibit in the field of agriculture, of wine-growing, beer-brewing, and of food in general.

JAPAN'S EXHIBIT

BY SEIICHI TEGIMA

Imperial Japanese Commissioner-General

THE Japanese exhibits at the Louisiana Purchase Exposition are divided into two classes—exhibits by the government and by the people.

The Imperial Commission undertakes the installation and display of the exhibits from the government in the various palaces, and being responsible for their custody, provides an adequate number of guards to look after them. The exhibits relating to education are, however, installed apart from the rest of the government exhibits in the Palace of Education, and are in charge of a special official from the Department of Education, Mr. Mosuke Matsumura, a secretary of the department. The exhibits from the Imperial Institute for Infectious Diseases and those from the Imperial Serum Institute are also in charge of a special envoy,

Correspondence

A REPLY FROM THOMAS NELSON PAGE

SANTA BARBARA, CAL., *April 1, 1904.*

To the Editor of Harper's Weekly:

SIR,—I believe that you will wish to correct an error which you have published. An editorial in your issue of March 26, on "Some Recent Views of the Negro Problem," asserts that in my first paper on "The Negro: The Southerners' Problem," published in the March number of *McClure's Magazine*, I state to the whites of the North that "the solution of the negro problem is no concern of theirs," and declares that you "hold the opposite opinion."

As I "hold the opposite opinion" very strongly myself, I am at a loss to know how you got that idea, unless it were from a misapprehension of the title of the article in question. It is true that I set forth plainly my views that the work of ignorant and cock-sure doctrinaires has caused much trouble, and further that Southerners know vastly more about the negro and the negro problem than Northerners can know. It is also true that I maintained that the Southerners, if left to settle the problem, would do so in time on economic lines, the only lines on which it could ever be settled. For such is my firm conviction. But the basis of my whole discussion is the necessity that "all sensible men"—both at the North and at the South—should get together and should endeavor as far as possible to dispel all preconceived theories and look at the subject frankly and rationally.

I hold that the Southern whites are all that stand between the Northern whites and this problem which we are all trying to solve. I believe that "all white men in this country who have at heart the maintenance and development of civilization, are jointly interested in effecting such a workable and permanent adjustment of the relations between the colored people and the whites as shall assure to the blacks opportunities of industrial and educational progress and of gradual elevation in the social scale, while safeguarding the political and social ascendency of the white race. Only by cordial cooperation on the part of whites, North and South, will the negro problem ever be solved, complicated as it is by constitutional requirements of doubtful wisdom and expediency."

This quotation is from your paper, but it might well have come from mine, so fully does it accord with the sense and purpose of that paper.

"So long as the two sections are divided upon it (the truth about the negro problem), the question will never be settled. As soon as they unite in one view it will settle itself on the only sound foundation, that of unimpeachable economic truth."

This quotation is from my second paper on the same subject, in the April number of *McClure's Magazine*, and this is the gist of my whole discussion of the subject.

I am, sir,

THOMAS NELSON PAGE.

[We said last week that the only thing we found to criticise in Mr. Page's useful papers was the point mentioned above. It seems now that Mr. Page and the WEEKLY are agreed in this matter on all points.—EDITOR.]

WHAT AILS THESE MICHIGAN VOTERS?

WELLS, DELTA CO., MICH., *April 4, 1904.*

To the Editor of Harper's Weekly:

SIR,—In the township where I live there are 500 voters. At the last general election 23 votes were cast. I have never heard of any pressure being brought to bear to compel the other 471 voters to cast their ballots. Why, then, should the writer of the article "Men's Opinion of Women," in your issue of March 26, use the words "to force the suffrage on all women" when speaking of granting to women that privilege which, so far as I can see, is their right? Would they not be as free to vote or abstain from voting as the masculine members of the community?

When the franchise was bestowed upon the negroes, I do not remember hearing of any claim being made that they would "improve the electorate." Is it for the sake of "improving the electorate" that ignorant emigrants are granted the ballot long before they can talk the language of their adopted country? If "improving the electorate" has not been the reason for granting the suffrage in these cases, why should women be denied the ballot because it cannot be positively proved that their votes would benefit the country? If, as has been claimed in our country's past, and is still claimed for classes of our population, the franchise is an inherent *right*, what bearing do all these other matters have upon the question? Prove to me that the right of self-government is not woman's as well as man's, and you will have convinced me that we are wrong in our plea for the ballot. Until you have made that plain, however, all other arguments are beside the mark.

In your issue of April 2, you suggest that woman, having the voting privilege where school matters are concerned, should be content therewith. If I remember rightly, our colonial forefathers had many more such privileges, and yet were not content. The local government was entirely in their own hands, and each colony had its elected legislative body. Yet the colonies revolted, claiming that "Taxation without representation is tyranny."

Wherein is woman's case to-day any more endurable than that of her forefathers of revolutionary fame? Would she not be false to the blood that runs in her veins if she were to be content with her present anomalous condition? When it is remembered that girls inherit from fathers as well as from mothers, the cry of the woman of to-day for justice, for representation, is more easily understood. Not until the American father loses all his love for freedom and self-government will the American daughter be content to be classed with those incompetent to exercise the rights of a free-born American citizen.

I am, sir,

ROSE WOOD-ALLEN CHAPMAN.

WORSE THAN THE SIXTEENTH CENTURY—A REPLY

NEW YORK, N. Y., *April 4, 1904.*

To the Editor of Harper's Weekly:

SIR,—I was greatly astonished at the article appearing in your esteemed journal of March 26, entitled, "Worse than the Sixteenth Century."

You are aware of the high esteem in which I hold you; in consequence I deeply regret to see that you were led into error, or rather that said article escaped your attention. It is hard for me to believe that it was your intention to allow the insertion in your widely read publication of statements so far from the truth.

In this article, Belgians are accused of wholesale murder, maiming, and ingenious torturing, mainly on the strength of assertions by Mr. Casement.

However, this is entirely untrue and maliciously false.

Belgians are humane, playing a conspicuous part in the world of letters, science, and art, and their course in the Congo is one of mild, wise, and prudent civilization. Owing to their refined feelings, they are incapable of committing such crimes.

The accusations of the English consul, Mr. Casement, are the *same* as those of the Englishman, Captain Burrows, the author of a book entitled, *The Curse of Central Africa*, of which mention is made in the above article.

This Captain Burrows, for these very same charges branded as false by the *judges of a London court*, has been condemned by these judges to pay $2500 to the Belgian, Captain Henry de Keyser; also $250 each to the Belgian Captain Chalfin, and the Belgian official Duerleenick, for *libel* in this matter.

Concerning these judgments, I refer you to articles of the New York *Herald* of Sunday, March 27, entitled,

1. Lies about the Congo nailed by a British jury.

2. Damages given for Congo libel, the accusations of the English consul, Mr. Casement, appearing to be substantially the same as those of the English Captain Burrows, *condemned by English judges*, it is evident, logically, that the English consul, Mr. Casement, also is morally condemned, and that his accusations are now and always must be branded as calumnies as flagrant as those of the English captain.

In view of the foregoing, I make bold to say that such attacks against the independent State of the Congo, the Belgians, and our beloved King, as have appeared in the article in your paper of March 26, are greatly to be regretted.

Having full confidence in your courtesy and honesty of purpose, I hope that you will kindly insert this refutation in your next number, giving it the title, "Worse than the Sixteenth Century—Reply."

Thanking you beforehand, I am, sir,

HENRY BAYER.

[We have no exclusive knowledge of Congo atrocities, but we observe that a missionary, whose refined feelings ought to make him incapable of wholesale lying, bears testimony in these parts very like that of Mr. Casement. There is a great deal of smoke in the Congo region. Our impression is that there is some warrant for it.—EDITOR.]

"A NEGLECTED QUOTATION"

NEW YORK, *April 6, 1904.*

To the Editor of Harper's Weekly:

SIR.—In your issue of the 26th ult. we notice the following item: "Christian Scientists are fond of publishing excerpts from well-known writings which seem in harmony with their views. In so doing they have neglected the passage in *Through the Looking-Glass* in which the White Queen says that with practice she is 'able to believe six impossible things before breakfast.'"

Christian Science has nothing to do with believing "impossible things," and consequently the White Queen's remarkable announcement does not fit the case. Mrs. Eddy's philosophy enables one to realize that nothing that is good is impossible, and that which is evil should not be believed.

As to the use of quotations, it is worthy of note that many of the greatest thinkers and philosophers in all ages have proclaimed fragments of Truth, which naturally find their place in Christian Science. Mrs. Eddy was the first, however, to formulate a system of divine metaphysics, capable of demonstration in the healing of sickness and sin.

The debt of gratitude due to this noble woman for her self-sacrifice and devotion to the interests of humanity should be recognized by us all, and those who do not understand the subject of Christian Science can at least maintain an attitude of respectful silence. I am, sir,

RICHARD P. VERRALL,
Christian Science Publication Committee.

[But if the attitude of respectful silence which Mr. Verrall recommends was maintained, what would befall the occupation of the Christian Science Publication Committee? Surely the committee's illuminating denials and rebukes are cheaply gained at the cost of such items as Mr. Verrall censures.—EDITOR.]

Japan's Exhibit

(Continued from page 688.)

Dr. Kannosuke Miyajima, an expert in the institutes referred to.

The exhibits from the people or the general exhibits are, with certain exceptions, mentioned below, to be displayed and handled by the Japan Exhibit Association. The general function of the association is briefly as follows:

The association was organized in Japan by the leading business men in the various important commercial and industrial centres of Japan, under the auspices of the Imperial Commission. It receives a certain amount of subsidy for the shipping, installing, displaying, and disposing of the various exhibits consigned to the association by the general public. The officials of the association, who are responsible for the faithful performance of the duties assigned to it, consist of one chairman, four members of the standing committee, and five directors. Although the general exhibits are in charge of the Japan Exhibit Association, yet certain exhibits are to be installed by individual exhibitors.

For example: With the view of introducing the special productions of Kioto and illustrating the beautiful scenery of its surroundings to the visitors of the World's Fair, the Kioto Chamber of Commerce will make a special Japanese exhibit in the Palace of Varied Industries.

To show the actual condition of communication and transportation in Japan, the Osaka Chamber of Commerce, with the approval of the leading men in this line of business throughout the country, will exhibit in the Palace of Transportation an interesting and instructive diagram illustrating all the important features attending the distribution of the different staple articles of production of each important town or city of Japan; the present state of communication and transportation of Japan itself, and that of Japan with its neighboring countries.

The Japan Red Cross Society will make exhibits showing the achievements of its work since its establishment, and the exhibits of the Nippon Yusen Kwaisha (Japan Mail Steamship Company) in the Palace of Transportation will give an idea of the progress in the building and equipment of Japanese liners and steamships.

Some of the other interesting exhibits by Japanese companies and individuals are as follows: Articles and furnitures for the decoration of rooms; silk textile goods; Japanese photographs and photographic apparatus; fans and the actual process of making them; Japanese "shoyu"; tea; mining exhibits both from the government and the Imperial Institute at Tokyo.

The exhibits from Formosa, comprising the special productions of the various places of Formosa, will be displayed in a special section assigned them in the Palace of Agriculture.

Besides exhibiting in the various palaces of exhibits, several associations of business men of Japan will have special buildings constructed in the Japanese government site of the Exposition grounds, the main features of which will be the Welcome Society for the Japanese Visitors to the St. Louis World's Fair, the Bazar Association, and the Tea House.

The Welcome Society has been established by a certain number of influential business men of Japan, under the patronage of the Imperial Commission, to give information to the Japanese visitors regarding their steamship and railroad travelling and hotel accommodations, to look after their comfort and pleasure, and to reconstruct a Bulla vue Pavilion in the Japanese garden for the benefit of all visitors.

The Bazar Association was organized under the patronage and the control of the Imperial Commission, with the object of constructing and running a bazar in the government site of the Exposition, where articles like those exhibited in the main palaces of the Exposition are to be sold.

The Tea House will be constructed in the Japanese garden under the patronage of the Imperial Commission. It will be in all respects like the tea houses of Japan, and will give the American public a new idea of one of Japan's most important staple products.

Bringing the Dead to Life

An English scientific journal recalls some remarkable cases of resuscitation in discussing the actual danger of premature burial. There is on record the case of a man who was capsized from a sailboat and sank with weights on top of him. With the exception of his left arm he was entirely submerged for almost fifteen minutes; but was revived, though with considerable difficulty, and eventually recovered. Examples of recovery after periods of submersion lasting for twenty minutes, one hour, and even two hours, are recorded. Another interesting case is that of a criminal who was hanged, being suspended for twenty minutes. His death was certified to, and the body removed for post-mortem examination; but while the surgeons were making their preparations for work he suddenly sat up, fully alive, although he afterward died of pulmonary congestion. Another instance relates to the surprising experience of a Russian general who was shot through the head and buried by his orderly, who had satisfied himself that the officer was dead. Two hours afterwards the general reported himself to the Emperor; and it is recorded that he lived for many years, and that he served, incidentally, as a pall-bearer to the orderly who had buried him. Again, there is the case of a man who took 120 grains of chloral with apparently fatal results. His respiration had ceased entirely, the sounds of the heart were imperceptible, and there was no pulse at the wrist. After having been in this condition for some hours he was successfully revived and made a permanent recovery.

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

IF YOUR PHYSICIAN prescribes a milk diet, for its easy digestibility, it will be well to use BORDEN'S PEERLESS BRAND EVAPORATED CREAM to get a rich, deliciously flavored milk food, perfectly sterilized according to latest sanitary methods. For general household uses. Prepared by Borden's Condensed Milk Co.—[*Adv.*]

KNOWING physicians prescribe Abbott's Angostura Bitters to tone up the system—they know Abbott's will meet every requirement. All druggists.—[*Adv.*]

THOSE who cough at night may secure rest by taking PISO'S CURE FOR CONSUMPTION.—[*Adv.*]

USE BROWN'S Camphorated Saponaceous DENTI FRICE for the TEETH. 25 cents a jar.—[*Adv.*]

ADVERTISEMENTS.

Pears'

Which would you rather have, if you could have your choice, transparent skin or perfect features?

All the world would choose one way; and you can have it measurably.

If you use Pears' Soap and live wholesomely otherwise, you will have the best complexion Nature has for you.

Sold all over the world.

THE TRUANTS

BY A·E·W·MASON

SYNOPSIS OF CHAPTERS

In the opening chapter Pamela Mardale is introduced to the reader as a young society woman of London, beautiful and of rare personal charm. Into her early life has come a mysterious influence which dominates and directs her whole career. What this strange influence is only two of her friends suspect—a young schoolmaster who knew her as a child at Roquebrune, and Alan Warrisden, who is in love with her, and who, though his proposal of marriage is refused, determines to win her. Late one night at a ball, Pamela and Warrisden, while seated on a balcony, observe a young couple leaving the opposite house. They are Tony and Millicent Stretton, who live in a gloomy home presided over by the rich but unjust father of the young man. They are in reality kept prisoners by the whims of the tyrannical old man, and it is only by playing truant and going out by stealth late at night that they are able to enter at all into the life of the outside world. This practice they keep up for a year, but finally both of them grow extremely weary of their monotonous life, and in a moment of exasperation Tony determines to go to America to make his fortune, while Millie is to be left behind and sent for as soon as her husband is able to establish a home. Tony has some misgivings about leaving Millie, for he has been warned by Pamela Mardale that she should never be left alone; but at last he departs, after Pamela has promised to be a staunch friend to his wife. Millie becomes infatuated with Lionel Callon, a gentlemanly adventurer. Pamela wishes to help her. She wires Warrisden to come by an early train, and asks him to find Tony and bring him home. Warrisden accepts the commission. Pamela has advised him to call on a Mr. Chase, head of a London mission, at whose suggestion Tony had chosen New York as a field of adventure. Warrisden learns from Mr. Chase that Tony, having lost all of his small fortune in New York, is now in the North Sea on a trawler. He starts out to find him, and finally reaches him far up in the North Sea. Warrisden uses every argument to prevail upon Tony to come back, but he refuses, and Warrisden is forced to return alone. He reports to Pamela the failure of his mission, but, to his surprise, she does not seem disappointed. He thinks it is because of the news which he hears from her—that Sir John Stretton has died, which will naturally bring Tony home. But that is not the whole explanation: for Pamela is overcoming her old indifference toward life, and in her life are being aroused new sympathies and emotions.

CHAPTER XII.—*(Continued.)*
